RE: Trident Seafoods Petersburg – APDES General Permit AKG520476

Dear Sir or Madam:

Enclosed is an amended Notice of Intent for Trident Seafoods Corporation's (Trident) Petersburg, Alaska facility. The purpose of this NOI amendment is to update production numbers after the facility redesign and to provide the coordinates for the facility outfall after it was relocated to its permanent location (ADEC Plan Tracking Number 9788).

The Petersburg facility is unable to accept the entire volume of seafood catch transfer water generated during the offload process through the waste handling system. Vessels have discharged seafood catch transfer water while tied to the dock for many years. Trident is requesting authorization at the northeast corner of the main dock as an outfall for fish hold water that is discharged as vessels are tied up to the facility dock. This is being included in this update because Trident would like to clearly identify all discharge points at the facility. Trident Petersburg seeks to minimize production of incidental foam and scum from the discharge of seafood catch transfer water to the extent practicable in accordance with AKG52000 Part V.C.h during the offloading process as described in the BMP. Please see the BMP attachment.

Please refer to the attached waiver request and its associated approval from the 6-26-2012 NOI Amendment for processing within 1 mile of the Tongass National Forest Wilderness Area.

Please contact Trident Seafoods Corporation's regulatory affairs department at (206) 783-3818 if you have questions or if you need additional information.

Sincerely,

Shawn Stokes
Environmental Compliance Director
Trident Seafoods Corporation
