SHANNON & WILSON, INC.

GEOTECHNICAL AND ENVIRONMENTAL CONSULTANTS

At Shannon & Wilson, our mission is to be a progressive, well-managed professional consulting firm in the fields of engineering and applied earth sciences. Our goal is to perform our services with the highest degree of professionalism with due consideration to the best interests of the public, our clients, and our employees.

GROUNDWATER INVESTIGATION
FORMER MARK AIR WAREHOUSE
FAIRBANKS INTERNATIONAL AIRPORT, ALASKA

This report discusses the 2008 field activities we conducted at the former Mark Air warehouse facility, 5250 Airport Industrial Road, at the Fairbanks International Airport (FIA). This report summarizes our field activities, including soil boring and monitoring well installation, and provides the analytical results for the soil and groundwater samples we collected during this effort.

1.0 BACKGROUND

The subject site consists of Lots 6, 7, and 13 of Airport Block 10 (Figure 1); the State of Alaska is the property owner, and the property is managed by the Alaska Department of Transportation and Public Facilities (ADOT&PF). It is an Alaska Department of Environmental Conservation (ADEC) leaking underground storage tank (UST)-site with confirmed soil and groundwater contamination. MarkAir, Inc., was leasing the property and owned the USTs in 1992. Subsequent tenants included Weaver Brothers, Inc., and Alaska Mechanical, Inc. (AMI), the current tenant.

In 1992, Environmental Management, Inc. (EMI) closed six regulated USTs at the site by removal (Figure 1). Contaminated soil remained in place in some or all of the excavations. Between 1993 and 2005, various consultants performed groundwater monitoring and collected subsurface soil samples at the site.

SLR, Alaska (SLR) conducted a site investigation in 2004. They found benzene in a groundwater sample from monitoring well MW-8 at 3,860 micrograms per liter (µg/L). The volatile organic compounds (VOCs) 1,2-dibromoethane (EDB) and 1,2-dichloroethane (EDC) were also detected above groundwater-cleanup levels in samples from MW-8 (Figure 1). Elevated levels of petroleum hydrocarbons were reported in soil samples collected near MW-8.

In 2006, Shannon & Wilson sampled four of the monitoring wells and performed a soil-gas study of the northern portion of the site. We installed 30 passive soil-gas collectors in a 50-foot grid pattern, and identified two potential "hot spots" of diesel range organics (DRO) and another of benzene, toluene, ethylbenzene, and xylenes (BTEX).

2.0 PROJECT OBJECTIVES AND SCOPE

The purpose of our 2008 field investigations was to further characterize the distribution of petroleum hydrocarbon groundwater contamination at the site, particularly between the subject site and downgradient lots TL-2321 and TL-2327 (Figure 1).

Our scope of services included installing several new groundwater-monitoring wells at and downgradient from the suspected contaminant source areas to evaluate the extent and distribution of soil and groundwater contamination. Our initial scope of services included:

- assessing the condition of and sampling the existing monitoring wells on the site;
- installing and sampling a groundwater-monitoring well in the BTEX hot spot indentified by the soil-gas survey;
- sampling two soil borings at the DRO hot spots; and
- installing and sampling monitoring wells near the downgradient property line.

We provided our services in accordance with our Professional Services Agreement 368-5-1-065, our July 8, 2008, proposal, and subsequent addendum.

3.0 FIELD ACTIVITIES

Shannon & Wilson performed the field investigation in phases as described in the following sections.

3.1 Existing Monitoring Well Inventory and Sampling

On August 20th and 21st, 2008, Kristen Williams, a Shannon & Wilson environmental chemist, performed an inventory of the nine previously installed monitoring wells on the site (MW-1 though MW-9; Figure 1). She found the wells in satisfactory condition. Well MW-4 had apparently been inside an aboveground monument, which had been cut off and converted to a flush-mounted monument. She checked for floating fuel product in each well using a new, disposable bailer; she did not observe floating product. She trimmed the PVC well casings of wells MW-3, MW-4, MW-8, and MW-9.

Ms. Williams then purged and sampled the monitoring wells using our standard procedures. She treated the purge water using our activated-carbon filter prior to discharging it to the ground surface. She submitted groundwater samples from each well to SGS Environmental Services,

Inc. (SGS) for determination of gasoline range organics (GRO) by Alaska Method AK101, BTEX by Environmental Protection Agency (EPA) Method 8021B, DRO by Alaska Method AK102, and VOCs by EPA Method 8260B. Table 1 summarizes the results for the groundwater samples.

We evaluated the laboratory results from this sampling event and available data from previous investigations. After conferring with you, we agreed to the following modifications to our scope of services: sampling well point WP-3 (installed in 2004 by SLR); installing a monitoring well at the southern inferred "DRO hot spot;" drilling and sampling a soil boring at the inferred "BTEX hot spot;" and moving two of the proposed monitoring wells farther south along the property line.

3.2 Utility Locates and Building Permit

Prior to the field activities, we located the underground utilities on the site and prepared a building permit application for the borings and new monitoring wells for FIA approval. We submitted the building permit application to FIA on August 21, 2008 and received approval on August 26th. The ADEC project manager approved our proposed scope of work and requested we field-screen soil samples at the groundwater interface from all the borings, sample the monitoring well downgradient of MW-8 for VOCs to measure EDB and EDC concentrations, and evaluate the historical groundwater results for trends.

3.3 Soil Sampling and Monitoring Well Installation

On September 9th through 11th, 2008, Peter Grey, a Shannon & Wilson geologist, collected soil samples from soil borings for, and supervised the installation of, monitoring wells MW-10 through MW-16 (Figure 1) by Homestead Drilling Company (Homestead). Homestead drilled soil boring B and installed monitoring well MW-10 near the inferred DRO hot spots and drilled soil boring A near the inferred BTEX hot spot. Homestead installed a row of five monitoring wells (MW-11 through MW-15) 20 feet to 40 feet from the fence between the subject site and the adjacent property (a sewer main is located within the 20-foot-wide utility easement east of the property line). Lastly, Homestead installed MW-16 on the subject site (Lot 6) at a location inferred to be downgradient of Lot 5A, the former Texaco Bulk Plant site. Figure 1 shows the location of the newly installed monitoring wells and soil borings.

Homestead used a truck-mounted drill rig with a hollow-stem auger to advance the soil borings. They drilled borings A and B and MW-10 to 17.5 feet or 19 feet below the ground surface (bgs)

and collected split-spoon soil samples at 2.5-foot intervals for potential laboratory analysis. They drilled the borings for MW-11 through MW-16 to 17.5 feet; Mr. Grey collected grab samples from the soil cuttings at 2.5- to 5-foot-intervals, and collected split-spoon samples for potential laboratory analysis at the groundwater interface. He logged the borings and performed field screening with a MiniRae 2000 photoionization detector (PID) to estimate the relative concentration of VOCs.

PID results were less than one part per million (ppm) in Boring B, monitoring wells MW-11, MW-13, MW-14, and MW-15, and less than 5 ppm in MW-12 soils. PID results were elevated (i.e., greater than 20 ppm) in Boring A, MW-10, and MW-16 soils. He observed a sheen and hydrocarbon odor in Boring A, and hydrocarbon odor in MW-10 and MW-16 soil. The depth to groundwater ranged from 7.5 feet to 9.5 feet bgs. Based on observations and PID measurements, he submitted soil samples from Borings A and B, wells MW-10, MW-12, and MW-16 to SGS for determination of GRO (Alaska Method AK101), DRO (Alaska Method AK102), and VOCs (EPA Method 8260B).

Homestead constructed the new monitoring wells using 2-inch-diameter PVC casing and 0.020-inch slotted well screen. They placed the slotted interval from 7 feet to 17 feet bgs to span the zone of seasonal water table fluctuation. Homestead installed the wells inside flush-mounted monuments cemented in place.

We prepared soil-boring logs depicting Mr. Grey's observations of subsurface conditions. The boring logs also show the monitoring-well construction details and PID field screening results. Figure 1 shows the locations of the existing and new monitoring wells. The boring logs are presented in Appendix A (Figures A-1 through A-9).

The soil at MW-10 and Boring A had high PID readings, strong fuel odor, and a sheen. Drilling generated one full drum of soil cuttings from MW-10, and about one-quarter drum of cuttings from Boring A, plus a few gallons of decontamination water. We stored the drums on the site until we arranged for treatment and disposal.

Soil from MW-16 had slightly elevated PID readings and a fuel odor. Drilling generated about one-half drum of soil cuttings. Since PID results indicated hydrocarbons were present in the soil from MW-10, Boring A, and potentially from MW-16, Homestead placed the drill cuttings from the boring and two wells into 55-gallon drums which were temporarily stored on the property.

3.4 Monitoring Well Development and Sampling

Rodney Guritz, an environmental chemist with Shannon & Wilson, developed the new monitoring wells on September 18th using an air-powered diaphragm pump. He pumped and surged the wells until the water ran clear, and collected about 50 gallons of water from each well in drums to be temporarily stored at the site pending laboratory results. Groundwater from MW-10 exhibited a strong hydrocarbon odor, and groundwater from well point WP-3, and monitoring wells MW-12 and MW-16 exhibited a slight hydrocarbon odor. Mr. Guritz also noted a sulfurous odor when he was developing wells MW-12, MW-13, and WP-3.

Mr. Guritz sampled the new monitoring wells on September 19th and 22nd. After straightening the damaged monument, he was able to access well point WP-3 for sampling. He purged and sampled the wells and WP-3 using our standard methods, and treated the purge water using our activated-carbon filter prior to discharging it to the ground surface. He submitted the samples to SGS for DRO, GRO, and BTEX or VOC analysis by the methods noted above.

After receiving the groundwater results from the September 2008 sampling effort, we returned to the site on November 4th to resample MW-16 and confirm the September results.

3.5 Monitoring Well Survey

Stutzmann Engineering Associates (Stutzmann) surveyed the location and top-of-casing elevations of the new and existing monitoring wells on October 10th, 2008. Three of the monitoring wells (MW-10, MW-12, and MW-16) were not accessible, so Stutzmann was not able to measure the top-of-casing elevations. We measured the depth to groundwater in the monitoring wells on that date and calculated the groundwater elevations. The October 10th groundwater elevations in the monitoring wells varied by 0.42 feet across the site. Using the groundwater-elevation data, we determined the direction of groundwater flow at the site was generally to the northwest. The survey data are provided in Appendix B.

4.0 ANALYTICAL RESULTS

The SGS laboratory data reports for the soil and groundwater samples are included in Appendix C to this report, along with their associated ADEC Data Review Checklists. Our data-quality review of the laboratory results is provided in the following section of this report.

4.1 Cleanup Levels

To evaluate soil analytical data, we compared the results to ADEC Method Two, Table B1 and B2 soil cleanup levels in 18 AAC 75.341 for the Under-40 Inch (mean annual precipitation) zone. We used the most stringent cleanup levels in the tables, which were generally for the migration-to-groundwater exposure pathway. To evaluate groundwater analytical data, we compared the results to ADEC groundwater-cleanup levels presented in 18 AAC 75.345 Table C. We present the soil- and groundwater-cleanup levels in our Table 1 and 2 for comparison.

4.2 Soil Sample Results

Table 1 summarizes the fuels, BTEX, and VOC results of the soil samples from Borings A and B and monitoring wells MW-10, 12, and 16. DRO was detected above the laboratory practical quantitation limit (PQL) in soil samples from Boring A and MW-10; the estimated DRO concentration in MW-10 exceeded the ADEC soil-cleanup level. GRO was detected above the PQL in soil samples from Boring A and MW-10; Boring A GRO concentrations exceeded the soil-cleanup level. The GRO/DRO results, and detected BTEX analyte results are shown on Figure 2.

BTEX analytes were found above their PQLs in soil samples from Boring A, MW-10, and MW-16. Benzene concentrations exceeded the ADEC soil-cleanup level in the samples from Boring A and MW-10. Toluene, ethylbenzene, and xylenes concentrations in Boring A, and toluene and ethylbenzene concentrations in MW-10, also exceeded their soil-cleanup levels.

