Subject:

ART Fourth Annual Monitoring Report
Former TBE Machine Shop Property
Mile 22.5 Kenai Spur Highway
Nikiski, Alaska

ENVIRONMENT

Date:
January 8, 2020

Dear Mr. Campbell:

This letter report has been prepared on behalf of the General Electric Company (GE) to document groundwater monitoring in August 2019 following shut down of the Accelerated Remediation Technologies (ART) in-well treatment system installed at the Former TBE Machine Shop Property located at 49200 Kenai Spur Highway (milepost 22.5) in Nikiski, Alaska (Figure 1). Monitoring included routine system inspections and groundwater gauging/sampling. Annual monitoring was performed in accordance with the Alaska Department of Environmental Conservation- (ADEC-) approved *ART Third Annual Monitoring Report, Revision No. 1* (Arcadis U.S., Inc., February 2019). Pursuant to 18 Alaska Administrative Code 75.335, the work described in this report was conducted under the supervision of a Qualified Person. The report is organized to provide a summary of activities in the following sections:

- System Operation and Maintenance
- Annual Groundwater Monitoring
- Investigation-derived Waste (IDW) Management
- Data Quality Assurance (QA)/Quality Control (QC) Summary
- Recommendations
- Summary

SYSTEM OPERATION AND MAINTENANCE

As presented in the *ART Post-System Startup Report* (Arcadis U.S., Inc. [Arcadis], August 2014), the ART system was installed in May 2014 and system startup activities were conducted in June 2014. The system was in continuous operation from June 18, 2014 to June 6, 2016, when the system was shutdown, with no significant issues noted and no down time, aside from routine maintenance periods. During the operation of the ART system, groundwater was sampled for volatile organic compounds (VOCs), diesel-range organics (DRO), gasoline-range organics (GRO), and field measurements of water quality parameters and ferrous iron on a quarterly basis. Based on these results, the system was shut down and post-shutdown monitoring was proposed in the *ART Second Annual Monitoring Report, Former TBE Machine Shop Property* (Arcadis, 2016). ADEC concurred with proposed post-shutdown monitoring in an e-mail from Mr. Pete Campbell (ADEC) to Mr. Matthew Pelton (Arcadis) dated September 9, 2016.

ANNUAL GROUNDWATER MONITORING

Annual groundwater sampling was conducted on August 1, 2019. The sampling event included static water level measurements at all 11 monitoring wells shown on Figure 1, as well as groundwater sampling. Samples collected from each of the 11 monitoring wells were analyzed for VOCs, DRO, GRO, and field measurements of water quality parameters.

Static water level measurements were recorded at each monitoring well prior to sampling. Water levels are summarized in Table 1. Samples were collected from the wells following purging using low flow techniques. Samples were submitted for laboratory analysis for VOCs by United States Environmental Protection Agency (USEPA) SW-846 Method 8260B, GRO by AK Method 101, and DRO by AK Method 102. A summary of all groundwater data to date since baseline sampling in 2014, conducted shortly before system startup is provided in Table 2. Laboratory analytical results are provided in Attachment 1. Laboratory Data Review Checklists are provided in Attachment 2.

VOC concentrations in samples collected from monitoring wells MW-3, MW-6, and MW-8 through MW-11 have never exceeded groundwater cleanup levels, including samples collected in 2019. Eight VOCs have historically been detected in one or more of the remaining monitoring wells (MW-1, MW-2, MW-4, MW-5, and MW-7) at concentrations above groundwater cleanup levels: 1,2,4-Trimethylbenzene, cis-1,2-dichloroethene (cis-DCE), ethylbenzene, naphthalene, tetrachloroethene (PCE), trichloroethene (TCE), vinyl chloride, and total xylenes. Of these VOCs, only four were detected at concentrations above cleanup levels in samples collected in 2019:

- cis-DCE in MW-1, MW-2, and MW-5
- Ethylbenzene in MW-2 and MW-5
- TCE in MW-1 and MW-4
- Total xylenes in MW-5

Recent groundwater data are generally consistent with historical groundwater concentrations for VOCs in monitoring wells MW-1, MW-2, MW-4, and MW-5. Groundwater concentrations at most wells remain below or within one order of magnitude of the cleanup levels. Concentrations of cis-DCE in MW-1 have decreased from the atypically high results observed in September of 2017. Similarly, MW-5 has had declining

concentrations of cis-DCE from 2017 up to and including the 2019 sample. Overall, decreases in concentrations indicate that attenuation of cis-DCE exceeds the rate of generation via any operative anaerobic reductive dechlorination. The decrease in TCE concentration observed in well MW-1 is consistent with anaerobic reductive dechlorination. Recent chlorinated solvent data indicates that natural attenuation is proceeding and effecting meaningful positive changes at the site. This is consistent with maintenance of a more consistently anaerobic environment due to the lack of oxygen introduction via the ART system operation.

