Subject: FINAL 2022 GROUNDWATER INVESTIGATION, SIX MILE RICHARDSON HIGHWAY, NORTH POLE, ALASKA

Shannon & Wilson prepared this report as specified in our approved work plan dated January 7, 2020, and Alaska Department of Environmental Conservation (DEC) Notice to Proceed Number 200000195, dated September 3, 2019.

We appreciate the opportunity to be of service to you on this project. If you have questions concerning this report, or we may be of further service, please contact us.

Sincerely,

SHANNON & WILSON, INC.

1,2,3-TCP	1,2,3-trichloropropane
2020 Report	*Six Mile Richardson Highway 2020 Groundwater Investigation* Report (March 2021)

1 INTRODUCTION

This report presents the results of groundwater investigation activities in North Pole, Alaska. The site was listed on the Alaska Department of Environmental Conservation (DEC) Contaminated Sites (CS) Database (DEC File No.100.38.112) after a trichloroethane (TCE) groundwater contaminant plume was discovered in the Six Mile Richardson Highway area in the early 1990s (Figure 1).

We conducted this work in general accordance with our *Six Mile Richardson Highway Groundwater Investigation Work Plan* (Work Plan), approved by DEC on January 7, 2020, and the DEC's January 2022 *Field Sampling Guidance*.

1.1 Project Purpose and Goals

The project purpose is to obtain current information on groundwater conditions at the site to determine if further monitoring and/or corrective actions may be necessary. Our goals were to sample select existing monitoring wells and compare the analytical results to DEC groundwater cleanup levels (CULs).

1.2 Study Boundaries

The study boundary includes areas upgradient, downgradient, and encompassing the 2017 2.8 microgram per liter (µg/L) TCE plume (Figure 2).

1.3 Site Description

The Six Mile Richardson Highway TCE groundwater plume originates from several source areas and merges to form an area-wide plume. When discovered in 1995, the plume measured slightly over one mile long, up to 1,200 feet wide, and more than 100 feet deep. The site is located off the Richardson Highway near milepost 365, southeast of Fairbanks, Alaska (latitude 64.8026° north, longitude -147.5592° west).

The groundwater plume originates near Milepost 356 on the south side of the Richardson Highway and extends in a northwesterly direction across the highway to the Six Mile Village Subdivision. The plume area encompasses commercial properties and residential properties, including the Six Mile residential subdivision. The area is not served by public water or sewer service. Most businesses and residences have water wells and on-site wastewater treatment (septic tanks and leach fields). The magnitude and direction of the area's groundwater gradient shows little seasonal variability, and its flow direction is generally to the northwest.

2 BACKGROUND

Shannon & Wilson's earliest work on the Six Mile Richardson Highway project began in 1988, to conduct assessments of potential source areas and groundwater modeling for remedial alternatives at the suspected source-area site. We have been evaluating the extent and behavior of the plume, sources areas, and regional and local trends in TCE attenuation since that time.

Following an intensive private-well search and sampling effort, public outreach, and initial plume-delineation effort, DEC initiated a long-term groundwater monitoring program in 1996 and included the annual sampling of private water wells and groundwater-monitoring wells through 2017. Between 1996-2017, the DEC provided and maintained water-treatment systems for residents with impacted private water wells. The DEC released new groundwater CULs in November 2016 and TCE was lowered from 5 µg/L to 2.8 µg/L. This updated concentration for TCE is used as the threshold for continued private well sampling and/or treatment system maintenance in the Six Mile plume area.

We performed several vapor intrusion investigations from 2011 through 2015 at residences and commercial properties within and downgradient of the plume. The vapor intrusion investigations focused on permanent buildings within 100 feet of the TCE contaminant plume.

We have conducted several interrelated investigations to assess risks to residential receptors and evaluate appropriate remedial measures including calculating cumulative risks at wells where multiple contaminants were present. Although we recognize vapor intrusion is not part of this scope of services, our 2015 *Soil-Gas Sampling Report* (revised submittal dated March 23, 2018) indicated a need for follow-up sampling at five locations where the most recent results exceeded residential or commercial target levels. Groundwater results from the 2017 sampling event indicated TCE remained at detectable concentrations in all nine monitoring wells sampled, however over half of the wells in the monitoring network showed TCE concentrations were either decreasing or had no temporal trend.

In 2020, MW-8 was decommissioned, the condition of the remaining wells were assessed, and the conceptual site model was updated. A TCE trend analysis was performed on 23 of the 24 sampled wells. Our analysis showed that concentrations were decreasing or remaining stable; concentrations were not seen to be increasing. Analytical results were consistent with historical results and did not exceed groundwater CULs except for TCE from monitoring wells MW-17 and MW-19; and cis-1,2-dichloroethene from monitoring well MW-32.

3 FIELD ACTIVITIES

Our scope of services included sampling 24 monitoring wells for volatile organic compounds (VOCs). Shannon & Wilson performed the monitoring-well sampling May 23, 2022 through May 26, 2022.

We performed our field activities in general accordance with our Work Plan apart from the deviations described in Section 4. The locations of monitoring wells sampled are presented in Figure 2 alongside their respective TCE results in relation to the DEC CUL. Field notes and sampling logs are presented in Appendix B.

We measured groundwater levels, total well depths, top-of-casing to ground surfaces, and checked for operational well locks.

3.1 Groundwater Sampling

We sampled 22 of the 24 existing monitoring wells in the Six Mile Richardson Highway area on May 23 through May 26, 2022. MW-13 and MW-14 were frozen and could not be sampled. We collected twenty-five groundwater samples in total, including field-duplicate samples at monitoring wells MW-108 and MW-17, and an equipment blank sample at monitoring well MW-19. Monitoring well sample locations are presented in Figure 2.

Prior to purging each monitoring well, we measured the top-of-casing to ground surface, depths to groundwater (Exhibit 3-1), and total well depths to a precision of 0.01 foot from the top of the well casings. Well monuments and casings were in overall good condition with the exceptions listed in Table 1. We purged water from the wells using a battery-powered, portable stainless-steel submersible pump with new disposable tubing. Reusable sampling equipment was decontaminated prior to use and reuse at each monitoring well location.

Exhibit 3-1: Measuring depth to groundwater at MW-30.

