RE: ***2021 Corrective Action Plan***

Speedway Store 5315 (formerly Tesoro 2 Go Mart 111)

3679 College Road, Fairbanks, Alaska
ADEC Facility ID #1112; ADEC File #100.26.026

Dear Ms. Duarte:

This letter presents the proposed work plan tasks for the 2021 (calendar year) Corrective Action Plan (CAP) pertaining to the remediation of contamination at the above referenced site. This 2021 CAP will be presented at the annual work session with the Alaska Department of Environmental Conservation (ADEC), Speedway LLC and Stantec Consulting Services Inc. (Stantec). The work session is scheduled for February 4, 2021, and will be presented virtually by Stantec via Microsoft Teams app.

The following sections provide a summary of the work plan tasks that were completed under the ADEC approved 2020 CAP and the proposed work plan tasks for the 2021 CAP. Attached to this letter are the project site plans and analytical test results for samples collected during the completion of the tasks. The site plans and test results will be included in the presentation during the February 4 work session.

2020 Work Plan Tasks

- *Task 1 – Groundwater Monitoring*

This task was completed in accordance with the approved 2020 CAP; however, the semi-annual groundwater sampling plan was altered due to temporary shutdown of field work during the first two quarters of 2020 as a result of Covid-19. Consequently, the semi-annual groundwater monitoring events were completed during the last two quarters of 2020.

- Task 2 – Complete Installation of the RM-2 Well Recirculation Groundwater Treatment System

This task was completed in accordance with the approved 2020 CAP.

- Task 3 – O&M Recirculation Well Remediation System

This task was completed in accordance with the approved 2020 CAP; however, the quarterly O&M schedule was altered due to temporary shutdown of field work during the first two quarters of 2020 as a result of Covid-19. Consequently, the O&M work was completed during the last two quarters of 2020.

- Task 4 – Chemical Oxidation (Chemox) Treatment

This task was completed in accordance with the approved 2020 CAP. The chemox treatment was completed during the 3rd and 4th quarters of 2020 due to field work shutdown during the first two quarters of 2020 as a result of Covid-19 precautions.

Proposed Work Plan Tasks for 2021

- Task 1 –Groundwater Monitoring

This task consists of semi-annual monitoring of the groundwater wells and quarterly monitoring of the remediation/recirculation wells (RM-1 and RM-2). Sampling locations and analyses for the groundwater monitoring wells and remediation wells are listed on the 2021 Work Plan Schedule below.

Work Plan Tasks for 2021		1 st Quarter	2 nd Quarter	3 rd Quarter	4 th Quarter
Task 1	Monitoring Wells: MW-11, MW-12, MW-13, MW-16, MW-10, G-1, G-5, MW 17-1, and MW 17-2	V, G, D, I & S		V, G, D, P, I & S	
	Recirculation/Remediation Wells: RM-1 and RM-2	V, G, D, I & S	V, G, D, I & S	V, G, D, P, I & S	V, G, D, I & S
Task 2	Install a buried insulated water discharge line from recirculation well RM-2 to connect to water discharge line from RM-1.		✓	✓	
Task 3	O&M Groundwater Recirculation Wells RM-1 & RM-2	✓	✓	✓	✓
Task 4	Chemical Oxidation Treatment		✓	✓	✓

Key: AK – Alaska Test Method

D – Diesel range organics by AK102.

E – Drinking water parameters by EPA Method 524.1.

G – Gasoline range organics by AK101.

I – Intrinsic indicators consisting of dissolved oxygen, specific conductance, oxygen-reduction potential, pH, and temperature.
O&M – Operation and Maintenance
V – Volatile organic compounds by EPA Test Method 8260C.
S – Sodium analyzed by Metals (ICP) Method 6010C.
P – Polynuclear aromatic hydrocarbons (PAHs), i.e., semi-volatile organic compounds, by EPA Test Method 8270D Selective Ion Monitoring (SIM).

- Task 2 – Install a buried insulated water discharge line from recirculation well RM-2 to connect to water discharge line from RM-1.

