Bering Select LLC intends to open and operate a fish oil production facility in Dutch Harbor, Ak.

The plant would receive frozen cod livers from Clipper Seafoods freezer longline vessels. The livers would be processed to remove the oil from the livers. The oil would be packaged in bulk totes that contain 350 gallons of oil. These totes would be placed into a shipping container that would be sent to a state in the lower 48 for further processing. Maximum production should allow the plant to process up to 20,000 lbs. of livers per day.

All processing waste would be pumped aboard the vessel Andronica for disposal at sea per APDES regulations. Stickwater and solid waste will be pumped to the vessel via above ground pipeline. This is used strictly for pumping waste to a stick vessel for disposal at sea.

In the future it is hoped to include other freezer longline vessels to deliver frozen livers to the Bering Select plant for processing.

In addition, I certify that Bering Select LLC has developed and will operate in accordance with a Best Management Practices Plan.

Regards,

William Dennis
Operations Manager
