Re: **First Semi-Annual 2006 Groundwater Monitoring Report**
Delta Western/Former Chevron Bulk Terminal #100-1467
1417 Peninsula Street
Wrangell, Alaska
ADEC No. 1994130128401
Cambria Project No. 31J-2235

Dear Mr. Janes:

Cambria Environmental Technology (Cambria) is submitting this *First Semi-Annual 2006 Groundwater Monitoring Report* to the Alaska Department of Environmental Conservation (ADEC) on behalf of Chevron Environmental Management Company (Chevron). Cambria prepared this report summarizing the groundwater monitoring and sampling activities during June 2006 at Delta Western/Former Chevron Bulk Terminal #100-1467 in Wrangell, Alaska.

SITE BACKGROUND

Site Description: This site is an operating Delta Western Terminal located at 1417 Peninsula Street in Wrangell, Alaska (Figure 1). The site was developed as a fuel storage facility by Chevron in the late 1930's and is currently operated by Delta Western. Site facilities have not significantly changed since the original construction. The facilities include eight above-ground storage tanks (ASTs) that contain aviation gasoline, jet fuel, unleaded gasoline, supreme gasoline, diesel, and pre-mix gasoline. There is one underground storage tank (UST), which holds heating fuel for the site's shower house. Other site facilities include a fuel loading rack, pump house, a marine fueling dock servicing the Wrangell Harbor, several covered and uncovered drum storage areas, an office, and warehouse buildings (Figure 2).

FIRST SEMI-ANNUAL 2006 ACTIVITIES

Field Activities: Cambria personnel conducted monitoring and sampling activities on monitoring wells MW-1, MW-2, and MW-4 through MW-9 and collected groundwater samples from monitoring wells MW-2, MW-4, MW-5, MW-6, and groundwater seeps SEEP-1 and SEEP-2 on June 29, 2006. Each well was opened and the well cap removed to allow groundwater levels to stabilize. All monitoring wells sampled were purged at a flow rate of approximately 0.1 to 0.5 Liters per minute (L/min) until groundwater parameters (temperature, pH, specific conductance,

Fax (303) 433-3974

oxidation reduction potential (redox), dissolved oxygen, and turbidity) stabilized to within 10% for three consecutive readings. Groundwater samples, including a duplicate sample, were collected into clean containers supplied by the analytical laboratory directly from the output. The samples were submitted under chain-of-custody to Test America Analytical Testing Corporation, Seattle. The groundwater analytical results are summarized in Tables 1, 2, 3, and 4. A copy of the laboratory analytical report is presented as Attachment A. Cambria's well sampling forms are presented as Attachment B. Cambria's standard procedures for low flow groundwater monitoring and sampling is presented as Attachment C. Historical groundwater analytical results are presented as Attachment D. The ADEC Laboratory checklist and QA Summary is presented as Attachment E.

Groundwater Analytical Methods: Groundwater samples from select wells were analyzed for one or more of the following analyses:

- Gasoline Range Organics (GRO) by Alaska Method 101,
- Benzene, Toluene, Ethyl-benzene, and Xylenes, (BTEX) by Environmental Protection Agency (EPA) Method 8021B,
- Diesel Range Organics (DRO) by Alaska Method 102,
- Residual Range Organics (RRO) by Alaska Method 103,
- Volatile Organic Compounds (VOCs) by EPA Method 8260 and
- Semi-volatile Organic Compounds (SVOCs) by EPA Method 8270.

Hydrogeology: The site is located on Wrangell Island in southeastern Alaska, along the shore of the Zimovia Strait. Historical static groundwater levels have ranged between approximately 3.14 and 5.83 feet (ft) below ground surface (bgs) according to groundwater data from 2001 to present. Static groundwater levels ranged from approximately 0.65 (MW-4) to 7.05 ft bgs (MW-8) on June 29, 2006 with a groundwater flow direction to the southwest with a gradient of approximately 0.065 ft/ft (Figure 2).

Groundwater Sampling Results: No RRO or SVOCs were detected above laboratory detection limits in any analyzed groundwater sample. All detected GRO, DRO, and BTEX concentrations in groundwater were below ADEC Table C groundwater cleanup levels. The maximum calculated total aromatic hydrocarbon (TAH) and total aqueous hydrocarbon (TAqH) concentrations were 27.37 µg/L in MW-6. The analytical result for MW-6 and MW-6-DUP exceeded recommended relative percent differences (RPD) but is suspected to be restricted to the collection of the duplicate and should not affect the overall usability of the samples. Groundwater analytical data is listed in Tables 1, 2, 3, and 4.

