**SUMMARY REPORT**  
**FEBRUARY TO MAY 2016 PRIVATE WELL SAMPLING**  
**CITY OF FAIRBANKS REGIONAL FIRE TRAINING CENTER**  
**FAIRBANKS, ALASKA**

**1.0 INTRODUCTION**

Shannon & Wilson, Inc. has prepared this report to document our well search and private well sampling effort proximal to the Regional Fire Training Center (RFTC) at 1710 30<sup>th</sup> Avenue in Fairbanks, Alaska. The City of Fairbanks (CoF) owns the land and facility and leases space at the facility to the State of Alaska and other entities. The objective of the well search and sampling was to identify private wells and determine whether the subset of wells that we sampled have been affected by groundwater contamination associated with the burn pit at the RFTC. The RFTC burn pit is considered an active ADEC contaminated site, File Number 102.38.182.

This report was prepared for the City of Fairbanks in accordance with the terms and conditions of our City of Fairbanks Regional Fire Training Center Burn Pit Site Investigation services contract (Project No. FB-14-25), relevant Alaska Department of Environmental Conservation (ADEC) guidance documents, and 18 Alaska Administrative Code (AAC) 75.335. The tasks described herein were conducted as authorized by our Professional Services Contract and in response to proposal numbers 31-2-16864-004, -005, and -006.

**1.1 Background**

The CoF RFTC burn pit, or “combustible liquids pit,” was constructed in 1984 and used for firefighting exercises for approximately 20 years. Fire-fighting agents used during training in the CoF burn pit include water, protein-based foam, and aqueous film-forming foam (AFFF). AFFF has since been found to contain perfluorinated compounds (PFCs), a category of persistent organic compounds that are considered emerging contaminants. Perfluorooctane sulfonate (PFOS) and perfluorooctanoic acid (PFOA) are PFCs commonly found at sites where AFFFs were used. Due to their persistence, toxicity, and bioaccumulative potential, these compounds are of increasing concern to environmental and health agencies.

In our 2015 Phase 2 site investigation we sampled five soil borings and five temporary well points around the RTFC burn pit. Concentrations of PFOS and PFOA in onsite water samples exceeded ADEC-proposed groundwater-cleanup levels and other regulatory levels.

Concentrations of PFCs in groundwater samples collected from around the burn pit were up to an estimated 550,000 nanograms per liter (ng/L) PFOS and 7,800 ng/L PFOA.

On September 1, 2015, ADEC representatives requested that offsite wells be sampled to determine if PFC contamination was present. In November 2015, we collected water samples from a Alaska Department of Transportation & Public Faculties (ADOT&PF) monitoring well (MW) on Davis Road (MW-507) and a Fairbanks North Star Borough (FNSB) irrigation well at the Interior Girls Softball Association (IGSA) softball fields, 0.2 miles and 0.8 miles northwest of the RFTC, respectively. PFCs were detected in samples from both offsite wells but concentrations were generally greater in MW-507. PFOS was detected at up to 63 ng/L and PFOA at up to 21 ng/L in the MW-507 sample and field duplicate sample.

The ratios of individual PFC concentration magnitudes in the offsite groundwater samples are similar to those in the onsite groundwater samples. Therefore, our December 2015 report concluded that the two data sets are reasonably inferred to be associated with a common source. We recommended a search for private water-supply wells within a half mile of the RFTC to determine if offsite exposure to PFCs exceeds health-based screening levels.

The topography in the RFTC area is generally flat; the site slopes gently to the north. The depth to groundwater at the time of onsite sampling ranged from approximately 7 feet to 8 feet below ground surface (bgs). Based on our experience and knowledge of hydrogeology in the Fairbanks area, the horizontal gradient in this area is relatively flat, typically averaging one foot to two feet per 1,000 feet. The groundwater-flow direction fluctuates seasonally and is dependent on the relative levels of the Tanana River and Chena River. Groundwater is typically recharged by the Tanana River and drained by the Chena River, causing a northwesterly groundwater flow. Depending on various seasonal factors, groundwater may be recharged by both rivers, causing a westerly or northerly flow. Permafrost, where present, likely impedes groundwater movement in the vicinity of the RFTC.

## **1.2 Contaminant of Concern and Regulatory Levels**

The primary contaminants of concern in offsite wells are PFOS and PFOA. Cleanup levels have not been established for PFOS, PFOA, or other PFCs. The U.S. Environmental Protection Agency (EPA) has established a Lifetime Health Advisory (LHA) level for drinking water of 70 ng/L for PFOS, PFOA, or the sum of the two. The CoF has established this as the level above which action should be taken to reduce exposure in drinking water. Following ADEC guidance indicating the precision of the LHA level, we consider combined concentrations in excess of 65 ng/L to be exceedances of the LHA.

The CoF was notified of the new, LHA level on May 19, 2016. The LHA level supersedes the former Provisional Health Advisory (PHA) levels of 200 ng/L PFOS and 400 ng/L PFOA. Prior to publication of the LHA, PHA levels were used for this project.

### **1.3 Project Objectives and Scope**

At the request of the ADEC, Shannon & Wilson, Inc. identified and sampled private wells in five areas near the RFTC to date. Our primary objective of the services described in this report was to evaluate the potential for human exposure to PFC-containing water in private water-supply wells. This report describes the findings of our initial private well search and sampling effort (Area 1), E.M. Jones Subdivision sampling effort (Area 2), and Northwest Quadrant well search and sampling effort (Area 3). We sampled a subset of identified private wells and MWs in these areas, described as follows. Expansion of our well search into each subsequent area was authorized iteratively based on the results of private well sampling. This report summarizes the findings of our February to May 2016 well search and sampling.

Our well searches sought to identify private water-supply wells, the owner of the property on which the well is located, if the well is in use, how the well is used (e.g., drinking, washing, irrigation, etc.), and well logs or well details if available. Following completion of the well search, we collected analytical water samples for determination of PFCs from a subset of identified private wells. We submitted the water samples to TestAmerica, Inc., for quantitation of 19 PFCs by Method WS-LC-0025.

Area 1 consists of the area within one half mile of the RFTC and west of Lathrop Street, plus 30<sup>th</sup> Avenue to Peger Road. Area 2 consists of the E.M. Jones Subdivision, a primarily residential area bound by Peger Road to the east, Davis Road to the south, Kiana Street to the west, and Kobuk Avenue to the north. Area 3 consists of the northwest quadrant between a half- and 1-mile radius of the RFTC. This area is bound by Eagan Avenue to the north, Lathrop Street to the east, and the Mitchell Expressway to the south. Our scope of services included a well search for Areas 1 and 3; we did not conduct a well search in Area 2.

## **2.0 FIELD ACTIVITIES**

This section summarizes field activities performed between February 11 and May 17, 2016, in an effort to identify and sample private water-supply wells in our previously described search areas. These areas are shown in Figure 1, Private Well Search and Sample Areas.

## 2.1 Well Search and Sample Areas

On February 11, 2016, we began contacting owners and occupants in Area 1, our initial search area. Our well search methodology began with downloading a list of improved and unimproved parcels and the owners of those properties within the search area from the FNSB property database. We also referenced the Alaska Department of Natural Resources (DNR) Well Log Tracking System and subsurface water rights files listed on the DNR Water Estate Map.

The goal of our well search was to contact the owner or occupant of each improved parcel within the search area to identify the presence or absence of a well. We began by preparing a well search letter and fact sheet using CoF letterhead. The letters and fact sheets, included in Appendix A, describe the potential presence of PFCs in groundwater near the RFTC. Using FNSB records, we developed a list of property owners within Area 1 and subdivided the list into smaller extents. We prepared maps for each of these extents, and cross-referenced our lists with property records to determine which parcels were improved (i.e., developed) and which were vacant. We prepared mailers including the well search letter, one-page fact sheet, *Private Well Inventory Survey Form*, and pre-addressed envelope (Appendix A).

We mailed the well search letter to parcels along International and Industrial Avenues, the primarily commercial portion of Area 1, on February 9 and 10. We hand-delivered the well search letter to owners or occupants whose property adjoins Peger Lake, the primarily residential portion of Area 1, on February 11 and 12. We made a reasonable attempt to contact each owner or occupant in the search area. Where we were unable to make contact in person or via mail, we followed up via telephone where contact information was available, made multiple visits to the property in question, and/or questioned nearby property owners. We completed a *Private Well Inventory Survey Form* for each identified well, copies included in Appendix B for each of the three search areas. In some cases the *Survey Forms* were completed by the owner or occupant themselves, in others they were completed by Shannon & Wilson personnel in person or via telephone.

We used information obtained from completed *Survey Forms* and subsequent conversations with property owners and occupant to categorize wells based on use. These category designations were developed in coordination with the CoF and ADEC, and are described as follows.

- Category 1: wells that are used for drinking or cooking, as reported by owners or occupants

- Category 2: wells that are used for dish washing and other residential purposes. Homes or businesses where the occupants report that they do not drink the water, but where water-supply wells lead to kitchen or bathroom faucets, are considered category 2 wells.
- Category 3: wells that are used for industrial and outdoor purposes only, such as irrigation or cleaning. These wells are considered non-drinking-water wells.

We identified 29 parcels with confirmed active wells, five confirmed unused, and four inferred water wells within Area 1. Well search results are summarized in Tables 1 and 4, organized by presence or absence of a well and parcel account number (PAN). Please note that in most cases well depths are reported by owners, occupants, or developers. In some cases depths were obtained from well logs or drilling records. The results of the well search in Area 1 are depicted in Figure 2, PANS and Results of Well Search Southwest of RFTC.

**TABLE 1  
AREA 1 WELL SUMMARY**

Yes – active well	29
Yes – inferred well	4
Yes – unused well	5
No – inferred	18
No – confirmed	73
Total parcels	129

On April 7, we expanded the sampling area to include Area 2. Groundwater monitoring of trichloroethene and benzene plumes originating at the ADOT&PF Peger Road Facility is ongoing by Ahtna Engineering Services, LLC (Ahtna), under the direction of the ADEC. The Ahtna private-well monitoring area includes the entirety of Area 2 and overlaps with several parcels in the northwest portion of Area 3 (Figure 1). According to Ahtna, the last private well search in the area was conducted in 2013. It is possible but unlikely that new wells have been installed in the Ahtna private-well monitoring area since 2013.

Mr. Andrew Weller of Ahtna provided well search records for this area on April 8; we made a reasonable attempt to contact the owners or occupants of identified, active and unused wells. We did not contact the owners or occupants of properties without wells, per Ahtna records. We were able to sample six private wells in the E.M. Jones subdivision. Although we did not conduct a well search within Area 2, we obtained relevant well-search data while scheduling sampling appointments. This information is summarize below in Table 2 and in Table 5.

**TABLE 2**  
**AREA 2 WELL SUMMARY**

Yes – active well	6
Yes – inferred well	0
Yes – unused well	16
No – inferred	70
No – confirmed	2
Total parcels	94

On April 26, we expanded the search area to include Area 3 to the north of the Mitchell Expressway. Our well search methodology was the same as for Area 1, with the following exceptions. Our first contact attempt for properties in Area 3 was via telephone, where contact information was available. We revised the Area 1 well-search letter and fact sheet to reflect project changes on April 28; these documents are included in Appendix A. For properties contacted via telephone, we did not mail or hand-deliver the revised well-search letter.

Excluding MWs, we identified 10 parcels with confirmed active wells within Area 3. Several parcels contain more than one well; we have identified 20 water-supply wells in the northwest quadrant search area. Well-search results, including names and addresses, are summarized in Tables 3 and 5. The results of the well search in Area 3 are depicted in Figure 3, PANS and Results of Well Search Southwest of RFTC.

**TABLE 3**  
**AREA 3 WELL SUMMARY**

Yes – active well	10
Yes – inferred well	0
Yes – unused well	2
No – inferred	0
No – confirmed	27
Total parcels	39

## 2.2 Private and Monitoring Well Sampling

We have conducted four sampling events that include mainly samples from Areas 1 through 3. Shannon & Wilson personnel Marcy Nadel, Geologist; Tiffany Green, Environmental Scientist; and Scott Hummel, Chemist collected analytical water samples from private wells and MWs in Areas 1 through 3. These individuals are State of Alaska Qualified Samplers per 18 AAC

75.333[c] and 18 AAC 78.088[c]. Copies of the original *Private Well Sampling Logs* and *Monitoring Well Sampling Logs* are included in Appendix C.

We collected water samples from a subset of identified private wells in these geographic areas. We selected wells to sample based on well use and proximity to wells of a similar depth. We initially sampled each category 1 well, where possible, and a representative subset of category 2 and 3 wells. We have since sampled additional wells in Areas 1 through 3; these results will be included in the next quarterly report. We also sampled two groundwater MWs associated with the ADOT&PF Peger Road Facility at 2301 Peger Road (PAN 483656). We obtained permission from Mr. Sam Myers of ADOT&PF and Mr. Jim Fish of ADEC prior to sampling these MWs.

We collected the private well samples from a location in the plumbing upstream of any water-treatment system or water softener, where possible. We purged the systems prior to sampling by allowing the water to run until its pH, temperature, and conductivity stabilized and the water appeared clear. We measured parameters using a multiprobe water quality meter (YSI) and recorded these measurements approximately once every three minutes until the parameters had stabilized. The following values were used to indicate stability:  $\pm 0.1$  pH,  $\pm 0.5$  degrees Celsius ( $^{\circ}\text{C}$ ) temperature, and  $\pm 3$  percent conductivity. For residential and commercial systems we discharged purge water to an indoor sink or to the ground surface. In some cases indoor plumbing leads to the municipal sewer system; in other cases it leads to a private septic system.

For ADOT&PF MWs and IGSA irrigation wells, we treated purge water using a granular activated carbon (GAC) filter prior to discharge. We did not treat purge water from the Fairbanks Youth Soccer Association irrigation (FYSA) well. Following parameter stabilization, we collected PFC water samples using laboratory-supplied containers. In cases when the sampling location was difficult to access (e.g., close to the floor, in a corner, etc.) we collected the water sample using a disposable plastic cup and immediately transferred its contents to the laboratory-supplied containers.