Ethylbenzene and xylene concentrations in MW-2 and MW-5 have remained fairly constant and are very close to the standard. While GRO remains below the cleanup standard in all wells, DRO in MW-5 was slightly above the standard, at a concentration of 1.6 mg/L versus a standard of 1.5 mg/L.

IDW MANAGEMENT

Groundwater from well purging was treated on-site by pumping through a carbon-filled drum. Treated groundwater was discharged to the ground per prior ADEC approval.

DATA QA/QC SUMMARY

As required by ADEC (Technical Memorandum 06-002, dated August 20, 2009), Arcadis completed a laboratory data review checklist for each TestAmerica Laboratories, Inc. (TestAmerica) laboratory report generated as part of the monitoring activities. The laboratory reports are included as Attachment 1 and the data review checklists are included as Attachment 2. The following QA summary describes parameters related to the quality and usability of the data presented in this report.

Sample Handling

Samples collected as part of the sampling program were shipped overnight via FedEx to Eurofins in Seattle, Washington to perform the requested analyses, using the methods specified in the chain of custody records.

Sample receipt forms for each work order were reviewed to verify that samples were received in good condition and within the acceptable temperature range. All samples were received within the acceptable temperature range upon arrival at the laboratory.

Sensitivity

Laboratory method blanks were analyzed in association with samples collected for the sampling program to check for contributions to the analytical results possibly attributable to laboratory-based contamination. A trip blank was submitted with groundwater samples for VOC and/or GRO analysis to verify that cross-contamination did not occur during sample handling and transport. There were no method blank or trip blank detections affecting data quality for the reporting period. An equipment rinsate blank was submitted for DRO, GRO, and VOC analysis to verify that proper equipment decontamination procedures were performed.

Precision

Field duplicate samples were collected at a frequency of approximately 20 percent of the overall number of samples collected during the August sampling event. The data meet precision objectives for field duplicate and matrix spike (MS) and matrix spike duplicate (MSD) RPDs.

Accuracy

Accuracy is evaluated using percent recoveries for laboratory control samples such as LCS, LCSD, MS, and MSD. The LCS and/or LCSD percent recoveries were outside the laboratory upper control limit for at least one analyte for the August 2019 groundwater sampling event. However, the associated sample result was a non-detection, and qualification was not necessary. The MS and/or MSD percent recoveries were outside laboratory control limits for at least one analyte for the August 2019 groundwater sampling event. However, the associated sample result was a non-detection, and qualification was not necessary, with the following exceptions:

- 4-chlorotoluene, 1,3-dichlorobenzene, 1,4-dichlorobenzene, 4-isopropyltoluene, m-xylene & p-xylene, n-butylbenzene, N-propylbenzene, sec-butylbenzene, tert-butylbenzene, 1,1,2,2-tetrachloroethane, trans-1,3-dichloropropene, 1,2,3-trichloropropane, 1,2,4-trimethylbenzene, and 1,3,5-trimethylbenzene qualified as "UJ" for estimated due to MS and MSD recovery outside the laboratory lower control limit for sample MW-9.

The data meet accuracy objectives as indicated by the laboratory QC samples.

Completeness

The results appear to be valid and usable, and meet the ADEC completeness goal.

A review of the laboratory data package indicates that the collected samples are considered to be representative of site conditions at the locations and times they were obtained. No samples were rejected as unusable due to quality control failures.

RECOMMENDATIONS

No evidence of significant rebound was observed during the 2019 post-ART system shutdown monitoring period. Based on the limited changes in groundwater quality observed during this monitoring period, GE proposes continued annual monitoring and reporting through 2020 for groundwater rebound and long-term groundwater quality trends with the ART system off. This is consistent with the recommendations outlined in the *ART Third Annual Monitoring Report* (Arcadis U.S., Inc., February 2019).

