Re: 2018 Groundwater Sampling Report
Wildwood Former Air Force Station Operations Facility FUDS – F10AK025104

Dear Ms. Flint:

The Alaska Department of Environmental Conservation (ADEC) has reviewed the *2018 Groundwater Sampling Report*, dated September 2018 for the Wildwood Former Air Force Station Operation Facility Formerly Used Defense Site – F10AK025104. The report described field effort was completed in August 2018, and consisted of collecting water samples from three monitoring wells (MW-1, MW-2, and MW-3). The sample collected from Well MW-2 exhibited a concentration of diesel range organics (DRO) at 2.2 mg/l, which exceeds the Table C groundwater cleanup level of 1.5 mg/l. Sample results from all other wells were either not detected above laboratory method detection limits, or were present at concentrations below Table C levels. This report is approved.

ADEC agrees with the recommendation for continued groundwater monitoring at this site. If you have any questions or need any further assistance, you can contact me at 907-269-7691 or via email at joshua.barsis@alaska.gov.

Sincerely,

A handwritten signature in blue ink, appearing to read "Joshua Barsis".