For the two ADOT&PF MWs, we collected analytical water samples using a submersible pump and disposable non-Teflon tubing. We did not collect an equipment-rinsate sample for this phase, but have collected rinsate samples at a 10-percent frequency for the overall project. We measured the total well depth and depth to water in each MW prior to sampling. We measured the well depth of MW-504 as 26.8 feet below the top of casing (TOC) and MW-207A as 58.3 feet below the TOC. We observed that MW-504 appears to have been impacted by frost jacking; we removed 0.3 inches of PVC casing to allow us to replace the flush-mounted monument cap. Following sampling, we locked both wells using the original locks.

On February 22 and 23, we conducted our initial round of sampling (laboratory Work Order [WO] 17423). This sampling event consisted of ten private wells distributed within the search area and with a range of depths, and one field duplicate. On March 14, we collected an additional 10 samples from private wells in Area 1, one upgradient private-well sample, and one field duplicate (WO 17748). On April 18 and 19 we collected three private-well samples from Area 1, five samples from Area 2, one sample from Area 3, two upgradient wells samples, and two field duplicate samples (WO 18463). On May 16 and 17, we collected one private-well sample from Area 1, one sample from Area 2, nine samples from Area 3, one outlier well on Standard Avenue, two MW samples, one field duplicate sample (WO 19030).

Following consultation with ADEC and the CoF, we have since revisited wells identified during our Area 1 and Area 3 well searches and sampled most of these wells. Additionally, we were unable to collect a sample from PAN 87149 during our initial Area 1 sampling effort due to pump inoperability and availability of the owners. Analytical results for these samples will be included under separate cover.

### **2.3 Upgradient Wells**

At the request of the ADEC, we identified and sampled three wells outside of Areas 1 through 3. These private wells are located between 0.4 and 0.6 miles west, south, and southwest from the RFTC. Based on knowledge of regional groundwater flow directions, these wells are considered upgradient or cross gradient from the RFTC.

- MSI Auto Parts at 1307 30<sup>th</sup> Avenue, estimated 30 foot deep well
- Young's Gear at 1711 Van Horn Road, 103 foot deep well
- City Electric at 3540 Holt Road, 91 foot deep well

These wells were sampled using the purge and sample-collection methods described for other private wells. We sampled the water-supply well at MSI Auto Parts as part of our March private well sampling event. We sampled the remaining two upgradient and cross gradient wells as part of our April sampling event.

### **2.4 Sample Custody, Storage, and Transport**

Immediately after collection, the sample jars for each location were placed in a Ziploc bags and stored in a designated sample cooler maintained at approximately 4 °C with ice substitute. Shannon & Wilson maintained custody of the samples until submitting them to the laboratory for analysis. For shipping we packaged analytical samples and chain-of-custody (COC) forms in a

hard plastic cooler with an adequate quantity of frozen ice substitute, packing material as necessary to prevent bottle breakage, and a laboratory-supplied liner bag. We applied Shannon & Wilson custody seals to the cooler, which were observed to be intact upon receipt by the laboratory.

We shipped sample coolers to TestAmerica Laboratories, Inc. (TestAmerica) in West Sacramento, California using FedEx priority overnight service. This allowed sufficient time for the laboratory to analyze the samples within holding-time requirements of the analytical method. The complete TestAmerica laboratory reports are included in Appendix D (WOs 17423, 17748, 18463, and 19030).

## **2.5 Notification of Results**

Upon completion of review of the analytical data, we prepared letters to owners and occupants informing them of the results for the sample from their well, including upgradient wells. These letters were tailored to each property and analytical sample, and included the following information:

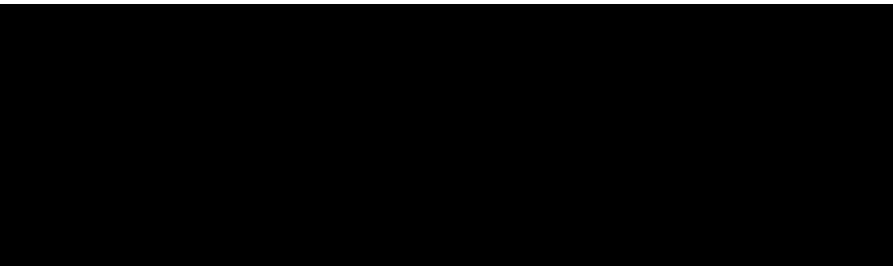

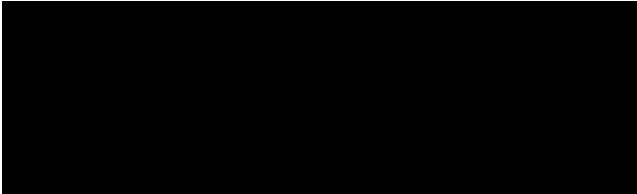

- sample name;
- analytical result for PFOS and PFOA;
- comparison of analytical results to PHA levels or LHA level;
- description of the project;
- those pages of the TestAmerica laboratory report that apply to the owner or occupant's water-well sample; and
- the updated RFTC fact sheet.

When requested, results letters were e-mailed to owners or occupants instead of mailed in hard copy. We also contacted some owners and occupants via telephone to notify them of their results prior to letter preparation. At a minimum, we contacted the owners of those properties whose results exceeded the PHA levels or LHA level, and those who requested to be notified immediately. For our first two sampling events, we telephoned the owner or occupant of each residential property.

The CoF was notified of the new, LHA level on May 19, 2016. At the request of the CoF we prepared advisory letters to the owners and occupants of wells sampled before that date to notify them of the LHA level. We prepared 37 letters, tailored to each owner or occupant. The LHA letter template is included in Appendix A; highlighted portions of the template letter are those that varied with each mailing. The LHA letters were mailed on May 25, 2016.

## 2.6 Alternative Water Source

The CoF has chosen to provide bottled water deliveries at no cost to owners and occupants whose category 1 or 2 well water exceeds the LHA level, until they are provided with a long-term alternate water source. Some additional residents were offered bottled water deliveries due to their proximity to homes with LHA exceedances. Water deliveries are being coordinated by Mr. Ernie Misewicz, the Assistant Fire Chief of the Fairbanks Fire Department, and are ongoing. The following homes and businesses have been offered bottled water deliveries; some have declined.

## 2.7 Deviations

In general, we conducted our services in accordance with the approved proposals. The following are the deviations from our agreed-upon scope of services.

- Our three proposals call for downloading a list of improved parcels from the FNSB database. After cross-referencing the FNSB list with aerial photographs we discovered some inconsistencies; we therefore downloaded and used a list of both improved and unimproved parcels.
- Our proposal dated March 15, 2016, called for our first contact attempt with owners and occupants in the search area to be via telephone. We first contacted owners and occupants in Area 1 by mailing or delivering a well-search letter. We only contacted these individuals via telephone, where we were unable to reach them using other means.
- Our proposal dated April 14, 2016, stated that we will provide a *Private Well Inventory Survey Form* to owners and occupants in Area 3. We first contacted some owners and

occupants in Area 3 via telephone; in these cases, a well search letter and *Survey Form* were not provided.

- At the request of the CoF and ADEC, we prepared and mailed advisory letters to the owners or occupants of sampled wells in late May 2016 (Appendix A). These letters were intended to notifying them of the newly published EPA LHA level.

### **3.0 ANALYTICAL RESULTS**

We submitted the water samples to TestAmerica for determination of PFCs using Method WS-LC-0025, the laboratory's in-house method. This method analyzes for 19 PFCs, including PFOS, PFOA, and the four other PFCs listed in the EPA's Unregulated Contaminant Monitoring Rule (UCMR). The TestAmerica laboratory reports and ADEC Laboratory Data Review Checklists for each WO are included in Appendix D.

Analytical results and other relevant information for Area 1 are depicted in Figure 4, PANs, PFOS and PFOA Results, and Well Depths Southwest of RFTC. Analytical results for Areas 2 and 3 are depicted in and Figure 5, PANs, PFOS and PFOA Results, and Well Depths Northwest of RFTC.

#### **3.1 February Private Well Samples**

Table 6 summarizes the concentrations of PFCs in February private well samples (WO 17423). Sample 87408 is a field duplicate of sample 87418. The analytical result for one private well, sample 87173, exceeds the EPA LHA level for combined PFOS and PFOA concentrations. This result is 220 ng/L PFOS and 9.7 ng/L PFOA for the well located at 2145 30<sup>th</sup> Avenue.

#### **3.2 March Private Well Samples**

Table 7 summarizes the concentrations of PFCs in March private well samples (WO 17748). Sample 522484 is a field duplicate of sample 522384. The analytical results for three private wells exceed the LHA level. The highest of these results is 340 ng/L PFOS and 12 ng/L PFOA for sample 522484 / 522384, the well located at 2051 30<sup>th</sup> Avenue.

#### **3.3 April Private Well Samples**

Table 8 summarizes the concentrations of PFCs in April private well samples (WO 18463). Sample 167854 is a field duplicate of sample 167754 and sample 526676 is a duplicate of 526576. The analytical results for two private wells exceed the LHA level, samples 127124 and 526676 / 526576. The higher of these two results is 68 ng/L PFOS and 14 ng/L PFOA for sample 127124, the well located at 2525 17<sup>th</sup> Avenue.

### 3.4 May Private Well Samples

Table 9 summarizes the concentrations of PFCs in May private and groundwater MW samples (WO 19030). None of the analytical results in this WO exceed the LHA level. The highest results are 38 ng/L PFOS in samples 597517-2 and MW-207A, and 6.3 ng/L PFOA in sample 671300.

## 4.0 QUALITY ASSURANCE/QUALITY CONTROL

Quality Assurance/Quality Control (QA/QC) procedures assist in producing data of acceptable quality and reliability. We reviewed the analytical results for laboratory QC samples and also conducted our own QA assessment for this project. We reviewed the chain-of-custody (COC) record and laboratory-receipt form to check that custody was not breached, sample holding-times were met, and the samples were properly handled from the point of collection through analysis by the laboratory. Our QA review procedures allowed us to document the accuracy and precision of the analytical data, as well as check the analyses were sufficiently sensitive to detect analytes at levels below regulatory standards.

The laboratory applies the letter ‘J’ to a detection less than the limit of quantitation but greater than the detection limit; this “flagged” datum is considered an estimated concentration. We reviewed the data using the current ADEC Laboratory Data Review Checklist and applied a standardized set of flags to any data brought into question during the review. During our QC review we applied flags indicating estimated data or analytical bias as applicable. Our QC review did not encounter QA/QC errors that resulted in flags for PFOS or PFOA analytical data.

We reviewed analytical sample results (TestAmerica WOs 17423, 17748, 18463, and 19030) for this project. The laboratory reports, including the case narratives describing the laboratory QA results in detail, along with completed ADEC data-review, are included in Appendix D. Laboratory QC procedures included evaluating surrogate recovery, performing continuing calibration checks, analyzing method blanks, and checking laboratory control samples to assess accuracy. Please refer to Appendix D for details regarding the results of our QA review for these four WOs.

By working in general accordance with our proposed scope of services, we consider the samples we collected for this project to be representative of site conditions at the locations and times they were obtained. Based on our QA review, no samples were rejected as unusable due to QC failures, and our completeness goal of obtaining 85 percent useable data was met. In general, the quality of the analytical data for this project does not appear to have been compromised by analytical irregularities and is adequate for the purposes of our assessment.

## 5.0 CONCLUSIONS AND RECOMMENDATIONS

Of the private and MW results discussed in this report, there are seven combined PFOS and PFOA concentrations exceeding the effective LHA level of 65 ng/L. Five of these wells are located on 30<sup>th</sup> Avenue to the west of the intersection with North Van Horn Court. The other two wells are located at [REDACTED] Avenue and in the Davis Road right-of-way next to the CoF maintenance yard (MW-507). These analytical results are summarized in Figure 4 for wells to the southwest of the RFTC (Area 1) and Figure 5 for wells to the northwest (Areas 2 and 3).

Based on our understanding of offsite private well data, Shannon & Wilson offers the following recommendations:

- continue to expand the private well search area as necessary to assess human exposure risk to PFOS- and PFOA-containing water;
- continue to provide an alternate water source to the occupants of homes or businesses whose well water exceeds the LHA level;
- continue to work with the ADEC and Alaska Department of Health and Human Services to educate the public regarding the potential health effects of exposure to PFC-containing water;
- decommission the RFTC burn pit; and
- install offsite groundwater MWs to the satisfaction of ADEC to study groundwater flow directions and the presence of permafrost.

Future private well search and sample results will be included under separate cover. We anticipate that this report will be the first of two 2016 quarterly reports describing offsite tasks and summarizing analytical results.

## 6.0 LIMITATIONS

The observations and conclusions described in this report are based solely on the scope of service described in and implemented pursuant to the signed agreements dated March 15, March 29, and April 14, 2016, between the City of Fairbanks and Shannon & Wilson, Inc. Shannon & Wilson has not performed any observation, investigation, study, or testing that is not specifically listed in the scope of service, or that was not developed in coordination with the City of Fairbanks. Other areas of contamination that were not obvious during our site work could be present at the site. Shannon & Wilson is not liable for failing to discover any condition whose discovery required the performance of services not authorized by the Agreement.

This report was prepared for the exclusive use of our Client and their representatives to document environmental conditions at the Regional Fire Training Center site. This work presents our professional judgment as to the conditions in the site. Information presented here is based on the sampling and analyses we performed. Our sampling was intended to confirm the presence or absence of selected contaminants at the sampled locations. It should not be construed as a definite conclusion about the soil conditions in the area, and it is possible our tests do not represent the highest levels of contamination at the site. In addition, conclusions cannot be drawn on the presence or absence of contaminants for which laboratory analyses were not performed. Interpretations and recommendations made by Shannon & Wilson are based solely upon information available to Shannon & Wilson at the time the interpretations and recommendations are made.