Samples will be collected from wells MW-1 through MW-11 during each event. Sampling will be performed in late summer/early fall, which is historically the time of year in which higher concentrations are observed in groundwater. Wells will be sampled for VOCs, DRO, and GRO. Field parameters to be collected include dissolved oxygen, oxidation-reduction potential, pH, specific conductivity, temperature, and turbidity. No collection of ferrous iron or HPC data is proposed.

The ART system wells did not reduce concentrations of contaminants to below standards over the course of their operation. While the ART system operation may have provided some benefit, it is unclear what the contribution of the ART system was to the overall improvement in groundwater concentrations of PCE and TCE. The formation of cis-DCE is indicative of anaerobic degradation of PCE and TCE; something which would not be expected to be enhanced, but rather hindered by, the ART system. At the present time, the predominate remaining chlorinated VOC is cis-DCE, which is amenable to both aerobic and anaerobic biodegradation. As the site conditions are amenable to cis-DCE formation, it is recommended that nothing be done to interfere with anaerobic reductive chlorination processes. Operation of the ART system may be counterproductive in that it produces, at least locally, conditions that are not favorable for anaerobic reductive dechlorination. All of the remaining constituents are amenable to non-biological attenuation mechanisms. Given the current concentrations and types of VOCs that now predominate, conditions are well suited to monitored natural attenuation as the sole remedy going forward.

SUMMARY

Routine groundwater monitoring has been conducted on site since the shutdown of the ART system in June 2016. Results have remained consistent with historical data and annual monitoring is proposed for 2020. If you have any questions or concerns, please feel free to call me at 919-415-2308 or Mr. Bob Witsell of GE at 706-291-3319.

Sincerely,

Arcadis U.S., Inc.

Matthew Pelton
Project Manager

Notes:
1. Groundwater cleanup levels are the Alaska Department of Environmental Conservation's Groundwater Cleanup Levels (Article 3 - 18 AAC 75.345), revised October 2018.

Duplicate sample concentrations are presented in brackets.

Exceedances are bolded and shaded.

-- = No cleanup level available

B = Compound was found in the blank and the sample.

F1 = MS and/or MSD Recovery exceeds the control limits.

H = Sample was prepped or analyzed beyond the specified holding time

J = estimated value

U = not detected

Y = The chromatographic response resembles a typical fuel pattern.

NA = not analyzed

Hcn = Sample was prepped or analyzed beyond the specified holding time. Due to the very short holding time of 8 hours, samples could not be analyzed within the hold time.

* = LCS or LCSD exceeds the control limits

µg/L = micrograms per liter

mg/L = milligrams per liter

CFU/mL = colony forming units per milliliter

mV = Millivolts

S.U. = Standard unit

mS/cm = Millisiemens per centimeter

°C = Degree Celsius

NTU = Nephelometric turbidity units

Notes:

1. Groundwater cleanup levels are the Alaska Department of Environmental Conservation's Groundwater Cleanup Levels (Article 3 - 18 AAC 75.345), revised October 2018.

(Article 3 - 18 AAC 75.345), revised October 2018.
Duplicate sample concentrations are presented in brackets.

Exceedances are bolded and shaded.

-- = No cleanup level available

B = Compound was found in the blank and the sample.
E1 - MS = % MCPB present in the sample. E1 = 100.

F1 - MS and/or MSD Recovery exceeds the control limits.
H - sample was prepped or analyzed beyond the specified

H = sample was prepped or analyzed beyond the specified hold time

J = estimated value

U = not detected

Y = The chromatographic response resembles a typical fuel peak.

NA = not analyzed
Hep. = Sample was prepared or analyzed beyond the specified

Hcn = Sample was prepped or analyzed beyond the specified holding time. Due to the very short holding time of 8 hours,

Holding time. Due to the very short holding time of 8 hours, samples could not be analyzed within the hold time.

* = LCS or LCSD exceeds the control limits

$\mu\text{g/L}$ = micrograms per liter

CFU/ml = colony forming units per milliliter

mV = Millivolts

MV = Millivolts
S.U. = Standard unit

mS/cm = Millisiemens per centimeter

$^{\circ}\text{C}$ = Degree Celsius

NTU = Nephelometric turbidity units

Comments

No additional comments.

Receipt

The samples were received on 8/2/2019 12:30 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 2 coolers at receipt time were 5.0° C and 5.9° C.

