RE: 2006 Annual Groundwater Sampling Results

814 Gold Mine Trail

Mr. Lee:

In accordance with our proposal, **NORTECH** Environmental Engineering, Health, and Safety (**NORTECH**) completed the 2006 groundwater sampling event at the residence located at 814 Gold Mine Trail in Fairbanks (the Site). These activities were requested by ADEC in a letter dated January 4, 2006 and completed in general accordance with **NORTECH**'s proposal dated March 29, 2006.

Site Background

The drinking water well at the 814 Gold Mine Trail residence was determined to be contaminated with fuel during a property transaction during 2004. The source of contamination was determined to be leaking underground fittings located in the fuel line between the buried heating oil tank and the structures two furnaces. The tank was removed and soil remediation was undertaken during the winter of 2005. A single monitoring well was installed downhill of the release location as the hydraulic gradient was assumed to be similar to the steep surface contours.

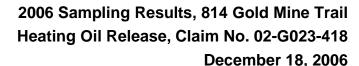

The monitoring well was installed in May and June of 2005 and consists of 80 feet of six-inch steel casing and 140 feet of 4.5-inch plastic liner. The total depth of the well is approximately 200 feet with water bearing schist beginning at 125 feet below the ground surface. The plastic liner is perforated from 100 to 200 feet below grade.

Field Activities

NORTECH mobilized to the site to measure the depth to water and sample the monitoring well on May 25, 2006. The depth to water was measured at 84.23 feet below the top of the casing. **NORTECH** initially expected that the purging and sampling could be completed with a bailer, however this was abandoned due to the volume of purging necessary and **NORTECH** made arrangements to return to the site the following day with a decontaminated submersible pump.

On May 26, 2006 **NORTECH** brought a submersible pump system to the site to complete the groundwater purging and sampling. The well produced up to 10 gallons a minute, but the water was very rusty and turbid. The flow rate was reduced to about 4 gallons a minute and became less turbid after about 50 minutes, but never cleared up

completely. This was consistent with the previous sampling event and the samples were collected after purging approximately 250 gallons. Purge water was disposed of on site based on previous results and samples were collected for diesel range organics (DRO, Method AK102) and benzene toluene, ethylbenzene, and xylenes (BTEX, EPA Method 524.2 for drinking water). These samples were delivered to SGS Environmental Services for analyses under a standard chain of custody.

Results, Conclusions, and Recommendations

The results from this sample are summarized and compared to the previous sampling event in Table 1, which is attached. A copy of the laboratory report is also attached with a completed laboratory quality review checklist as required by ADEC.

Benzene, toluene, ethylbenzene, and xylenes (BTEX) and diesel range organics (DRO) are the contaminants of concern at this site. BTEX compounds were not detected in the monitoring well during the 2005 and 2006 sampling events. A trace amount of DRO was detected at a concentration below the cleanup level in 2005 and the pattern was not consistent with diesel fuel or heating oil. DRO was not detected in 2006 indicating the previous detection of DRO is probably not a concern. Review of the laboratory data indicates that it meets the quality objectives for this project.

The 2006 sampling event was completed in accordance with the ADEC approved work plan for groundwater sampling and represents the second sampling event for the property. ADEC typically requires a minimum of three consecutive groundwater sampling events and **NORTECH** recommends completing the approved 2007 groundwater sampling event as planned. At that time, the data will be reviewed for potential conditional closure by ADEC.

We trust that this information is sufficient for your needs at the present time. Please call if you have any questions or comments about the proposed scope or estimate. We look forward to the opportunity to work with you on this project and appreciate your confidence in **NORTECH**.

Sincerely, **NORTECH**

Peter Beardsley, PE Environmental Engineer

Refer to the sample receipt form for information on sample condition.

704828 MB MB for HBN 172536 [VXX/15409]

524.2 - MB result for napthalene is above one half PQL but below PQL. Napthalene is below PQL for all associated samples.

704834 CCV CCV for HBN 172537 [VMS/8391]

524.2 - CCV recovery for vinyl chloride @ 136% (limit is 130%). This analyte is below PQL for all associated samples.

Enclosed are the analytical results associated with the above workorder.

As required by the state of Alaska and the USEPA, a formal Quality Assurance/Quality Control Program is maintained by SGS. A copy of our Quality Assurance Plan (QAP), which outlines this program, is available at your request.

The laboratory certification numbers are AK971-05 (DW), UST-005 (CS) and AK00971 (Micro) for ADEC and 001543 for NELAP.

Except as specifically noted, all statements and data in this report are in conformance to the provisions set forth by the SGS QAP, the National Environmental Laboratory Accreditation Program and, when applicable, other regulatory authorities.

If you have any questions regarding this report or if we can be of any other assistance, please contact your SGS Project Manager at 907-562-2343.

The following descriptors may be found on your report which will serve to further qualify the data.

PQL	Practical Quantitation Limit (reporting limit).
U	Indicates the analyte was analyzed for but not detected.
F	Indicates value that is greater than or equal to the MDL.
J	The quantitation is an estimation.
ND	Indicates the analyte is not detected.
В	Indicates the analyte is found in a blank associated with the sample.
*	The analyte has exceeded allowable regulatory or control limits.
GT	Greater Than
D	The analyte concentration is the result of a dilution.
LT	Less Than
!	Surrogate out of control limits.
Q	QC parameter out of acceptance range.
M	A matrix effect was present.
JL	The analyte was positively identified, but the quantitation is a low estimation.
E	The analyte result is above the calibrated range.

Note: Soil samples are reported on a dry weight basis unless otherwise specified.

TO BE COMPLETED IN ANCHORAGE UPON ARRIVAL FROM FAIRBANKS OR HAWAII. NOTES RECORDED BELOW ARE ACTIONS NEEDED UPON ARRIVAL IN ANCHORAGE.
Notes:
Receipt Date / Time: 5/27/06 1(45
Is Sample Date/Time Conversion Necessary? Yes No
Number of Hours From Alaska Local Time:
Foreign Soil? Yes No
Delivery method to Anchorage (circle all that apply):
Alert Courier / UPS / FedEx / USPS / AA Goldstreak / NAC / ERA / PenAir / Carlile / Lynden / SGS
Other:
Airbill #

Laboratory Data Review Checklist

1. Laboratory a. Did an ADEC CS approved laboratory receive and perform all of the submitted sample analyses? Yes O No Comments: b. If the samples were transferred to another "network" laboratory or sub-contracted to an alternate laboratory, was the laboratory performing the analyses ADEC CS approved? Comments: O Yes O No NA 2. Chain of Custody (COC) a. COC information completed, signed, and dated (including released/received by)? Comments: Yes \bigcirc No b. Correct analyses requested? Comments: Yes O No 3. <u>Laboratory Sample Receipt Documentation</u> a. Sample/cooler temperature documented and within range at receipt $(4^{\circ} \pm 2^{\circ} \text{ C})$? Comments: Yes \bigcirc No b. Sample preservation acceptable - acidified waters, Methanol preserved VOC soil (GRO, BTEX, Volatile Chlorinated Solvents, etc.)? Yes Comments: O No c. Sample condition documented - broken, leaking (Methanol), zero headspace (VOC vials)? Comments: Yes O No