2006 PLANNED ACTIVITIES

Cambria will continue semi-annual monitoring and sampling during 2006 and evaluate site groundwater conditions.

CLOSING

We appreciate the opportunity to work with Chevron and the ADEC on this project. Please call John Riggi at (303) 433-3923 if you have any questions.

Sincerely,
Cambria Environmental Technology, Inc.

Notes and Definitions

Report Specific Notes:

D-09 - Results in the diesel organics range are primarily due to overlap from a heavy oil range product.

Q-41 - This analyte had a high bias in the associated calibration verification standard.

Laboratory Reporting Conventions:

DET - Analyte DETECTED at or above the Reporting Limit. Qualitative Analyses only.

ND - Analyte NOT DETECTED at or above the reporting limit (MDL or MRL, as appropriate).

NR/NA - Not Reported / Not Available

dry - Sample results reported on a Dry Weight Basis. Results and Reporting Limits have been corrected for Percent Dry Weight.

wet - Sample results and reporting limits reported on a Wet Weight Basis (as received). Results with neither 'wet' nor 'dry' are reported on a Wet Weight Basis.

RPD - RELATIVE PERCENT DIFFERENCE (RPDs calculated using Results, not Percent Recoveries).

MRL - METHOD REPORTING LIMIT. Reporting Level at, or above, the lowest level standard of the Calibration Table.

MDL* - METHOD DETECTION LIMIT. Reporting Level at, or above, the statistically derived limit based on 40CFR, Part 136, Appendix B. *MDLs are listed on the report only if the data has been evaluated below the MRL. Results between the MDL and MRL are reported as Estimated Results.

Dil - Dilutions are calculated based on deviations from the standard dilution performed for an analysis, and may not represent the dilution found on the analytical raw data.

Reporting Limits - Reporting limits (MDLs and MRLs) are adjusted based on variations in sample preparation amounts, analytical dilutions and percent solids, where applicable.

Electronic Signature - Electronic Signature added in accordance with TestAmerica's *Electronic Reporting and Electronic Signatures Policy.* Application of electronic signature indicates that the report has been reviewed and approved for release by the laboratory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Notes and Definitions

Report Specific Notes:

D-09 - Results in the diesel organics range are primarily due to overlap from a heavy oil range product.

Laboratory Reporting Conventions:

DET - Analyte DETECTED at or above the Reporting Limit. Qualitative Analyses only.

ND - Analyte NOT DETECTED at or above the reporting limit (MDL or MRL, as appropriate).

NR/NA - Not Reported / Not Available

dry - Sample results reported on a Dry Weight Basis. Results and Reporting Limits have been corrected for Percent Dry Weight.

wet - Sample results and reporting limits reported on a Wet Weight Basis (as received). Results with neither 'wet' nor 'dry' are reported on a Wet Weight Basis.

RPD - RELATIVE PERCENT DIFFERENCE (RPDs calculated using Results, not Percent Recoveries).

MRL - METHOD REPORTING LIMIT. Reporting Level at, or above, the lowest level standard of the Calibration Table.

MDL* - METHOD DETECTION LIMIT. Reporting Level at, or above, the statistically derived limit based on 40CFR, Part 136, Appendix B. *MDLs are listed on the report only if the data has been evaluated below the MRL. Results between the MDL and MRL are reported as Estimated Results.

Dil - Dilutions are calculated based on deviations from the standard dilution performed for an analysis, and may not represent the dilution found on the analytical raw data.

Reporting Limits - Reporting limits (MDLs and MRLs) are adjusted based on variations in sample preparation amounts, analytical dilutions and percent solids, where applicable.

Electronic Signature - Electronic Signature added in accordance with TestAmerica's *Electronic Reporting and Electronic Signatures Policy.* Application of electronic signature indicates that the report has been reviewed and approved for release by the laboratory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Notes and Definitions

Report Specific Notes:

D-09 - Results in the diesel organics range are primarily due to overlap from a heavy oil range product.

Laboratory Reporting Conventions:

DET - Analyte DETECTED at or above the Reporting Limit. Qualitative Analyses only.

ND - Analyte NOT DETECTED at or above the reporting limit (MDL or MRL, as appropriate).