Receipt Exceptions

The Chain-of-Custody (COC) was incomplete as received and/or improperly completed. Sample 1 (EQB) did not have sample time listed on the CoC. Time taken from sample container labels.

Multiple sample labels from multiple samples were missing the '-W-190801' portion that is part of the sample IDs on the CoC but were including MW-1 or MW-4, for example. Client was contacted and instructed that all samples be logged in according to the CoC.

MS/MSD were listed as separate samples on the CoC with matching dates and times to parent sample. The MS and MSD samples were logged in as MS/MSD connected to the parent sample.

GC/MS VOA

Method(s) 8260C: The minimum response factor (RF) criteria for the continuing calibration verification (CCV) analyzed in batch 580-307894 was outside criteria for the following analyte(s): Styrene. As indicated in the reference method, sample analysis may proceed; however, any detection or non-detection for the affected analyte(s) is considered estimated.

Method(s) 8260C: The continuing calibration verification (CCV) associated with batch 580-307894 recovered outside acceptance criteria, low biased, for Naphthalene, Bromoform and 1,2-Dibromo-3-Chloropropane. A reporting limit (RL) standard was analyzed, and the target analyte was detected. Since the associated samples were non-detect for this analyte, the data have been reported.

Method(s) 8260C: The laboratory control sample (LCS) for analytical batch 580-307894 recovered outside control limits for the following analytes: Bromomethane. This analyte was biased high in the LCS and was not detected in the associated samples; therefore, the data have been reported.

Method(s) 8260C: The minimum response factor (RF) criteria for the continuing calibration verification (CCV) analyzed in batch 580-308148 was outside criteria for the following analyte: Styrene. As indicated in the reference method, sample analysis may proceed; however, any detection or non-detection for the affected analyte(s) is considered estimated.

Method(s) 8260C: The following samples were diluted to bring the concentration of target analytes within the calibration range: MW-5-W-190801 (580-88094-7). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC VOA

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

GC Semi VOA

Method(s) AK102 & 103: The following samples contained a hydrocarbon pattern in the diesel range; however, the elution pattern was later than the typical diesel fuel pattern used by the laboratory for quantitative purposes: MW-4-W-190801 (580-88094-2), MW-3-W-190801 (580-88094-3), MW-1-W-190801 (580-88094-4), MW-2-W-190801 (580-88094-5), MW-5-W-190801 (580-88094-7), MW-6-W-190801 (580-88094-8), MW-11-W-190801 (580-88094-12) and BD-1-W-190801 (580-88094-13).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Organic Prep

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
*	LCS or LCSD is outside acceptance limits.
F1	MS and/or MSD Recovery is outside acceptance limits.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation These commonly used abbreviations may or may not be present in this report.

□	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Client Sample Results

Client: ARCADIS U.S. Inc
Project/Site: GE-Kenai, AK

Job ID: 580-88094-1

Client Sample ID: EQB-1-W-190801
Date Collected: 08/01/19 09:00
Date Received: 08/02/19 14:28

Lab Sample ID: 580-88094-1
Matrix: Water

Method: 8260C - Volatile Organic Compounds by GC/MS

Accreditation/Certification Summary

Client: ARCADIS U.S. Inc
Project/Site: GE-Kenai, AK

Job ID: 580-88094-1

Laboratory: Eurofins TestAmerica, Seattle

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	EPA Region	Identification Number	Expiration Date
Alaska (UST)	State Program	10	17-024	01-19-20

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
8260C		Water	1,1-Dichloropropene
8260C		Water	1,2-Dibromo-3-Chloropropane
8260C		Water	1,3-Dichloropropane
8260C		Water	2,2-Dichloropropane
8260C		Water	2-Chlorotoluene
8260C		Water	4-Chlorotoluene
8260C		Water	4-Isopropyltoluene
8260C		Water	Chlorobromomethane
8260C		Water	cis-1,3-Dichloropropene
8260C		Water	trans-1,3-Dichloropropene

Login Sample Receipt Checklist

Client: ARCADIS U.S. Inc

Job Number: 580-88094-1

Login Number: 88094

List Source: Eurofins TestAmerica, Seattle

List Number: 1

Creator: Pilch, Andrew C

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	False	No sample date and/or time on COC, logged in per container labels.
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	False	Refer to Job Narrative for details.
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	False	Refer to Job Narrative for details.
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Laboratory Data Review

Checklist

Laboratory Data Review Checklist

Completed by:	Kylie Kegerreis		
Title:	Environmental Engineer	Date:	11/14/2019
CS Report Name:	GE - Kenai	Report Date:	8/15/2019
Consultant Firm:	Arcadis U.S., Inc.		
Laboratory Name:	TestAmerica, Inc.	Laboratory Report Number:	580-88094-1
ADEC File Number:		ADEC RecKey Number:	

1. Laboratory

a. Did an ADEC CS approved laboratory receive and perform all of the submitted sample analyses?