The information included in this report is based on limited sampling at the site and should be considered representative of the time and location at which the sampling occurred. It was not the intent of our investigation to detect the presence of soil, groundwater, or surface water contaminants other than those for which laboratory analyses were performed; no conclusions can be drawn on the presence or absence of other contaminants. The observed levels of contamination may be dependent upon changes due to natural forces or human activity. In addition, changes in government codes, regulations, or laws may occur. Due to such changes, or other factors beyond our control, our observations and recommendations applicable to this site may need to be revised. If substantial time has elapsed between submission of this report and the start of activities or action based upon it, we recommend this report be reviewed to determine the applicability of the conclusions. We have prepared and included in the Appendix E, "*Important Information about your Geotechnical/Environmental Report*," to assist you and others in understanding the use and limitations of our reports.

Within the limitations of scope, schedule, and budget, Shannon & Wilson has prepared this report in a professional manner, using that level of skill and care normally exercised for similar projects under similar conditions by reputable and competent environmental consultants currently practicing in this area.

The data presented in this report are based on limited research and sampling at the site and should be considered representative at the time of our observations. Note too that the passage of time may affect conditions at the sampling locations. Shannon & Wilson is not responsible for conditions or consequences arising from relevant facts that were concealed, withheld, or not fully disclosed at the time the report was prepared. We also note that the facts and conditions referenced in this report may change over time, and that the facts and conditions set forth here

SHANNON & WILSON, INC.

are applicable to the facts and conditions as described only at the time of this report. We believe that the conclusions stated here are factual, but no guarantee is made or implied.

Dear Property Owner:

The City of Fairbanks (City) was recently alerted to concentrations of perfluorinated compounds (PFCs) in the groundwater at the Regional Fire Training Center (RFTC) at 1710 30<sup>th</sup> Avenue. From 1984 to around 2004, firefighters from the City and other agencies used Aqueous Film Forming Foam, a firefighting agent that contained PFCs, during training to extinguish petroleum fires at the RFTC. The PFCs recently discovered in the groundwater at the RFTC are in concentrations higher than the U.S. Environmental Protection Agency's preliminary health advisory levels. The City is working with an environmental consulting firm, Shannon & Wilson Inc., and the Alaska Department of Environmental Conservation to identify and sample private water wells near the RFTC to determine if these compounds are present above health advisory levels outside the RFTC property.

Enclosed is a Fact Sheet about PFCs, agency contact information to help address questions, and a Private Well Inventory Survey Form. The City asks that you review this information and return the survey by March 1 using the preaddressed envelope. Your participation in the survey helps ensure the study is not only thorough, but also identifies those in the area at risk of drinking PFC-contaminated water.

The City realizes the search area is served by the Golden Heart Utilities water system and that although our municipal code requires connection to the system where service is available, there may be still be some private wells in use which predate the system's installation. In such cases, the City is not going to mandate property owners decommission their wells. With this effort the City wants to identify those who may be at risk of drinking PFC-contaminated water from the RFTC; and if anyone is found to be at risk, the City may be able to assist those property owners with connection to the water system to provide access to clean drinking water.

If you have any questions, please see the list of contacts on the Fact Sheet to help direct you to the most appropriate person/agency for your inquiry. We look forward to receiving your completed survey.

## FACT SHEET – Well Testing for Perfluorinated Compounds

FEBRUARY 2016

Perfluorinated compounds (PFCs) are a group of manmade chemicals that have been used for a wide variety of residential, commercial, and industrial uses. PFCs are classified as emerging environmental contaminants because they do not have established regulatory standards, but evolving science has identified potential risk to human health and regulatory standards are under consideration. The City of Fairbanks has discovered PFC contamination at the Regional Fire Training Center (RFTC) at 1710 30<sup>th</sup> Avenue and is working in coordination with state regulators to identify affected wells and, when necessary, take responsive action. The initial well-search area consists of the area within ½ mile of the RFTC and west of Lathrop Street, as well as 30<sup>th</sup> Avenue to Peger Road.

### KEY MESSAGES & QUICK FACTS

The City has confirmed that PFCs are present in the groundwater at the RFTC and would like to test nearby water wells.

The City will ask to test private wells where it believes PFCs could be present based on the known pattern of groundwater flow.

Test results will typically be available within three weeks.

The U.S. Environmental Protection Agency (EPA) issued a provisional health advisory for two forms of PFCs known as “PFOA” and “PFOS.” A provisional health advisory is a concentration above which action should be taken to reduce exposure in drinking water. PFOA refers to perfluorooctanoic acid, and PFOS refers to perfluorooctane sulfonic acid.

The City is considering action to mitigate PFC exposures based on results in drinking water above the EPA provisional health advisory concentrations of:

PFOS: drinking water concentrations greater than 0.2 µg/L

PFOA: drinking water concentrations greater than 0.4 µg/L

Human health risks associated with PFC exposures have not been definitively established.

PFCs are used in a large number of products ranging from non-stick cookware, fabric waterproofing compound, stain-resistant carpeting, some food packaging, and firefighting agents.

From 1984 to 2004, firefighters from the City of Fairbanks and other agencies used Aqueous Film Forming Foam, a firefighting agent that contained PFCs, during training to extinguish petroleum fires at the RFTC.

PFCs are not known to degrade by natural processes.

For more information about PFCs, see <http://www.atsdr.cdc.gov/pfc/index.html>.

April 28, 2016

**Dear Property Owner:**

The City of Fairbanks (City) was recently alerted to concentrations of perfluorinated compounds (PFCs) in the groundwater at the Regional Fire Training Center (RFTC) at 1710 30<sup>th</sup> Avenue. From 1984 to around 2004, firefighters from the City and other agencies used Aqueous Film Forming Foam, a firefighting agent that contained PFCs, during training to extinguish petroleum fires at the RFTC. The PFCs recently discovered in the groundwater at the RFTC are in concentrations higher than the U.S. Environmental Protection Agency's preliminary health advisory levels.

The City is working with an environmental consulting firm, Shannon & Wilson Inc., and the Alaska Department of Environmental Conservation to identify and sample private water wells near the RFTC to determine if these compounds are present above health advisory levels outside the RFTC property. In February Shannon & Wilson began contacting property owners and sampling private water-supply wells within approximately one-half mile of the RFTC. In April the well search area was expanded to include properties within approximately one mile to the west and northwest of the RFTC.

Enclosed is a Fact Sheet about PFCs, agency contact information to help address questions, and a Private Well Inventory Survey Form. The City asks that you review this information and return the survey as soon as possible using the preaddressed envelope. Your participation in the survey helps ensure the study is not only thorough, but also identifies those in the area at risk of drinking PFC-contaminated water.

The City realizes that a portion of the search area is served by the Golden Heart Utilities water system, although there may be private wells in use which predate the system's installation in those areas. In such cases, the City is not going to mandate property owners decommission their wells. With this effort the City seeks to identify those who may be at risk of drinking PFC-contaminated water from the RFTC; and if anyone is found to be at risk, the City may be able to assist those property owners with connection to the water system to provide access to clean drinking water.

If you have any questions, please see the list of contacts on the Fact Sheet to help direct you to the most appropriate person/agency for your inquiry. We look forward to receiving your completed survey.

May 25, 2016

Dear **Owner/Occupant Name:**

Shannon & Wilson is working as a contractor for the City of Fairbanks to evaluate the potential presence of perfluorinated compounds (PFCs) in groundwater near the Regional Fire Training Center (RFTC) at 1730 30<sup>th</sup> Avenue. The well-water samples have been analyzed for 19 PFC analytes, including perfluorooctane sulfonate (PFOS) and perfluorooctanoic acid (PFOA).

On May 19, 2016, the U.S. Environmental Protection Agency published an updated health advisory level for PFCs. The new lifetime health advisory level is 70 nanograms per liter (ng/L) for PFOS, PFOA, or the sum of the two. The former provisional health advisory levels were 200 ng/L for PFOS and 400 ng/L for PFOA. Please note that the units of ng/L are equivalent to parts per trillion. There are no advisory levels for the other PFC analytes.

Shannon & Wilson has sampled 44 private water-supply wells and four monitoring wells in the RFTC area to date, including your well/s. The locations of these wells are shown in the enclosed map (Figure 1, PFC Sample Locations as of May 2016). The water sample from your well was mailed to TestAmerica Laboratories, Inc. on May 18, 2016; analytical results are forthcoming. The City is continuing to collect PFC water samples in order to evaluate the extent of PFC-containing groundwater in the area.

The PFOS and PFOA results for six of these wells exceed the new, lifetime health advisory level. The occupants of these homes and their nearest neighbors have been offered//The City is offering bottled water delivery at no cost; deliveries to homes on 30<sup>th</sup> Avenue began in March. The City is preparing a plan to provide owners and occupants whose well water exceeds the lifetime health advisory level with a long-term alternate water source. The City Council is considering connection to the municipal water supply system and other long-term water-supply solutions.

Please contact me at (907) 459-6758 or email [jcfox@ci.fairbanks.ak.us](mailto:jcfox@ci.fairbanks.ak.us) if you have any questions or need additional information. For questions relating to well testing, environmental regulations, or other inquiries please refer to contact information on the enclosed Fact Sheet.

## **FACT SHEET – Well Testing for Perfluorinated Compounds**

**MAY 2016**

Perfluorinated compounds (PFCs) are a group of manmade chemicals that have been used for a wide variety of residential, commercial, and industrial uses. PFCs are classified as emerging environmental contaminants because they do not have established regulatory standards, but evolving science has identified potential risk to human health and regulatory standards are under consideration. The City of Fairbanks has discovered PFC contamination at the Regional Fire Training Center (RFTC) at 1710 30<sup>th</sup> Avenue and is working in coordination with state regulators to identify affected wells and, when necessary, take responsive action. The current well-search area consists of properties within approximately 1 mile to the west and northwest of the RFTC.

### **KEY MESSAGES & QUICK FACTS**

The City has confirmed that PFCs are present in the groundwater at the RFTC and in water from some private wells to the west.

The City will ask to test private wells where it believes PFCs could be present based on the known pattern of groundwater flow. Test results will typically be available within three weeks.

The U.S. Environmental Protection Agency (EPA) issued a lifetime health advisory level for PFCs in May 2016. The health advisory level has been set with a sufficient margin of protection for a lifetime of exposure to PFOA and PFOS from drinking water, including for sensitive populations such as children. PFOA refers to perfluorooctanoic acid; PFOS refers to perfluorooctane sulfonate.

The City has adopted the EPA lifetime health advisory level of 70 nanograms per liter (ng/L) for PFOS, PFOA, or the sum of the two as the level above which action should be taken to reduce exposure in drinking water.

The new health advisory level has been set based on the latest peer-reviewed science. However, the human health risks associated with PFC exposures have not been definitively established.

PFCs are used in a large number of products ranging from non-stick cookware, fabric waterproofing compounds, stain-resistant carpeting, some food packaging, and firefighting agents.

From 1984 to 2004, firefighters from the City of Fairbanks and other agencies used Aqueous Film Forming Foam, a firefighting agent that contained PFCs, during training to extinguish petroleum fires at the RFTC.

PFCs are resistant to degradation by natural processes.

## Qualifiers

### LCMS

Qualifier	Qualifier Description
*	Isotope Dilution analyte is outside acceptance limits.
B	Compound was found in the blank and sample.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

## Glossary

### Abbreviation

These commonly used abbreviations may or may not be present in this report.

dw	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

TestAmerica Job ID: 320-17423-1

SDG: 31-1-11735-0004

## Job ID: 320-17423-1

### Laboratory: TestAmerica Sacramento

#### Narrative

#### Job Narrative 320-17423-1

#### Receipt

The samples were received on 2/25/2016 10:15 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 5.5° C.

#### LCMS

Method(s) WS-LC-0025: The Isotope Dilution Analyte (IDA) recovery associated with the following samples is below the method recommended limit: 87173 (320-17423-1), 87408 (320-17423-2), 84718 (320-17423-3), 87319 (320-17423-4), 92801 (320-17423-5), 629709 (320-17423-6), 95451 (320-17423-7), 563412 (320-17423-8), 87301 (320-17423-9), 562637 (320-17423-10) and 87335 (320-17423-11). Generally, data quality is not considered affected if the IDA signal-to-noise ratio is greater than 10:1, which is achieved for all IDA in the samples.

Method(s) WS-LC-0025: The reporting limit for Perfluoro-n-hexadecanoic acid (PFHxDA) was raised due to problems with the calibration curve and low background levels in the instrument for this compound. Results below the new RL should be considered suspect. 87173 (320-17423-1), 87408 (320-17423-2), 84718 (320-17423-3), 87319 (320-17423-4), 92801 (320-17423-5), 629709 (320-17423-6), 95451 (320-17423-7), 563412 (320-17423-8), 87301 (320-17423-9), 562637 (320-17423-10), 87335 (320-17423-11) and (MB 320-101730/1-A)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

#### Organic Prep

Method(s) 3535: Due to excessive sediment in sample column became clogged. The remainder of sample was loaded onto an additional column. After elution extracts were combined, respectively. 87408 (320-17423-2), 84718 (320-17423-3), 87319 (320-17423-4) and 87301 (320-17423-9)

Method(s) 3535: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with 320-101730.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

## Login Sample Receipt Checklist

Client: Shannon & Wilson

Job Number: 320-17423-1  
SDG Number: 31-1-11735-0004

**Login Number:** 17423

**List Number:** 1

**Creator:** Nelson, Kym D

**List Source:** TestAmerica Sacramento

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A	

## Laboratory Data Review Checklist

Completed by:	Marcy Nadel		
Title:	Geologist	Date:	March 03, 2016
CS Report Name:	City of Fairbanks Fire Training Area	Report Date:	March 02, 2016
Consultant Firm:	Shannon & Wilson, Inc.		
Laboratory Name:	TestAmerica, Inc.	Laboratory Report Number:	320-17423
ADEC File Number:	102.38.182	ADEC RecKey Number:	

### 1. Laboratory

- a. Did an ADEC CS approved laboratory receive and perform all of the submitted sample analyses?  
 Yes  No  NA (Please explain.)      Comments:

ADEC has not approved an analytical laboratory for this analysis.

