RE: ***2021 Corrective Action Plan***

Speedway Store 5325 (formerly Tesoro 2 Go Mart 52)

Mile 49 at 7172 Parks Highway, Wasilla, Alaska
ADEC Facility ID #648; ADEC File #2265.26.006

Dear Ms. Duarte:

This letter presents the proposed work plan tasks for the 2021 (calendar year) Corrective Action Plan (CAP) pertaining to the investigation and/or remediation of contamination at the above referenced site. This 2021 CAP will be presented at the annual work session with the Alaska Department of Environmental Conservation (ADEC), Speedway LLC and Stantec Consulting Services Inc. (Stantec). The work session is scheduled for February 4, 2021, and will be presented virtually by Stantec via Microsoft Teams app.

The following sections provides a summary of the work plan tasks that were completed under the ADEC approved 2020 CAP and the proposed work plan tasks for the 2021 CAP. Attached to this letter are the project site plans and analytical test results for samples collected during the completion of the tasks. The site plans and test results will be included in the presentation during the February 4 work session.

2020 Work Plan Tasks

• *Task 1 – Groundwater Monitoring*

This task was partially completed in accordance with the approved 2020 CAP. Only two of the proposed four quarterly monitoring events were completed due to temporary shutdown of field work during the first two quarters of 2020 as a result of Covid-19.

• *Task 2 – O&M Air-Lift Pump Well Remediation System*

This task was completed in accordance with the approved 2020 CAP.

- Task 3 – Install Two 4-inch Diameter Chemox Injection Wells

This task was completed in accordance with the approved 2020 CAP with the exception the task could not be completed until the last quarter of 2020 due to adjustment of work schedule that was impacted by Covid-19.

- Task 4 -Chemical Oxidation (Chemox) Treatment

This task was partially completed in accordance with the approved 2020 CAP. Only one of the proposed three chemox injection events were completed due to temporary shutdown of field work as a result of Covid-19.

Proposed Work Plan Tasks for 2021

- Task 1 –Groundwater Monitoring

Quarterly monitoring of the groundwater wells and annual monitoring of several existing drinking water wells will be conducted. Sampling locations and analyses for the monitoring and drinking water wells are listed on the 2021 Work Plan Schedule below.

Work Plan Task 2021		1 st Quarter	2 nd Quarter	3 rd Quarter	4 th Quarter
Task 1	Monitoring Wells: G-1, G-3, G-5, G-7, RM 16-1, and 16-2	V, G, D, S & I	V, G, D, S, & I	V, G, D, S & I	V, G, D, S & I
	Monitoring Wells G-2 and G-4				V, G, D, S & I
	Drinking Water Wells serving Lots 1 and 2, Lot 4, and Lot 5 in Runion Subdivision				D & E
Task 2	O&M Air-Lift Well Remediation System	✓	✓	✓	✓
Task 3	Chemical Oxidation Treatment		✓	✓	✓

Key:

- AK – Alaska Test Method
- D – Diesel range organics by AK102.
- E – Drinking water parameters by EPA Method 524.1.
- G – Gasoline range organics by AK101.
- I – Intrinsic indicators include: dissolved oxygen, specific conductance, oxygen-reduction potential, pH, and temperature.
- O&M – Operation and Maintenance
- V – Volatile organic compounds by EPA Test Method 8260C.
- S – Sodium analyzed by Metals (ICP) Method 6010C.

- Task 2 – O&M Air-Lift Pump Well Remediation System

The operation of the compressor that operates the air-lift recirculation well is monitored several times during the day with iMonnit® sensors that remotely monitor, via the wireless broadband network (cellular internet), the electrical current usage on the compressor wiring system. On a quarterly basis, Stantec will physically inspect the compressor. The compressor runs continuously (24-hours per day). Also, the air-lift recovery well will be inspected to assess the flow of recirculated groundwater discharged into MW G-1. Repair and maintenance of the remediation system will be provided on an as needed basis.

- Task 3 – Chemical Oxidation (Chemox) Treatment

Chemical oxidation treatment of the petroleum contaminated vadose zone soil and associated groundwater table will be performed three times a year via injection of a chemical oxidant (chemox) into two recently installed 4-inch diameter injection wells (RW20-1 and RW20-2). The injection of chemox will occur in the 2nd, 3rd and 4th quarters of the year. The first annual injection will occur in the spring of the year after the winter frost dissipates, and the second and third injection will take place several months later just prior to winter freeze-up. A minimum of 100 gallons of a prepared solution of the chemical oxidant Klorozur One® (a chemical mixture consisting primarily of sodium persulfate) will be injected into each injection well. The chemox mixture for each well will consist of 110 pounds Klorozur One® mixed with approximately 100 gallons of clear water. A minimum of 200 gallons of clear tap water will be injected into each of injection wells to provide a means of “hydraulically pushing” the chemox solution into the subsurface soil formation and associated groundwater table. The downgradient monitoring wells will be sampled quarterly as outlined in Task 1 to assess treatment impact on the groundwater table. In addition, the monitoring wells will be sampled for sodium to check on the distribution/migration of the oxidant.

The Corrective Action Work Plan for the year 2021 will be implemented by Stantec on behalf of Speedway. Groundwater monitoring will be conducted to track migration and trends of contaminants that are present at the site. All sampling activities will be completed in accordance with ADEC's *Underground Storage Tanks Procedures Manual– Standard Sampling Procedures* (March 22, 2017). The methods that will be used for conducting a monitoring event, unless otherwise noted in the monitoring report, will include:

- The static water levels in the monitoring wells will be measured with respect to the top of each well casing. The elevation of the static water level will be based on an arbitrary datum established on-site during a vertical control survey that will be completed by Stantec on an annual basis. The survey will be performed during the summer after the seasonal frost layer thaws.
- The monitoring wells will be purged of a minimum of three well bore volumes prior to collecting the water samples. A new, disposable, Teflon® bailer will be used to sample each well. The first bail of water removed from each well will be examined for petroleum odor, sheen, and any other unique physical features.
- Water and vapor samples will be collected in laboratory-supplied sample containers. The samples will be delivered to an ADEC-approved laboratory in accordance with standard chain-of-custody procedures.

- Additional water samples will be collected from the monitoring wells after the well has been purged, as described above, and tested in the field for chemical and physical intrinsic parameters listed in the 2021 Work Plan Schedule shown above.

If you have any questions or need additional information concerning this 2021 Corrective Action Work Plan, please contact us at (907) 248-8883.

Regards,