Each well was purged at a rate of less than 0.5 gallon per minute, until four of the five water-quality parameters (temperature, conductivity, pH, dissolved oxygen, and oxidation/reduction potential) stabilized over three consecutive readings prior to sample collection. MW-103 did not reach stabilization, however, three well volumes were purged prior to sampling.

We measured water-quality parameters in the field using a YSI Professional Plus multiparameter, calibrated according to the manufacturers' instructions. We reduced the pump-flow rate to allow collection of water samples for VOC analysis into appropriate laboratory-prepared containers where necessary; we collected duplicate VOC samples for quality assurance (QA) purposes immediately after filling the sample container for the primary sample. Field parameters are presented in Table 1 as recorded on our field logs, included in Appendix B.

Our observations and results are specific to the locations, depths, and times noted in our field forms and are not a guarantee or warranty of conditions present at all areas of the site. No amount of sampling can precisely predict the characteristics, quality, or distribution of site conditions. Potential variation includes, but is not limited to:

- the passage of time or intervening causes (natural or manmade) that may result in changes to site conditions; and
- the concentrations of contaminants may change at any sampled or unsampled location in response to natural conditions, chemical reactions, and/or other events.

3.2 Investigation Derived Waste Management

For locations where the most recent trends were increasing or stable and where analytes exceeded DEC CULs, we filtered the purge and rinse water with granular activated carbon (GAC) adsorption before discharging to the ground surface near the monitoring well. The purge and rinse water from the remaining monitoring wells were discharged directly to the ground surface near the monitoring well. Other investigative derived waste such as nitrile gloves and pump tubing were disposed of at the Fairbanks North Star Borough landfill. Our GAC usage tracking log and procedures for estimating contaminant breakthrough are presented in Appendix A.

4 DEVIATIONS FROM THE WORK PLAN

Field activities for the May 2022 sampling event were conducted in accordance with the DEC approved Work Plan with the following exceptions:

- Snow removal equipment damaged MW-30 at an unknown time and was repaired by the landowner. According to the landowner, the monument was replaced, and the casing was repaired using a PVC coupler and additional length of 2-inch PVC casing.
- MW-13 and MW-14 were frozen and not sampled. DEC approved our recommendation of omitting samples from these locations in an e-mail dated May 27, 2022.
- Three well volumes were purged at MW-103.

- Samples were analyzed by the most updated method Environmental Protection Agency 8260D instead of 8260C as presented in the Work Plan.

In our opinion, the above listed deviations have no effect on data quality or usability.

5 RESULTS

The SGS Environmental Services, Inc. (SGS) laboratory report and corresponding DEC laboratory data review checklist (LDRC) are provided in Appendix E. A quality control (QC) and QA assessment of analytical results is presented in Appendix F.

The May 2022 analytical results are summarized in Table 2. Figure 2 depicts TCE results for all sampled wells and includes results of other VOCs exceeding their respective DEC CULs. A summary of historical detections for existing monitoring wells in the Six Mile Richardson Highway groundwater-monitoring network is presented in Table 3.

5.1 Data Quality Summary

Shannon & Wilson performed a QA/QC assessment of our sampling procedures and the laboratory report; this assessment is presented in Appendix F. By conducting our field activities in general accordance with our standard QA/QC procedures and the Work Plan, we consider the samples we collected representative of site conditions at the locations and times they were obtained. Based on our QA review, no datum was rejected as unusable due to QC failures, and our completeness goal of obtaining 85-percent useable data was met.

Our QA assessment in Appendix F identifies analytical results that were qualified due to QC failures reported by the laboratory. In our opinion, the data produced by SGS for this project are suitable for characterizing groundwater water quality at the locations sampled, with qualifications applied by Shannon & Wilson due to data affected by QC failures.

5.2 Analytical Summary

Five VOCs were detected in one or more project sample from the current sampling event (Table 2) and are overall consistent with historical results (Table 3). Analytical results do not exceed DEC CULs with the exception of TCE from monitoring well MW-17.

The reported laboratory limits of detection (LODs) for the requested analytes were within sensitivity requirements except for 1,2,3-trichloropropane (1,2,3-TCP). We cannot assess whether the non-detect 1,2,3-TCP results are present at concentrations below the LOD but greater than the DEC CUL. Non-detect results where LODs exceed the DEC CUL are displayed in Table 2 in "**Bold**".

6 DISCUSSION

The 2022 sampling event provides additional long-term groundwater-monitoring data for monitoring wells in the Six Mile area. Analytical results for the current sampling event are overall consistent with historical data and are presented in Table 2 and Table 3, respectively.

A QA/QC review of the analytical results indicated a few instances where sensitivity, accuracy, and precision requirements were not met and affected the data quality. These data are considered usable with qualifications to the analytical results as defined in Appendix F. The overall data quality and usability are sufficient for reporting purposes.

Our 2022 analytical results indicate TCE contamination exceeded regulatory limits in only one monitoring well:

- TCE was detected in monitoring well MW-17 at a concentration of 3.82 µg/L, exceeding the CUL of 2.8 µg/L.

MW-17 has a total depth of approximately 29 feet below ground surface (bgs). A second collocated well (MW-27) with a total depth of approximately 72 feet bgs, resulted in a TCE concentration of 0.55 µg/L (Exhibit 6-1).

Exhibit 6-1: Collocated monitoring wells MW-17 and MW-27; from left to right.

As discussed in the *Six Mile Richardson Highway 2020 Groundwater Investigation* Report (2020 Report), TCE trends at MW-17 are decreasing. Between 1996 and 2020, the TCE concentrations at MW-17 has varied between 66 µg/L and 6.05 µg/L. No other analytes were detected in exceedance of regulatory limits.

6.1 Recommendations

As TCE concentrations in the plume decrease, we recommend evaluating potential pathways to site closure to help refine future site activities. While the timeline for site closure may still be uncertain, it is our opinion that assessing contaminant trends, data gaps, and human-health and ecological exposure scenarios in light of the most recent sample results will provide focus to future efforts.

We recommend readdressing our initial source investigations completed in the 1990s. These investigations were completed on an expedited timeframe to facilitate the immediate actions required in order to reduce exposure to residential receptors. Our reporting from those investigations identified potential source areas on the McCall, Holder, Walsky, and 6-Mile

Truck Stop properties, including such possible features as floor drains or leach fields that could be considered injection wells under the U.S. Environmental Protection Agency's Underground Injection (UIC) well program.