Yes No NA (Please explain.)

Comments:

b. If the samples were transferred to another "network" laboratory or sub-contracted to an alternate laboratory, was the laboratory performing the analyses ADEC CS approved?

Yes No NA (Please explain)

Comments:

Samples were not transferred or sub-contracted to an alternate laboratory

2. Chain of Custody (COC)

a. COC information completed, signed, and dated (including released/received by)?

Yes No NA (Please explain)

Comments:

b. Correct analyses requested?

Yes No NA (Please explain)

Comments:

VOCs by Method 8260C
GRO by Method AK101
DRO by Methods AK102 & 103

3. Laboratory Sample Receipt Documentation

a. Sample/cooler temperature documented and within range at receipt ($4^{\circ} \pm 2^{\circ}$ C)?

Yes No

NA (Please explain)

Comments:

Temperatures = 5.0 and 5.9 °C

b. Sample preservation acceptable - acidified waters, Methanol preserved VOC soil (GRO, BTEX, Volatile Chlorinated Solvents, etc.)?

Yes

No

NA (Please explain)

Comments:

Case Narrative: "The samples were received... properly preserved..." Samples were also received on ice.

c. Sample condition documented - broken, leaking (Methanol), zero headspace (VOC vials)?

Yes

No

NA (Please explain)

Comments:

Containers were not broken or leaking. VOC vials have no headspace.

d. If there were any discrepancies, were they documented? - For example, incorrect sample containers/preservation, sample temperature outside of acceptance range, insufficient or missing samples, etc.?

Yes

No

NA (Please explain)

Comments:

Login sample receipt checklist states "false" for no headspace and to refer to Job Narrative, but nothing is noted in Job Narrative

e. Data quality or usability affected? (Please explain)

Comments:

Data quality or usability not affected.

4. Case Narrative

a. Present and understandable?

Yes

No

NA (Please explain)

Comments:

b. Discrepancies, errors or QC failures identified by the lab?

Yes

No

NA (Please explain)

Comments:

See Attachment 1

c. Were all corrective actions documented?

Yes

No

NA (Please explain)

Comments:

See Attachment 1

d. What is the effect on data quality/usability according to the case narrative?

Comments:

Some data qualification is required (see Attachment 1).

5. Samples Results

a. Correct analyses performed/reported as requested on COC?

Yes No NA (Please explain)

Comments:

b. All applicable holding times met?

Yes No NA (Please explain)

Comments:

Hold times: Methods 8260C and AK101 - Analysis w/in 14 days; Methods AK102 & 103 - Extraction w/in 14 days, Analysis w/in 40 days of extraction
Collection Date: 8/1/19
Prepped: 8/9/19 (AK102 & 103 only)
Analyzed: 8/8/19 (8260C); 8/11/2019, 8/14/2019 (AK101); Some 8260C samples re-analyzed on 8/12/19; 8/10/19 (AK102 & 103)

c. All soils reported on a dry weight basis?

Yes No NA (Please explain)

Comments:

Samples are aqueous

d. Are the reported PQLs less than the Cleanup Level or the minimum required detection level for the project?

Yes No NA (Please explain)

Comments:

trichloroethene PQL = 3.0 ug/L // cleanup level = 2.8 ug/L; vinyl chloride PQL = 1.0 ug/L // cleanup level = 0.19 ug/L. For diluted sample, ethylbenzene PQL = 30 ug/L // cleanup level = 15 ug/L

e. Data quality or usability affected? (Please explain)

Comments:

Data quality or usability not affected.

6. QC Samples

a. Method Blank

i. One method blank reported per matrix, analysis and 20 samples?

Yes No NA (Please explain)

Comments:

ii. All method blank results less than PQL?

Yes No NA (Please explain)

Comments:

iii. If above PQL, what samples are affected?