- b. If the samples were transferred to another “network” laboratory or sub-contracted to an alternate laboratory, was the laboratory performing the analyses ADEC CS approved?

Yes  No  NA (Please explain.)      Comments:

Analyses were performed by TestAmerica, Inc. in Folsom, California.

### 2. Chain of Custody (COC)

- a. COC information completed, signed, and dated (including released/received by)?  
 Yes  No  NA (Please explain.)      Comments:

- b. Correct analyses requested?

Yes  No  NA (Please explain.)      Comments:

### 3. Laboratory Sample Receipt Documentation

- a. Sample/cooler temperature documented and within range at receipt ( $4^{\circ} \pm 2^{\circ}$  C)?  
 Yes  No  NA (Please explain.)      Comments:

The temperature blank or cooler was measured within the acceptable temperature range of  $0^{\circ}$  C to  $6^{\circ}$  C upon receipt at the laboratory, as specified in the EPA publication SW-846. This range has been approved by ADEC.

- b. Sample preservation acceptable – acidified waters, Methanol preserved VOC soil (GRO, BTEX, Volatile Chlorinated Solvents, etc.)?

Yes  No  NA (Please explain.)

Comments:

Analysis of PFCs does not require a preservative.

- c. Sample condition documented – broken, leaking (Methanol), zero headspace (VOC vials)?

Yes  No  NA (Please explain.)

Comments:

The sample-receipt form notes that the samples were received in good condition.

- d. If there were any discrepancies, were they documented? For example, incorrect sample containers/preservation, sample temperature outside of acceptable range, insufficient or missing samples, etc.?

Yes  No  NA (Please explain.)

Comments:

There were no discrepancies.

- e. Data quality or usability affected? (Please explain.)

Comments:

No, the data quality and usability were not affected.

#### 4. Case Narrative

- a. Present and understandable?

Yes  No  NA (Please explain.)

Comments:

- b. Discrepancies, errors or QC failures identified by the lab?

Yes  No  NA (Please explain.)

Comments:

The case narrative identifies the following discrepancies:

The Isotope Dilution Analyte (IDA) recovery associated with surrogate 13C8 FOSA in each of the 11 samples is below the method recommended limit of 25% to 150%. Generally, data quality is not considered affected if the IDA signal-to-noise ratio is greater than 10:1, which is achieved for all IDA in the samples.

The reporting limit for PFHxD was raised due to problems with the calibration curve and low background levels in the instrument for this compound. Results below the new PQL should be considered suspect.

Organic prep method 3535: Due to excessive sediment the sample column became clogged for samples samples "87408," "84718," "87319," and "87301." The remainder of sample was loaded onto an additional column. After-elution extracts were combined. Additionally, insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with this organic prep batch.

c. Were all corrective actions documented?

Yes  No  NA (Please explain.)

Comments:

Yes; see above.

d. What is the effect on data quality/usability according to the case narrative?

Comments:

IDA recovery failures are considered to affect data quality, and are discussed in Section 6c. The method reporting limit and organic preparation batch comments are not considered to affect data quality or usability.

## 5. Samples Results

a. Correct analyses performed/reported as requested on COC?

Yes  No  NA (Please explain.)

Comments:

b. All applicable holding times met?

Yes  No  NA (Please explain.)

Comments:

The hold time of seven days until extraction was met.

c. All soils reported on a dry weight basis?

Yes  No  NA (Please explain.)

Comments:

N/A; no soil samples were submitted with this work order.

d. Are the reported PQLs less than the Cleanup Level or the minimum required detection level for the project?

Yes  No  NA (Please explain.)

Comments:

The PQL, equivalent to the TestAmerica Reporting or Requested Limit (RL), is less than applicable EPA provisional drinking water health advisory levels and ADEC proposed groundwater cleanup levels for PFOS and PFOA.

e. Data quality or usability affected?

Comments:

The data quality and usability were not affected.

## 6. QC Samples

a. Method Blank

i. One method blank reported per matrix, analysis and 20 samples?

Yes  No  NA (Please explain.)

Comments:

[Redacted]

ii. All method blank results less than PQL?

Yes  No  NA (Please explain.)

Comments:

Eight PFC analytes were detected in the method blank (MB) at estimated concentrations less than their PQLs (reporting limits, or RLs). These analytes are PFBA, PFHpA, PFDA, PFUnA, PFTriA, PFTeA, PFHxDA, and FOSA.

iii. If above PQL, what samples are affected?

Comments:

Each of the 11 samples were associated with the MB containing detectable perfluorinated compounds. The results for PFTriA are considered unaffected because PFTriA is present at a concentration at least 10-fold greater than the MB concentration.

The results for PFBA, PFHpA, PFDA, PFUnA, PFTeA, PFHxDA, and FOSA are considered to affect at least one sample result because they were present at concentrations within 5 and 10 times that of the MB concentration, between the PQL and 5 times the MB concentration, or less than the PQL.

iv. Do the affected sample(s) have data flags and if so, are the data flags clearly defined?

Yes  No  NA (Please explain.)

Comments:

Where not already qualified by the laboratory, these results are considered estimated and biased high (flagged 'JH'), or considered not detected and flagged 'B\*' at either the reported sample result or the PQL, whichever is higher.

v. Data quality or usability affected? (Please explain.)

Comments:

Yes; see above.

b. Laboratory Control Sample/Duplicate (LCS/LCSD)

i. Organics – One LCS/LCSD reported per matrix, analysis and 20 samples? (LCS/LCSD required per AK methods, LCS required per SW846)

Yes  No  NA (Please explain.)

Comments:

LCS/LCSD sample results were reported.

ii. Metals/Inorganics – one LCS and one sample duplicate reported per matrix, analysis and 20 samples?

Yes  No  NA (Please explain.)

Comments:

Metals and inorganics were not analyzed as part of this work order.

- iii. Accuracy – All percent recoveries (%R) reported and within method or laboratory limits? And project specified DQOs, if applicable. (AK Petroleum methods: AK101 60%-120%, AK102 75%-125%, AK103 60%-120%; all other analyses see the laboratory QC pages)
- Yes  No  NA (Please explain.)      Comments:

Yes; percent recoveries were between 60% and 140% or 150% depending on the analytes, as required by the laboratory method.

- iv. Precision – All relative percent differences (RPD) reported and less than method or laboratory limits? And project specified DQOs, if applicable. RPD reported from LCS/LCSD, MS/MSD, and or sample/sample duplicate. (AK Petroleum methods 20%; all other analyses see the laboratory QC pages)
- Yes  No  NA (Please explain.)      Comments:

Yes; LCS/LCSD RPDs were within the laboratory limit of 30%.

- v. If %R or RPD is outside of acceptable limits, what samples are affected?
- Comments:

N/A; percent recoveries and RPDs were within acceptable limits.

- vi. Do the affected sample(s) have data flags? If so, are the data flags clearly defined?
- Yes  No  NA (Please explain.)      Comments:

N/A; no data flags are required.

- vii. Data quality or usability affected? (Use comment box to explain.)
- Comments:

The data quality and usability were not affected.

c. Surrogates – Organics Only

- i. Are surrogate recoveries reported for organic analyses – field, QC and laboratory samples?
- Yes  No  NA (Please explain.)      Comments:

The analytical method WS-LC-0025 uses IDA recovery, which entails adding a 13C-isotope of each target analyte and assessing the recovery of each analyte. The isotopically labeled compounds are the surrogates for this method.

- ii. Accuracy – All percent recoveries (%R) reported and within method or laboratory limits? And project specified DQOs, if applicable. (AK Petroleum methods 50-150 %R; all other analyses see the laboratory report pages)

Yes  No  NA (Please explain.)

Comments:

With the exception of 13C8 FOSA, the percent recoveries are within the method recommended limit of 25% to 150%. The percent recovery for FOSA is below the method recommended limit for each of the 11 samples.

However, according to the laboratory, data quality is not considered affected if the IDA signal-to-noise ratio is greater than 10:1, which was achieved for all IDAs in the samples.

- iii. Do the sample results with failed surrogate recoveries have data flags? If so, are the data flags clearly defined?

Yes  No  NA (Please explain.)

Comments:

N/A; the data did not require flags.

- iv. Data quality or usability affected? (Use the comment box to explain.)

Comments:

The data quality and usability were not affected.

- d. Trip blank – Volatile analyses only (GRO, BTEX, Volatile Chlorinated Solvents, etc.): Water and Soil

- i. One trip blank reported per matrix, analysis and for each cooler containing volatile samples? (If not, enter explanation below.)

Yes  No  NA (Please explain.)

Comments:

PFCs are not volatile compounds, so a trip blank is not required.

- ii. Is the cooler used to transport the trip blank and VOA samples clearly indicated on the COC? (If not, a comment explaining why must be entered below)

Yes  No  NA (Please explain.)

Comments:

No trip blank is required; see above.

- iii. All results less than PQL?

Yes  No  NA (Please explain.)

Comments:

No trip blank is required; see above.

iv. If above PQL, what samples are affected?

Comments:

No trip blank is required; see above.

v. Data quality or usability affected? (Please explain.)

Comments:

The data quality and usability were not affected.

e. Field Duplicate

i. One field duplicate submitted per matrix, analysis and 10 project samples?

Yes  No  NA (Please explain.)

Comments:

ii. Submitted blind to lab?

Yes  No  NA (Please explain.)

Comments:

The field duplicate pair "87408" / "87418" was submitted for this work order.

iii. Precision – All relative percent differences (RPD) less than specified DQOs?

(Recommended: 30% water, 50% soil)

$$\text{RPD (\%)} = \text{Absolute value of: } \frac{(R_1 - R_2)}{((R_1 + R_2)/2)} \times 100$$

Where  $R_1$  = Sample Concentration

$R_2$  = Field Duplicate Concentration

Yes  No  NA (Please explain.)

Comments:

The RPD value for FOSA is greater than 100%. The RPD values for the other PFC analytes, where calculable for detected results, meet QC criteria.

iv. Data quality or usability affected? (Use the comment box to explain why or why not.)

Comments:

Data quality for FOSA results in the field duplicate pair is considered affected. The results for "87408" and "87418" are considered estimated and flagged 'J' where not already qualified.

f. Decontamination or Equipment Blank (If not used explain why).

Yes  No  NA (Please explain.)

Comments:

Reusable equipment was not used in sample collection for this work order, so an equipment blank was not required.

i. All results less than PQL?

Yes  No  NA (Please explain.)

Comments:

N/A; an equipment blank was not required.

ii. If above PQL, what samples are affected?

Comments:

N/A; an equipment blank was not required.

iii. Data quality or usability affected? (Please explain.)

Comments:

The data quality and usability were not affected.

7. Other Data Flags/Qualifiers (ACOE, AFCEE, Lab Specific, etc.)

a. Defined and appropriate?

Yes  No  NA (Please explain.)

Comments:

There were no other data qualifiers used.

## Qualifiers

### LCMS

Qualifier	Qualifier Description
*	Isotope Dilution analyte is outside acceptance limits.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
B	Compound was found in the blank and sample.

## Glossary

**Abbreviation** These commonly used abbreviations may or may not be present in this report.

dw	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

# Case Narrative

Client: Shannon & Wilson

Project/Site: City of Fairbanks Fire Training Area

TestAmerica Job ID: 320-17748-1

SDG: 31-1-11735-004

## Job ID: 320-17748-1

### Laboratory: TestAmerica Sacramento

#### Narrative

#### Job Narrative 320-17748-1

#### Receipt

The samples were received on 3/16/2016 10:00 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 3.7° C.

#### LCMS

Method(s) WS-LC-0025: The Isotope Dilution Analyte (IDA) recovery associated with the following samples is below the method recommended limit: 652286 (320-17748-1), 3228039 (320-17748-2), 87157 (320-17748-3), 669077 (320-17748-4), 87351 (320-17748-5), 522384 (320-17748-6), 522484 (320-17748-7), 87386 (320-17748-8), 87165 (320-17748-9), 92924 (320-17748-10), 87360 (320-17748-11) and 87190 (320-17748-12). Generally, data quality is not considered affected if the IDA signal-to-noise ratio is greater than 10:1, which is achieved for all IDA in the samples.

Method(s) WS-LC-0025: The reporting limit for perfluoro-n-hexadecanoic acid (PFHxDA) had to be raised for the following samples due to problems with the low levels of the calibration curve. 652286 (320-17748-1), 3228039 (320-17748-2), 87157 (320-17748-3), 669077 (320-17748-4), 87351 (320-17748-5), 522384 (320-17748-6), 522484 (320-17748-7), 87386 (320-17748-8), 87165 (320-17748-9), 92924 (320-17748-10), 87360 (320-17748-11) and 87190 (320-17748-12)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

#### Organic Prep

Method(s) 3535: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with 320-103929

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

## Login Sample Receipt Checklist

Client: Shannon & Wilson

Job Number: 320-17748-1  
SDG Number: 31-1-11735-004

**Login Number: 17748**

**List Source: TestAmerica Sacramento**

**List Number: 1**

**Creator: Nelson, Kym D**

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	N/A	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A	

## Laboratory Data Review Checklist

Completed by:	Tiffany Green		
Title:	Environmental Scientist	Date:	March 25, 2016
CS Report Name:	City of Fairbanks Fire Training Area	Report Date:	March 25, 2016
Consultant Firm:	Shannon & Wilson, Inc.		
Laboratory Name:	TestAmerica, Inc.	Laboratory Report Number:	320-17748
ADEC File Number:	102.38.182	ADEC RecKey Number:	

### 1. Laboratory

- a. Did an ADEC CS approved laboratory receive and perform all of the submitted sample analyses?  
 Yes  No  NA (Please explain.)      Comments:

The ADEC has not approved any analytical laboratory for perfluorinated compound (PFC) analysis.

