Re: Kenai Pipeline Company 2019 Groundwater Monitoring Report
ADEC Report Comments

Mr. Harper:

On April 28, 2020, the Alaska Department of Environmental Conservation, Contaminated Sites Program (ADEC), received the 2019 Groundwater Monitoring Report, dated April 22 2020. This document was prepared by Trihydro Corporation. The report is approved. ADEC has the following requirements.

- 1: Determine if the hydrocarbons present in groundwater at MW-71 are part of the KPL plume or the Chevron plume. Present hydrocarbon speciating data for monitoring wells MW-71, MW-72 and CMW-61 and demonstrate plume origin for MW-71.
- 2: If supported by the data, it appears that the Pipeline Manifold plume presented on Figure 6 should be extended to include MW-71, comingling with the Chevron plume at CMW-61. Revise the figure as necessary.
- 3: The new beach wells associated with the beach dock plume (MW-99 and MW-100) should be decommissioned. Prepare a work plan to be submitted for approval.

We will forward comments on well CMW-61 to Chevron to facilitate sharing data to gain an understanding of off-site conditions.

If you have any questions on any aspect of the project, please contact me at (907)-262-3412, or by e-mail at peter.campbell@alaska.gov

Sincerely,

A handwritten signature in cursive script that reads "Peter Campbell".
