Re: Institutional Controls verification for ERA Aviation Bethel Airport Fac.

The Contaminated Sites Program conducts periodic verification of closed sites where institutional controls (land use restrictions) are required under 18 AAC 75.375. We have identified ERA Aviation Bethel Airport Fac. as a site with institutional controls.

In order to prevent people from being exposed to any remaining contamination on the property, this letter is being sent as a reminder of the conditions placed on the property as part of the 2007 Record of Decision granted by the Alaska Department of Environmental Conservation (ADEC). At the time of closure, soil contamination was documented as remaining on the property. The contamination is from petroleum impacted soil found at the former location of two 1,000-gallon aboveground storage tanks used to store Jet A-50 fuel.

The 2007 determination is subject to the following site-specific conditions and/or controls:

1. Any proposal to transport soil off site requires ADEC approval in accordance with 18 AAC 75.325(i).
2. Alaska Airlines must notify ADEC if the existing structure is removed.

In addition to the two conditions above, you are required to notify the ADEC if there are any changes in land use or ownership. Failure to maintain these requirements may result in re-opening the site by the Contaminated Sites Program, in which case, further remediation could be mandatory.

December 4, 2013

In accordance with 18 AAC 75.380(d)(2), ADEC may require additional site assessment, monitoring, remediation, and/or necessary actions at this facility should new information become available that indicates contamination at this site may pose a threat to human health or the environment.

If you seek to have the institutional controls removed from this site, you can choose at any time to voluntarily conduct additional assessment, monitoring or further cleanup to demonstrate that contamination at the site now meets the applicable cleanup levels under 18 AAC 75.