NR/NA - Not Reported / Not Available

dry - Sample results reported on a Dry Weight Basis. Results and Reporting Limits have been corrected for Percent Dry Weight.

wet - Sample results and reporting limits reported on a Wet Weight Basis (as received). Results with neither 'wet' nor 'dry' are reported on a Wet Weight Basis.

RPD - RELATIVE PERCENT DIFFERENCE (RPDs calculated using Results, not Percent Recoveries).

MRL - METHOD REPORTING LIMIT. Reporting Level at, or above, the lowest level standard of the Calibration Table.

MDL* - METHOD DETECTION LIMIT. Reporting Level at, or above, the statistically derived limit based on 40CFR, Part 136, Appendix B. *MDLs are listed on the report only if the data has been evaluated below the MRL. Results between the MDL and MRL are reported as Estimated Results.

Dil - Dilutions are calculated based on deviations from the standard dilution performed for an analysis, and may not represent the dilution found on the analytical raw data.

Reporting Limits - Reporting limits (MDLs and MRLs) are adjusted based on variations in sample preparation amounts, analytical dilutions and percent solids, where applicable.

Electronic Signature - Electronic Signature added in accordance with TestAmerica's *Electronic Reporting and Electronic Signatures Policy.* Application of electronic signature indicates that the report has been reviewed and approved for release by the laboratory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Standard Procedures for Low Flow Groundwater Monitoring and Sampling

CAMBRIA

STANDARD FIELD PROCEDURES FOR LOW FLOW GROUNDWATER MONITORING AND SAMPLING

This document presents standard field methods for groundwater monitoring, purging and sampling, and well development. These procedures are designed to comply with Federal, State and local regulatory guidelines. Cambria's specific field procedures are summarized below.

Groundwater Monitoring

Prior to performing monitoring activities, the historical monitoring and analytical data of each monitoring well shall be reviewed to determine if any of the wells are likely to contain separate phase hydrocarbons (SPH) and to determine the order in which the wells will be monitored (i.e. cleanest to dirtiest). Groundwater monitoring should not be performed when the potential exists for surface water to enter the well (i.e. flooding during a rainstorm).

Prior to monitoring, each well shall be opened and the well cap removed to allow water levels to stabilize and equilibrate. The condition of the well box and well cap shall be observed and recommended repairs noted. Any surface water that may have entered and flooded the well box should be evacuated prior to removing the well cap. In wells with no history of SPH, the static water level and total well depth shall be measured to the nearest 0.01 foot with an electronic water level meter. Wells with the highest contaminant concentrations shall be monitored last. In wells with a history of SPH, the SPH level/thickness and static water level shall be measured to the nearest 0.01 foot using an electronic interface probe. The water level meter and/or interface probe shall be thoroughly cleaned and decontaminated at the beginning of the monitoring event and between each well. All monitoring and sample equipment (e.g., pumps, in-line water quality measurement device, tubing, etc.) shall be decontaminated using soapy water consisting of Liqui-nox™ or Alconox™ followed by one rinse of clean tap water and then two rinses of distilled water.

Groundwater Purging and Sampling

Prior to groundwater purging and sampling, the historical analytical data of each monitoring well shall be reviewed to determine the order in which the wells should be purged and sampled (i.e. cleanest to dirtiest). No purging or groundwater sampling shall be performed on wells with a sheen or measurable thickness of SPH or floating SPH globules. Prior to purging, all monitoring equipment shall be decontaminated and calibrated to manufacturer's recommendations. Wells shall be purged by using an aboveground pump (e.g. peristaltic or Wattera™) or down-hole pump (e.g. Grundfos™ or DC Purger pump) provided the pump has flow control. The pump intake shall be slowly lowered down the well and set in the middle of the screened interval as to not disturb the water column. An in-line water quality measurement device (e.g., flow-through cell) shall be used to establish the stabilization time for the necessary parameters (e.g., pH, temperature, specific conductance, oxidation reduction potential (redox), dissolved oxygen, and turbidity.

Groundwater wells shall be purged at a rate of approximately 0.1 to 0.5 Liters per minute (L/min), unless site conditions warrant otherwise, until groundwater parameters have stabilized to within 10% for three consecutive readings. Temperature, pH, specific conductance, oxidation reduction potential (redox), dissolved oxygen, and turbidity shall be measured and recorded at the start and completion of purging. The total volume of groundwater removed shall be recorded along with any other notable physical characteristic such as color and odor.

