October 31, 2001

Mr. Darren Mulkey  
Alaska Department of Transportation and Public Facilities  
2301 Peger Road  
Fairbanks, Alaska 99709

RE: Voluntary Cleanup Program –  
Allakaket Airport Apron Soil Stockpile Closure

Dear Mr. Mulkey:

The department received your sampling results from the latest stockpile sampling on October 26. Final sampling results for the two individual stockpile samples are tabulated below:

Contaminant	Applicable ADEC Method 1 Cleanup Level (ppm)	Stockpile Sample #1 (ppm)	Stockpile Sample #2 (ppm)
Diesel Range Organics (DRO)	200	10.6	148
Residual Range Organics (RRO)	2000	21.1	109
Benzene	0.02	ND @ 0.010	NS
Ethylbenzene	5	ND @ 0.0402	NS
Toluene	4.8	ND @ 0.0402	NS
Xylenes	69	ND @ 0.0402	NS

ND – Non-Detect

NS – Not Sampled

Contaminated soils resulted from the excavation of small-scale Diesel and Residual Range Organic (DRO, RRO) spills at the former Snow Removal Equipment Building. Excavation resulted in the stockpiling of approximately 30 cubic yards of soil for biocell treatment.

Sampled soils meet the approved Method One, Table A1 cleanup levels, including the most stringent standards for Benzene Toluene Ethylbenzene and Xylenes (BTEX) under Table B1. These soils qualify for unrestricted soil disposal requirements. All soils meeting these levels may now be disposed of at any non-environmentally sensitive location without department review and approval.

The department concurs that no further remedial action is needed for these stockpiles and the site is now closed. This conclusion is subject to a future department determination that the cleanup is not protective of human health, safety, and welfare, or of the environment. If, in the future, additional contamination is found to be present that was not addressed in this action, it must be reported and additional cleanup may be required.

If you have any questions about this site, please do not hesitate to contact me at (907) 465-5358.

Sincerely,