Comments:

N/A

iv. Do the affected sample(s) have data flags? If so, are the data flags clearly defined?

Yes No NA (Please explain)

Comments:

Method blank results all below PQL

v. Data quality or usability affected? (Please explain)

Comments:

Data quality or usability not affected due to method blank.

b. Laboratory Control Sample/Duplicate (LCS/LCSD)

i. Organics - One LCS/LCSD reported per matrix, analysis and 20 samples? (LCS/LCSD required per AK methods, LCS required per SW846)

Yes No NA (Please explain)

Comments:

ii. Metals/Inorganics - One LCS and one sample duplicate reported per matrix, analysis and 20 samples?

Yes No NA (Please explain)

Comments:

Not analyzed for metals or inorganics.

iii. Accuracy - All percent recoveries (%R) reported and within method or laboratory limits? And project specified DQOs, if applicable. (AK Petroleum methods: AK101 60%-120%, AK102 75%-125%, AK103 60%-120%; all other analyses see the laboratory QC pages)

Yes No NA (Please explain)

Comments:

Method 8260C (Batch = 307894) LCS: bromomethane %R = 126 (Limits = 66 - 125)

iv. Precision - All relative percent differences (RPD) reported and less than method or laboratory limits? And project specified DQOs, if applicable. RPD reported from LCS/LCSD, MS/DMSD, and or sample/sample duplicate. (AK Petroleum methods 20%; all other analyses see the laboratory QC pages)

Yes No

NA (Please explain)

Comments:

v. If %R or RPD is outside of acceptable limits, what samples are affected?

Comments:

No samples are affected because the LCSD and RPD are within acceptable limits and the analytes were not detected in the samples associated with batch 307894.

vi. Do the affected samples(s) have data flags? If so, are the data flags clearly defined?

Yes No

NA (Please explain)

Comments:

vii. Data quality or usability affected? (Please explain)

Comments:

c. Surrogates - Organics Only

i. Are surrogate recoveries reported for organic analyses - field, QC and laboratory samples?

Yes No

NA (Please explain)

Comments:

ii. Accuracy - All percent recoveries (%R) reported and within method or laboratory limits? And project specified DQOs, if applicable. (AK Petroleum methods 50-150 %R; all other analyses see the laboratory report pages)

Yes No

NA (Please explain)

Comments:

iii. Do the sample results with failed surrogate recoveries have data flags? If so, are the data flags clearly defined?

Yes No

NA (Please explain)

Comments:

iv. Data quality or usability affected? (Use the comment box to explain.).

Comments:

d. Trip Blank - Volatile analyses only (GRO, BTEX, Volatile Chlorinated Solvents, etc.): Water and Soil

i. One trip blank reported per matrix, analysis and for each cooler containing volatile samples?
(If not, enter explanation below.)

Yes No NA (Please explain.)

Comments:

ii. Is the cooler used to transport the trip blank and VOA samples clearly indicated on the COC?
(If not, a comment explaining why must be entered below)

Yes No NA (Please explain.)

Comments:

iii. All results less than PQL?

Yes No NA (Please explain.)

Comments:

iv. If above PQL, what samples are affected?

Comments:

N/A - all results less than PQL

v. Data quality or usability affected? (Please explain.)

Comments:

Data quality or usability not affected due to trip blank

e. Field Duplicate

i. One field duplicate submitted per matrix, analysis and 10 project samples?

Yes No NA (Please explain.)

Comments:

BD-1-W-190801 (Parent sample: MW-4-W-190801); BD-2-W-190801 (Parent sample: MW-10-W-190801)

ii. Submitted blind to lab?

Yes No NA (Please explain.)

Comments:

iii. Precision - All relative percent differences (RPD) less than specified DQOs?
(Recommended: 30% water, 50% soil)

$$\text{RPD (\%)} = \frac{\text{Absolute Value of: } (R_1 - R_2) \times 100}{((R_1 + R_2)/2)}$$

Where R_1 = Sample Concentration

R_2 = Field Duplicate Concentration

Yes

No

NA (Please explain)

Comments:

See Table 1

iv. Data quality or usability affected? (Use the comment box to explain why or why not.)

Yes

No

NA (Please explain)

Comments:

Data quality or usability not affected due to field duplicates

f. Decontamination or Equipment Blank (if applicable)

Yes

No

NA (Please explain)

Comments:

EQB-1-W-190801

i. All results less than PQL?