Groundwater samples shall be collected into clean containers supplied by the analytical laboratory directly from the output after stabilization of groundwater parameters has been established. New latex gloves and disposable tubing shall be used for sampling each well. If a

down-hole pump is used for groundwater purging and collection, it shall be decontaminated before purging and sampling each well by using soapy water consisting of Liqui-nox™ or Alconox™ followed by one rinse of clean tap water and then two rinses of distilled water. If a submersible pump with non-dedicated discharge tubing is used for groundwater purging, both the inside and outside of pump and discharge tubing shall be decontaminated as described above.

Sample Handling

Except for samples that will be tested in the field, or that require special handling or preservation, samples shall be stored in coolers chilled to 4° C for shipment to the analytical laboratory. Samples shall be labeled, placed in protective foam sleeves or bubble wrap as needed, stored on crushed ice at or below 4° C, and submitted under chain-of-custody (COC) to the laboratory. The laboratory shall be notified of the sample shipment schedule and arrival time. Samples shall be shipped to the laboratory within a time frame to allow for extraction and analysis to be performed within the standard sample holding times.

Sample labels shall be filled out using indelible ink and must contain the site name; field identification number; the date, time, and location of sample collection; notation of the type of sample; identification of preservatives used; remarks; and the signature of the sampler. Field identification must be sufficient to allow easy cross-reference with the field datasheet.

All samples submitted to the laboratory shall be accompanied by a COC record to ensure adequate documentation. One copy of the COC shall be kept in the QA/QC file and another copy shall be retained in the project file. Information on the COC shall consist of the project name and number; project location; sample numbers; sampler/recorder's signature; date and time of collection of each sample; sample type; analyses requested; name of person receiving the sample; and date of receipt of sample.

Laboratory-supplied trip blanks shall accompany the samples and be analyzed to check for cross-contamination, if requested by the project manager.

Well Development

Wells shall be developed using a combination of groundwater surging and extraction. A surge block shall be used to swab the well and agitate the groundwater in order to dislodge any fine sediment from the sand pack. After approximately ten minutes of swabbing the well, groundwater shall be extracted from the well using a bailer, pump and/or reverse air-lifting through a pipe to remove the sediments from the well. Alternating surging and extraction shall continue until the sediment volume in the groundwater (i.e. turbidity) is negligible, which typically requires extraction of approximately ten well-casing volumes of groundwater. Preliminary well development usually is performed during well installation prior to placing the sanitary surface seal to ensure sand pack stabilization. Well development that is performed after surface seal installation, should occur 72 hours after seal installation to ensure that the cement has had adequate time to set.

Waste Handling and Disposal

Groundwater extracted during development and sampling shall be stored onsite in sealed U.S. DOT H17 55-gallon drums. Each drum shall be labeled with the contents, date of generation, generator identification and consultant contact. If hydrocarbon concentrations in the purged groundwater are below ADEC cleanup levels or the site is in a remote area (pending ADEC approval) groundwater will be discharged to the ground surface, at least 100 feet from the nearest surface water body.

Notes:

GRO = gasoline range organics
DRO = diesel range organics
RRO = residual range organics
MSL = mean sea level
TOC = top of casing
TAH = total aromatic hydrocarbons (totaled concentrations of benzene, toluene, ethyl-benzene, and total xylenes)
TAqH = total aqueous hydrocarbons (totaled concentrations of TAH and total PAHs from Table 2)
-- = not analyzed
ND = not detected - all compounds
ppb = parts per billion
< = not detected at or above laboratory detection limit shown

Table 1
Groundwater Analytical Data
(Petroleum Hydrocarbons)

Delta Western/Former Chevron Bulk Terminal #1001467
1417 Peninsula Street
Wrangell, Alaska

Sample Description	Date Monitored	Well Elevation (feet-MSL)	Depth to Water (feet TOC)	Groundwater Elevation (feet-MSL)	SPH Thickness (feet)	Date Sampled	GRO (ppb)	Benzene (ppb)	Toluene (ppb)	Ethyl-benzene (ppb)	Total Xylenes (ppb)	DRO (ppb)	RRO (ppb)	Total TAH (ppb)	Total TAqH (ppb)

a = not detected at or above laboratory detection limit shown
b = 10.0 feet of casing added to well due to residential construction activites.
c = Re-sampled on 4/26/02 for GRO/BTEX Compounds due to container breakage by laboratory.
d = 5.0 feet removed following residential construction activities