In our 2020 Report we provided a number of recommendations for additional groundwater sampling, vapor-intrusion sampling, data evaluation, and monitoring-well decommissioning. In our opinion, those recommendations remain valid.

In addition to the recommendations discussed in the 2020 Report and based on our overall project understanding and the 2022 analytical results, we recommend continued sampling efforts at MW-17 until DEC CULs are reached and collecting samples from MW-13 and MW-14 when the wells are thawed.

7 CLOSURE

This data report was prepared for the exclusive use of the DEC, in accordance with our scope of services. No other parties may rely upon our reports. The contents of this report should not be considered a warranty of site surface water conditions. We do not guarantee that regulatory agencies will reach the same conclusions as Shannon & Wilson.

This report should not be used without our approval if any of the following occurs:

- Conditions change due to natural forces or human activity at or adjacent to the site.
- Assumptions stated in this report have changed.
- Project details change or new information becomes available that may affect our analyses, recommendations, or conclusions.
- Regulations or laws change such that our analyses, recommendations, or conclusions are affected.

If any of these occur, we should be retained to review the applicability of our analyses, recommendations, or conclusions. If conditions different from those described herein are encountered during the next sampling event, we will review these conditions and reconsider our recommendations and conclusions.

We conducted our services in a manner consistent with the level of care and skill ordinarily exercised by members of the environmental profession currently practicing in Alaska and under similar conditions as this project. We have prepared the document included at the end of this report Important Information about Your Environmental Report to assist you and others in understanding the use and limitations of this report.

Copies of documents that may be relied upon by our client are limited to the printed copies (also known as hard copies) signed or sealed by Shannon & Wilson. Text, data, or graphics files in electronic media format are furnished solely for the convenience of our client. Any conclusion or information obtained or derived from such electronic files shall be at the user's sole risk. If there is a discrepancy between the electronic files and the hard copies, the hard copies govern.

Because data stored in electronic media can deteriorate or be modified inadvertently or otherwise without authorization of the data's creator, the client should perform acceptance tests or procedures within 60 days after its receipt, after which, unless notice of any errors are given in writing to Shannon & Wilson, the client shall be deemed to have accepted the data thus transferred. Any errors reported within the 60-day acceptance period shall be corrected by Shannon & Wilson. Shannon & Wilson shall not be responsible for maintaining documents stored in electronic media format after acceptance by the client.

When transferring documents in electronic media format, Shannon & Wilson does not make any representations as to long-term compatibility, usability, or readability of documents resulting from the use of software application packages, operating systems, or computer hardware differing from those used for the document's creation.

NOTES:
Results reported from SGS North America, Inc. work order 1222631, for VOCs by Method SW8260D
Cleanup Level — Alaska Department of Environmental Conservation (DEC) Cleanup Levels obtained from 18 AAC 75.341 Table C - Groundwater Cleanup Levels Table
† — *Sample MW-917* is a field duplicate of *MW-17* and sample *MW-908* is a field duplicate of *MW-108*
— Not applicable; DEC groundwater-cleanup level not yet established
< Analyte not detected; listed as less than the limit of detection (LOD) unless otherwise flagged due to quality-control failures.
J Estimated concentration, detected greater than the detection limit (DL) and less than the limit of quantitation (LOQ). Flag applied by the laboratory.
<BOLD The laboratory's LOD exceeds the regulatory limit.
BOLD The detected concentration exceeds the regulatory limit for the associated analyte.

DEC = Alaska Department of Environmental Conservation; LOD = limit of detection; LOQ = limit of quantitation; µg/L = microgram per liter; VOC = volatile organic compound

Table 3 - Historical Summary of Groundwater Results (µg/L)

NOTES:
- Historically detected analytes are presented.
- † Cleanup Level obtained from 18 AAC 75.341 Table C - Groundwater Cleanup Levels Table
- **BOLD** Detected result exceeds DEC Groundwater Cleanup Level.
- < Analyte not detected; listed as less than the limit of detection (LOD) unless otherwise flagged due to quality-control failures.
- J Estimated concentration, detected greater than the detection limit (DL) and less than the limit of quantitation (LOQ). Flag applied by the laboratory.
- <J* Non-detected estimated concentration due to quality control failures. Flag applied by Shannon & Wilson, Inc.
- B Result is considered not detected due to potential bias identified in quality control samples. Flag applied by Shannon & Wilson, Inc. (*)
- D Secondary dilution required for result to fall within instrument calibration range.
- (dup) Field duplicate of preceding sample.

BTEX = benzene, toluene, ethylbenzene, and xylenes; DEC = Alaska Department of Environmental Conservation; LOD = limit of detection; LOQ = limit of quantitation; µg/L = microgram per liter; MW = monitoring well; VOC = volatile organic compound

Map adapted from aerial imagery provided by Pictometry International Corporation, 2017.

MONITORING WELL SAMPLING LOG

Owner/Client: *Alaska Department of Environmental Conservation*
Location: *Six-Mile Richardson Highway*
Sampling Personnel: APM
Weather Conditions: Overcast Air Temp. (°F): 60s

Project No.: *103822-004*
Date: 5/25/22
Well: MW-04
Time started: 1100
Time completed: 1228

Sample No.: MW-04 Time: 1203
Duplicate: — Time: —
Equipment Blank: ✓ Time: —

Pump: Hurricane A
Pumping Start: 1136
Purge Rate (gal./min.): 0.2 > 5.4 gallons
Pumping End: 1203

Pump Set Depth Below MP (ft.): 73
Tubing (ft.): 80

Diameter and Type of Casing: 2" PVC
Approximate Total Depth of Well Below MP (ft.): —
Measured Total Depth of Well Below MP (ft.): 74.08 + 1.52 = 75.6
Depth to Water Below MP (ft.): 6.77
Depth to Ice (if frozen) Below MP (ft.): —
Feet of Water in Well: 68.83
Gallons per foot: 0.17
Gallons in Well: 11.7
Purge Water Volume (gal.): 35.1
Purge Water Disposal: *GAC* or *Purge to Ground*

Monument Condition: OK

Casing Condition: Frost jacked

Measuring Point (MP): *Top of Casing (TOC)*
Monument type: *Stickup* / *Flushmount*
Measurement method: *Rod & level* / *Tape measure*

Top-of-casing to monument (ft.): -0.3 (casing above monument +)
Monument to ground surface (ft.): 2.55