- b. If the samples were transferred to another “network” laboratory or sub-contracted to an alternate laboratory, was the laboratory performing the analyses ADEC CS approved?

Yes  No  NA (Please explain.)      Comments:

Analyses were performed by TestAmerica, Inc. in Folsom, California.

### 2. Chain of Custody (COC)

- a. COC information completed, signed, and dated (including released/received by)?  
 Yes  No  NA (Please explain.)      Comments:

- b. Correct analyses requested?

Yes  No  NA (Please explain.)      Comments:

### 3. Laboratory Sample Receipt Documentation

- a. Sample/cooler temperature documented and within range at receipt ( $4^{\circ} \pm 2^{\circ}$  C)?  
 Yes  No  NA (Please explain.)      Comments:

The temperature blank or cooler was measured within the acceptable temperature range of 0 °C to 6 °C upon receipt at the laboratory, as specified in the EPA publication SW-846. This range has been approved by ADEC.

- b. Sample preservation acceptable – acidified waters, Methanol preserved VOC soil (GRO, BTEX, Volatile Chlorinated Solvents, etc.)?

Yes  No  NA (Please explain.)

Comments:

Analysis of PFCs does not require a preservative.

- c. Sample condition documented – broken, leaking (Methanol), zero headspace (VOC vials)?

Yes  No  NA (Please explain.)

Comments:

The sample-receipt form notes that the samples were received in good condition.

- d. If there were any discrepancies, were they documented? For example, incorrect sample containers/preservation, sample temperature outside of acceptable range, insufficient or missing samples, etc.?

Yes  No  NA (Please explain.)

Comments:

There were no discrepancies reported.

- e. Data quality or usability affected? (Please explain.)

Comments:

No, the data quality and usability were unaffected.

#### 4. Case Narrative

- a. Present and understandable?

Yes  No  NA (Please explain.)

Comments:

- b. Discrepancies, errors or QC failures identified by the lab?

Yes  No  NA (Please explain.)

Comments:

The case narrative identifies the following discrepancies:

The Isotope Dilution Analyte (IDA) recovery for method WS-LC-0025 associated with the 12 samples is below the method-recommended limit of 25% to 150%. Generally, data quality is not considered affected if the IDA signal-to-noise ratio is greater than 10:1, which was achieved for all IDA in the samples.

The reporting limit for PFHxD was raised due to problems with the low levels of the calibration curve. Results below the revised PQL should be considered suspect.

Organic preparation method 3535: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with sample 320-103929.

- c. Were all corrective actions documented?

Yes  No  NA (Please explain.)

Comments:

Yes; see above.

d. What is the effect on data quality/usability according to the case narrative?

Comments:

IDA recovery failures are considered to affect data quality, and are discussed in Section 6c. The method reporting limit and organic preparation batch comments are not considered to affect data quality or usability.

## 5. Samples Results

a. Correct analyses performed/reported as requested on COC?

Yes  No  NA (Please explain.)

Comments:

b. All applicable holding times met?

Yes  No  NA (Please explain.)

Comments:

The hold time of seven days until extraction was met.

c. All soils reported on a dry weight basis?

Yes  No  NA (Please explain.)

Comments:

N/A; no soil samples were submitted with this work order.

d. Are the reported PQLs less than the Cleanup Level or the minimum required detection level for the project?

Yes  No  NA (Please explain.)

Comments:

The PQL, equivalent to the TestAmerica Reporting Limit (RL), is less than applicable EPA provisional drinking water health advisory levels and ADEC proposed groundwater-cleanup levels for perfluorooctane sulfonate (PFOS) and perfluorooctanoic acid (PFOA).

e. Data quality or usability affected?

Comments:

The data quality and usability were unaffected.

## 6. QC Samples

a. Method Blank

i. One method blank reported per matrix, analysis and 20 samples?

Yes  No  NA (Please explain.)

Comments:

ii. All method blank results less than PQL?

Yes  No  NA (Please explain.)

Comments:

Five PFC analytes were detected in the MB at estimated concentrations less than their PQLs (reporting limits, or RLs). These analytes are perfluorodecanoic acid (PFDA), perfluorododecanoic acid (PFDoA), perfluorotetradecanoic acid (PFTeA), perfluoroundecanoic acid (PFUnA), and perfluoro-n-octadecanoic acid (PFODA).

iii. If above PQL, what samples are affected?

Comments:

Each of the twelve samples were associated with the MB containing detectable perfluorinated compounds. The results for PFUnA are considered unaffected because PFUnA was not detected in the project samples.

The results for PFDA, PFDoA, PFTeA, and PFODA are considered to affect at least one sample result because they were present in the MB at concentrations less than or equal to the LOQ, and the sample concentrations were within a factor of five of the MB concentrations.

iv. Do the affected sample(s) have data flags and if so, are the data flags clearly defined?

Yes  No  NA (Please explain.)

Comments:

Where not already qualified by the laboratory, these results are considered not detected and flagged 'B\*' at either the reported sample result or the PQL, whichever is higher.

v. Data quality or usability affected? (Please explain.)

Comments:

Yes; see above.

b. Laboratory Control Sample/Duplicate (LCS/LCSD)

i. Organics – One LCS/LCSD reported per matrix, analysis and 20 samples? (LCS/LCSD required per AK methods, LCS required per SW846)

Yes  No  NA (Please explain.)

Comments:

LCS/LCSD sample results were reported.

ii. Metals/Inorganics – one LCS and one sample duplicate reported per matrix, analysis and 20 samples?

Yes  No  NA (Please explain.)

Comments:

Metals and inorganics were not analyzed as part of this work order.

iii. Accuracy – All percent recoveries (%R) reported and within method or laboratory limits?

And project specified DQOs, if applicable. (AK Petroleum methods: AK101 60%-120%, AK102 75%-125%, AK103 60%-120%; all other analyses see the laboratory QC pages)

Yes  No  NA (Please explain.)

Comments:

Yes; percent recoveries were between 60% and 140% or 150% depending on the analytes, as required by the laboratory method.

- iv. Precision – All relative percent differences (RPD) reported and less than method or laboratory limits? And project specified DQOs, if applicable. RPD reported from LCS/LCSD, MS/MSD, and or sample/sample duplicate. (AK Petroleum methods 20%; all other analyses see the laboratory QC pages)

Yes  No  NA (Please explain.)

Comments:

Yes; LCS/LCSD RPDs were within the laboratory limit of 30%.

- v. If %R or RPD is outside of acceptable limits, what samples are affected?

Comments:

N/A; percent recoveries and RPDs were within acceptable limits.

- vi. Do the affected sample(s) have data flags? If so, are the data flags clearly defined?

Yes  No  NA (Please explain.)

Comments:

N/A; no data flags are required.

- vii. Data quality or usability affected? (Use comment box to explain.)

Comments:

The data quality and usability were unaffected.

c. Surrogates – Organics Only

- i. Are surrogate recoveries reported for organic analyses – field, QC and laboratory samples?

Yes  No  NA (Please explain.)

Comments:

The analytical method WS-LC-0025 uses Isotope Dilution Analyte (IDA) recovery, which entails adding a 13C-isotope of each target analyte and assessing the recovery of each analyte. The isotopically labeled compounds are the surrogates for this method.

- ii. Accuracy – All percent recoveries (%R) reported and within method or laboratory limits? And project specified DQOs, if applicable. (AK Petroleum methods 50-150 %R; all other analyses see the laboratory report pages)

Yes  No  NA (Please explain.)

Comments:

With the exception of 13C8 perfluorooctane sulfonamide (FOSA), the percent recoveries are within the method-recommended limit of 25% to 150%. The percent recovery for FOSA is below the method recommended limit for each of the 12 samples. However, according to the laboratory, data quality is not considered affected if the IDA signal-to-noise ratio is greater than 10:1, which was achieved for all IDAs in the samples.

- iii. Do the sample results with failed surrogate recoveries have data flags? If so, are the data flags clearly defined?

Yes  No  NA (Please explain.)

Comments:

The data did not require flags.

iv. Data quality or usability affected? (Use the comment box to explain.)

Comments:

The data quality and usability were unaffected.

d. Trip blank – Volatile analyses only (GRO, BTEX, Volatile Chlorinated Solvents, etc.): Water and Soil

i. One trip blank reported per matrix, analysis and for each cooler containing volatile samples?  
(If not, enter explanation below.)

Yes  No  NA (Please explain.)

Comments:

PFCs are not volatile compounds, so a trip blank is not required.

ii. Is the cooler used to transport the trip blank and VOA samples clearly indicated on the COC?  
(If not, a comment explaining why must be entered below)

Yes  No  NA (Please explain.)

Comments:

No trip blank is required; see above.

iii. All results less than PQL?

Yes  No  NA (Please explain.)

Comments:

No trip blank is required; see above.

iv. If above PQL, what samples are affected?

Comments:

No trip blank is required; see above.

v. Data quality or usability affected? (Please explain.)

Comments:

The data quality and usability were not affected.

e. Field Duplicate

i. One field duplicate submitted per matrix, analysis and 10 project samples?

Yes  No  NA (Please explain.)

Comments:

ii. Submitted blind to lab?

Yes  No  NA (Please explain.)

Comments:

The field duplicate pair "522384" / "522484" was submitted for this work order.

- iii. Precision – All relative percent differences (RPD) less than specified DQOs?  
(Recommended: 30% water, 50% soil)

$$\text{RPD (\%)} = \text{Absolute value of: } \frac{(R_1 - R_2)}{((R_1 + R_2)/2)} \times 100$$

Where  $R_1$  = Sample Concentration

$R_2$  = Field Duplicate Concentration

Yes  No  NA (Please explain.)      Comments:

The following analytes did not meet recommended RPD criteria: PFDA RPD = 47%; PFTeA RPD = 89%; perfluoro-1-heptanesulfonate (PFHpS) RPD=43%. The RPD values for the other PFC analytes, where calculable for detected results, meet QC criteria.

- iv. Data quality or usability affected? (Use the comment box to explain why or why not.)

Comments:

Data quality for PFDA, PFTeA, and PFHpS results in the field duplicate pair is considered affected. The results for "522384" and "522484" are considered estimated and flagged 'J\*' where not already qualified.

- f. Decontamination or Equipment Blank (If not used explain why).

Yes  No  NA (Please explain.)      Comments:

Reusable equipment was not used in sample collection for this work order, so an equipment blank is not required.

- i. All results less than PQL?

Yes  No  NA (Please explain.)      Comments:

N/A; an equipment blank was not required.

- ii. If above PQL, what samples are affected?

Comments:

N/A; an equipment blank was not required.

iii. Data quality or usability affected? (Please explain.)

Comments:

The data quality and usability were not affected.

7. Other Data Flags/Qualifiers (ACOE, AFCEE, Lab Specific, etc.)

a. Defined and appropriate?

Yes  No  NA (Please explain.)

Comments:

[Redacted]

The test results in this report meet all 2003 NELAC and 2009 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

## Qualifiers

### LCMS

Qualifier	Qualifier Description
*	Isotope Dilution analyte is outside acceptance limits.
B	Compound was found in the blank and sample.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

## Glossary

**Abbreviation** These commonly used abbreviations may or may not be present in this report.

dw	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

# Case Narrative

Client: Shannon & Wilson

Project/Site: City of Fairbanks Fire Training Area

TestAmerica Job ID: 320-18463-1

SDG: 31-1-11735-004

## Job ID: 320-17483-1

### Laboratory: TestAmerica Sacramento

#### Narrative

#### Job Narrative 320-17483-1

#### Receipt

The samples were received on 4/22/2016 11:15 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 4.9° C.

#### LCMS

Method(s) WS-LC-0025: The continuing calibration verification (CCV) associated with batch 109605 recovered above the upper control limit for Perfluorooctane Sulfonamide (FOSA). The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The following samples are impacted: 95443 (320-18463-3), 411866 (320-18463-4), 454974 (320-18463-5) and 4527158 (320-18463-9).

Method(s) WS-LC-0025: The Isotope Dilution Analyte (IDA) recovery associated with the following samples is below the method recommended limit: 167754 (320-18463-1), 167854 (320-18463-2), 95443 (320-18463-3), 411866 (320-18463-4), 454974 (320-18463-5), 127311 (320-18463-6), 127230 (320-18463-7), 524565 (320-18463-8), 4527158 (320-18463-9), 526576 (320-18463-11), 526676 (320-18463-12) and 127523 (320-18463-13). Generally, data quality is not considered affected if the IDA signal-to-noise ratio is greater than 10:1, which is achieved for all IDA in the samples.

Method(s) WS-LC-0025: Isotope Dilution Analyte (IDA) recovery is above the method recommended limit for the following sample: (MB 320-107572/1-A). Quantitation by isotope dilution generally precludes any adverse effect on data quality due to elevated IDA recoveries.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

#### Organic Prep

Method(s) 3535: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with 320-107572

Method(s) 3535: Samples were amber colored. 167754 (320-18463-1), 167854 (320-18463-2), 95443 (320-18463-3), 411866 (320-18463-4), 454974 (320-18463-5), 127311 (320-18463-6), 127230 (320-18463-7), 524565 (320-18463-8), 4527158 (320-18463-9), 127124 (320-18463-10), 526576 (320-18463-11), 526676 (320-18463-12) and 127523 (320-18463-13) Samples 7 and 9 were clogged and took extra time to load into the columns.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

## Laboratory Data Review Checklist

Completed by:	Adam Wyborny	
Title:	Environmental Engineering Staff	Date: May 16, 2016
CS Report Name:	City of Fairbanks Fire Training Area	Report Date: May 16, 2016
Consultant Firm:	Shannon & Wilson, Inc.	
Laboratory Name:	TestAmerica, Inc.	Laboratory Report Number: 320-18463
ADEC File Number:	102.38.182	ADEC RecKey Number:

### 1. Laboratory

- a. Did an ADEC CS approved laboratory receive and perform all of the submitted sample analyses?  
 Yes  No  NA (Please explain.)      Comments:

The ADEC has not approved any analytical laboratory for perfluorinated compound (PFC) analysis.