ATTACHMENT E

ADEC Laboratory Checklist and QA Summary

Laboratory Data Review Checklist

1. Laboratory
   a. Did an ADEC CS approved laboratory receive and perform all of the submitted sample analyses?
      [X] Yes ☐ No Comments: **Test America Laboratories, WA**

   b. If the samples were transferred to another "network" laboratory or sub-contracted to an alternate laboratory, was the laboratory performing the analyses ADEC CS approved?
      ☐ Yes ☐ No Comments: **N/A**

2. Chain of Custody (COC)
   a. COC information completed, signed, and dated (including released/received by)?
      [X] Yes ☐ No Comments:

   b. Correct analyses requested?
      [X] Yes ☐ No Comments:

3. Laboratory Sample receipt documentation
   a. Sample/cooler temperature documented and within range at receipt ($4^{o} \pm 2^{o}$ C)?
      [X] Yes ☐ No Comments: **With a range of 5.4 ^{o}C to 5.9^{o}C**

   b. Sample preservation acceptable – acidified waters, Methanol preserved VOC soil (GRO, BTEX, Volatile Chlorinated Solvents, etc.)?
      [X] Yes ☐ No Comments: **HCL**

   c. Sample condition documented – broken, leaking (Methanol), zero headspace (VOC vials)?
      [X] Yes ☐ No Comments: **Samples received in good condition.**

   d. If there were any discrepancies, were they documented? – For example, incorrect sample containers/preservation, sample temperature outside of acceptance range, insufficient or missing samples, etc.?
      ☐ Yes ☐ No Comments: **N/A**

   e. Data quality or usability affected? Explain
      Data quality or usability is not affected.

4. Case Narrative
   a. Present and understandable?
      ☐ Yes **[X] No** Comments: **No case narrative was provided.**

b. Discrepancies, errors or QC failures identified by the lab?
☐ Yes ☐ No Comments: **N/A**

c. Were all corrective actions documented?
☐ Yes ☐ No Comments: **N/A**

d. What is the effect on data quality/usability according to the case narrative?
A case narrative was not provided.

5. Samples Results
   a. Correct analyses performed/reported as requested on COC?
   [X] Yes ☐ No Comments:

   b. All applicable holding times met?
   [X] Yes ☐ No Comments:

   c. All soils reported on a dry weight basis?
   ☐ Yes ☐ No Comments: **N/A (Groundwater Samples)**

   d. Are the reported PQLs less than the Cleanup Level or the minimum required detection level for the project?
   [X] Yes ☐ No Comments:

   e. Data quality or usability affected? Explain
   Data quality or usability not affected.

6. QC Samples
   a. Method Blank
      i. One method blank reported per matrix, analysis and 20 samples?
      [X] Yes ☐ No Comments:

      ii. All method blank results less than PQL?
      [X] Yes ☐ No Comments:

      iii. If above PQL, what samples are affected?
      Not Applicable

      iv. Do the affected sample(s) have data flags? If so, are the data flags clearly defined?
      ☐ Yes **[X] No** Comments: **No affected samples.**

      v. Data quality or usability affected? Explain
      Data quality or usability not affected.

b. Laboratory Control Sample/Duplicate (LCS/LCSD)

i. Organics - One LCS/LCSD reported per matrix, analysis and 20 samples?

[X] Yes ☐ No Comments:

ii. Metals/Inorganics - One LCS and one sample duplicate reported per matrix, analysis and 20 samples?

☐ Yes ☐ No Comments: **N/A**

iii. Accuracy – All percent recoveries (%R) reported and within method or laboratory limits? Or project specified DQOs? (AK Petroleum methods 75-125 %R; all other analyses see the laboratory QC pages)

[X] Yes ☐ No Comments:

iv. Precision - All relative percent differences (RPD) reported and less than method or laboratory limits? Or project specified DQOs? (AK Petroleum methods 20 %; all other analyses see the laboratory QC pages)

[X] Yes ☐ No Comments:

v. If %R or RPD outside of acceptable limits, what samples are affected?

%R or RPD were not outside of acceptable limits.

vi. Do the affected sample(s) have data flags? If so, are the data flags clearly defined?

☐ Yes ☐ No Comments: **No affected samples.**

vii. Data quality or usability affected? Explain

Data quality or usability not affected.

c. Surrogates – Organics only

i. Are surrogate recoveries reported for organic analyses – field, QC and laboratory samples?