☑ Lock present and operational: sticky
☑ Well No. legible on outside of well: No, Re-wrote w/ sharpie
☑ Evidence of frost-jacking? (explain if checked): yes,

Notes: Cut casing 5/26

Weather Conditions: Overcast Air Temp. (°F) 60s

Project No. *103822-004*
Date 5/26/22
Well MW-30
Time started 12:48
Time completed 1320

Sample No. MW-30 Time 1309
Duplicate — Time —
Equipment Blank — Time —

Pump Hurricane A
Pumping Start 12:48
Purge Rate (gal./min.) 0.2
Pumping End 1309

Pump Set Depth Below MP (ft.) 30
Tubing (ft.) 35

Diameter and Type of Casing 2" PVC
Approximate Total Depth of Well Below MP (ft.) —
Measured Total Depth of Well Below MP (ft.) 81.38 × .41 = 31.79
Depth to Water Below MP (ft.) 8.46
Depth to Ice (if frozen) Below MP (ft.) —
Feet of Water in Well 23.33
Gallons per foot 0.17
Gallons in Well ~4
Purge Water Volume (gal.) ~12
Purge Water Disposal *GAC or* Purge to Ground

Monument Condition good
Casing Condition good

Measuring Point (MP): *Top of Casing (TOC)*
Monument type: *Stickup / Flushmount*
Measurement method: *Rod & level / Tape measure*

Top-of-casing to monument (ft.) .28
Monument to ground surface (ft.) 3.5

☑ Lock present and operational No - replaced
☑ Well No. legible on outside of well
☐ Evidence of frost-jacking? (explain if checked) No

Notes Mr. Mansfield indicated this well had been hit by snow remover. He replaced it. Well looks good PVC is connected w/ tubing coupler.

Weather Conditions: Clear Air Temp. (°F): 55

Project No.: *103822-004*
Date: 5/24/2022
Well: MW-103
Time started: 1200
Time completed: 1300

Sample No.: MW-103 Time: 1243
Duplicate: — Time: —
Equipment Blank: — Time: —

Pump: Hurricane A
Pumping Start: 1211
Purge Rate (gal./min.): 0.1
Pumping End: 1243

Pump Set Depth Below MP (ft.): 11.51
Tubing (ft.): 16.5

Diameter and Type of Casing: 2" PVC
Approximate Total Depth of Well Below MP (ft.): —
Measured Total Depth of Well Below MP (ft.): 12.51 +0.41 = 12.92
Depth to Water Below MP (ft.): 6.53
Depth to Ice (if frozen) Below MP (ft.): —
Feet of Water in Well: 6.39
Gallons per foot: 0.17
Gallons in Well: 1.08
Purge Water Volume (gal.): 3.25
Purge Water Disposal: GAC or (Purge to Ground)

Monument Condition: good
Casing Condition: good

Measuring Point (MP): *Top of Casing (TOC)*
Monument type: (Stickup) / Flushmount
Measurement method: Rod & level / (Tape measure)

Top-of-casing to monument (ft.): 0.54
Monument to ground surface (ft.): 2.95

☒ Lock present and operational: Stick
☐ Well No. legible on outside of well: inside monument
☐ Evidence of frost-jacking? (explain if checked): NO

Notes: locks for these 3 wells are rusted/hard to open
WD-40? or bolt cutters + extra locks might be a good idea

SHANNON & WILSON
GEOTECHNICAL AND ENVIRONMENTAL CONSULTANTS

March 2, 2021

DISCLAIMER: The following estimates derived by this method may not represent real world outcomes. The intent of this method is to generate overly conservative estimates when empirical data is not available and not practical to obtain. Whenever possible, a pilot study should be performed to generate an isotherm for the specific treatment system and waste stream.

GAC QUANTITY ESTIMATION AND USAGE TRACKING

Estimating the usage rate of granular activated carbon (GAC) to predict breakthrough relies on empirically derived data that is unique to the waste stream being treated and the properties of the GAC product employed. For this reason, pilot studies are typically performed during the design process for industrial or large scale GAC treatment systems. For small sites or rapid response efforts, conducting a pilot study is often cost and time prohibitive. Oftentimes, portable GAC treatment systems for small projects are used to treat investigation-derived waste that is generated during an investigation. The use of these portable systems at multiple sites with potentially variable types and concentrations of contaminants may also render a pilot study meaningless as the waste stream would not be consistent while the system is in operation. For this reason, it is necessary to develop a method of generating order-of-magnitude estimates of required GAC quantities for small-scale deployment of the portable GAC treatment system on remote sites. The following method relies on substituting general "ballpark" constants for variables that would typically be derived from a second-order differential analysis of empirical data. Due to the inherent error, a factor of safety is applied to ensure a conservative estimate. Below is a list of assumptions used to simplify the parameters.

Assumptions

- We assume that the GAC media adsorbs contaminants uniformly, such that channeling does not occur, and the entire capacity is utilized before breakthrough.
- The adsorptive capacity of GAC is influenced by temperature and other environmental factors. For the purpose of these estimates, we disregard minor losses due to environmental unknowns.
- The removal efficiency of GAC is affected by potential hydrogen (pH) to varying degrees depending on the particular compound being adsorbed. Typically, removal efficiency decreases as pH increases. We assume a near-neutral pH in our waste stream

for estimation purposes. However, a rule of thumb is to increase the carbon bed by 20 percent for every pH unit above neutral (7.0).