Of the 64 VOC analytes quantitated by EPA Method 8260B, seven VOC analytes were detected above their PQLs in the soil sample and duplicate from Boring A. No VOC analytes were detected above their PQLs in the soil sample from Boring B. The soil sample from monitoring well MW-10 contained five VOC analytes. The compound 1,2,4-trimethylbenzene exceeded its cleanup level in the sample and duplicate from Boring A. The PQLs for 1,2-dibromoethane (EDB) and 1,2-dichloroethane (EDC) were greater than their respective soil-cleanup levels; these analytes were not detected in any of the soil samples.

4.3 Groundwater Sample Results

Table 2 summarizes the groundwater-sample results for fuels and BTEX for the previously installed monitoring wells and well point WP-3, and the new monitoring wells. Table 2 also includes the VOC results for those water samples on which the VOC analysis was performed. The GRO/DRO results and the detected VOC analyte results are shown on Figure 3.

DRO was detected in samples from wells MW-3, MW-8, MW-12, and MW-13, and were detected above the cleanup level in the samples from WP-3, MW-10, and MW-16. GRO was detected in samples from MW-12, and was detected above the cleanup level in the samples from monitoring wells MW-8, MW-10, and MW-16.

Benzene was detected above its PQL in samples from monitoring wells MW-4, MW-9, MW-13, and MW-15, and was detected above the cleanup level in the samples from MW-8, MW-10, MW-12, and MW-16. Toluene, ethylbenzene, and/or xylenes were detected in the samples from MW-4, MW-8, MW-10, MW-12, and MW-16. Toluene and ethylbenzene exceeded their groundwater-cleanup levels in the sample from MW-10.

The monitoring well samples contained a variety of alkylbenzenes, naphthalene, and four halogenated organics. EDB was detected in the sample from MW-10 above the cleanup level, and its PQL exceeded the cleanup level in the samples from MW-6, MW-7, MW-8, and MW-12. EDC was detected in MW-8 and MW-12 and was detected above the cleanup level in the duplicate sample from MW-8. The compounds dichlorodifluoromethane and trichlorofluoromethane were also detected in several wells (Table 2).

Resampling of well MW-16 in November 2008 confirmed the elevated benzene, DRO, and GRO concentrations in the original sampling event.

5.0 QUALITY ASSURANCE AND QUALITY CONTROL

Quality Assurance/Quality Control (QA/QC) procedures assist us in checking that our data quality is acceptable and reliable. We reviewed the analytical results for laboratory QC samples, and also conducted our own QA assessment for this project. We also reviewed the chain-of-custody records and laboratory sample-receipt forms to check that custody was not breached, sample holding times were met, and the samples were kept properly chilled (between 2 °C and 6 °C) during shipping. Our QA review procedures allowed us to document the accuracy and precision of the analytical data, and check that the analyses were sufficiently sensitive to detect analytes at levels below regulatory standards.

For this report, we reviewed the groundwater- and soil-sample data produced by SGS. The laboratory reports we reviewed were SGS work orders 1084936 (August 2008 groundwater samples), 1084993 (September 2008 soil-boring samples), 1085913 (September 2008 groundwater samples), 1085951 (a sample of investigation-derived waste [IDW] we collected

from a storage drum to determine the proper waste-disposal options), and 1085856 (November 2008 resample of MW-16). Each laboratory report contained a case narrative and forms documenting sample-receipt conditions. We present details about the results of our QA review below.

5.1 Sample Handling

We hand-delivered the samples to the SGS sample-receiving office in Fairbanks; the SGS staff re-packed and shipped the samples in coolers to their analytical laboratory in Anchorage. The laboratory-report case narratives indicated the samples arrived at the laboratory within the acceptable temperature range.

The sample-holding period for four soil-boring samples collected in September was exceeded by one day for the DRO analyses. The samples were obtained from the boring for monitoring well MW-10, and from Borings A and B; the DRO results from these soil samples should be considered biased low. No other sample-handling anomalies occurred, and the sample-holding times were met for the remaining analyses.

5.2 Analytical Sensitivity

The analyses of project samples had PQLs below the ADEC soil- and groundwater-cleanup levels for most of the analytes determined, with the exception of 1,2-dichloroethane and 1,2-dibromoethane in the soil-boring samples, and 1,2-dibromoethane in the groundwater samples. The 1,2-dichloroethane and 1,2-dibromoethane PQLs for the soil samples from MW-10, Boring A, Boring B, and the trip blank ranged from 0.0255 mg/kg to 0.811 mg/kg; the soil-cleanup level is 0.016 mg/kg for 1,2-dichloroethane and 0.00016 mg/kg for 1,2-dibromoethane. These analytes were not detected in any of the soil samples we collected for this project, but they may be present at concentrations between their soil-cleanup levels and the PQLs in these samples.

The 1,2-dibromoethane PQLs for the groundwater samples were 1.00 µg/L; the groundwater-cleanup level for this analyte is 0.05 µg/L. This analyte was detected in the sample from MW-10, but was not detected in the other groundwater samples analyzed for VOCs. In those samples where this analyte was not detected, it may be present at a concentration between the groundwater-cleanup level and the PQL.

We submitted trip blanks with water samples to be analyzed for VOCs and GRO to determine whether cross-contamination or contamination from an outside source may have occurred during

shipment or storage. No analytes were detected above their PQL in the trip blanks, indicating no cross-contamination or contamination from an outside source affected sample results.

Laboratory method blanks were analyzed in association with samples collected for this project to check for contributions to the analytical results possibly attributable to laboratory-based contamination. The method blank associated with the soil-boring samples contained detectable DRO, naphthalene, and benzene at estimated concentrations below their PQLs; the method blank associated with the August 2008 groundwater samples contained DRO at an estimated concentration below its PQL; and the method blanks associated with the November 2008 MW-16 groundwater sample contained benzene and DRO at estimated concentrations below their PQLs. When these analytes were detected in the associated samples, they were found at concentrations at least five-fold higher than the estimated method blank concentrations, and the sample results were unaffected.

5.3 Accuracy

The laboratory assessed the accuracy of their analytical procedure by analyzing laboratory control samples (LCSs) and LCS duplicates (LCSDs). These QC samples allow the laboratories to evaluate their ability to recover analytes added to clean solid or aqueous matrices. The LCSD recovery of dichlorodifluoromethane was biased low for the groundwater samples *MW-6*, *MW-7*, *MW-8*, *MW-80,* and the trip blank submitted in August 2008, and would generally be considered biased low. However, the initial calibration verification (ICV) analysis associated with this sample set recovered dichlorodifluoromethane above laboratory limits, indicating this analyte would be biased high in the associated samples. As a result of these conflicting biases, the dichlorodifluoromethane results for the groundwater samples collected in August 2008 should be considered estimates; this analyte was reported at concentrations ranging from below detection (i.e., less than 1 µg/L) to 2.24 µg/L in the August 2008 samples.

The ICV results for dichlorodifluoromethane were biased high in the analyses for the September 2008 water samples; the results for this analyte in these samples should also be considered biased high. Dichlorodifluoromethane was detected in monitoring-well samples MW-10, MW-12, and MW-21; concentrations in these samples ranged from 1.23 µg/L to 1.79 µg/L. The ADEC groundwater-cleanup level for dichlorodifluoromethane is 7,300 µg/L.

LCS and/or LCSD recoveries for a few analytes in the soil samples were above the laboratory's control limits, but the analytes were not detected in the associated samples and their results were unaffected.

The laboratory also evaluated analytical accuracy for each sample by assessing the recovery of analyte surrogates added to individual project samples. The GRO surrogate, 4-bromofluorobenzene, was recovered above the laboratory's control limit in the soil samples from monitoring well MW-10 and Boring A, and in the duplicate water samples from monitoring well MW-8; the laboratory report's case narrative noted the high surrogate recovery was due to hydrocarbon interference in those samples. The LCS and LCSD results associated with these samples were within limits, so the GRO results should be considered accurate, despite the high surrogate recoveries.

No other surrogate recovery anomalies occurred in the soil or groundwater sample sets.

The LCS-, LCSD-, and surrogate-recovery data indicate the sample analyses generally yielded accurate results, with the exception of the August 2008 groundwater samples (dichlorodifluoromethane concentrations in samples *MW-6*, *MW-7*, *MW-8*, *MW-80,* and the August 2008 trip blank should be considered estimates), and the September 2008 groundwater samples (dichlorodifluoromethane concentrations in samples *MW-10*, *MW-12*, and *MW-21* should be considered biased high).

5.4 Precision

We collected field-duplicate samples at a frequency of 10 percent of the number of project samples to evaluate the precision of analytical measurements and the reproducibility of our sampling technique. To evaluate the precision of the data, we calculated the relative percent difference (RPD; difference between the sample and its duplicate divided by the mean of the two). RPD can be evaluated only if the results of the analyses for both the sample and its duplicate are above the PQLs.

The RPDs for field-duplicate groundwater samples (*MW-8/MW-80* and *MW-12/MW-21*) were within our QC goal of 30 percent. The RPDs for our duplicate soil samples (*1417-090908-002/1417-090908-003*; Boring A) also met our QC goal (50 percent), with the exception of the benzene (72 percent), toluene (55 percent), and n-butylbenzene (51 percent) results. Soil heterogeneity may explain the relatively high RPDs; we will accept the higher of the two soil results from these samples as being representative of site conditions at that location and sampling depth.

Laboratory analytical precision can also be evaluated by RPD calculations. The LCS and LCSDs provide information regarding the reproducibility of laboratory procedures, and are therefore a

measure of the laboratory's analytical precision. The LCS/LCSD RPDs were within QC goals and laboratory control limits for most of the analytes, with the exception of dichlorodifluoromethane in the August 2008 groundwater-sample analyses. This analytical imprecision affected samples *MW-6*, *MW-7*, *MW-8*, *MW-80,* and the August 2008 trip blank; these samples' results for dichlorodifluoromethane concentrations are considered estimates due to LCSD and ICV anomalies, as we noted above.

With the exception of the dichlorodifluoromethane results in groundwater samples *MW-6*, *MW-7*, *MW-8*, and *MW-80*, and the benzene, toluene, and n-butylbenzene results for the soil samples from Boring A, the RPD calculations indicate the results for our project samples are precise.

5.5 Data Quality Summary

By working in general accordance with our proposed scope of services, we consider the samples we collected to be representative of site conditions at the locations and times they were obtained. In our opinion, the overall quality and utility of the analytical data for this project was not compromised by analytical irregularities, but some data should be used with qualification:

- The DRO results for the soil samples from monitoring well MW-10 and Borings A and B should be considered biased low.

- The PQLs for 1,2-dichloroethane and 1,2-dibromoethane in the soil samples from MW-10, Boring A, Boring B, and the trip blank were above these analytes' ADEC soil-cleanup levels (0.016 and 0.00016 mg/kg). The PQLs for 1,2-dichloroethane and 1,2-dibromoethane ranged from 0.0255 mg/kg to 0.811 mg/kg in these samples, and these analytes were not detected. They may be present at concentrations between their soil-cleanup levels and the PQLs in these samples.

- The 1,2-dibromoethane PQLs for the groundwater samples were 1.00 µg/L, and the groundwater-cleanup level for this analyte is 0.05 µg/L. This analyte was detected in the sample from MW-10, but not in the other groundwater samples analyzed for VOCs. In those samples where this analyte was not detected, it may be present at a concentration between the groundwater-cleanup level and the PQL.

- Dichlorodifluoromethane concentrations in the August 2008 groundwater samples *MW-6*, *MW-7*, *MW-8*, *MW-80,* and the August 2008 trip blank should be considered estimates due to ICV, LCSD, and imprecision anomalies.

- The dichlorodifluoromethane concentrations in the September 2008 groundwater samples *MW-10*, *MW-12*, and *MW-21* should be considered biased high.

- The benzene, toluene, and n-butylbenzene results for the soil samples from Boring A are imprecise; the higher of the duplicate results for these analytes will be considered representative of site conditions at that location and sampling depth.

We provide the SGS laboratory reports and ADEC data-review checklists for the project samples in Appendix C to this report.

