Subject: FW: AHFC - Eyak Manor, Cordova, ADEC File #2215.38.010, Conditional Closure Decision Approved

Kim,

I have reviewed the September 21, 1995 Gilfilian Engineering report that you located and provided for our file and review. Today I issued a conditional closure decision based on the information in that report, and entered that action into our database. Residual soil contamination remained at this property, but in my estimation, it does not warrant additional cleanup action at this time. An informational Institutional Control was also entered in ADEC's database noting that residual soil contamination remained at the site in 1995, and that this soil should not be transported offsite without prior ADEC approval. The soil is not expected to pose an unacceptable risk at the existing site, but has the potential to if transported and disposed in an environmentally sensitive area, either ecologically, or where groundwater is used for drinking water.

Let me know if you have any questions. Also, thanks again for locating and providing us with the copy of the Gilfilian report.

Alyce,

I conditionally closed out this site today, August 7 2008, and also established an information Institutional Control in our CS database concerning residual soil contamination that remained at this site in 1995. No conditional closure letter will be issued for this site. Please edit this site in the CS database to correctly reflect the conditional closure status, print out the CS database 'Actions' report for this site, and place a copy of that report along with this e-mail message in our hard copy project file. This will serve to document the decisions and actions completed for this AHFC property/site, located in Cordova, Alaska.

You might also post a copy of this e-mail message to our electronic file for this site.

Thanks,

Paul Horwath, ADEC, Environmental Engineer