- We assume that the molecular weights of the target species are such that they can be readily removed from the waste stream and immobilized within the pore space of the carbon. The nature of the waste stream should be considered prior to selecting GAC as the primary treatment technology.
- We assume the target contaminants are dissolved within the waste stream and that free product is not being fed into the GAC media. Introduction of free product will dramatically increase GAC usage rates.
- We assume a typical density value for GAC media of 28 pounds per cubic foot.
- We assume that total suspended solids (TSS) and/or hard water deposits (Ca^{2+} and Mg^{2+}) are not coating the GAC particles or otherwise inhibiting adsorption of the target contaminants. Excluding deposits, we note that removal efficiency tends to be enhanced by hard water. For a short-term treatment event, only TSS clogging is a concern and may be addressed with in-line filters.
- Lacking available water quality data, we assume general background concentrations of non-target constituents that may compete with target contaminants for adsorption sites and increase the GAC usage rate. Examples of non-target constituents that can interact with GAC media include total organic carbon (TOC), free chlorine (Cl), chloride (Cl^-), total fluoride (F^-), nitrate (NO_3^{2-}), phosphate (PO_4^{3-}), and hydrogen sulfide (H_2S). The sum of these concentrations (if analyzed for the project) is used when estimating required GAC quantities for a project site or when estimating the GAC loading upon receipt of analytical data for target contaminants.
- We assume that the GAC media can immobilize roughly 4 to 10 percent of its total mass in organic constituents. This value is based on Frank DeSilva's article entitled *Activated Carbon Filtration* published in Water Quality Products Magazine in January 2000. In the article DeSilva states that "*Carbon filter capacity can be roughly estimated at 0.1 pound of organics per 1 pound of carbon at a flowrate of 1 to 2 gallons per minute per cubic foot (gpm/ft^3) and a bed depth of 3 feet.*" For higher flowrates and/or smaller bed depths, a more conservative value should be assumed.
- While estimating GAC usage, we assume that the volume of the GAC vessel employed is sufficient to ensure adequate contact time between the waste stream influent and the GAC media. The required GAC vessel volume should be sized according to the desired Empty bed contact time (EBCT). The EBCT is expressed as the volume of the vessel divided by the flowrate, as shown below. A typical EBCT for removal of hydrocarbons is five minutes.

$$\frac{X\ gallons}{Y\ gallons\ per\ minute} = Z\ minutes\ of\ contact$$

Conversion Factors

For the following relationships to be useful, the data inputs need to be consistent in their unit systems. Contaminant concentrations are often expressed in milligrams per liter (mg/L) while the waste stream volume is often communicated in gallons. Similarly, GAC media is typically supplied by the pound but the mass/concentrations of contaminants are usually reported in metric units. Table 1 provides common conversions between imperial and metric units.

Table 1: Common conversion factors

Imperial Unit	Multiply By	Metric Unit
Pound (lb)	0.45359	Kilogram (kg)
Pound (lb)	453,592	Milligram (mg)
Gallon (gal)	3.78541	Liters (L)
Cubic Feet (ft^3)	28.3168	Liters (L)
Pounds per Gallon (lbs/gal)	119,826	Milligrams per Liter (mg/L)

Estimating Mass Loading and Treatable Volume

To conservatively estimate the mass loading on the GAC, we take the sum of the highest concentrations of target species from prior analytical results and the known or assumed background concentrations of non-target species that may interact with the GAC media, and multiply the sum of these two concentrations by the volume of liquid treated. This yields the theoretical total mass of compounds to be adsorbed by the GAC media. The removal effectiveness is predominantly controlled by contact time, which we assume to be sufficient for complete immobilization of the target compounds.

$$Mass\ loading = (concentrations\ of\ target\ species + sum\ of\ additional\ inputs) \times volume\ treated$$

We typically treat contaminated water on sites with prior characterization. However, if prior analytical results are not available, we always assume a worst-case scenario based on prior experience at similar release sites. Shannon & Wilson has a considerable amount of historical analytical data from a wide variety of release sites and response efforts. A first step would be to locate analytical data from a similar site and apply a 50 to 100 percent factor of safety when totaling the concentrations of target species.

If the total concentrations of target species and relevant non-target species are known, and the GAC vessel is used only at the site in question, then it is possible to estimate the theoretical maximum volume of water that can be treated before the GAC capacity is exhausted.

$$Maximum\ volume\ of\ treatable\ liquid = \frac{(Quantity\ of\ GAC \times Adsorptive\ capacity)}{(Concentrations\ of\ target\ species + Additional\ inputs)}$$

Similarly, if the total volume of fluid requiring treatment is known, then the required quantity of GAC to treat that volume can be determined by using the following relationship.

$$Required\ Quantity\ of\ GAC = \frac{Mass\ loading}{Adsorptive\ capacity\ of\ the\ GAC}$$

Estimating Usage of GAC Media

To estimate the quantity of usable GAC remaining, we subtract the total mass loading from the total quantity of GAC in the vessel multiplied by the assumed adsorption capacity of the GAC media.

$$Remaining\ capacity\ of\ GAC = (Quantity\ of\ GAC\ \times Adsorptive\ capacity) - Mass\ loading$$

For ease of tracking, we then express this value as a percent of the total capacity of the GAC media by dividing the remaining capacity of the GAC by the total capacity of the GAC and multiplying by 100.

$$Percent\ of\ GAC\ remaining = \frac{Remaining\ capacity\ of\ GAC}{(Quantity\ of\ GAC \times Adsorptive\ capacity\ of\ GAC)} \times 100$$

If the GAC vessel is used several times before disposal, then the mass loading needs to be a running total from all treatment events. Shannon & Wilson's tracking spreadsheet will perform these calculations as a running total upon being supplied with volume and constituent concentration data.

Final Considerations

Because channeling, non-uniform GAC usage, and sediment coating are all likely occur, it is important to replace the GAC media once the theoretical remaining capacity gets below a certain threshold. This threshold can be somewhat subjective depending on the waste stream and how robust the treatment system is, but roughly 30 percent is recommended. It is Shannon & Wilson's policy to replace the GAC media annually regardless of utilization.

Laboratory Report of Analysis

To: Shannon & Wilson-Fairbanks
2355 Hill Rd
Fairbanks, AK 99707

Report Number: **1222631**

Client Project: **103822-004 6 Mile**

Dear Sheila Hinckley,

Enclosed are the results of the analytical services performed under the referenced project for the received samples and associated QC as applicable. The samples are certified to meet the requirements of the National Environmental Laboratory Accreditation Conference Standards. Copies of this report and supporting data will be retained in our files for a period of ten years in the event they are required for future reference. All results are intended to be used in their entirety and SGS is not responsible for use of less than the complete report. Any samples submitted to our laboratory will be retained for a maximum of fourteen (14) days from the date of this report unless other archiving requirements were included in the quote.

If there are any questions about the report or services performed during this project, please call Jennifer at (907) 562-2343. We will be happy to answer any questions or concerns which you may have.

Thank you for using SGS North America Inc. for your analytical services. We look forward to working with you again on any additional analytical needs.

Sincerely,
SGS North America Inc.