6.0 DISCUSSION

6.1 Subsurface Conditions

Except for Boring B and MW-16, the borings and monitoring wells were within AMI's asphalt-paved storage yard. Subsurface soils in the borings within the depth explored (17.5 feet to 19 feet bgs) were sandy gravel in the upper 4 feet to 6 feet (likely fill material from construction of the parking lot) underlain by silty sand to sandy silt, with occasional organic material. We measured the groundwater elevations (NAVD 1988 vertical datum) in the existing monitoring wells at 424.62 feet to 425.01 feet in August, and at 421.26 feet to 421.68 feet in October 2008. Elevated PID readings and hydrocarbon odors were present in Boring A and the borings for monitoring wells MW-10, and MW-16 at 5 feet bgs to the bottom of the borings. PID readings were highest in these borings in the sample intervals immediately above and below the water table. The soil in Boring B and the borings for monitoring wells MW-11, MW-13, MW-14, and MW-15 did not have elevated PID readings or exhibit a hydrocarbon odor.

Our field personnel observed a sulfur odor (sulfide) in a number of the wells. This is likely the product of bacterially mediated sulfate reduction, which indicates the microbial population is metabolizing organic matter (e.g., petroleum hydrocarbons) in the subsurface.

6.2 Investigation-Derived Wastes

We evaluated the soil sample results to determine whether the soil cuttings from Boring A, MW-10, and MW-16 could be treated as non-hazardous, petroleum-contaminated soil. The analytical laboratory results showed the soil sample (*1417-090908-002*) from Boring A contained 11.3 mg/kg benzene, but its duplicate sample (*1417-090908-004*) contained 5.33 mg/kg benzene. The Resource Conservation and Recovery Act (RCRA) Toxicity Characteristic Leaching Procedure

(TCLP) regulatory level for benzene in soil is 0.5 mg/L (equivalent to 10 mg/kg), above which the soil could be considered a hazardous waste.

Mr. Guritz collected a sample of soil (*1417-A4*) from the drum of Boring A cuttings for GRO/BTEX analysis. Analytical results (SGS Work Order 1085951, Appendix C) for benzene were less than 10 mg/kg. The drum of soil cuttings from Boring A was therefore managed as RCRA-exempt, petroleum-contaminated soil. Analytical results from the drum of MW-10 cuttings indicated the soil would not exceed the regulatory level for benzene and therefore is not considered a hazardous waste. We contracted Emerald Alaska, Inc. (Emerald) to transport and treat the drums of contaminated soil cuttings from Boring A, MW-10, and MW-16.

We evaluated the groundwater results to determine if the development water would exceed the groundwater cleanup level and therefore require treatment. We treated the development water from monitoring well MW-10 with our carbon filter prior to discharge on the site. We discharged development water from monitoring wells MW-11, 13, 14, and 15 to the ground surface in an unpaved portion of the site. Due to schedule and cold-weather constraints, we contracted Emerald to treat the drums of development water from MW-12 and MW-16.

6.3 Soil and Groundwater Contamination

Residual soil contamination in and near the former UST and dispenser excavation area at the northwest corner of the warehouse building is the primary source of the groundwater contamination at this site. The USTs contained gasoline and diesel fuel, and a diesel aboveground storage tank was located near the dispenser island.

The hydrocarbon concentrations in soil and groundwater do not suggest the presence of free-phase product on the water table at the soil-boring or monitoring well locations. Except at MW-16, the nature of the soil and groundwater contamination we encountered in our soil borings and groundwater monitoring wells is consistent with releases from the former USTs. As one would expect, the contamination is characterized as weathered petroleum fuels with components in the diesel and gasoline range. The alkylbenzene analytes and naphthalene detected in the soil and groundwater samples are typically associated with fuel products. The detected halogenated VOCs have been previously reported in groundwater at the site.

Our field observations and PID measurements did not indicate soil contamination at monitoring wells MW-11, MW-13, MW-14, or MW-15 (Figure 2). We did not submit soil samples from these borings for laboratory analysis; it is possible there is soil contamination at these locations.

We used SLR's 2004 soil-sample results and our 2008 investigation results to evaluate the extent of soil contamination at the site.

PID results indicate contamination above cleanup levels may be present in the near-surface soils to at least the bottom of the boring (2.5 feet to 17 feet bgs) in Boring A and MW-10.

Soil contamination (i.e., above ADEC soil-cleanup levels) is present at least as far west as Boring A and MW-10, and was found at MW-8 and well points WP-1, WP-2, and WP-3 during SLR's 2004 investigation. Boring B marks the eastern extent of soil contamination from the former dispenser island; soil contamination may extend northeast of the former UST locations. Soil contamination does not appear to extend to MW-11, MW-12, or MW-13; SLR did not collect soil samples from MW-9 (Figure 2) in 2004. Based on the analytical results, we estimate the extent of subsurface-soil contamination by one or more analytes to be within an area of approximately 150 feet (in the northwest to southeast direction) by 100 feet to 150 feet (northeast to southwest).

Benzene was detected above the soil cleanup level in the boring for MW-16. PID readings were elevated from 5 feet bgs to the bottom of the boring, indicating possible soil contamination within that range. The extent of soil contamination in this area cannot be determined with the available information from our investigation.

The benzene groundwater plume is less than 200 feet wide at the transect of monitoring wells near the western property line, and is bound by MW-11 to the north and MW-13 to the south. The benzene plume extends from the former UST source area to at least MW-12, a distance of about 240 feet. Given the benzene concentration in MW-12 (113 µg/L), located about 20 feet from the fence, benzene concentrations above the 5-µg/L ADEC groundwater-cleanup level likely cross the property line onto TL-2321 (Figure 3). The plumes of GRO, DRO, and other analytes, including EDB and EDC, appear to be smaller and do not extend to MW-12 near the property line.

The highest benzene groundwater concentration on the subject site was found in the sample from MW-16; resampling confirmed the elevated concentrations. The elevated benzene concentration points to an additional source area upgradient of MW-16. At the ADOT&PF FIA's request, we installed monitoring well MW-16 roughly downgradient from Lot 5A (Figure 3). The Texaco Bulk Plant was formerly located on this property, which is an ADEC contaminated site where the groundwater is sampled on a regular basis. According to the ADEC Contaminated Sites web page, the highest contaminant levels in 13 soil borings and six monitoring wells installed on that

site in 2004 were observed in boring MW-1. "MW-1 is near the property boundary along Airport Industrial Road. The FIA Fuel Hydrant pipeline runs approximately 15 feet to the southeast of MW-1 and could potentially be contributing to contamination at the site." The GRO (3.79 mg/L) and benzene (152 µg/L) concentrations in the 2006 samples from MW-1 exceeded the ADEC cleanup levels. These concentrations are lower than those found in our samples from MW-16.

Given the high DRO, GRO, and benzene concentrations at MW-16, groundwater contamination likely crosses the northwestern property line onto TL-2321 (Figure 3). The source and extent of DRO, GRO, and benzene groundwater contamination at MW-16 is not known. The benzene detected in groundwater at MW-15 may be related to the plume at MW-16. The source of the soil and groundwater contamination at MW-16 may be the former FIA fuel hydrant system, the former Texaco Bulk Plant, or another source.

The laboratory data-quality issues do not affect our evaluation of conditions at the site. The DRO soil concentrations reported in Boring A and MW-10 are biased low. Comparison of the reported concentrations to the respective cleanup levels indicates the bias would not likely change whether the result would be above or below the cleanup level.

Benzene is the primary contaminant of concern on the subject site since it exceeds the groundwater cleanup level near the property line in MW-12 and likely crosses the property boundary. Other contaminants above groundwater cleanup level are limited to the area of the subject site.

To address ADEC's concern about its presence, we analyzed selected soil and groundwater samples for EDB and EDC). EDB and EDC were not reported above their PQLs in the soil samples from Boring A and B and MW-10, but the PQLs were at least 1,500 and 15 times their respective soil cleanup levels. EDB was not reported in the groundwater samples from MW-6, MW-7, MW-8, and MW-12, but its PQL was 20 times the groundwater cleanup level. EDB was detected in MW-10 at an estimated 79.3 µg/L, which is above the groundwater cleanup level. EDC was reported in the sample and field duplicate from MW-8 at 4.92 µg/L and 5.12 µg/L, respectively. The latter value exceeds the EDC groundwater cleanup level. EDC was not detected in the samples from MW-6, MW-7, and MW-10, and was detected in the samples from MW-12 at concentrations less than the groundwater-cleanup level. The EDC cleanup level is 100 times that of EDB. EDB may be present at the other wells but the PQL was too high to measure it. Future groundwater monitoring should include analysis by EPA Method 504.1, 524.2, or 8011 to provide EDB PQLs less than the groundwater-cleanup level.

We evaluated the benzene concentration trends in the monitoring wells at the subject site. An evaluation of trends is only possible for those wells where at least four sampling events had occurred. The benzene concentration is decreasing in wells MW-3 and MW-8. The available benzene data do not exhibit a trend at wells MW-1, MW-2, MW-4, and MW-9. There are not sufficient data available to allow us to determine whether a trend is present at monitoring wells MW-5, MW-6, and MW-7, and at all the wells we installed at this site in 2008.

7.0 CONCLUSION AND RECOMMENDATIONS

Based on the findings of our 2008 investigation at the former Mark Air warehouse site, Shannon & Wilson concludes:

- diesel- and gasoline-range petroleum hydrocarbon subsurface-soil contamination is present at the UST source area;
- petroleum-hydrocarbon groundwater contamination (i.e., GRO and DRO) from the UST source area is limited to the area of the subject site;
- the benzene plume from the UST source area likely crosses the western property line; and
- groundwater contamination is present at MW-16 from another, as yet unknown, source.

We recommend continued groundwater monitoring at the subject site, at a minimum on a yearly basis, corresponding with seasonal high groundwater conditions. The goal of additional monitoring would be to accumulate sufficient data to allow us to assess contaminant-concentration trends where they are not now apparent. Aug/Sept

Obtaining seasonal groundwater-elevation measurements would allow us to better define the groundwater-flow regime on the property, i.e., seasonal changes in groundwater gradient. The apparent groundwater gradient at the time of our measurements for this study was to the north/northwest and of relatively low magnitude. Understanding how groundwater flow at the site varies seasonally will allow us to better define contaminant-source areas.

The ADOT&PF may consider pursuing innovative remedial options for the source area (including the area of MW-10 and Boring A) affecting groundwater quality at MW-12. Our field crew noted a strong odor of hydrogen sulfide while sampling some of the monitoring wells, which indicates there is ongoing microbiological activity in the contaminated aquifer. This

observation may point to opportunities for bioremediation of the petroleum-contaminated source areas.

We recommend an investigation to locate the source or sources of groundwater contamination found in the samples from monitoring well MW-16. This may require coordination with the consultant monitoring the former Texaco Bulk Plant site, so as not to duplicate efforts.

Shannon & Wilson recently performed a water-well search for the tenant of another contaminated property at the airport. We suggest reviewing available well-search results to identify wells at TL-2321/2327, and recommend sampling the water well or wells on that property.

A groundwater sample from MW-16 should be analyzed for VOCs, in the event groundwater samples from TL-2321/2327 contain VOC analytes. Analyzing samples from both MW-15 and MW-16 for VOCs may show whether those wells are affected by the same source.

8.0 LIMITATIONS

The data presented in this report are based on the sampling and analysis we performed; they should not be construed as a guarantee of the water or soil quality at the site. Our sampling was intended to confirm the presence or absence of selected contaminants at the sampled locations. It is possible our subsurface tests do not represent the highest levels of contamination. In addition, conclusions cannot be drawn on the presence or absence of contaminants for which laboratory analyses were not performed. As a result, the sampling and analysis performed can only provide you with our judgment as to the environmental characteristics of the site, and in no way guarantees an agency or its staff will reach the same conclusions.

Changes due to natural forces or human activity can occur on the site. The data presented in this report should be considered representative only of the time the data were collected. In addition, changes in government codes, regulations, or laws may occur. Because of such changes beyond our control, our observations and interpretations may need to be revised.

APPENDIX C

SGS Laboratory Results and ADEC Data Review Checklists

SGS Environmental Services
Alaska Division
Level II Laboratory Data Report

Project:	31-1-11417-001 Mark Air
Client:	Shannon & Wilson-Fairbanks
SGS Work Order:	1084936

Released by:

Contents:

Note:
Unless otherwise noted, all quality assurance/quality control criteria is in compliance with the standards set forth by the proper regulatory authority, the SGS Quality Assurance Program Plan, and the National Environmental Accreditation Conference.

