---

Jesse,

Based on our discussion earlier this week, I have prepared an outline of an approach to address increment consumption from existing sources. Although we discussed the potential of mobile sources impact on increment consumption (and I included this in my outline), the rule language seems to refer only to increases/decreases in actual emissions from stationary sources for the purpose of increment evaluation. Let me know if you believe we need to consider mobile sources in this analysis, or if we can focus only on stationary source emissions.

I welcome any other thoughts or suggestions you might have on our outlined approach.

Subject: Emission Summary of Sources Near KNO Facility

Gentlemen,

Attached please find the updated list of stationary sources near Agrium's KNO facility with the most recent year of emissions information we have on file.

I would like to apologize on behalf of the Department for the mix up with the transmittal of the 3rd

PSD extension approval letter. Our records show that we sent out a hard copy of the letter to Fred Werth, but an electronic copy was not properly distributed.

Regards,

Dave Jones