- b. If the samples were transferred to another “network” laboratory or sub-contracted to an alternate laboratory, was the laboratory performing the analyses ADEC CS approved?

Yes  No  NA (Please explain.)      Comments:

Analyses were performed by TestAmerica, Inc. in Folsom, California.

### 2. Chain of Custody (COC)

- a. COC information completed, signed, and dated (including released/received by)?  
 Yes  No  NA (Please explain.)      Comments:

- b. Correct analyses requested?

Yes  No  NA (Please explain.)      Comments:

### 3. Laboratory Sample Receipt Documentation

- a. Sample/cooler temperature documented and within range at receipt ( $4^{\circ} \pm 2^{\circ}$  C)?  
 Yes  No  NA (Please explain.)      Comments:

The temperature blank or cooler was measured within the acceptable temperature range of 0 °C to 6 °C upon receipt at the laboratory, as specified in the EPA publication SW-846. This range has been approved by ADEC.

- b. Sample preservation acceptable – acidified waters, Methanol preserved VOC soil (GRO, BTEX, Volatile Chlorinated Solvents, etc.)?

Yes  No  NA (Please explain.)

Comments:

Analysis of PFCs does not require a preservative other than temperature control.

- c. Sample condition documented – broken, leaking (Methanol), zero headspace (VOC vials)?

Yes  No  NA (Please explain.)

Comments:

The sample-receipt form notes that the samples were received in good condition.

- d. If there were any discrepancies, were they documented? For example, incorrect sample containers/preservation, sample temperature outside of acceptable range, insufficient or missing samples, etc.?

Yes  No  NA (Please explain.)

Comments:

There were no discrepancies reported by the laboratory.

- e. Data quality or usability affected? (Please explain.)

Comments:

The laboratory did not note any affect on data quality or usability.

#### 4. Case Narrative

- a. Present and understandable?

Yes  No  NA (Please explain.)

Comments:

[Large empty rectangular box for narrative text.]

b. Discrepancies, errors or QC failures identified by the lab?

Yes  No  NA (Please explain.)

Comments:

The case narrative identifies the following discrepancies and observations:

Method(s) WS-LC-0025: The continuing calibration verification (CCV) associated with batch 109605 recovered Perfluorooctane Sulfonamide (FOSA) above the upper control limit. The following samples are affected: 95443 (320-18463-3), 411866 (320-18463-4), 454974 (320-18463-5) and 4527158 (320-18463-9). The samples associated with this CCV did not contain detectable quantities of the affected analytes, so the data were unaffected.

Method(s) WS-LC-0025: The Isotope Dilution Analyte (IDA) recovery associated with the following samples is below the method recommended limit: 167754 (320-18463-1), 167854 (320-18463-2), 95443 (320-18463-3), 411866 (320-18463-4), 454974 (320-18463-5), 127311 (320-18463-6), 127230 (320-18463-7), 524565 (320-18463-8), 4527158 (320-18463-9), 526576 (320-18463-11), 526676 (320-18463-12) and 127523 (320-18463-13). Generally, data quality is not considered affected if the IDA signal-to-noise ratio is greater than 10:1, which is achieved for all IDA in the samples. The data are considered unaffected.

Method(s) WS-LC-0025: Isotope Dilution Analyte (IDA) recovery is above the method recommended limit for project sample MB 320-107572/1-A. Quantitation by isotope dilution generally precludes any adverse effect on data quality due to elevated IDA recoveries.

Method(s) 3535: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with 320-107572.

Method(s) 3535: The following samples were amber colored: 167754 (320-18463-1), 167854 (320-18463-2), 95443 (320-18463-3), 411866 (320-18463-4), 454974 (320-18463-5), 127311 (320-18463-6), 127230 (320-18463-7), 524565 (320-18463-8), 4527158 (320-18463-9), 127124 (320-18463-10), 526576 (320-18463-11), 526676 (320-18463-12) and 127523 (320-18463-13). Samples 7 and 9 were clogged and took extra time to load into the columns.

c. Were all corrective actions documented?

Yes  No  NA (Please explain.)

Comments:

No corrective actions were required.

d. What is the effect on data quality/usability according to the case narrative?

Comments:

The method reporting limit and organic preparation batch comments are not considered to affect data quality or usability.

IDA-recovery failures can affect data quality, and are discussed in Section 6c.

According to the laboratory, quantitation by isotope dilution generally precludes any adverse effect on data quality due to elevated IDA recoveries. In addition, data quality is not considered affected if the IDA signal-to-noise ratio is greater than 10:1, which was achieved for all IDAs in the samples. See Section 6c for further comments.

## 5. Samples Results

- a. Correct analyses performed/reported as requested on COC?  
 Yes  No  NA (Please explain.)      Comments:

- b. All applicable holding times met?  
 Yes  No  NA (Please explain.)      Comments:

The hold time of seven days until extraction was met.

- c. All soils reported on a dry weight basis?  
 Yes  No  NA (Please explain.)      Comments:

No soil samples were submitted with this work order.

- d. Are the reported PQLs less than the Cleanup Level or the minimum required detection level for the project?

Yes  No  NA (Please explain.)      Comments:

The PQL, equivalent to the TestAmerica Reporting Limit (RL), is less than the applicable EPA provisional drinking-water health advisory levels and the ADEC proposed groundwater-cleanup levels for perfluorooctane sulfonate (PFOS) and perfluorooctanoic acid (PFOA).

- e. Data quality or usability affected?  
Comments:

The data quality and usability were unaffected.

## 6. QC Samples

- a. Method Blank  
i. One method blank reported per matrix, analysis and 20 samples?  
 Yes  No  NA (Please explain.)      Comments:

- ii. All method blank results less than PQL?  
 Yes  No  NA (Please explain.)      Comments:

Two PFC analytes were detected in the MB at estimated concentrations less than their PQLs (reporting limits, or RLs). These analytes are Perfluorobutanoic acid (PFBA) and Perfluoro-n-hexadecanoic acid (PFHxDA).

iii. If above PQL, what samples are affected?

Comments:

All of the project samples were associated with the MB containing detectable perfluorinated compounds.

The concentration of PFBA detected in the method blank is considered to affect all project samples except 127230 and 127124. Those samples are considered unaffected because PFBA was detected at concentrations greater than ten times the concentration detected in the method blank. The PFHxDA concentration detected in the method blank is considered to affect all project samples because PFHxDA concentrations were present in all samples at concentrations greater than the method detection limit (MDL) and within a factor of five of the MB concentrations.

iv. Do the affected sample(s) have data flags and if so, are the data flags clearly defined?

Yes  No  NA (Please explain.)

Comments:

The PFBA concentrations detected in project samples 167754, 167854, 411866, 127311, 526576, 526676, and 127523, are considered biased high by the method blank detection and flagged 'JH\*' in the analytical results table.

The PFBA concentrations detected in project samples 95443, 454974, 524565, and 4527158, are considered not detected due to the method blank detection and flagged 'B\*' at either the reported sample result or the PQL, whichever is higher.

The PFHxDA concentrations detected in all project samples are considered not detected and flagged 'B\*' at either the reported sample result or the PQL, whichever is higher.

v. Data quality or usability affected? (Please explain.)

Comments:

Yes; see above.

b. Laboratory Control Sample/Duplicate (LCS/LCSD)

i. Organics – One LCS/LCSD reported per matrix, analysis and 20 samples? (LCS/LCSD required per AK methods, LCS required per SW846)

Yes  No  NA (Please explain.)

Comments:

LCS/LCSD sample results were reported.

ii. Metals/Inorganics – one LCS and one sample duplicate reported per matrix, analysis and 20 samples?

Yes  No  NA (Please explain.)

Comments:

Metals and inorganics were not analyzed as part of this work order.

- iii. Accuracy – All percent recoveries (%R) reported and within method or laboratory limits? And project specified DQOs, if applicable. (AK Petroleum methods: AK101 60%-120%, AK102 75%-125%, AK103 60%-120%; all other analyses see the laboratory QC pages)
- Yes  No  NA (Please explain.)      Comments:

Yes; percent recoveries were between 60% and 140% or 150%, depending on the analytes, as required by the laboratory method.

- iv. Precision – All relative percent differences (RPD) reported and less than method or laboratory limits? And project specified DQOs, if applicable. RPD reported from LCS/LCSD, MS/MSD, and or sample/sample duplicate. (AK Petroleum methods 20%; all other analyses see the laboratory QC pages)
- Yes  No  NA (Please explain.)      Comments:

Yes; LCS/LCSD RPDs were less than the laboratory limit of 30%.

- v. If %R or RPD is outside of acceptable limits, what samples are affected?
- Comments:

No samples were affected; percent recoveries and RPDs were within acceptable limits.

- vi. Do the affected sample(s) have data flags? If so, are the data flags clearly defined?
- Yes  No  NA (Please explain.)      Comments:

No data flags are required; see above.

- vii. Data quality or usability affected? (Use comment box to explain.)
- Comments:

The data quality and usability were unaffected.

c. Surrogates – Organics Only

- i. Are surrogate recoveries reported for organic analyses – field, QC and laboratory samples?
- Yes  No  NA (Please explain.)      Comments:

The analytical method WS-LC-0025 uses Isotope Dilution Analyte (IDA) recovery, which entails adding a <sup>13</sup>C-isotope of each target analyte and assessing the recovery of each analyte. The isotopically labeled compounds are the surrogates for this method.

- ii. Accuracy – All percent recoveries (%R) reported and within method or laboratory limits? And project specified DQOs, if applicable. (AK Petroleum methods 50-150 %R; all other analyses see the laboratory report pages)

Yes  No  NA (Please explain.)

Comments:

The recovery of 13C4 perfluorodecane sulfonate (PFOS) was outside the method-recommended limit of 25% to 150% for project sample 4527158. However, PFOS was not detected in the associated sample so no qualification is necessary.

With the exception of 13C8 perfluorooctane sulfonamide (FOSA), the percent recoveries are within the method-recommended limit of 25% to 150% for all project samples. The percent recovery for FOSA is below the method-recommended limit for each of the project samples except 127124. However, according to the laboratory, data quality is not considered affected if the IDA signal-to-noise ratio is greater than 10:1, which was achieved for all IDAs in the samples.

The percent recoveries of 13C5 perfluorononanoic acid (PFNA), 13C2 perfluorodecanoic acid (PFDA), 13C2 perfluoroundecanoic acid (PFUnA), 13C4 perfluorodecane sulfonate (PFOS), and 13C4 perfluoroheptanoic acid (PFHpA), were outside the method-recommended limit of 25% to 150% for the method blank 320-107572/1-A. However, according to the laboratory, quantitation by isotope dilution generally precludes any adverse effect on data quality due to elevated IDA recoveries.

- iii. Do the sample results with failed surrogate recoveries have data flags? If so, are the data flags clearly defined?

Yes  No  NA (Please explain.)

Comments:

The data did not require flags.

- iv. Data quality or usability affected? (Use the comment box to explain.)

Comments:

The data quality and usability were unaffected.

- d. Trip blank – Volatile analyses only (GRO, BTEX, Volatile Chlorinated Solvents, etc.): Water and Soil

- i. One trip blank reported per matrix, analysis and for each cooler containing volatile samples? (If not, enter explanation below.)

Yes  No  NA (Please explain.)

Comments:

PFCs are not volatile compounds, so a trip blank is not required.

- ii. Is the cooler used to transport the trip blank and VOA samples clearly indicated on the COC? (If not, a comment explaining why must be entered below)

Yes  No  NA (Please explain.)

Comments:

No trip blank is required; see above.

iii. All results less than PQL?

Yes  No  NA (Please explain.)

Comments:

No trip blank is required; see above.

iv. If above PQL, what samples are affected?

Comments:

No trip blank is required; see above.

v. Data quality or usability affected? (Please explain.)

Comments:

The data quality and usability were not affected.

e. Field Duplicate

i. One field duplicate submitted per matrix, analysis and 10 project samples?

Yes  No  NA (Please explain.)

Comments:

ii. Submitted blind to lab?

Yes  No  NA (Please explain.)

Comments:

The field duplicate pairs "167754" / "167854" and "526576" / "526676" were submitted with this work order.

iii. Precision – All relative percent differences (RPD) less than specified DQOs?

(Recommended: 30% water, 50% soil)

$$\text{RPD (\%)} = \text{Absolute value of: } \frac{(R_1 - R_2)}{((R_1 + R_2)/2)} \times 100$$

Where  $R_1$  = Sample Concentration

$R_2$  = Field Duplicate Concentration

Yes  No  NA (Please explain.)

Comments:

For the field duplicate pair "167754" / "167854" the following analytes did not meet recommended RPD criteria: PFNA RPD = 36%, and PFHxDA RPD = 65%. The RPD values for the other PFC analytes, where calculable for detected results, meet QC criteria.

For the field duplicate pair "526576" / "526676", the following analytes did not meet recommended RPD criteria: PFTeA RPD = 86%, and PFHpS RPD = 53%. The RPD values for the other PFC analytes, where calculable for detected results, meet QC criteria.

iv. Data quality or usability affected? (Use the comment box to explain why or why not.)

Comments:

Data quality for PFNA and PFHxD results in the field duplicate pair "167754" / "167854" is considered affected. The results are considered estimated and flagged 'J\*' where not already qualified.

Data quality for PFTeA and PFHpS results in the field duplicate pair "526576" / "526676" is considered affected. The results are considered estimated and flagged 'J\*' where not already qualified.

f. Decontamination or Equipment Blank (If not used explain why).