SGS

Case Narrative

Client	SHANFBK	Shannon & Wilson-Fairbanks	**Printed Date/Time**	9/4/2008	14:15
Workorder	1084936	31-1-11417-001 Mark Air			

Sample ID	Client Sample ID

Refer to the sample receipt form for information on sample condition.

1084936003 **PS** **MW-3**

AK102 - The pattern is consistent with a highly weathered middle distillate.

1084936006 **PS** **MW-6**

8260B - ICV recovery for dichlordifluoromethane is biased high. Sample result for dichlorodifluoromethane is estimated in the associated sample.

1084936008 **PS** **MW-8**

AK101 - BFB (surrogate) recovery does not meet QC goals (biased high) due to hydrocarbon interference.
8260B - ICV recovery for dichlordifluoromethane is biased high. Sample result for dichlorodifluoromethane is estimated in the associated sample.
AK102 - The pattern is consistent with a weathered gasoline.

1084936010 **PS** **MW-80**

AK101 - BFB (surrogate) recovery does not meet QC goals (biased high) due to hydrocarbon interference.
8260B - ICV recovery for dichlordifluoromethane is biased high. Sample result for dichlorodifluoromethane is estimated in the associated sample.
AK102 - The pattern is consistent with a weathered gasoline.

851792 **LCSD** **LCSD for HBN 204931 [VXX/18631**

8260B - LCSD recovery for dichlorodifluoromethane does not meet QC goals (biased low). Results for this analyte may be estimated. This analyte was not detected in the associated samples.
8260B - LCS/LCSD does not meet laboratory RPD criteria for dichlorodifluoromethane. Results for this analyte are estimated in the associated samples.

Fairbanks, AK 99709

Work Order:	1084936	
	31-1-11417-001 Mark Air	**Released by:**
Client:	Shannon & Wilson-Fairbanks	
Report Date:	September 04, 2008	

Enclosed are the analytical results associated with the above workorder.

As required by the state of Alaska and the USEPA, a formal Quality Assurance/Quality Control Program is maintained by SGS. A copy of our Quality Assurance Plan (QAP), which outlines this program, is available at your request.

The laboratory certification numbers are AK971-05 (DW), UST-005 (CS) and AK00971 (Micro) for ADEC and 001992 for NELAP (RCRA methods: 1020A, 1311, 6010B, 7470A, 7471A, 9040B, 9045C, 9056, 9060, 9065, 8015B, 8021B, 8081A/8082, 8260B, 8270C).

Except as specifically noted, all statements and data in this report are in conformance to the provisions set forth by the SGS QAP, the National Environmental Laboratory Accreditation Program and, when applicable, other regulatory authorities.

If you have any questions regarding this report or if we can be of any other assistance, please contact your SGS Project Manager at 907-562-2343.

The following descriptors may be found on your report which will serve to further qualify the data.

PQL	Practical Quantitation Limit (reporting limit).
U	Indicates the analyte was analyzed for but not detected.
F	Indicates value that is greater than or equal to the MDL.
J	The quantitation is an estimation.
ND	Indicates the analyte is not detected.
B	Indicates the analyte is found in a blank associated with the sample.
*	The analyte has exceeded allowable regulatory or control limits.
GT	Greater Than
D	The analyte concentration is the result of a dilution.
LT	Less Than
!	Surrogate out of control limits.
Q	QC parameter out of acceptance range.
M	A matrix effect was present.
JL	The analyte was positively identified, but the quantitation is a low estimation.
E	The analyte result is above the calibrated range.
R	Rejected

Note: Sample summaries which include a result for "Total Solids" have already been adjusted for moisture content.

Client Sample ID	MW-6	**Received Date/Time**	08/22/2008 9:40
Matrix	Water (Surface, Eff., Ground)	**Technical Director**	**Stephen C. Ede**

Sample Remarks:

8260B - ICV recovery for dichlordifluoromethane is biased high. Sample result for dichlorodifluoromethane is estimated in the associated sample.

Sample Remarks:

AK101 - BFB (surrogate) recovery does not meet QC goals (biased high) due to hydrocarbon interference.
8260B - ICV recovery for dichlordifluoromethane is biased high. Sample result for dichlorodifluoromethane is estimated in the associated sample.
AK102 - The pattern is consistent with a weathered gasoline.

SAMPLE RECEIPT FORM FOR TRANSFERS
From
FAIRBANKS, ALASKA OR HONOLULU, HAWAII
To
ANCHORAGE, AK

TO BE COMPLETED IN ANCHORAGE UPON ARRIVAL FROM FAIRBANKS OR HAWAII.
NOTES RECORDED BELOW ARE ACTIONS NEEDED UPON ARRIVAL IN ANCHORAGE.

Notes: _____

_____

_____

_____

_____

Receipt Date / Time: 8-22-08 0940

Is Sample Date/Time Conversion Necessary? Yes _____ **No** ✓

Number of Hours From Alaska Local Time: —

Foreign Soil? Yes _____ **No** ✓

Delivery method to Anchorage (*circle all that apply*):

Alert Courier / UPS / FedEx / USPS / AA Goldstreak / NAC / ERA / PenAir / Carlile / (Lynden) / SGS

Other: _____

Airbill # _____

COOLER AND TEMP BLANK READINGS* 70d

Cooler ID	Temp Blank (°C)	Cooler (°C)	Cooler ID	Temp Blank (°C)	Cooler (°C)
1	2.1	2.6			
2	4.7	2.8			

CUSTODY SEALS INTACT: (YES) / NO

#/WHERE: TWO ON FRONT AND BACK TOP LIDS X 2

COMPLETED BY: _____

**Temperature readings include thermometer correction factors.*

Additional Sample Remarks: *(√if applicable)*

_____ Extra Sample Volume?
_____ Limited Sample Volume?
_____ MeOH field preserved for volatiles?
_____ Field-filtered for dissolved _____
_____ Lab-filtered for dissolved _____
_____ Ref Lab required? _____
_____ Foreign Soil?

This section must be filled out for DoD projects (USACE, Navy, AFCEE)

Yes	No		
___	___	Is received temperature 4 ± 2°C?	
		Exceptions:	Samples/Analyses Affected:
		_____	_____
		_____	_____
		_____	_____
___	___	If temperature(s) <0 °C, were containers ice-free? N/A	
		Notify PM immediately of any ice in samples.	
___	___	Was there an airbill? *(Note # above in the right hand column)*	
___	___	Was cooler sealed with custody seals?	
		# / where: _____	
___	___	Were seal(s) intact upon arrival?	
___	___	Was there a COC with cooler?	
___	___	Was COC sealed in plastic bag & taped inside lid of cooler?	
___	___	Was the COC filled out properly?	
___	___	Did the COC indicate USACE / Navy / AFCEE project?	
___	___	Did the COC and samples correspond?	
___	___	Were all sample packed to prevent breakage?	
		Packing material: _____	
___	___	Were all samples unbroken and clearly labeled?	
___	___	Were all samples sealed in separate plastic bags?	
___	___	Were all VOCs free of headspace and/or MeOH preserved?	
___	___	Were correct container / sample sizes submitted?	
___	___	Is sample condition good?	
___	___	Was copy of CoC, SRF, and custody seals given to PM to fax?	

This section must be filled if problems are found.

Yes No
___ ___ Was client notified of problems?

LABORATORY DATA REVIEW CHECKLIST

(**NOTE**: **NA** = not applicable)

1. Laboratory

a. Did an ADEC CS-approved laboratory receive and perform all of the submitted sample analyses? **Yes** / **No**

b. If the samples were transferred to another "network" laboratory or sub-contracted to an alternate laboratory, was the laboratory performing the analyses ADEC CS-approved? **Yes / No / NA**

2. Chain of Custody (COC)

a. COC information completed, signed, and dated (including released/received by)? **Yes** / **No**

b. Were the correct analyses requested? **Yes** / **No**

3. Laboratory Sample Receipt Documentation

a. Sample/cooler temperature documented and within range at receipt (4° ± 2° C)? **Yes** / **No**

b. Sample preservation acceptable - acidified waters, MeOH-preserved VOC soil (GRO, BTEX, VOCs, etc.)? **Yes** / **No**

c. Sample condition documented - broken, leaking (soil MeOH), zero headspace (VOC vials)? **NA** / **Yes / No**

d. If there were any discrepancies, were they documented (e.g., incorrect sample containers/preservation, sample temperatures outside range, insufficient sample size, missing samples)? **NA** / **Yes / No**

e. Data quality or usability affected? **Yes (explain)** / **No**

4. Case Narrative

a. Present and understandable? **Yes** / **No (explain)**

b. Discrepancies, errors or QC failures noted by the lab? **NA** / **Yes** / **No (explain)**

c. Were all corrective actions documented? **NA** / **Yes / No (explain) – Note: No corrective actions were required.**

d. Is there an effect on data quality/usability, according to the case narrative? **NA / (No) / Yes (explain) – Note: the case narrative indicates the Initial Calibration Verifications (ICVs) for dichlorodifluoromethane were biased high, and the results for this analyte in associated samples are estimated. The associated samples were *MW-6*, *MW-8*, and *MW-80*.**

5. Sample Results

a. Correct analyses performed/reported as requested on COC? **(Yes) / No (explain)**

b. All applicable holding times met? **(Yes) / No**

c. All soils reported on a dry-weight basis? **(NA) / Yes / No**

d. Are the reported PQLs less than the Cleanup Level or the minimum required detection level for the project? **(Yes) / No (explain only for non-detects with elevated PQLs)**

e. Data quality or usability affected? **(No) / Yes (explain)**

6. QC Samples

a. Method Blank

i. Is at least one method blank (MB) reported per matrix, analysis, and 20 samples? **(Yes) / No**
ii. Are all method blank results less than PQL? **(Yes) / No**
iii. If MB above PQL, what samples are affected?

iv. Do the affected sample(s) have data flags? **Yes / No (NA)**
If so, are the data flags clearly defined? **Yes / No (NA)**

v. Are data quality or usability affected? **(No)** (i.e., MB data are acceptable) / **Yes** (Explain)

b. Laboratory Control Sample/Duplicate (LCS/LCSD)

i. Organics - Is at least one LCS/LCSD reported per matrix, analysis, and 20 samples?
NA (Yes) / No

ii. Metals/Inorganics - Is at least one LCS and one sample duplicate reported per matrix, analysis and 20 samples? **NA (Yes) / No**

iii. Accuracy – Are all percent recoveries (%R) reported and within method or laboratory limits or project-specified DQOs? [*AK petroleum methods %R < 20%; other analyses, refer to lab QC pages*] **Yes (No)** (explain) – **Note: the LCSD recovery for dichlorodifluoromethane was below the laboratory's limit. As noted above, this analyte's ICVs were biased high.**

The results were for this analyte in samples *MW-6*, *MW-7*, *MW-8*, *MW-80*, and the trip blank should be considered estimates.

iv. Precision – Are all relative percent differences (RPDs) reported and less than method or laboratory limits, or project-specified DQOs? **Yes / (No) (explain) – Note: the RPD for dichlorodifluoromethane was above laboratory limits.**

v. If %R or RPD is outside of acceptable limits, what samples are affected? **NA or (list) – Note: samples *MW-6*, *MW-7*, *MW-8*, *MW-80*, and the trip blank were affected.**

vi. Do the affected samples(s) have data flags? **NA / (Yes) / No (explain)**

If so, are the data flags clearly defined? **Yes**

vii. Is the data quality or usability affected? **No or (explain) – Note: the dichlorodifluoromethane concentrations for samples *MW-6*, *MW-7*, *MW-8*, *MW-80*, and the trip blank should be considered estimates.**

c. Surrogates - Organics Only

i. Are surrogate recoveries reported for organic analyses, including field, QC and laboratory samples? **(Yes) / No**

ii. Accuracy – Are all percent recoveries (%R) reported and within method or laboratory limits or project-specified DQOs? **Yes / (No)**

iii. Do the sample results with failed surrogate recoveries have data flags? **NA / (Yes) / No (explain)**

If so, are the data flags clearly defined? **(Yes) / No / NA**

iv. Is the data quality or usability affected? **No or (explain) – Note: the GRO surrogate in samples *MW-8* and *MW-80* was recovered above the laboratory control limit due to hydrocarbon interference. The LCS analyses associated with these samples were acceptable, and the GRO results should be considered accurate.**

d. Trip Blank - Volatile analyses only (GRO, BTEX, VOCs, etc.)

i. Is at least one trip blank (TB) reported per matrix, analysis and cooler? **NA / (Yes) / No**

ii. Are all results less than the PQL? **NA / (Yes) / No**

iii. If TB is above the PQL, what samples are affected? **(NA) or list samples**

iv. Is the data quality or usability affected? **(No) or explain.**

SGS Work Order Number: 1084936

e. Field Duplicate

i. Was at least one field duplicate submitted per matrix, analysis and 10 project samples?
Yes / No – Note: duplicate samples were collected from well MW-8.

ii. Were the field duplicates submitted blind to the lab? **Yes / No / NA**

iii. Precision – Are all relative percent differences (RPDs) less than specified DQOs (recommended: 30% for water, 50% for soil) ? **Yes / No / NA**

iv. Is the data quality or usability affected? **No / Yes** (explain)

f. Decontamination or Equipment Blank (if applicable)

Not Applicable or…

i. Are all results less than the PQL? **Yes / No**

ii. If results are above PQL, what samples are affected? **NA** or **list**

iii. Is the data quality or usability affected? Explain.

