RE: Review of report titled "Environmental Assessment During Removal of the Shop Concrete Floor and Floor Sump" for Huffman Road Mercury Site, Anchorage, Alaska (ADEC CS Database No. 1996-2109-260-01)

Dear Mr. McLeod,

The Alaska Department of Environmental Conservation, Contaminated Sites Program (ADEC) has reviewed the environmental assessment report for work done during and after the removal of the concrete floor and floor sump of the former shop. Initial field observations and sampling by Astro Environmental Services (AES) were done on May 19 and 23, 2006 with additional cleanup and confirmation sampling done on July 9, 2006. Based on the information provided, the Department concurs that mercury levels in confirmation samples from soils below the sump meet applicable site cleanup levels and that cleanup is complete. Additionally, ADEC finds that the condition of the Record of Decision dated December 29, 2005 has been met with respect to the soil beneath the shop slab:

> Lot 10 only: If soil beneath the shop and/or warehouse becomes accessible, ADEC must be notified before work begins. Any future assessment and/or cleanup activities shall be conducted by a qualified environmental consultant in accordance with applicable ADEC regulations.

As requested by AES, this letter confirms that the conditional site closure remains in effect. If you have any questions concerns regarding this decision, please contact Eileen Olson at (907) 269–7527 or e-mail her at Eileen_Olson@dec.state.ak.us.

Sincerely,

Eileen Olson
Site Project Manager