Stephen C. Ede

Laboratory Qualifiers

Enclosed are the analytical results associated with the above work order. The results apply to the samples as received. All results are intended to be used in their entirety and SGS is not responsible for use of less than the complete report. This document is issued by the Company under its General Conditions of Service accessible at <http://www.sgs.com/en/Terms-and-Conditions.aspx>. Attention is drawn to the limitation of liability, indenmification and jurisdiction issues defined therein.

Any holder of this document is advised that information contained hereon reflects the Company's findings at the time of its intervention only and within the limits of Client's instructions, if any. The Company's sole responsibility is to its Client and this document does not exonerate parties to a transaction from exercising all their rights and obligations under the transaction documents. Any unauthorized alteration, forgery or falsification of the context or appearance of this document is unlawful and offenders may be prosecuted to the fullest extent of the law.

SGS maintains a formal Quality Assurance/Quality Control (QA/QC) program. A copy of our Quality Assurance Plan (QAP), which outlines this program, is available at your request. The laboratory certification numbers are AK00971 DW Chemistry (Provisionally Certified as of 05/31/2022 for Fluoride by EPA 300.0 and Nitrate as N by SM 4500NO3-F) & Microbiology & 17-021 (CS) for ADEC and 2944.01 for DOD ELAP/ISO17025 (RCRA methods: 1020B, 1311, 3010A, 3050B, 3520C, 3550C, 5030B, 5035A, 6020B, 7470A, 7471B, 8015C, 8021B, 8082A, 8260D, 8270D, 8270D-SIM, 9040C, 9045D, 9056A, 9060A, AK101 and AK102/103). SGS is only certified for the analytes listed on our Drinking Water Certification (DW methods: 200.8, 2130B, 2320B, 2510B, 300.0, 4500-CN-C,E, 4500-H-B, 4500-NO3-F, 4500-P-E and 524.2) and only those analytes will be reported to the State of Alaska for compliance. Except as specifically noted, all statements and data in this report are in conformance to the provisions set forth by the SGS QAP and, when applicable, other regulatory authorities.

The following descriptors or qualifiers may be found in your report:

*	The analyte has exceeded allowable regulatory or control limits.
!	Surrogate out of control limits.
B	Indicates the analyte is found in a blank associated with the sample.
CCV/CVA/CVB	Continuing Calibration Verification
CCCV/CVC/CVCA/CVCB	Closing Continuing Calibration Verification
CL	Control Limit
DF	Analytical Dilution Factor
DL	Detection Limit (i.e., maximum method detection limit)
E	The analyte result is above the calibrated range.
GT	Greater Than
IB	Instrument Blank
ICV	Initial Calibration Verification
J	The quantitation is an estimation.
LCS(D)	Laboratory Control Spike (Duplicate)
LLQC/LLIQC	Low Level Quantitation Check
LOD	Limit of Detection (i.e., 1/2 of the LOQ)
LOQ	Limit of Quantitation (i.e., reporting or practical quantitation limit)
LT	Less Than
MB	Method Blank
MS(D)	Matrix Spike (Duplicate)
ND	Indicates the analyte is not detected.
RPD	Relative Percent Difference
TNTC	Too Numerous To Count
U	Indicates the analyte was analyzed for but not detected.

Note: Sample summaries which include a result for "Total Solids" have already been adjusted for moisture content. All DRO/RRO analyses are integrated per SOP.

e-Sample Receipt Form FBK

SGS Workorder #:	S&W	S&W

Review Criteria	Condition (Yes, No, N/A	Exceptions Noted below
Chain of Custody / Temperature Requirements		Yes — Exemption permitted if sampler hand carries/delivers.
Were Custody Seals intact? Note # & location	N/A	
COC accompanied samples?	Yes	
DOD: Were samples received in COC corresponding coolers?	N/A	

☐ **Exemption permitted if chilled & collected <8 hours ago, or for samples where chilling is not required

Temperature blank compliant* (i.e., 0-6 °C after CF)?	Yes	Cooler ID:	1	@	3.6	°C	Therm. ID:	D065
		Cooler ID:		@		°C	Therm. ID:	
If samples received without a temperature blank, the "cooler temperature" will be documented instead & "COOLER TEMP" will be noted to the right. "ambient" or "chilled" will be noted if neither is available.		Cooler ID:		@		°C	Therm. ID:	
		Cooler ID:		@		°C	Therm. ID:	

*If >6°C, were samples collected <8 hours ago?		
If <0°C, were sample containers ice free?		
Note: Identify containers received at non-compliant temperature . Use form FS-0029 if more space is needed.		
Holding Time / Documentation / Sample Condition Requirements		Note: Refer to form F-083 "Sample Guide" for specific holding times.
Do samples **match COC**** (i.e.,sample IDs,dates/times collected)?	N/C	
**Note: If times differ <1hr, record details & login per COC.		
***Note: If sample information on containers differs from COC, SGS will default to COC information		
Were samples in good condition (no leaks/cracks/breakage)?	Yes	
Were analytical requests clear? (i.e., method is specified for analyses with multiple option for analysis (Ex: BTEX, Metals)	Yes	
Were Trip Blanks (i.e., VOAs, LL-Hg) in cooler with samples?	Yes	
Were all water VOA vials free of headspace (i.e., bubbles ≤ 6mm)?	Yes	
Were all soil VOAs field extracted with MeOH+BFB?	N/A	
For Rush/Short Hold Time, was RUSH/Short HT email sent?	N/A	

Note to Client: Any "No", answer above indicates non-compliance with standard procedures and may impact data quality.

Additional notes (if applicable):

SGS Profile #	362915	362915

e-Sample Receipt Form

SGS Workorder #:	1222631	1222631

Review Criteria	Condition (Yes, No, N/A	Exceptions Noted below
Chain of Custody / Temperature Requirements	*Note:* Temperature and COC seal information is found on the chain of custody form	
DOD only: Did all sample coolers have a corresponding COC?	N/A	
If <0°C, were sample containers ice free?	N/A	
Note containers received with ice:		
Identify any containers received at non-compliant temperature: *(Use form FS-0029 if more space is needed)*		
Holding Time / Documentation / Sample Condition Requirements	*Note:* Refer to form F-083 "Sample Guide" for specific holding times and sample containers.	
Were samples received within analytical holding time?	Yes	
Do sample labels match COC? Record discrepancies.	Yes	
Note: *If information on containers differs from COC, default to COC information for login. If times differ <1hr, record details & login per COC.*		
Were analytical requests clear? *(i.e. method is specified for analyses with multiple option for method (Eg, BTEX 8021 vs 8260, Metals 6020 vs 200.8)*	Yes	
Were proper containers (type/mass/volume/preservative)used? Note: Exemption for metals analysis by 200.8/6020 in water.	Yes	
Volatile Analysis Requirements (VOC, GRO, LL-Hg, etc.)		
Were all soil VOAs received with a corresponding % solids container?	N/A	
Were Trip Blanks (e.g., VOAs, LL-Hg) in cooler with samples?	Yes	
Were all water VOA vials free of headspace (e.g., bubbles ≤ 6mm)?	Yes	
Were all soil VOAs field extracted with Methanol+BFB?	N/A	

Note to Client: Any "No", answer above indicates non-compliance with standard procedures and may impact data quality.