Yes  No  NA (Please explain.)

Comments:

Reusable equipment was not used in sample collection for this work order, so an equipment blank is not required.

i. All results less than PQL?

Yes  No  NA (Please explain.)

Comments:

N/A; an equipment blank was not required.

ii. If above PQL, what samples are affected?

Comments:

N/A; an equipment blank was not required.

iii. Data quality or usability affected? (Please explain.)

Comments:

The data quality and usability were not affected.

7. Other Data Flags/Qualifiers (ACOE, AFCEE, Lab Specific, etc.)

a. Defined and appropriate?

Yes  No  NA (Please explain.)

The test results in this report meet all 2003 NELAC and 2009 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

## Qualifiers

### LCMS

Qualifier	Qualifier Description
*	Isotope Dilution analyte is outside acceptance limits.
*	LCS or LCSD is outside acceptance limits.
B	Compound was found in the blank and sample.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
H	Sample was prepped or analyzed beyond the specified holding time
*	RPD of the LCS and LCSD exceeds the control limits

## Glossary

### Abbreviation These commonly used abbreviations may or may not be present in this report.

□	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

# Case Narrative

Client: Shannon & Wilson

Project/Site: City of Fairbanks Fire Training Area

TestAmerica Job ID: 320-19030-1

## Job ID: 320-19030-1

### Laboratory: TestAmerica Sacramento

#### Narrative

#### Job Narrative 320-19030-1

#### Receipt

The samples were received on 5/20/2016 9:40 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 3.9° C.

#### LCMS

Method(s) WS-LC-0025: One or more of the Isotope Dilution Analyte (IDA) recoveries is above the method recommended limit for the following samples: 95630 (320-19030-1), 471542 (320-19030-3), 582573 (320-19030-4), 597517-1 (320-19030-6) and 515485 (320-19030-7). Quantitation by isotope dilution generally precludes any adverse effect on data quality due to elevated IDA recoveries.

Method(s) WS-LC-0025: One or more of the The Isotope Dilution Analyte (IDA) recovery associated with the following samples is below the method recommended limit: 471542 (320-19030-3), 582573 (320-19030-4), 593460-2 (320-19030-10), 593460-1 (320-19030-12), MW-207A (320-19030-14) and MW-504 (320-19030-15). Generally, data quality is not considered affected if the IDA signal-to-noise ratio is greater than 10:1, which is achieved for all IDA in the samples.

Method(s) WS-LC-0025: The laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) for prep batch 110951 had low recoveries for Perfluoro-n-octadecanoic acid (PFODA). The samples were re-extracted out of hold time and the reanalysis has the LCS and LCSD in control for this compound. Both sets of data are reported for this compound. The following samples are impacted. 95630 (320-19030-1), 95730 (320-19030-2), 471542 (320-19030-3), 671300 (320-19030-5), 597517-1 (320-19030-6), 515485 (320-19030-7), (LCS 320-110951/2-A) and (LCSD 320-110951/3-A)

Method(s) WS-LC-0025: The laboratory control sample (LCS) and laboratory control sample duplicate for prep batch 111096 had low recovery for Perfluoro-n-octadecanoic acid (PFODA). The samples were re-extracted out of hold time and the reanalysis has the LCS and LCSD in control for this compound. Both sets of data are reported for this compound. The following samples are impacted. 597507 (320-19030-9), 593460-2 (320-19030-10), 563555-1 (320-19030-11), 593460-1 (320-19030-12), 597517-2 (320-19030-13), MW-207A (320-19030-14), MW-504 (320-19030-15), (LCS 320-111096/2-A), (320-18954-A-11-A), (320-18954-A-11-B MS) and (320-18954-A-11-C MSD)

Method(s) WS-LC-0025: The laboratory control sample duplicate (LCSD) for prep batch 112821 recovered outside control limits for the following analytes: Perfluoro-n-octadecanoic acid (PFODA). The samples were either non-detect or J flagged below the reporting limit with the exception of samples 597507 (320-19030-9), which was detected at the reporting limit. As this was a re-extraction, no additional sample remains to perform another extraction.

Method(s) WS-LC-0025: Isotope Dilution Analyte (IDA) recovery is above the method recommended limit for the following sample: 563555-1 (320-19030-11). Quantitation by isotope dilution generally precludes any adverse effect on data quality due to elevated IDA recoveries.

Method(s) WS-LC-0025: The following sample was re-extracted in prep batch 103509 but the analysis shows the sample wasn't spiked with the IDA compounds so it can't be quantified for perfluoro-n-octadecanoic acid (PFODA). The sample was used up in the re-extraction so a second re-extraction isn't possible. The original results are reported for this sample. 582573 (320-19030-4)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

#### Organic Prep

Method(s) 3535: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with analytical batch 320-110951.

Method(s) 3535: These samples 95630 (320-19030-1), 95730 (320-19030-2), 471542 (320-19030-3), 582573 (320-19030-4), 671300 (320-19030-5), 597517-1 (320-19030-6), 515485 (320-19030-7) and 521779 (320-19030-8) came with a light yellowish orange color, but there was no sediment on the bottom.

Method(s) 3535: These samples 597507 (320-19030-9), 593460-2 (320-19030-10), 563555-1 (320-19030-11), 593460-1

## Case Narrative

Client: Shannon & Wilson

Project/Site: City of Fairbanks Fire Training Area

TestAmerica Job ID: 320-19030-1

### Job ID: 320-19030-1 (Continued)

#### Laboratory: TestAmerica Sacramento (Continued)

(320-19030-12), 597517-2 (320-19030-13), MW-207A (320-19030-14) and MW-504 (320-19030-15) contain an orange color.

Method(s) 3535: These samples MW-207A (320-19030-14) and MW-504 (320-19030-15) came in containing some kind of dark orange residue on the bottom.

Method(s) 3535: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with analytical batch 320-112821.

Method(s) 3535: The following samples 597507 (320-19030-9), 593460-2 (320-19030-10), 563555-1 (320-19030-11), 593460-1 (320-19030-12), 597517-2 (320-19030-13), MW-207A (320-19030-14) and MW-504 (320-19030-15) was re-prepared outside of preparation holding time due to low recovery in the LCS. Therefore, a second bottle was used for the re-extraction.

Method(s) 3535: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate/sample duplicate (MS/MSD/DUP) associated with analytical batch 320-113509.

Method(s) 3535: The following samples 95630 (320-19030-1), 95730 (320-19030-2), 471542 (320-19030-3), 582573 (320-19030-4), 671300 (320-19030-5), 597517-1 (320-19030-6), 515485 (320-19030-7) and 521779 (320-19030-8) was re-prepared outside of preparation holding time due to low LCS and LCSD recoveries for one compound.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

## Login Sample Receipt Checklist

Client: Shannon & Wilson

Job Number: 320-19030-1

**Login Number:** 19030

**List Source:** TestAmerica Sacramento

**List Number:** 1

**Creator:** Nelson, Kym D

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A	

## Laboratory Data Review Checklist

Completed by:	Erica Blake		
Title:	Geologist	Date:	June 24, 2016
CS Report Name:	City of Fairbanks Fire Training Area	Report Date:	June 23, 2016
Consultant Firm:	Shannon & Wilson, Inc.		
Laboratory Name:	TestAmerica, Inc.	Laboratory Report Number:	320-19030
ADEC File Number:	102.38.182	ADEC RecKey Number:	

### 1. Laboratory

- a. Did an ADEC CS approved laboratory receive and perform all of the submitted sample analyses?  
 Yes  No  NA (Please explain.)      Comments:

The ADEC has not approved any analytical laboratory for perfluorinated compound (PFC) analysis.

- b. If the samples were transferred to another “network” laboratory or sub-contracted to an alternate laboratory, was the laboratory performing the analyses ADEC CS approved?

Yes  No  NA (Please explain.)      Comments:

Analyses were performed by TestAmerica, Inc. in Folsom, California.

### 2. Chain of Custody (COC)

- a. COC information completed, signed, and dated (including released/received by)?  
 Yes  No  NA (Please explain.)      Comments:

- b. Correct analyses requested?

Yes  No  NA (Please explain.)      Comments:

### 3. Laboratory Sample Receipt Documentation

- a. Sample/cooler temperature documented and within range at receipt ( $4^{\circ} \pm 2^{\circ}$  C)?  
 Yes  No  NA (Please explain.)      Comments:

The temperature blank or cooler was measured within the acceptable temperature range of 0 °C to 6 °C upon receipt at the laboratory, as specified in the EPA publication SW-846. This range has been approved by ADEC.

- b. Sample preservation acceptable – acidified waters, Methanol preserved VOC soil (GRO, BTEX, Volatile Chlorinated Solvents, etc.)?

Yes  No  NA (Please explain.)

Comments:

Analysis of PFCs does not require a preservative other than temperature control.

- c. Sample condition documented – broken, leaking (Methanol), zero headspace (VOC vials)?

Yes  No  NA (Please explain.)

Comments:

The sample-receipt form notes that the samples were received in good condition.

- d. If there were any discrepancies, were they documented? For example, incorrect sample containers/preservation, sample temperature outside of acceptable range, insufficient or missing samples, etc.?

Yes  No  NA (Please explain.)

Comments:

There were no discrepancies reported by the laboratory.

- e. Data quality or usability affected? (Please explain.)

Comments:

The laboratory did not note any affect on data quality or usability.

#### 4. Case Narrative

- a. Present and understandable?

Yes  No  NA (Please explain.)

Comments:

- b. Discrepancies, errors or QC failures identified by the lab?

Yes  No  NA (Please explain.)

Comments:

Isotope Dilution Analyte (IDA) recoveries were outside the method-recommended recovery limits for several project samples. Refer to the Case Narrative for the sample list.

The laboratory control sample (LCS) and/or LCS duplicate (LCSD) for prep batches 110951, 111096 and 112821 had low recoveries for perfluoro-n-octadecanoic acid (PFODA).

Sample 582573 (320-19030-4) was re-extracted in prep batch 103509 but the analysis showed the sample wasn't spiked with the IDA compounds so it can't be quantified for perfluoro-n-octadecanoic acid (PFODA). The sample was used up in the re-extraction so a second re-extraction isn't possible. The original results are reported.

Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with analytical batches 320-110951, 320-112821. Insufficient sample volume was available to perform an MS/MSD/sample duplicate for analytical batch 320-113509.

The extract for all samples were orange or yellow in color. Samples MW-207A (320-19030-14) and MW-504 (320-19030-15) were received with some kind of dark orange residue on the bottom.

- c. Were all corrective actions documented?  
 Yes  No  NA (Please explain.)

Comments:

The LCS and LCSD recovery failures for PFODA required re-extraction of the project samples to confirm the initial extraction results. The re-extractions were performed out of hold time with acceptable LCS and LCSD recoveries, with the exception of PFODA in the LCSD (Prep Batch 112821). Since the sample was a re-extraction there was not sufficient volume to re-extract a third time with passing QC for PFODA.

- d. What is the effect on data quality/usability according to the case narrative?  
Comments:

The laboratory does not specify any effect on the data quality or usability. Refer to Section 6.b for LCS/LCSD recovery failures and Section 6.c for IDA recovery failures.

## 5. Samples Results

- a. Correct analyses performed/reported as requested on COC?  
 Yes  No  NA (Please explain.)

Comments:

- b. All applicable holding times met?  
 Yes  No  NA (Please explain.)

Comments:

Samples were re-extracted out of hold time to confirm the initial results for PFODA due to LCS and LCSD recovery failures. The original results were used for reporting purposes and are not affected by the hold time exceedance.

- c. All soils reported on a dry weight basis?  
 Yes  No  NA (Please explain.)

Comments:

Soil samples were not submitted with this work order.

- d. Are the reported PQLs less than the Cleanup Level or the minimum required detection level for the project?  
 Yes  No  NA (Please explain.)

Comments:

The PQLs, equivalent to the TestAmerica Reporting Limit (RL), are less than the applicable EPA provisional drinking-water health advisory levels and the ADEC proposed groundwater-cleanup levels for perfluorooctane sulfonate (PFOS) and perfluorooctanoic acid (PFOA).

- e. Data quality or usability affected?

Comments:

The data quality and usability were not affected, see above.

## 6. QC Samples

### a. Method Blank

i. One method blank reported per matrix, analysis and 20 samples?

Yes  No  NA (Please explain.)

Comments:

ii. All method blank results less than PQL?

Yes  No  NA (Please explain.)

Comments:

PFC analytes were detected in the method blanks (MBs) at estimated concentrations less than their reporting limits (RL) but greater than the method detection limit (MDL). The analytes are: perfluorobutanoic acid (PFBA), perfluoropentanoic acid (PFPeA), perfluorotetradecanoic acid (PFTeA), perflouroundecanoic acid (PFUnA), and perflouro-n-octadecanoic (PFODA).

iii. If above PQL, what samples are affected?

Comments:

Project samples in the same preparatory batch are affected by the method blank detection if they have reported detections within ten times the method blank detection.

iv. Do the affected sample(s) have data flags and if so, are the data flags clearly defined?

Yes  No  NA (Please explain.)

Comments:

The PFBA concentrations detected in project sample 515485, 593460-2, 593460-1, 597517-2, and MW-207A are considered estimated results (biased high) and are flagged 'JH\*' in the analytical results table.

The PFBA concentrations detected in project samples 95630, 95730, 471542, 582573, 671300, 597517-1, 521779, and 597507 are considered not detected due to the method blank detection and are flagged 'B\*' at either the reported sample result or the reporting limit, whichever is higher.

The PFPeA concentrations detected in project samples 671300, 597517-1, and 515485 are considered estimated results (biased high) and are flagged 'JH\*' in the analytical results table.

The PFPeA concentrations detected in project samples 95630, 95730, 471542, 582573, and 521779 are considered not detected due to the method blank detection and flagged 'B\*' at either the reported sample result or the reporting limit, whichever is higher.