The plumbing system for the discharge of flow from recirculation well RM-2 will be extended to connect via a buried insulated water line from RM-2 to the existing discharge water line from recirculation well RM-1. The plumbing addition will allow the winter shut down of RM-1 pump when the groundwater table drops below the feasible pumping level in the well casing. When RM-1 is seasonally shut down then a portion of the flow from RM-2 will be discharged into the groundwater injection line (former SVE line) located on the southeast edge of the UST.

- Task 3 – O&M Groundwater Recirculation Wells RM-1 & RM-2

Perform quarterly maintenance to operate the remediation system, consisting of the existing 4-inch diameter well RM-1 and 4-inch diameter well RM-2 groundwater recirculation systems for treating the vadose zone soil and groundwater beneath the existing USTs and fuel dispenser islands. The in-situ remediation system provides treatment of the contaminated groundwater with the injection of chemical oxidation (see Task 3). The operation of the submersible pumps for the two treatment systems will run continuously (24-hours per day). The pumping system will be monitored daily for electrical usage, water pressure and water line temperature with iMonnit® wireless sensors and the equipment checked monthly with maintenance provided on an as needed basis.

- Task 4 – Chemical Oxidation Treatment

Stantec proposes to provide chemical oxidation treatment of the petroleum contaminated soil and groundwater three times a year into the three existing horizontal injection lines located beneath the fuel dispenser islands and the two injection lines located on the east side of the USTs. The injection of chemox will occur in the 2nd, 3rd and 4th quarters of the year. The first annual injection will occur in the spring of the year after the winter frost dissipates, and the second and third injections will take place several months later just prior to winter freeze-up. Five hundred (500) gallons of a prepared solution of the chemical oxidant Klozur One® (a chemical mixture consisting primarily of sodium persulfate) will be injected into the five existing horizontal injection lines with a dose of 100 gallons per injection well. The chemox mixture for each well will consist of 110 pounds Klozur One® mixed with approximately 100 gallons of clear water. The horizontal injection well located along the northeast edge of the USTs will receive an additional 200 gallons of clear water to provide a “hydraulic push” to distribute the chemox solution into the surrounding formation. The other four injection lines are continuously dosed with recirculated groundwater discharged from remediation/recirculation wells RM-1 & RM-2. The on-site monitoring wells will be sampled semi-annually as outlined in Task 1 to assess treatment impact on the groundwater table. The remediation/recirculation wells will be sampled on

a quarterly basis. In addition, the groundwater monitoring wells will be sampled for sodium to check on the distribution/migration of the oxidant.

The Corrective Action Plan for the year 2021 will be implemented by Stantec on behalf of Speedway. Groundwater monitoring will be conducted to track migration and trends of contaminants that are present at the site. All sampling activities will be completed in accordance with ADEC's Underground Storage Tanks Procedures Manual—Standard Sampling Procedures (March 22, 2017). The methods that will be used for conducting a monitoring event, unless otherwise noted in the monitoring report, will include:

- The static water levels in the monitoring wells will be measured with respect to the top of each well casing. The elevation of the static water level will be based on an arbitrary datum established on-site during a vertical control survey that will be completed by Stantec on an annual basis. The survey will be performed during the summer after the seasonal frost layer thaws.
- The monitoring wells will be purged of a minimum of three well bore volumes prior to collecting the water samples. A new, disposable, Teflon® bailer will be used to sample each well. The first bail of water removed from each well will be examined for petroleum odor, sheen, and any other unique physical features.
- Water samples will be collected in laboratory-supplied sample containers. The samples will be delivered to an ADEC-approved laboratory in accordance with standard chain-of-custody procedures.
- Additional water samples will be collected from the monitoring wells after the well has been purged, as described above, and tested in the field for chemical and physical intrinsic parameters listed in the 2021 Work Plan Schedule shown above.

If you have any questions or need additional information concerning this 2021 Corrective Action Plan, please contact us at (907) 248-8883.

Key:

* - Elevation may be biased due to presence of ice plug.

DRO - diesel range organics

GCLs - ground water cleanup levels

GRO - gasoline range organics

J - The identification of the analyte is acceptable; the reported value is an estimate.

mg/L - milligram per liter

NA - not applicable

NT - not tested

NM - not measured

U - Undetected above practical quantitation limit.

Bold, shade indicates concentration exceeds the GCL or, if not detected, the practical quantitation limit exceeds the GCL