Container Id	Preservative	Container Condition	Container Id	Preservative	Container Condition

Container Condition Glossary

Containers for bacteriological, low level mercury and VOA vials are not opened prior to analysis and will be assigned condition code OK unless evidence indicates than an inappropriate container was submitted.

OK - The container was received at an acceptable pH for the analysis requested.
BU - The container was received with headspace greater than 6mm.
DM - The container was received damaged.
FR - The container was received frozen and not usable for Bacteria or BOD analyses.
IC - The container provided for microbiology analysis was not a laboratory-supplied, pre-sterilized container and therefore was not suitable for analysis.
NC- The container provided was not preserved or was under-preserved. The method does not allow for additional preservative added after collection.
PA - The container was received outside of the acceptable pH for the analysis requested. Preservative was added upon receipt and the container is now at the correct pH. See the Sample Receipt Form for details on the amount and lot # of the preservative added.
PH - The container was received outside of the acceptable pH for the analysis requested. Preservative was added upon receipt, but was insufficient to bring the container to the correct pH for the analysis requested. See the Sample Receipt Form for details on the amount and lot # of the preservative added.
QN - Insufficient sample quantity provided.

Laboratory Data Review Checklist

Completed By:

Justin Risley and Michael Jaramillo

Title:

Engineering Staff and Chemist

Date:

06/14/2022

Consultant Firm:

Shannon and Wilson, Inc.

Laboratory Name:

SGS North America, Inc.

Laboratory Report Number:

1222631

Laboratory Report Date:

06/07/2022

CS Site Name:

Six Mile Richardson Highway Groundwater Investigation

ADEC File Number:

100.38.112

Hazard Identification Number:

25660

1222631

Laboratory Report Date:

06/07/2022

CS Site Name:

Six Mile Richardson Highway Groundwater Investigation

Note: Any N/A or No box checked must have an explanation in the comments box.

1. Laboratory

   a. Did an ADEC CS approved laboratory receive and perform all of the submitted sample analyses?

   Yes☒ No☐ N/A☐ Comments:

   b. If the samples were transferred to another "network" laboratory or sub-contracted to an alternate laboratory, was the laboratory performing the analyses ADEC CS approved?

   Yes☐ No☐ N/A☒ Comments:

   All analyses were performed by SGS North America in Anchorage, AK. The SGS Anchorage laboratory maintains ADEC CS approval for the requested analyses.

2. Chain of Custody (CoC)

   a. CoC information completed, signed, and dated (including released/received by)?

   Yes☒ No☐ N/A☐ Comments:

   b. Correct analyses requested?

   Yes☒ No☐ N/A☐ Comments:

   Analytical method was not clearly identified by the laboratory reported the results by the appropriate analytical method.

3. Laboratory Sample Receipt Documentation

   a. Sample/cooler temperature documented and within range at receipt (0° to 6° C)?

   Yes☒ No☐ N/A☐ Comments:

   b. Sample preservation acceptable – acidified waters, Methanol preserved VOC soil (GRO, BTEX, Volatile Chlorinated Solvents, etc.)?

   Yes☒ No☐ N/A☐ Comments:

1222631

Laboratory Report Date:

06/07/2022

CS Site Name:

Six Mile Richardson Highway Groundwater Investigation

c. Sample condition documented – broken, leaking (Methanol), zero headspace (VOC vials)?

Yes☒ No☐ N/A☐ Comments:

The sample receipt form notes the samples arrived properly preserved and in good condition.

d. If there were any discrepancies, were they documented? For example, incorrect sample containers/preservation, sample temperature outside of acceptable range, insufficient or missing samples, etc.?

Yes☐ No☐ N/A☒ Comments:

The sample receipt form does not note any sample handling or receipt discrepancies.

e. Data quality or usability affected?

Comments:

There was no effect on data quality/usability.

4. Case Narrative

a. Present and understandable?

Yes☒ No☐ N/A☐ Comments:

b. Discrepancies, errors, or QC failures identified by the lab?

Yes☐ No☐ N/A☒ Comments:

The VOC LCS and LCSD samples associated with preparation batches VXX38655 and VXX38660 had recovery failures for methylene chloride. This analyte was not detected above the LOQ in the associated samples. Refer to Section 6.b. for further assessment.

c. Were all corrective actions documented?

Yes☐ No☐ N/A☒ Comments:

Corrective actions were not required; see above.

d. What is the effect on data quality/usability according to the case narrative?

Comments:

There is no effect on data quality/usability documented in the case narrative.

1222631

Laboratory Report Date:

06/07/2022

CS Site Name:

Six Mile Richardson Highway Groundwater Investigation

5. Samples Results

a. Correct analyses performed/reported as requested on COC?

Yes☒ No☐ N/A☐ Comments:

b. All applicable holding times met?

Yes☒ No☐ N/A☐ Comments:

c. All soils reported on a dry weight basis?

Yes☐ No☐ N/A☒ Comments:

Soil samples were not submitted with this work order.

d. Are the reported LOQs less than the Cleanup Level or the minimum required detection level for the project?

Yes☐ No☒ N/A☐ Comments:

The laboratory limit of detection (LOD) for 1,2,3-trichloropropane is greater than the DEC groundwater cleanup level.

e. Data quality or usability affected?

We cannot assess whether 1,2,3-trichloropropane is present in the field samples at concentrations greater than the DEC Groundwater Cleanup Level but less than the LOD.

6. QC Samples

a. Method Blank

i. One method blank reported per matrix, analysis and 20 samples?

Yes☒ No☐ N/A☐ Comments:

ii. All method blank results less than limit of quantitation (LOQ) or project specified objectives?