7. Other Data Flags/Qualifiers (ACOE, AFCEE, Lab-specific, etc.)

Not applicable or …

a. Are they defined and appropriate? **Yes / No**

Case Narrative

Client	SHANFBK	Shannon & Wilson-Fairbanks	**Printed Date/Time**	10/1/2008	16:23
Workorder	1084993	31-1-11417-002 Mark Air			

Sample ID **Client Sample ID**

Refer to the sample receipt form for information on sample condition.

1084993001 **PS** **1417-090908-001**

AK101/8021B - BFB (surrogate) recovery does not meet QC goals (biased high) due to hydrocarbon interference.
AK102 - The sample was extracted one day outside of hold time.
AK102 - The pattern is consistent with a weathered middle distillate.

1084993002 **PS** **1417-090908-002**

AK101/8021B - BFB (surrogate) recovery does not meet QC goals (biased high) due to hydrocarbon interference.
AK102 - The sample was extracted one day outside of hold time.
AK102 - The pattern is consistent with a weathered middle distillate.

1084993003 **PS** **1417-090908-003**

AK102 - The sample was extracted one day outside of hold time.

1084993004 **PS** **1417-090908-004**

AK101/8021B - BFB (surrogate) recovery does not meet QC goals (biased high) due to hydrocarbon interference.
AK102 - The sample was extracted one day outside of hold time.
AK102 - The pattern is consistent with a weathered middle distillate.

1084993005 **PS** **1417-091108-005**

AK102 - The sample was diluted due to the dark color; therefore the PQL was elevated.

857831 **LCS** **LCS for HBN 206203 [VXX/18726]**

8260B - LCS recovery for dichlorodifluoromethane does not meet QC criteria (biased high). This analyte was not detected in the associated samples.

857833 **MS** **1084929001(857832MS)**

8260B - MS/MSD recoveries for vinyl chloride and dichlorodifluoromethane do not meet QC criteria (biased high). These analytes were not detected in the associated samples.

857834 **MSD** **1084929001(857832MSD)**

8260B - MS/MSD recoveries for vinyl chloride and dichlorodifluoromethane do not meet QC criteria (biased high). These analytes were not detected in the associated samples

857839 **CCV** **CCV for HBN 206205 (VMS/10111)**

8260B - CCV recoveries for several analytes do not meet QC criteria (biased high). These analytes were not detected in the associated samples.

857966 **MB** **MB for HBN 206227 [VXX/18729]**

MB - result for benzene is greater than one-half the PQL but less than PQL.

Client	SHANFBK	Shannon & Wilson-Fairbanks	Printed Date/Time	10/1/2008	16:23
Workorder	1084993	31-1-11417-002 Mark Air			

Sample ID		Client Sample ID
858278	LCS	LCS for HBN 206289 [VXX/18734]

8260B - LCS recovery for dichlorodifluoromethane does not meet QC criteria (biased high). This analyte was not detected in the associated samples.

858279	MS	08FTW348-118A(1085018011MS)

8260B - MS/MSD recoveries for dichlorodifluoromethane and vinyl chloride do not meet QC criteria (biased high). See LCS for accuracy.

858280	MSD	08FTW348-118A(1085018011MSD)

8260B - MS/MSD recoveries for dichlorodifluoromethane and vinyl chloride do not meet QC criteria (biased high). See LCS for accuracy.
8260B - MSD/RPD result for chloroethane do not meet QC criteria. This analyte was not detected in the associated samples.

858348	CCV	CCV for HBN 206297 (VMS/10117)

8260B - CCV recoveries for several analytes do not meet QC criteria (biased high). These analytes were not detected in the associated samples.

858595	MSD	1085018011(858854MSD)

8260B - MSD recovery for napthalene does not meet QC criteria (biased high). See LCS for accuracy.

858895	MB	MB for HBN 206408 [VXX/18746]

MB - result for benzene is greater than one-half the PQL but less than PQL.

Fairbanks, AK 99709

Work Order:	1084993	
	31-1-11417-002 Mark Air	**Released by:**
Client:	Shannon & Wilson-Fairbanks	
Report Date:	October 01, 2008	

Enclosed are the analytical results associated with the above workorder.

As required by the state of Alaska and the USEPA, a formal Quality Assurance/Quality Control Program is maintained by SGS. A copy of our Quality Assurance Plan (QAP), which outlines this program, is available at your request.

The laboratory certification numbers are AK971-05 (DW), UST-005 (CS) and AK00971 (Micro) for ADEC and AK100001 for NELAP (RCRA methods: 1020A, 1311, 6010B, 7470A, 7471A, 9040B, 9045C, 9056, 9060, 9065, 8015B, 8021B, 8081A/8082, 8260B, 8270C).

Except as specifically noted, all statements and data in this report are in conformance to the provisions set forth by the SGS QAP, the National Environmental Laboratory Accreditation Program and, when applicable, other regulatory authorities.

If you have any questions regarding this report or if we can be of any other assistance, please contact your SGS Project Manager at 907-562-2343.

The following descriptors may be found on your report which will serve to further qualify the data.

PQL	Practical Quantitation Limit (reporting limit).
U	Indicates the analyte was analyzed for but not detected.
F	Indicates value that is greater than or equal to the MDL.
J	The quantitation is an estimation.
ND	Indicates the analyte is not detected.
B	Indicates the analyte is found in a blank associated with the sample.
*	The analyte has exceeded allowable regulatory or control limits.
GT	Greater Than
D	The analyte concentration is the result of a dilution.
LT	Less Than
!	Surrogate out of control limits.
Q	QC parameter out of acceptance range.
M	A matrix effect was present.
JL	The analyte was positively identified, but the quantitation is a low estimation.
E	The analyte result is above the calibrated range.
R	Rejected

Note: Sample summaries which include a result for "Total Solids" have already been adjusted for moisture content.

Sample Remarks:

AK101/8021B - BFB (surrogate) recovery does not meet QC goals (biased high) due to hydrocarbon interference.
AK102 - The sample was extracted one day outside of hold time.
AK102 - The pattern is consistent with a weathered middle distillate.

Sample Remarks:

AK101/8021B - BFB (surrogate) recovery does not meet QC goals (biased high) due to hydrocarbon interference.
AK102 - The sample was extracted one day outside of hold time.
AK102 - The pattern is consistent with a weathered middle distillate.

SAMPLE RECEIPT FORM

SGS WO#:

Yes	No	NA		
___	✓	___	Are samples **RUSH**, priority or *w/in 72 hrs* of hold time?	**TAT (circle one):** ~~Standard~~ -or- Rush
___	___	✓	If yes, have you done *e-mail ALERT notification*?	**Received Date:** 9/15/08
___	✓	___	Are samples *within 24 hrs.* of **hold time** or **due date**?	**Received Time:** 1445
___	___	✓	If yes, have you also *spoken with* supervisor?	Is date/time conversion necessary? NC
___	✓	___	Archiving bottles (if req'd): Are they properly marked?	# of hours to AK Local Time: NA
___	✓	___	Are there any **problems**? PM Notified? ___	**Thermometer ID:** FBX710
___	___	✓	Were samples preserved correctly and pH verified?	

Cooler ID	Temp Blank	Cooler Temp
1	3.4 °C	4.9 °C
	°C	°C
	°C	°C
	°C	°C
	°C	°C

Note: Temperature readings include thermometer correction factors

___	✓	___	If this is for PWS, provide **PWSID.** ___	
___	✓	___	Will courier charges apply?	
			Method of payment? ___	
✓	___	___	Data package required? (Level: 1 / (2) / 3 / 4)	
			Notes: ___	
___	✓	___	Is this a DoD project? (USACE, Navy, AFCEE)	

Delivery method (circle all that apply): (Client) / Alert Courier / UPS / FedEx / USPS / DHL / AA Goldstreak / NAC / ERA / PenAir / Carlile/ Lynden / SGS / Other: ___

Airbill # ___

Additional Sample Remarks: *(√if applicable)*

___ Extra Sample Volume?
___ Limited Sample Volume?
✓ MeOH field preserved for volatiles?
___ Field-filtered for dissolved ___
___ Lab-filtered for dissolved ___
___ Ref Lab required? ___
___ Foreign Soil?

This section must be filled out for DoD projects (USACE, Navy, AFCEE)

Yes	No	
___	___	Is received temperature 4 ± 2°C? Exceptions: ___ Samples/Analyses Affected: ___
___	___	If temperature(s) <0 °C, were containers ice-free? N/A *Notify PM immediately of any ice in samples.*
___	___	Was there an airbill? *(Note # above in the right hand column)*
___	___	Was cooler sealed with custody seals? # / where: ___
___	___	Were seal(s) intact upon arrival?
___	___	Was there a COC with cooler?
___	___	Was COC sealed in plastic bag & taped inside lid of cooler?
___	___	Was the COC filled out properly?
___	___	Did the COC indicate USACE / Navy / AFCEE project?
___	___	Did the COC and samples correspond?
___	___	Were all sample packed to prevent breakage? Packing material: ___
___	___	Were all samples unbroken and clearly labeled?
___	___	Were all samples sealed in separate plastic bags?
___	___	Were all VOCs free of headspace and/or MeOH preserved?
___	___	Were correct container / sample sizes submitted?
___	___	Is sample condition good?
___	___	Was copy of CoC, SRF, and custody seals given to PM to fax?

This section must be filled if problems are found.

Yes No ___ ___ Was client notified of problems?