Yes

No

NA (Please explain)

Comments:

ii. If above PQL, what samples are affected?
Comments:
N/A - no sample results above PQL

iii. Data quality or usability affected? (Please explain.)

Comments:

Data quality or usability not affected due to equipment blanks.

7. Other Data Flags/Qualifiers (ACOE, AFCEE, Lab Specific, etc.)

a. Defined and appropriate?

Yes

No

NA (Please explain)

Comments:

See Attachment 1

Reset Form

Table 1**Relative Percent Difference for Parent and Field Duplicate Samples****Report Number: 580-88094-1****GE - Kenai**

Sample Identification		MW-4-W-190801	BD-1-W-190801	RPD ^a	MW-10-W-190801	BD-2-W-190801	RPD ^a
Analyte	Units	Result	Result		Result	Result	
tetrachloroethene	µg/L	14	14	0%	ND	ND	--
trichloroethene	µg/L	4.2	4.4	5%	ND	ND	--
DRO (nC10-< nC25)	mg/L	0.31	0.37	18%	ND	ND	--

Notes:

^a Relative percent difference (RPD) calculated for detected results only.

µg/L = micrograms per liter

ND = not detected

Attachment 1

Additional Information for Job 580-88094-1

GE-Kenai

4. Case Narrative

- b. Discrepancies, errors or QC failures identified by the lab?

Method 8260C:

1. The minimum response factor (RF) criteria for the continuing calibration verification (CCV) analyzed in batch 580-307894 was outside criteria for the following analyte(s): Styrene. As indicated in the reference method, sample analysis may proceed; however, any detection or non-detection for the affected analyte(s) is considered estimated.
2. The continuing calibration verification (CCV) associated with batch 580-307894 recovered outside acceptance criteria, low biased, for Naphthalene, Bromoform, and 1,2-Dibromo-3-Chloropropane. A reporting limit (RL) standard was analyzed, and the target analyte was detected. Since the associated samples were non-detect for this analyte, the data have been reported.
3. The laboratory control sample (LCS) for analytical batch 580-307894 recovered outside control limits for the following analyte(s): Bromomethane. This analyte was biased high in the LCS and was not detected in associated samples; therefore, the data have been reported.
4. The minimum response factor (RF) criteria for the continuing calibration verification (CCV) analyzed in batch 580-308148 was outside criteria for the following analyte: Styrene. As indicated in the reference method, sample analysis may proceed; however, any detection or non-detection for the affected analyte(s) is considered estimated.
5. The following samples were diluted to bring the concentration of target analytes within the calibration range: MW-5-W-190801 (580-88094-7). Elevated reporting limits (RLs) are provided.

Methods AK102 & 103:

6. The following samples contained a hydrocarbon pattern in the diesel range; however, the elution pattern was later than the typical diesel fuel pattern used by the laboratory for quantitative purposes: MW-4-W-190801 (580-88094-2), MW-3-W-190801 (580-88094-3), MW-1-W-190801 (580-88094-4), MW-2-W-190801 (580-88094-5), MW-5-W-190801 (580-88094-7), MW-6-W-190801 (580-88094-8), MW-11-W-190801 (580-88094-12) and BD-1-W-190801 (580-88094-13).
- c. Were all corrective actions documented?
 1. Corrective actions not required by laboratory; however, any detection or non-detection is considered estimated
 2. Not required
 3. Not required
 4. Corrective actions not required by laboratory; however, any detection or non-detection is considered estimated
 5. Elevated reporting limits are provided
 6. Not required
7. Other Data Flags/Qualifiers (ACOE, AFCEE, Lab Specific, etc).
 - a. Defined and appropriate

MS/MSD analysis performed on MW-9-W-190801.

- Many percent recoveries outside of limits, biased low (identified by laboratory qualifier F1); however, all MSD percent recoveries are within limits with the following exceptions: 4-chlorotoluene, 1,3-dichlorobenzene, 1,4-dichlorobenzene, 4-isopropyltoluene, m-xylene and p-xylene, n-butylbenzene, n-propylbenzene, sec-butylbenzene, tert-butylbenzene, 1,1,2,2-

tetrachloroethane, trans-1,3-dichloropropene, 1,2,3-trichloropropane, 1,2,4-trimethylbenzene, and 1,3,5-trimethylbenzene. All sample results are non-detected, so qualify as UJ (see laboratory report).
