Re: Results From Additional UST Soil PID Screening/Analyses

Dear Mr. Swearingen:

The Department of Environmental Conservation, Defense Facilities Oversight group, (ADEC) has received a fax of the document listed above on August 19, 1994. The analytical results for bldgs. 750E, 750W, 778, 784, 812, 980, 45726, and 55295 show levels well below the most stringent cleanup criteria. ADEC considers the UST sites closed out. However, closing out these sites does not limit nor preclude ADEC from requesting future remediation or site investigation at a later date. If new information indicates that there is previously undiscovered contamination or exposures that causes an increased risk to human health or the environment, then future investigation and/or remedial actions will be required.

Please contact me at 563-6529,if there are any questions regarding this letter.

Sincerely,

Louis Howard