LABORATORY DATA REVIEW CHECKLIST

(**NOTE**: **NA** = not applicable)

1. Laboratory

a. Did an ADEC CS approved laboratory receive and perform all of the submitted sample analyses? (Yes) / **No**

b. If the samples were transferred to another "network" laboratory or sub-contracted to an alternate laboratory, was the laboratory performing the analyses ADEC CS-approved? **Yes / No /** (NA)

2. Chain of Custody (COC)

a. COC information completed, signed, and dated (including released/received by)? (Yes) / **No**

b. Were the correct analyses requested? (Yes) / **No**

3. Laboratory Sample Receipt Documentation

a. Sample/cooler temperature documented and within range at receipt (4° ± 2° C)? (Yes) **No**

b. Sample preservation acceptable - acidified waters, MeOH-preserved VOC soil (GRO, BTEX, VOCs, etc.)? (Yes) / **No**

c. Sample condition documented - broken, leaking (soil MeOH), zero headspace (VOC vials)? (NA) / **Yes / No**

d. If there were any discrepancies, were they documented (e.g., incorrect sample containers/preservation, sample temperatures outside range, insufficient sample size, missing samples)? (NA) / **Yes / No**

e. Data quality or usability affected? Yes (explain) / (No)

4. Case Narrative

a. Present and understandable? (Yes) / **No (explain)**

b. Discrepancies, errors or QC failures noted by the lab? **NA /** (Yes) / **No (explain)**

c. Were all corrective actions documented? (NA) / **Yes / No (explain) – Note: No corrective actions were required.**

d. Is there an effect on data quality/usability, according to the case narrative? **NA / No /(Yes) (explain) – Note: the case narrative indicates the samples from MW-10, Boring A, and Boring B were extracted one day past the holding-time limit; these samples may be biased low.**

5. Sample Results

a. Correct analyses performed/reported as requested on COC? **(Yes) / No (explain)**

b. All applicable holding times met? **Yes /(No) See note above.**

c. All soils reported on a dry-weight basis? **NA /(Yes) / No**

d. Are the reported PQLs less than the Cleanup Level or the minimum required detection level for the project? **Yes /(No)** (explain only for non-detects with elevated PQLs) – **Note: the PQLs for 1,2-dichloroethane exceeded the ADEC soil cleanup level for the trip blank and each of the soil samples submitted for VOC analysis. This analyte was not detected in the samples, but may be present at a concentration between the cleanup level and the PQL.**

e. Data quality or usability affected? **No /(Yes) (explain) – Note: the case narrative indicates the samples from MW-10, Boring A, and Boring B were extracted one day past the holding-time limit; these samples may be biased low.**

6. QC Samples

a. Method Blank

i. Is at least one method blank (MB) reported per matrix, analysis, and 20 samples? **(Yes) / No**
ii. Are all method blank results less than PQL? **(Yes) / No**
iii. If MB above PQL, what samples are affected?

iv. Do the affected sample(s) have data flags? **Yes / No /(NA)**

If so, are the data flags clearly defined? **Yes / No /(NA)**

v. Are data quality or usability affected? **(No)** (i.e., MB data are acceptable) / **Yes** (Explain)

b. Laboratory Control Sample/Duplicate (LCS/LCSD)

i. Organics - Is at least one LCS/LCSD reported per matrix, analysis, and 20 samples?
NA /(Yes) / No

ii. Metals/Inorganics - Is at least one LCS and one sample duplicate reported per matrix, analysis and 20 samples? **NA /(Yes) / No**

SGS Work Order Number: 1084993

iii. Accuracy – Are all percent recoveries (%R) reported and within method or laboratory limits or project-specified DQOs? [*AK petroleum methods %R < 20%; other analyses, refer to lab QC pages*] **Yes** / (**No**) (explain) – **Note: the LCS recovery for dichlorodifluoromethane was above the laboratory's limit. This analyte was not detected in associated samples, and the results were not affected.**

iv. Precision – Are all relative percent differences (RPDs) reported and less than method or laboratory limits, or project-specified DQOs? (**Yes**) / **No** (explain)

v. If %R or RPD is outside of acceptable limits, what samples are affected? (**NA**) or **list**

vi. Do the affected samples(s) have data flags? (**NA**) **/Yes / No (explain)**

If so, are the data flags clearly defined?

vii. Is the data quality or usability affected? (**No**) or **explain**.

c. Surrogates - Organics Only

i. Are surrogate recoveries reported for organic analyses, including field, QC and laboratory samples? (**Yes**) **/ No**

ii. Accuracy – Are all percent recoveries (%R) reported and within method or laboratory limits or project-specified DQOs? **Yes** / (**No**)

iii. Do the sample results with failed surrogate recoveries have data flags? **NA** / (**Yes**) **/ No (explain)**

If so, are the data flags clearly defined? (**Yes**) **/ No / NA**

iv. Is the data quality or usability affected? **No** or (**explain**) – **Note: the GRO surrogate in the samples from MW-10 and Boring A was recovered above the laboratory control limit due to hydrocarbon interference. The LCS analyses associated with these samples were acceptable, and the GRO results should be considered accurate.**

d. Trip Blank - Volatile analyses only (GRO, BTEX, VOCs, etc.)

i. Is at least one trip blank (TB) reported per matrix, analysis and cooler? **NA /** (**Yes**) **/ No**

ii. Are all results less than the PQL? **NA /** (**Yes**) **/ No**

iii. If TB is above the PQL, what samples are affected? (**NA**) or **list samples**

iv. Is the data quality or usability affected? (**No**) or **explain**.

SGS Work Order Number: 1084993

e. Field Duplicate

i. Was at least one field duplicate submitted per matrix, analysis and 10 project samples?
Yes / No – Note: duplicate samples were collected from Boring A.

ii. Were the field duplicates submitted blind to the lab? **Yes / No / NA**

iii. Precision – Are all relative percent differences (RPDs) less than specified DQOs (recommended: 30% for water, 50% for soil) ? **Yes / No / NA – Note: the RPDs for benzene, toluene, and n-butyl benzene were greater than 50%.**

iv. Is the data quality or usability affected? **No / Yes** (explain) – **Note: we will assume the higher of the two replicate values for benzene, toluene, and n-butyl benzene in the samples from Boring A represent the soil quality at that location.**

f. Decontamination or Equipment Blank (if applicable)

Not Applicable or…

i. Are all results less than the PQL? **Yes / No**

ii. If results are above PQL, what samples are affected? **NA** or **list**

iii. Is the data quality or usability affected? Explain.

7. Other Data Flags/Qualifiers (ACOE, AFCEE, Lab-specific, etc.)

Not applicable or …

a. Are they defined and appropriate? **Yes / No**

Certification:

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, other than the conditions noted on the sample data sheet(s) and/or the case narrative. This certification applies only to the tested parameters and the specific sample(s) received at the laboratory.

If you have any questions regarding this report, or if we can be of further assistance, please contact your SGS Project Manager.

Carmon Beene

Project Manager

SGS

Print Date: 11/17/2008

Enclosed are the analytical results associated with this workorder.

As required by the state of Alaska and the USEPA, a formal Quality Assurance/Quality Control Program is maintained by SGS. A copy of our Quality Assurance Plan (QAP), which outlines this program is available at your request.

The Laboratory certification numbers are AK971-05 (DW), UTS-005 (CS) and AK00971 (Micro) for ADEC and AK100001 for NELAP (RCRA methods: 1020A, 1311, 6010B, 7470A, 7471A, 9040B, 9045C, 9056, 9060, 8015B, 8021B, 8081A/8082, 8260B, 8270C).

Except as specifically noted, all statements and data in this report are in conformance to the provisions set forth by the SGS QAP, the National Environmental Laboratory Accreditation Program and, when applicable, other regulatory authorities.

If you have any questions regarding this report or if we can be of any assistance, please contact your SGS Project Manager at 907-562-2343.

The following descriptors may be found on your report which will serve to further qualify the data.

MDL	Method Detection Limit
PQL	Practical Quantitation Limit (reporting limit).
CL	Control Limit
U	Indicates the analyte was analyzed for but not detected.
F	Indicates value that is greater than or equal to the MDL.
J	The quantitation is an estimation.
ND	Indicates the analyte is not detected
B	Indicates the analyte is found in a blank associated with the sample.
*	The analyte has exceeded allowable regulatory or control limits.
D	The analyte concentration is the result of dilution.
GT	Greater Than
LT	Less Than
Q	QC parameter out of acceptance range.
M	A matrix effect was present.
E	The analyte result is above the calibrated range.
R	Rejected
DF	Analytical Dilution Factor
JL	The analyte was positively identified, but the quantitation is a low estimation.
<Surr>	Surrogate QC spiked standard
<Surr/IS>	Surrogate / Internal Standard QC spiked standard
QC	Quality Control
QA	Quality Assurance
MB	Method Blank
LCS (D)	Laboratory Control Sample (Duplicate)
MS(D)	Matrix Spike (Duplicate)
BMS(D)	Site Specific Matrix Spike
RPD	Relative Percent Difference
ICV	Initial Calibration Verification
CCV	Continuous Calibration Verification
MSA	Method of Standard Addition

Notes: Soil samples are reported on a dry weight basis unless otherwise specified

All DRO/RRO analysese are integrated per SOP.

SAMPLE RECEIPT FORM

SGS WO#:

Yes	No	NA		
	✓		Are samples RUSH, priority or *w/in 72 hrs* of hold time?	TAT (circle one): ~~Standard~~ -or- Rush
		✓	If yes, have you done *e-mail ALERT notification*?	Received Date: 11/05/08
	✓		Are samples *within 24 hrs.* of hold time or due date?	Received Time: 1115
		✓	If yes, have you also *spoken with* supervisor?	Is date/time conversion necessary? NO
	✓		Archiving bottles (if req'd): Are they properly marked?	# of hours to AK Local Time: N/A
	✓		Are there any problems? PM Notified?	Thermometer ID: TBXB
✓			Were samples preserved correctly and ~~pH verified?~~	
	✓		If this is for PWS, provide PWSID.	
	✓		Will courier charges apply?	
			Method of payment?	
✓			Data package required? (Level: 1 / (2) / 3 / 4)	
			Notes:	
	✓		Is this a DoD project? (USACE, Navy, AFCEE)	

Cooler ID	Temp Blank	Cooler Temp
1	3.4 °C	3.2 °C
	°C	°C
	°C	°C
	°C	°C
	°C	°C

Airbill #

Additional Sample Remarks: (√if applicable)

_____ Extra Sample Volume?
_____ Limited Sample Volume?
_____ MeOH field preserved for volatiles?
_____ Field-filtered for dissolved_____
_____ Lab-filtered for dissolved_____
_____ Ref Lab required?_____
_____ Foreign Soil?

This section must be filled out for DoD projects (USACE, Navy, AFCEE)

Yes	No		
		Is received temperature 4 ± 2°C?	
		Exceptions:	Samples/Analyses Affected:
		If temperature(s) <0°C, were containers ice-free? N/A	
		Notify PM immediately of any ice in samples.	
		Was there an airbill? *(Note # above in the right hand column)*	
		Was cooler sealed with custody seals?	
		#'s/where:	
		Were seal(s) intact upon arrival?	
		Was there a COC with cooler?	
		Was COC sealed in plastic bag & taped inside lid of cooler?	
		Was the COC filled out properly?	
		Did the COC indicate USACE / Navy / AFCEE project?	
		Did the COC and samples correspond?	
		Were all sample packed to prevent breakage?	
		Packing material:	
		Were all samples unbroken and clearly labeled?	
		Were all samples sealed in separate plastic bags?	
		Were all VOCs free of headspace and/or MeOH preserved?	
		Were correct container / sample sizes submitted?	
		Is sample condition good?	
		Was copy of CoC, SRF, and custody seals given to PM to fax?	

This section must be filled if problems are found.

Yes	No	
		Was client notified of problems?

LABORATORY DATA REVIEW CHECKLIST

(**NOTE**: **NA** = not applicable)

1. Laboratory

a. Did an ADEC CS approved laboratory receive and perform all of the submitted sample analyses? (Yes) / **No**

b. If the samples were transferred to another "network" laboratory or sub-contracted to an alternate laboratory, was the laboratory performing the analyses ADEC CS-approved? **Yes / No /** (NA)

2. Chain of Custody (COC)

a. COC information completed, signed, and dated (including released/received by)? (Yes) / **No**

b. Were the correct analyses requested? (Yes) / **No**

3. Laboratory Sample Receipt Documentation

a. Sample/cooler temperature documented and within range at receipt (4° ± 2° C)? (Yes) / **No**

b. Sample preservation acceptable - acidified waters, MeOH-preserved VOC soil (GRO, BTEX, VOCs, etc.)? (Yes) / **No**

c. Sample condition documented - broken, leaking (soil MeOH), zero headspace (VOC vials)? (NA) / **Yes / No**

d. If there were any discrepancies, were they documented (e.g., incorrect sample containers/preservation, sample temperatures outside range, insufficient sample size, missing samples)? (NA) / **Yes / No**

e. Data quality or usability affected? Yes (explain) / (No)

4. Case Narrative

a. Present and understandable? (Yes) / **No (explain)**

b. Discrepancies, errors or QC failures noted by the lab? **NA /** (Yes) / **No (explain)**

c. Were all corrective actions documented? (NA) / **Yes / No (explain) – Note: No corrective actions were required.**

SGS Work Order Number: 1085856

d. Is there an effect on data quality/usability, according to the case narrative? **NA / (No) / Yes**

5. Sample Results

a. Correct analyses performed/reported as requested on COC? **(Yes) / No (explain)**

b. All applicable holding times met? **(Yes) / No**

c. All soils reported on a dry-weight basis? **(NA) / Yes / No**

d. Are the reported PQLs less than the Cleanup Level or the minimum required detection level for the project? **(Yes) / No** (explain only for non-detects with elevated PQLs)

e. Data quality or usability affected? **(No) / Yes (explain)**

6. QC Samples

a. Method Blank

i. Is at least one method blank (MB) reported per matrix, analysis, and 20 samples? **(Yes) / No**
ii. Are all method blank results less than PQL? **(Yes) / No**
iii. If MB above PQL, what samples are affected?

