Re: 2021 Groundwater Monitoring Program Report
Cannery Loop Pad 3
ADEC Report Comments

Ms. Nixon:

On November 19, 2021, the Alaska Department of Environmental Conservation, Contaminated Sites Program (ADEC), received the 2021 Groundwater Monitoring Program Report, for Cannery Loop Unit Pad #3 dated November 2021. This document was prepared by Brice Environmental. The report is approved. We have the following comments.

MW-5 (offsite) DRO concentrations are elevated but below cleanup levels. Concentrations in MW-5 are increasing, indicating that contaminants are migrating offsite. Based on the increasing concentrations in MW-5, sampling frequency should increase from once every four years to biennially.

The report recommends replacing PZ-1 and PZ-2 if they remain dry. These well locations can be supplemented with additional wells, but not removed, as they are in the proper location to monitor site impacts when groundwater is present.

If you have any questions on any aspect of the project, please contact me at (907) 262-3412, or by e-mail at peter.campbell@alaska.gov

Sincerely,

Peter Campbell