The PFTeA concentrations detected in all project samples are considered not detected and are flagged 'B\*' at either the reported sample result or the reporting limit, whichever is higher.

The PFUnA concentrations detected in project samples 597507, 593460-2 and 593460-1 are considered not detected and are flagged 'B\*' at either the reported sample result or the reporting limit, whichever is higher.

PFODA results from the re-extraction are associated with the method blank detection for PFODA. We are only reporting the original results and consider the method blank detections for PFODA to not affect the original sample results.

v. Data quality or usability affected? (Please explain.)

Comments:

Yes; see above.

b. Laboratory Control Sample/Duplicate (LCS/LCSD)

i. Organics – One LCS/LCSD reported per matrix, analysis and 20 samples? (LCS/LCSD required per AK methods, LCS required per SW846)

Yes  No  NA (Please explain.)

Comments:

LCS/LCSD sample results were reported. Sufficient volume was not available to obtain MS/MSD samples. However, the LCS/LCSD samples are sufficient to assess accuracy and precision.

ii. Metals/Inorganics – one LCS and one sample duplicate reported per matrix, analysis and 20 samples?

Yes  No  NA (Please explain.)

Comments:

Metals and inorganics were not analyzed as part of this work order.

iii. Accuracy – All percent recoveries (%R) reported and within method or laboratory limits?

And project specified DQOs, if applicable. (AK Petroleum methods: AK101 60%-120%, AK102 75%-125%, AK103 60%-120%; all other analyses see the laboratory QC pages)

Yes  No  NA (Please explain.)

Comments:

LCS and LCSD samples for prep batch 110951 and 111096 had low percent recoveries for PFODA.

iv. Precision – All relative percent differences (RPD) reported and less than method or laboratory limits? And project specified DQOs, if applicable. RPD reported from LCS/LCSD, MS/MSD, and or sample/sample duplicate. (AK Petroleum methods 20%; all other analyses see the laboratory QC pages)

Yes  No  NA (Please explain.)

Comments:

The LCS/LCSD RPD for PFODA in prep batch 112821 was outside acceptance criteria.

v. If %R or RPD is outside of acceptable limits, what samples are affected?

Comments:

All reported project sample results for PFODA are affected by the LCS and LCSD recovery failures.

The results for prep batch 112821 were not used for reporting purposes. The project samples are not affected by the RPD failure.

vi. Do the affected sample(s) have data flags? If so, are the data flags clearly defined?

Yes  No  NA (Please explain.)

Comments:

Project sample results for PFODA are considered estimated, biased low due to the LCS and LCSD recovery failures. Project samples results with detections for PFODA are flagged "JL\*" and samples with non-detect results are flagged "J\*" to note the inaccuracy of the QC failure.

vii. Data quality or usability affected? (Use comment box to explain.)

Comments:

Yes; see above.

c. Surrogates – Organics Only

i. Are surrogate recoveries reported for organic analyses – field, QC and laboratory samples?

Yes  No  NA (Please explain.)

Comments:

The analytical method WS-LC-0025 uses Isotope Dilution Analyte (IDA) recovery, which entails adding a 13C-isotope or 18O-isotope for target analyte and assessing the recovery of each analyte. The isotopically labeled compounds are the surrogates for this method.

ii. Accuracy – All percent recoveries (%R) reported and within method or laboratory limits? And project specified DQOs, if applicable. (AK Petroleum methods 50-150 %R; all other analyses see the laboratory report pages)

Yes  No  NA (Please explain.)

Comments:

The project sample MW-504 had recovery failures for all IDAs.

The IDA recovery for 13C2 perfluorododecanoic acid (PFDoA) was outside QC criteria for project sample 563555-1. The analyte PFDoA is associated with the IDA recovery failure.

The IDA recovery for 13C2 perfluoroundecanoic acid (PFUnA) was outside QC criteria for project sample 515485. The analytes PFUnA, PFTriA, and PFTeA are associated with the IDA recovery failure.

The IDA recovery for 13C4 perfluorodecane sulfonate (PFOS) was outside QC criteria for project samples 95630 and 471542. The analytes PFDS and PFOS are associated with IDA recovery failure.

The IDA recovery for 13C8 perfluorooctane sulfonamide (FOSA) was outside QC criteria for project samples 471542, 582573, 593460-2, 593460-1, and MW-270A. The analyte PFOSA is associated with the IDA recovery failure.

The IDA recovery for 18O2 perfluorohexane sulfonate (PFHxS) was outside QC criteria for project samples 95630, 582573, and 597517-1. The analytes PFBS and PFHxS are associated with the IDA recovery failure.

iii. Do the sample results with failed surrogate recoveries have data flags? If so, are the data flags clearly defined?

Yes  No  NA (Please explain.)

Comments:

The analytical results associated with the IDA recovery failures are considered estimated (no bias) and are flagged "J\*" in the analytical tables.

iv. Data quality or usability affected? (Use the comment box to explain.)

Comments:

Yes; see above.

d. Trip blank – Volatile analyses only (GRO, BTEX, Volatile Chlorinated Solvents, etc.): Water and Soil

i. One trip blank reported per matrix, analysis and for each cooler containing volatile samples?  
(If not, enter explanation below.)

Yes  No  NA (Please explain.)

Comments:

PFCs are not volatile compounds, so a trip blank is not required.

ii. Is the cooler used to transport the trip blank and VOA samples clearly indicated on the COC?  
(If not, a comment explaining why must be entered below)

Yes  No  NA (Please explain.)

Comments:

No trip blank is required; see above.

iii. All results less than PQL?

Yes  No  NA (Please explain.)

Comments:

No trip blank is required; see above.

iv. If above PQL, what samples are affected?

Comments:

No trip blank is required; see above.

v. Data quality or usability affected? (Please explain.)

Comments:

The data quality and usability were not affected.

e. Field Duplicate

i. One field duplicate submitted per matrix, analysis and 10 project samples?

Yes  No  NA (Please explain.)

Comments:

ii. Submitted blind to lab?

Yes  No  NA (Please explain.)

Comments:

The field duplicate pair "95630" / "95730" was submitted with this work order.

iii. Precision – All relative percent differences (RPD) less than specified DQOs?

(Recommended: 30% water, 50% soil)

$$\text{RPD (\%)} = \frac{\text{Absolute value of: } (R_1 - R_2)}{(R_1 + R_2)/2} \times 100$$

Where  $R_1$  = Sample Concentration

$R_2$  = Field Duplicate Concentration

Yes  No  NA (Please explain.)

Comments:

The field duplicate RPDs were within QC criteria (where calculable), with the exception of the RPD for perfluoro-n-hexadecanoic acid (PFHxDA). The PFHxDA results are for the field duplicate samples are considered estimated (no bias) and are flagged "J\*" in the analytical table.

iv. Data quality or usability affected? (Use the comment box to explain why or why not.)

Comments:

Yes; see above.

f. Decontamination or Equipment Blank (If not used explain why).

Yes  No  NA (Please explain.)      Comments:

Reusable equipment was not used in sample collection for this work order, so an equipment blank is not required.

i. All results less than PQL?

Yes  No  NA (Please explain.)      Comments:

N/A; an equipment blank was not required.

ii. If above PQL, what samples are affected?

Comments:

N/A; an equipment blank was not required.

iii. Data quality or usability affected? (Please explain.)

Comments:

The data quality and usability were not affected.

7. Other Data Flags/Qualifiers (ACOE, AFCEE, Lab Specific, etc.)

a. Defined and appropriate?

Yes  No  NA (Please explain.)      Comments:

## **APPENDIX E**

### **IMPORTANT INFORMATION ABOUT YOUR GEOTECHNICAL/ENVIRONMENTAL REPORT**

Attachment to and part of Report: 31-1-11735-005

Date: August 2016

To: Mr. Jackson Fox, City of Fairbanks

Re: February to May 2016 Private Well Sampling  
Summary Report, City of Fairbanks Regional  
Fire Training Center, Fairbanks, Alaska

## IMPORTANT INFORMATION ABOUT YOUR GEOTECHNICAL/ENVIRONMENTAL REPORT

### **CONSULTING SERVICES ARE PERFORMED FOR SPECIFIC PURPOSES AND FOR SPECIFIC CLIENTS.**

Consultants prepare reports to meet the specific needs of specific individuals. A report prepared for a civil engineer may not be adequate for a construction contractor or even another civil engineer. Unless indicated otherwise, your consultant prepared your report expressly for you and expressly for the purposes you indicated. No one other than you should apply this report for its intended purpose without first conferring with the consultant. No party should apply this report for any purpose other than that originally contemplated without first conferring with the consultant.

### **THE CONSULTANT'S REPORT IS BASED ON PROJECT-SPECIFIC FACTORS.**

A geotechnical/environmental report is based on a subsurface exploration plan designed to consider a unique set of project-specific factors. Depending on the project, these may include: the general nature of the structure and property involved; its size and configuration; its historical use and practice; the location of the structure on the site and its orientation; other improvements such as access roads, parking lots, and underground utilities; and the additional risk created by scope-of-service limitations imposed by the client. To help avoid costly problems, ask the consultant to evaluate how any factors that change subsequent to the date of the report may affect the recommendations. Unless your consultant indicates otherwise, your report should not be used: (1) when the nature of the proposed project is changed (for example, if an office building will be erected instead of a parking garage, or if a refrigerated warehouse will be built instead of an unrefrigerated one, or chemicals are discovered on or near the site); (2) when the size, elevation, or configuration of the proposed project is altered; (3) when the location or orientation of the proposed project is modified; (4) when there is a change of ownership; or (5) for application to an adjacent site. Consultants cannot accept responsibility for problems that may occur if they are not consulted after factors which were considered in the development of the report have changed.

### **SUBSURFACE CONDITIONS CAN CHANGE.**

Subsurface conditions may be affected as a result of natural processes or human activity. Because a geotechnical/environmental report is based on conditions that existed at the time of subsurface exploration, construction decisions should not be based on a report whose adequacy may have been affected by time. Ask the consultant to advise if additional tests are desirable before construction starts; for example, groundwater conditions commonly vary seasonally.

Construction operations at or adjacent to the site and natural events such as floods, earthquakes, or groundwater fluctuations may also affect subsurface conditions and, thus, the continuing adequacy of a geotechnical/environmental report. The consultant should be kept apprised of any such events, and should be consulted to determine if additional tests are necessary.

### **MOST RECOMMENDATIONS ARE PROFESSIONAL JUDGMENTS.**

Site exploration and testing identifies actual surface and subsurface conditions only at those points where samples are taken. The data were extrapolated by your consultant, who then applied judgment to render an opinion about overall subsurface conditions. The actual interface between materials may be far more gradual or abrupt than your report indicates. Actual conditions in areas not sampled may differ from those predicted in your report. While nothing can be done to prevent such situations, you and your consultant can work together to help reduce their impacts. Retaining your consultant to observe subsurface construction operations can be particularly beneficial in this respect.

## **A REPORT'S CONCLUSIONS ARE PRELIMINARY.**

The conclusions contained in your consultant's report are preliminary because they must be based on the assumption that conditions revealed through selective exploratory sampling are indicative of actual conditions throughout a site. Actual subsurface conditions can be discerned only during earthwork; therefore, you should retain your consultant to observe actual conditions and to provide conclusions. Only the consultant who prepared the report is fully familiar with the background information needed to determine whether or not the report's recommendations based on those conclusions are valid and whether or not the contractor is abiding by applicable recommendations. The consultant who developed your report cannot assume responsibility or liability for the adequacy of the report's recommendations if another party is retained to observe construction.

## **THE CONSULTANT'S REPORT IS SUBJECT TO MISINTERPRETATION.**

Costly problems can occur when other design professionals develop their plans based on misinterpretation of a geotechnical/environmental report. To help avoid these problems, the consultant should be retained to work with other project design professionals to explain relevant geotechnical, geological, hydrogeological, and environmental findings, and to review the adequacy of their plans and specifications relative to these issues.

## **BORING LOGS AND/OR MONITORING WELL DATA SHOULD NOT BE SEPARATED FROM THE REPORT.**

Final boring logs developed by the consultant are based upon interpretation of field logs (assembled by site personnel), field test results, and laboratory and/or office evaluation of field samples and data. Only final boring logs and data are customarily included in geotechnical/environmental reports. These final logs should not, under any circumstances, be redrawn for inclusion in architectural or other design drawings, because drafters may commit errors or omissions in the transfer process.

To reduce the likelihood of boring log or monitoring well misinterpretation, contractors should be given ready access to the complete geotechnical engineering/environmental report prepared or authorized for their use. If access is provided only to the report prepared for you, you should advise contractors of the report's limitations, assuming that a contractor was not one of the specific persons for whom the report was prepared, and that developing construction cost estimates was not one of the specific purposes for which it was prepared. While a contractor may gain important knowledge from a report prepared for another party, the contractor should discuss the report with your consultant and perform the additional or alternative work believed necessary to obtain the data specifically appropriate for construction cost estimating purposes. Some clients hold the mistaken impression that simply disclaiming responsibility for the accuracy of subsurface information always insulates them from attendant liability. Providing the best available information to contractors helps prevent costly construction problems and the adversarial attitudes that aggravate them to a disproportionate scale.

## **READ RESPONSIBILITY CLAUSES CLOSELY.**

Because geotechnical/environmental engineering is based extensively on judgment and opinion, it is far less exact than other design disciplines. This situation has resulted in wholly unwarranted claims being lodged against consultants. To help prevent this problem, consultants have developed a number of clauses for use in their contracts, reports, and other documents. These responsibility clauses are not exculpatory clauses designed to transfer the consultant's liabilities to other parties; rather, they are definitive clauses that identify where the consultant's responsibilities begin and end. Their use helps all parties involved recognize their individual responsibilities and take appropriate action. Some of these definitive clauses are likely to appear in your report, and you are encouraged to read them closely. Your consultant will be pleased to give full and frank answers to your questions.