iv. Do the affected sample(s) have data flags? **Yes / No / (NA)**

If so, are the data flags clearly defined? **Yes / No / (NA)**

v. Are data quality or usability affected? **(No)** (i.e., MB data are acceptable) **/ Yes** (Explain)

b. Laboratory Control Sample/Duplicate (LCS/LCSD)

i. Organics - Is at least one LCS/LCSD reported per matrix, analysis, and 20 samples?
NA / (Yes) / No

ii. Metals/Inorganics - Is at least one LCS and one sample duplicate reported per matrix, analysis and 20 samples? **(NA) / Yes / No**

iii. Accuracy – Are all percent recoveries (%R) reported and within method or laboratory limits or project-specified DQOs? [*AK petroleum methods %R < 20%; other analyses, refer to lab QC pages*] **(Yes) / No** (explain)

iv. Precision – Are all relative percent differences (RPDs) reported and less than method or laboratory limits, or project-specified DQOs? **(Yes) / No** (explain)

SGS Work Order Number: 1085856

v. If %R or RPD is outside of acceptable limits, what samples are affected? (NA) or **list**

vi. Do the affected samples(s) have data flags? (NA)/**Yes / No (explain)**

If so, are the data flags clearly defined?

vii. Is the data quality or usability affected? (No) or **explain**.

c. Surrogates - Organics Only

i. Are surrogate recoveries reported for organic analyses, including field, QC and laboratory samples? (Yes)/ **No**

ii. Accuracy – Are all percent recoveries (%R) reported and within method or laboratory limits or project-specified DQOs? (Yes)/ **No**

iii. Do the sample results with failed surrogate recoveries have data flags? (NA)/**Yes / No (explain)**

If so, are the data flags clearly defined? **Yes / No** (NA)

iv. Is the data quality or usability affected? (No) or **explain.**

d. Trip Blank - Volatile analyses only (GRO, BTEX, VOCs, etc.)

i. Is at least one trip blank (TB) reported per matrix, analysis and cooler? **NA /** (Yes)/ **No**

ii. Are all results less than the PQL? **NA /** (Yes)/ **No**

iii. If TB is above the PQL, what samples are affected? (NA) or **list samples**

iv. Is the data quality or usability affected? (No) or **explain**.

e. Field Duplicate

i. Was at least one field duplicate submitted per matrix, analysis and 10 project samples?
Yes / (No) **– Note: Project sample *1417-MW-16* was collected to verify previous sample results. A duplicate sample was collected from well MW-12 in the previous sampling event.**

ii. Were the field duplicates submitted blind to the lab? **Yes / No** (NA)

iii. Precision – Are all relative percent differences (RPDs) less than specified DQOs (recommended: 30% for water, 50% for soil) ? **Yes / No** (NA)

iv. Is the data quality or usability affected? (No)/ **Yes** (explain)

SGS Work Order Number: 1085856

f. Decontamination or Equipment Blank (if applicable)

Not Applicable or…

i. Are all results less than the PQL? **Yes / No**

ii. If results are above PQL, what samples are affected? **NA** or **list**

iii. Is the data quality or usability affected? Explain.

7. Other Data Flags/Qualifiers (ACOE, AFCEE, Lab-specific, etc.)

Not applicable or …

a. Are they defined and appropriate? **Yes / No**

Case Narrative

Client	SHANFBK	Shannon & Wilson-Fairbanks	**Printed Date/Time**	10/6/2008	16:49
Workorder	1085913	31-1-11417-001 Mark Air			

Sample ID	Client Sample ID

Refer to the sample receipt form for information on sample condition.

1085913001 **PS** **1417-MW-10**

8260B - ICV recovery for dichlorodifluoromethane does not meet QC goals (biased high). This analyte is estimated in the sample.
AK101/8021B - BFB (surrogate) recovery does not meet QC goals (biased high) due to hydrocarbon interference.
8260B - Sample result is estimated for 1,2-dibromoethane due to matrix. Result is posted overrange at 79.34 ug/L. Result was confirmed at 100X dilution at 0.76 ug/L.
AK102 - The pattern is consistent with a weathered gasoline.

1085913003 **PS** **1417-MW-12**

AK102 - Unknown hydrocarbon with several peaks is present.

1085913004 **PS** **1417-MW-21**

AK102 - Unknown hydrocarbon with several peaks is present.

1085913008 **PS** **1417-MW-16**

AK101/8021B - Antifoam and dilution required to analyze the sample; therefore, PQLs were elevated.
AK102 - The pattern is consistent with a weathered gasoline.

1085913009 **PS** **1417-WP-3**

AK102 - The pattern is consistent with a weathered gasoline.

860782 **CCV** **CCV for HBN 206715 [VMS/10139]**

8260B - ICV recovery for dichlorodifluoromethane does not meet QC goals (biased high). This analyte may be estimated, where detected, in the associated samples.
8260B - ICV recovery for several analytes does not meet QC goals (biased high). These analytes were not detected above the PQL in the associated samples.
8260B - CCV recovery for methylene chloride does not meet QC goals (biased high). This analyte was not detected above the PQL in the associated samples.

862323 **LCS** **LCS for HBN 207068 [VXX/18828]**

8260B - LCS recovery for trichlorofluoromethane does not meet QC goals (biased high). This anaylte was not detected above the PQL in the associated samples.

862325 **CCV** **CCV for HBN 207069 [VMS/10173]**

8260B - CCV recovery for trichlorofluoromethane does not meet QC goals (biased high). This anaylte was not detected above the PQL in the associated samples.

862326 **MS** **1085198036(862328MS)**

8260B - MS recovery for trichlorofluoromethane does not meet QC goals. Refer to LCS for accuracy.

Rodney Guritz
Shannon & Wilson-Fairbanks
2355 Hill Road
Fairbanks, AK 99707

Work Order:	1085913	
	31-1-11417-001 Mark Air	**Released by:**
Client:	Shannon & Wilson-Fairbanks	
Report Date:	October 06, 2008	

Enclosed are the analytical results associated with the above workorder.

As required by the state of Alaska and the USEPA, a formal Quality Assurance/Quality Control Program is maintained by SGS. A copy of our Quality Assurance Plan (QAP), which outlines this program, is available at your request.

The laboratory certification numbers are AK971-05 (DW), UST-005 (CS) and AK00971 (Micro) for ADEC and AK100001 for NELAP (RCRA methods: 1020A, 1311, 6010B, 7470A, 7471A, 9040B, 9045C, 9056, 9060, 9065, 8015B, 8021B, 8081A/8082, 8260B, 8270C).

Except as specifically noted, all statements and data in this report are in conformance to the provisions set forth by the SGS QAP, the National Environmental Laboratory Accreditation Program and, when applicable, other regulatory authorities.

If you have any questions regarding this report or if we can be of any other assistance, please contact your SGS Project Manager at 907-562-2343.

The following descriptors may be found on your report which will serve to further qualify the data.

PQL	Practical Quantitation Limit (reporting limit).
U	Indicates the analyte was analyzed for but not detected.
F	Indicates value that is greater than or equal to the MDL.
J	The quantitation is an estimation.
ND	Indicates the analyte is not detected.
B	Indicates the analyte is found in a blank associated with the sample.
*	The analyte has exceeded allowable regulatory or control limits.
GT	Greater Than
D	The analyte concentration is the result of a dilution.
LT	Less Than
!	Surrogate out of control limits.
Q	QC parameter out of acceptance range.
M	A matrix effect was present.
JL	The analyte was positively identified, but the quantitation is a low estimation.
E	The analyte result is above the calibrated range.
R	Rejected

Note: Sample summaries which include a result for "Total Solids" have already been adjusted for moisture content.

Technical Director	**Stephen C. Ede**

Sample Remarks:

8260B - ICV recovery for dichlorodifluoromethane does not meet QC goals (biased high). This analyte is estimated in the sample.
AK101/8021B - BFB (surrogate) recovery does not meet QC goals (biased high) due to hydrocarbon interference.
8260B - Sample result is estimated for 1,2-dibromoethane due to matrix. Result is posted overrange at 79.34 ug/L. Result was confirmed at 100X dilution at 0.76 ug/L.
AK102 - The pattern is consistent with a weathered gasoline.

Project Name/#	31-1-11417-001 Mark Air	**Collected Date/Time**	09/19/2008 15:33
Client Sample ID	1417-MW-16	**Received Date/Time**	09/23/2008 9:15
Matrix	Water (Surface, Eff., Ground)	**Technical Director**	**Stephen C. Ede**

Sample Remarks:

AK101/8021B - Antifoam and dilution required to analyze the sample; therefore, PQLs were elevated.
AK102 - The pattern is consistent with a weathered gasoline.

LABORATORY DATA REVIEW CHECKLIST

(**NOTE**: **NA** = not applicable)

1. Laboratory

a. Did an ADEC CS approved laboratory receive and perform all of the submitted sample analyses? (Yes) / **No**

b. If the samples were transferred to another "network" laboratory or sub-contracted to an alternate laboratory, was the laboratory performing the analyses ADEC CS-approved? **Yes / No /** (NA)

2. Chain of Custody (COC)

a. COC information completed, signed, and dated (including released/received by)? (Yes) / **No**

b. Were the correct analyses requested? (Yes) / **No**

3. Laboratory Sample Receipt Documentation

a. Sample/cooler temperature documented and within range at receipt (4° ± 2° C)? (Yes) **No**

b. Sample preservation acceptable - acidified waters, MeOH-preserved VOC soil (GRO, BTEX, VOCs, etc.)? (Yes) / **No**

c. Sample condition documented - broken, leaking (soil MeOH), zero headspace (VOC vials)? (NA) / **Yes / No**

d. If there were any discrepancies, were they documented (e.g., incorrect sample containers/preservation, sample temperatures outside range, insufficient sample size, missing samples)? (NA) / **Yes / No**

e. Data quality or usability affected? Yes (explain) / (No)

4. Case Narrative

a. Present and understandable? (Yes) / **No (explain)**

b. Discrepancies, errors or QC failures noted by the lab? **NA** / (Yes) / **No (explain)**

c. Were all corrective actions documented? (NA) / **Yes / No (explain) – Note: No corrective actions were required.**

d. Is there an effect on data quality/usability, according to the case narrative? **NA / No /(Yes) (explain) – Note: the case narrative indicates the initial calibration verification analysis for dichlorodifluoromethane was biased high, and this analyte may be estimated, where detected in associated samples. This analyte was detected in samples from wells MW-10 and MW-12.**

5. Sample Results

a. Correct analyses performed/reported as requested on COC? **(Yes) / No (explain)**

b. All applicable holding times met? **(Yes) / No**

c. All soils reported on a dry-weight basis? **(NA) / Yes / No**

d. Are the reported PQLs less than the Cleanup Level or the minimum required detection level for the project? **(Yes) / No** (explain only for non-detects with elevated PQLs)

e. Data quality or usability affected? **(No) / Yes (explain)**

6. QC Samples

a. Method Blank

i. Is at least one method blank (MB) reported per matrix, analysis, and 20 samples? **(Yes) / No**
ii. Are all method blank results less than PQL? **(Yes) / No**
iii. If MB above PQL, what samples are affected?

iv. Do the affected sample(s) have data flags? **Yes / No /(NA)**

If so, are the data flags clearly defined? **Yes / No /(NA)**

v. Are data quality or usability affected? **(No)** (i.e., MB data are acceptable) / **Yes** (Explain)

b. Laboratory Control Sample/Duplicate (LCS/LCSD)

i. Organics - Is at least one LCS/LCSD reported per matrix, analysis, and 20 samples?
NA (Yes) / No

ii. Metals/Inorganics - Is at least one LCS and one sample duplicate reported per matrix, analysis and 20 samples? **NA (Yes) / No**

iii. Accuracy – Are all percent recoveries (%R) reported and within method or laboratory limits or project-specified DQOs? [*AK petroleum methods %R < 20%; other analyses, refer to lab QC pages*] **Yes (No)** (explain) – **Note: the LCS recovery for dichlorodifluoromethane**

was above the laboratory's limit, and this analyte may be biased high in associated samples. This analyte was detected in samples from wells MW-10 and MW-12.