[X] Yes ☐ No Comments:

ii. Accuracy – All percent recoveries (%R) reported and within method or laboratory limits? Or project specified DQOs? (AK Petroleum methods 50-150 %R; all other analyses see the laboratory report pages)

[X] Yes ☐ No Comments:

iii. Do the sample results with failed surrogate recoveries have data flags? If so, are the data flags clearly defined?

☐ Yes ☐ No Comments: **Results did not fail surrogate recoveries.**

iv. Data quality or usability affected? Explain
Data quality or usability is not affected.

d. Trip Blank – Volatile analyses only (GRO, BTEX, Volatile Chlorinated Solvents, etc.): water and soil

i. One trip blank reported per matrix, analysis and cooler?

☐ Yes **[X] No** Comments: **Two out of four coolers did not have a trip blank associated with them.**

ii. All results less than PQL?

[X] Yes ☐ No Comments:

iii. If above PQL, what samples are affected?
Results not above PQL.

iv. Data quality or usability affected? Explain
Data quality or usability not affected.

e. Field Duplicate

i. One field duplicate submitted per matrix, analysis and 10 project samples?

[X] Yes ☐ No Comments: **One duplicate sample was provided.**

ii. Submitted blind to lab?

☐ Yes **[X] No** Comments: **Duplicate sample was labeled as MW-6-Dup.**

iii. Precision - All relative percent differences (RPD) less than specified DQOs? (Recommended: 30% water, 50% soil)

☐ Yes **[X] No**

Comments:

MW-6-DUP

$$RPD = \frac{(X_1 - X_2)}{(X_1 + X_2)/2} * 100\%$$

| Concentration (µg/L) / Duplicate Concentration (µg/L) |
GRO = |98.1/739| = 153.1%
DRO = |0.255/0.284| = 10.8%
RRO = |ND/ND| = 0.0%
Benzene = |ND/ND| = 0.0%
Toluene = |23.5/232| = 163.2%
Ethylbenzene = |0.673/1.58| = 80.5%
Total Xylenes = |3.20/2.89| = 10.2%

iv. Data quality or usability affected? Explain

Although the RPD is more than the specified DQOs, after reviewing the historical data, it is suspected that the error was restricted to the specific sample and should not affect the overall usability.

f. Decontamination or Equipment Blank (if applicable)

☐ Yes ☐ No **[X] Not Applicable**

i. All results less than PQL?

☐ Yes ☐ No Comments: **N/A**

ii. If above PQL, what samples are affected?

N/A

iii. Data quality or usability affected? Explain

Disposable tubing used and did not require decontamination procedures. Data quality or usability not affected.

7. Other Data Flags/Qualifiers (ACOE, AFCEE, Lab specific, etc.)

a. Defined and appropriate

☐ Yes ☐ No

Comments:

No Data Flags/Qualifiers reported.

Completed by: **Nicholas M. Greco**

Date: **October 26, 2006**

QUALITY ASSURANCE SUMMARY
CHEVRON 100-1467, 1st SEMI-ANNUAL 2006
GROUNDWATER MONITORING EVENT

Precision

Field Duplicates: Four groundwater monitoring wells and two seeps were sampled. One field duplicate (MW-6-DUP) was collected from well MW-6.

Laboratory Sample Duplicates and/or Spike Duplicates: Laboratory sample duplicates and matrix spike duplicates were analyzed and reported with all groundwater samples collected during groundwater sampling activities.

Accuracy

Laboratory QC Samples Percent Recoveries–Spikes: All laboratory QC sample percent recoveries were within accepted values.

Surrogate Percent Recoveries: All surrogate sample percent recoveries were within accepted values.

Representativeness

Site Condition Characterization: Groundwater samples were collected from all existing ADEC requested monitoring wells associated with the site.

Consistency with Conceptual Site Model (CSM) and Data Quality Objectives: Groundwater sampling was conducted in accordance with Cambria's ADEC approved historical sampling plan.

Comparability

Field Screening vs. Laboratory Data Correlation: There were no noted irregularities or observations on submitted field sheets.

Laboratory Standardization: Test America Laboratories, Washington conducted all sample analysis.

Completeness

Percent Completeness: The 85% minimum completeness goal per the ADEC UST Procedures Manual was met:

%Completeness = (Number of Valid samples/Number of total) * 100%

- %Completeness = (6/6) * 100% = 100% Complete

Sensitivity

Limits of Detection: The laboratory limits of detection were less than the regulatory cleanup levels established in Groundwater Cleanup Levels, Table C (ADEC, 18 AAC 75.345).

Blank Results: The trip blank limits of detection were less than the PQL.