iv. Precision – Are all relative percent differences (RPDs) reported and less than method or laboratory limits, or project-specified DQOs? (Yes) / No (explain)

v. If %R or RPD is outside of acceptable limits, what samples are affected? (NA) or **list**

vi. Do the affected samples(s) have data flags? (NA) /**Yes / No (explain)**

If so, are the data flags clearly defined?

vii. Is the data quality or usability affected? (No) or **explain.**

c. Surrogates - Organics Only

i. Are surrogate recoveries reported for organic analyses, including field, QC and laboratory samples? (Yes) / **No**

ii. Accuracy – Are all percent recoveries (%R) reported and within method or laboratory limits or project-specified DQOs? (Yes) / **No**

iii. Do the sample results with failed surrogate recoveries have data flags? (NA) /**Yes / No (explain)**

If so, are the data flags clearly defined? **Yes / No /** (NA)

iv. Is the data quality or usability affected? (No) or **explain.**

d. Trip Blank - Volatile analyses only (GRO, BTEX, VOCs, etc.)

i. Is at least one trip blank (TB) reported per matrix, analysis and cooler? **NA /** (Yes) / **No**

ii. Are all results less than the PQL? **NA /** (Yes) / **No**

iii. If TB is above the PQL, what samples are affected? (NA) or **list samples**

iv. Is the data quality or usability affected? (No) or **explain.**

e. Field Duplicate

i. Was at least one field duplicate submitted per matrix, analysis and 10 project samples? (Yes) / **No – Note: duplicate samples were collected from well MW-12.**

ii. Were the field duplicates submitted blind to the lab? (Yes) / **No / NA**

SGS Work Order Number: 1085913

iii. Precision – Are all relative percent differences (RPDs) less than specified DQOs (recommended: 30% for water, 50% for soil) ? **Yes** / **No** / **NA**

iv. Is the data quality or usability affected? **No** / **Yes** (explain)

f. Decontamination or Equipment Blank (if applicable)

Not Applicable or…

i. Are all results less than the PQL? **Yes** / **No**

ii. If results are above PQL, what samples are affected? **NA** or **list**

iii. Is the data quality or usability affected? Explain.

7. Other Data Flags/Qualifiers (ACOE, AFCEE, Lab-specific, etc.)

Not applicable or …

a. Are they defined and appropriate? **Yes** / **No**

Work Order:	1085951	
	31-1-11417 Mark Air	**Released by:**
Client:	Shannon & Wilson-Fairbanks	
Report Date:	October 16, 2008	

Enclosed are the analytical results associated with the above workorder.

As required by the state of Alaska and the USEPA, a formal Quality Assurance/Quality Control Program is maintained by SGS. A copy of our Quality Assurance Plan (QAP), which outlines this program, is available at your request.

The laboratory certification numbers are AK971-05 (DW), UST-005 (CS) and AK00971 (Micro) for ADEC and AK100001 for NELAP (RCRA methods: 1020A, 1311, 6010B, 7470A, 7471A, 9040B, 9045C, 9056, 9060, 9065, 8015B, 8021B, 8081A/8082, 8260B, 8270C).

Except as specifically noted, all statements and data in this report are in conformance to the provisions set forth by the SGS QAP, the National Environmental Laboratory Accreditation Program and, when applicable, other regulatory authorities.

If you have any questions regarding this report or if we can be of any other assistance, please contact your SGS Project Manager at 907-562-2343.

The following descriptors may be found on your report which will serve to further qualify the data.

PQL	Practical Quantitation Limit (reporting limit).
U	Indicates the analyte was analyzed for but not detected.
F	Indicates value that is greater than or equal to the MDL.
J	The quantitation is an estimation.
ND	Indicates the analyte is not detected.
B	Indicates the analyte is found in a blank associated with the sample.
*	The analyte has exceeded allowable regulatory or control limits.
GT	Greater Than
D	The analyte concentration is the result of a dilution.
LT	Less Than
!	Surrogate out of control limits.
Q	QC parameter out of acceptance range.
M	A matrix effect was present.
JL	The analyte was positively identified, but the quantitation is a low estimation.
E	The analyte result is above the calibrated range.
R	Rejected

Note: Sample summaries which include a result for "Total Solids" have already been adjusted for moisture content.

___	___	✓	If this is for PWS, provide **PWSID.** ___	**Delivery method** (circle all that apply): Client /
___	___	✓	Will courier charges apply?	Alert Courier / UPS / FedEx / USPS / DHL /
			Method of payment? ___	AA Goldstreak / NAC / ERA / PenAir / Carlile/
___	✓	___	Data package required? (Level: 1 / 2 / 3 / 4)	Lynden / SGS / Other: ___
			Notes: ___	**Airbill #** ___
___	✓	___	Is this a DoD project? (USACE, Navy, AFCEE)	Additional Sample Remarks: *(✓if applicable)*

___ Extra Sample Volume?
___ Limited Sample Volume?
✓ MeOH field preserved for volatiles?
___ Field-filtered for dissolved ___
___ Lab-filtered for dissolved ___
___ Ref Lab required? ___
___ Foreign Soil?

This section must be filled out for DoD projects (USACE, Navy, AFCEE)

Yes	No	
___	___	Is received temperature 4 ± 2°C?
		Exceptions: ___ Samples/Analyses Affected: ___
___	___	If temperature(s) <0°C, were containers ice-free? N/A
		Notify PM immediately of any ice in samples.
___	___	Was there an airbill? *(Note # above in the right hand column)*
___	___	Was cooler sealed with custody seals?
		# / where: ___
___	___	Were seal(s) intact upon arrival?
___	___	Was there a COC with cooler?
___	___	Was COC sealed in plastic bag & taped inside lid of cooler?
___	___	Was the COC filled out properly?
___	___	Did the COC indicate USACE / Navy / AFCEE project?
___	___	Did the COC and samples correspond?
___	___	Were all sample packed to prevent breakage?
		Packing material: ___
___	___	Were all samples unbroken and clearly labeled?
___	___	Were all samples sealed in separate plastic bags?
___	___	Were all VOCs free of headspace and/or MeOH preserved?
___	___	Were correct container / sample sizes submitted?
___	___	Is sample condition good?
___	___	Was copy of CoC, SRF, and custody seals given to PM to fax?

This section must be filled if problems are found.

Yes	No

LABORATORY DATA REVIEW CHECKLIST

(**NOTE**: **NA** = not applicable)

1. Laboratory

a. Did an ADEC CS approved laboratory receive and perform all of the submitted sample analyses? (Yes) / **No**

b. If the samples were transferred to another "network" laboratory or sub-contracted to an alternate laboratory, was the laboratory performing the analyses ADEC CS-approved? **Yes / No /** (NA)

2. Chain of Custody (COC)

a. COC information completed, signed, and dated (including released/received by)? (Yes) / **No**

b. Were the correct analyses requested? (Yes) / **No**

3. Laboratory Sample Receipt Documentation

a. Sample/cooler temperature documented and within range at receipt (4° ± 2° C)? (Yes) / **No**

b. Sample preservation acceptable - acidified waters, MeOH-preserved VOC soil (GRO, BTEX, VOCs, etc.)? (Yes) / **No**

c. Sample condition documented - broken, leaking (soil MeOH), zero headspace (VOC vials)? (NA) / **Yes / No**

d. If there were any discrepancies, were they documented (e.g., incorrect sample containers/preservation, sample temperatures outside range, insufficient sample size, missing samples)? (NA) / **Yes / No**

e. Data quality or usability affected? Yes (explain) (No)

4. Case Narrative

a. Present and understandable? (Yes) / **No (explain)**

b. Discrepancies, errors or QC failures noted by the lab? **NA /** (Yes) / **No (explain)**

c. Were all corrective actions documented? (NA) / **Yes / No (explain) – Note: No corrective actions were required.**

d. Is there an effect on data quality/usability, according to the case narrative? **NA (No) / Yes (explain)**

5. Sample Results

a. Correct analyses performed/reported as requested on COC? **(Yes) / No (explain)**

b. All applicable holding times met? **(Yes) / No**

c. All soils reported on a dry-weight basis? **NA / (Yes) / No**

d. Are the reported PQLs less than the Cleanup Level or the minimum required detection level for the project? **(Yes) / No** (explain only for non-detects with elevated PQLs)

e. Data quality or usability affected? **(No) / Yes (explain)**

6. QC Samples

a. Method Blank

i. Is at least one method blank (MB) reported per matrix, analysis, and 20 samples? **(Yes) / No**
ii. Are all method blank results less than PQL? **(Yes) / No**
iii. If MB above PQL, what samples are affected?

iv. Do the affected sample(s) have data flags? **Yes / No / (NA)**

If so, are the data flags clearly defined? **Yes / No / (NA)**

v. Are data quality or usability affected? **(No)** (i.e., MB data are acceptable) / **Yes** (Explain)

b. Laboratory Control Sample/Duplicate (LCS/LCSD)

i. Organics - Is at least one LCS/LCSD reported per matrix, analysis, and 20 samples?
NA (Yes) / No

ii. Metals/Inorganics - Is at least one LCS and one sample duplicate reported per matrix, analysis and 20 samples? **(NA) /Yes / No**

iii. Accuracy – Are all percent recoveries (%R) reported and within method or laboratory limits or project-specified DQOs? [*AK petroleum methods %R < 20%; other analyses, refer to lab QC pages*] **(Yes) / No** (explain)

SGS Work Order Number: 1085951

iv. Precision – Are all relative percent differences (RPDs) reported and less than method or laboratory limits, or project-specified DQOs? (Yes) / No (explain)

v. If %R or RPD is outside of acceptable limits, what samples are affected? (NA) or **list**

vi. Do the affected samples(s) have data flags? (NA) / Yes / No **(explain)**

If so, are the data flags clearly defined?

vii. Is the data quality or usability affected? (No) or **explain.**

c. Surrogates - Organics Only

i. Are surrogate recoveries reported for organic analyses, including field, QC and laboratory samples? (Yes) / No

ii. Accuracy – Are all percent recoveries (%R) reported and within method or laboratory limits or project-specified DQOs? **Yes** (No) **Note: Recovery of the GRO surrogate 4-bromo-fluorobenzene was above the laboratory control limit for samples *1417-A3* due to hydrocarbon interference.**

iii. Do the sample results with failed surrogate recoveries have data flags? **NA** (Yes) / No **(explain)**

If so, are the data flags clearly defined? (Yes) / No / NA

iv. Is the data quality or usability affected? (No) or **explain. – Note: the GRO surrogate was recovered above the laboratory control limit due to high levels of hydrocarbon in the sample.**

d. Trip Blank - Volatile analyses only (GRO, BTEX, VOCs, etc.)

i. Is at least one trip blank (TB) reported per matrix, analysis and cooler? **NA / Yes** (No) **– Note: this was sample of investigation-derived waste retrieved from a storage drum to determine the proper soil-disposal option, so a trip blank was not submitted for analysis.**

ii. Are all results less than the PQL? (NA) / **Yes / No**

iii. If TB is above the PQL, what samples are affected? (NA) or **list samples**

iv. Is the data quality or usability affected? (No) or **explain.**

SGS Work Order Number: 1085951

e. Field Duplicate

i. Was at least one field duplicate submitted per matrix, analysis and 10 project samples?
Yes / (No) **Note: this was sample of investigation-derived waste retrieved from a storage drum to determine the proper soil-disposal option, so duplicate samples were not submitted for analysis. The laboratory analyzed a duplicate sample, and the RPD between the two duplicates was less than one percent.**

ii. Were the field duplicates submitted blind to the lab? **Yes / No / (NA)**

iii. Precision – Are all relative percent differences (RPDs) less than specified DQOs (recommended: 30% for water, 50% for soil) ? **Yes / No / (NA)**

iv. Is the data quality or usability affected? **(No) / Yes** (explain)

f. Decontamination or Equipment Blank (if applicable)

(Not Applicable) or…

i. Are all results less than the PQL? **Yes / No**

ii. If results are above PQL, what samples are affected? **NA** or **list**

iii. Is the data quality or usability affected? Explain.

7. Other Data Flags/Qualifiers (ACOE, AFCEE, Lab-specific, etc.)

(Not applicable) or …

a. Are they defined and appropriate? **Yes / No**