Yes☒ No☐ N/A☐ Comments:

1222631

Laboratory Report Date:

06/07/2022

CS Site Name:

Six Mile Richardson Highway Groundwater Investigation

iii. If above LOQ or project specified objectives, what samples are affected?

Comments:

None; target analytes were not detected in the method blank samples.

iv. Do the affected sample(s) have data flags? If so, are the data flags clearly defined?

Yes☐ No☐ N/A☒ Comments:

No samples are affected. Qualification of the data was not required.

v. Data quality or usability affected?

Comments:

The data quality/usability are not affected; see above.

b. Laboratory Control Sample/Duplicate (LCS/LCSD)

i. Organics – One LCS/LCSD reported per matrix, analysis and 20 samples? (LCS/LCSD required per AK methods, LCS required per SW846)

Yes☒ No☐ N/A☐ Comments:

ii. Metals/Inorganics – one LCS and one sample duplicate reported per matrix, analysis and 20 samples?

Yes☐ No☐ N/A☒ Comments:

Metals/inorganics analyses were not requested for these samples.

iii. Accuracy – All percent recoveries (%R) reported and within method or laboratory limits and project specified objectives, if applicable? (AK Petroleum methods: AK101 60%-120%, AK102 75%-125%, AK103 60%-120%; all other analyses see the laboratory QC pages)

Yes☐ No☒ N/A☐ Comments:

Methylene chloride was outside laboratory control limits, biased high, in the LCS and LCSD associated with preparation batches VXX38655 and VXX38660. Methylene chloride was not detected in any project samples; therefore, the results are unaffected, and no qualification is required.

1222631

Laboratory Report Date:

06/07/2022

CS Site Name:

Six Mile Richardson Highway Groundwater Investigation

iv. Precision – All relative percent differences (RPD) reported and less than method or laboratory limits and project specified objectives, if applicable? RPD reported from LCS/LCSD, and or sample/sample duplicate. (AK Petroleum methods 20%; all other analyses see the laboratory QC pages)

Yes☒ No☐ N/A☐ Comments:

v. If %R or RPD is outside of acceptable limits, what samples are affected?

Comments:

See above.

vi. Do the affected sample(s) have data flags? If so, are the data flags clearly defined?

Yes☐ No☐ N/A☒ Comments:

No samples are affected. Qualification of the data is not required. See above.

vii. Data quality or usability affected? (Use comment box to explain.)

Comments:

The data quality/usability are not affected.

c. Matrix Spike/Matrix Spike Duplicate (MS/MSD)

Note: Leave blank if not required for project

i. Organics – One MS/MSD reported per matrix, analysis and 20 samples?

Yes☐ No☐ N/A☒ Comments:

MS/MSD samples were not required for this project.

ii. Metals/Inorganics – one MS and one MSD reported per matrix, analysis and 20 samples?

Yes☐ No☐ N/A☒ Comments:

Metals/inorganics analyses were not requested for these samples.

1222631

Laboratory Report Date:

06/07/2022

CS Site Name:

Six Mile Richardson Highway Groundwater Investigation

iii. Accuracy – All percent recoveries (%R) reported and within method or laboratory limits and project specified objectives, if applicable? (AK Petroleum methods: AK101 60%-120%, AK102 75%-125%, AK103 60%-120%; all other analyses see the laboratory QC pages)

Yes☐ No☐ N/A☒ Comments:

MS/MSD samples were not required for this project.

iv. Precision – All relative percent differences (RPD) reported and less than method or laboratory limits and project specified objectives, if applicable? RPD reported from MS/MSD, and or sample/sample duplicate. (AK Petroleum methods 20%; all other analyses see the laboratory QC pages)

Yes☐ No☐ N/A☒ Comments:

MS/MSD samples were not required for this project.

v. If %R or RPD is outside of acceptable limits, what samples are affected?

Comments:

Not applicable, MS/MSD samples were not required for this project.

vi. Do the affected sample(s) have data flags? If so, are the data flags clearly defined?

Yes☐ No☐ N/A☒ Comments:

MS/MSD samples were not required for this project.

vii. Data quality or usability affected? (Use comment box to explain.)

Comments:

Not applicable, MS/MSD samples were not required for this project.

d. Surrogates – Organics Only or Isotope Dilution Analytes (IDA) – Isotope Dilution Methods Only

i. Are surrogate/IDA recoveries reported for organic analyses – field, QC and laboratory samples?

Yes☒ No☐ N/A☐ Comments:

1222631

Laboratory Report Date:

06/07/2022

CS Site Name:

Six Mile Richardson Highway Groundwater Investigation

ii. Accuracy – All percent recoveries (%R) reported and within method or laboratory limits and project specified objectives, if applicable? (AK Petroleum methods 50-150 %R; all other analyses see the laboratory report pages)

Yes☒ No☐ N/A☐ Comments:

iii. Do the sample results with failed surrogate/IDA recoveries have data flags? If so, are the data flags clearly defined?

Yes☐ No☐ N/A☒ Comments:

There were no surrogate recovery failures associated with this work order.

iv. Data quality or usability affected?

Comments:

The data quality/usability is not affected.

e. Trip Blanks

i. One trip blank reported per matrix, analysis and for each cooler containing volatile samples? (If not, enter explanation below.)

Yes☒ No☐ N/A☐ Comments:

ii. Is the cooler used to transport the trip blank and VOA samples clearly indicated on the COC? (If not, a comment explaining why must be entered below)

Yes☒ No☐ N/A☐ Comments:

All samples were transported in a single cooler with the trip blanks.

iii. All results less than LOQ and project specified objectives?

Yes☒ No☐ N/A☐ Comments:

iv. If above LOQ or project specified objectives, what samples are affected?

Comments:

No samples are affected. Target analytes were not detected in the trip blank samples associated with this work order.

1222631

Laboratory Report Date:

06/07/2022

CS Site Name:

Six Mile Richardson Highway Groundwater Investigation

v. Data quality or usability affected?

Comments:

The data quality/usability are not affected; see above.

f. Field Duplicate

i. One field duplicate submitted per matrix, analysis and 10 project samples?

Yes☒ No☐ N/A☐ Comments:

ii. Submitted blind to lab?

Yes☒ No☐ N/A☐ Comments:

The field duplicate samples *MW-17* / *MW-917* and *MW-108* / *MW-908* were submitted with this work order.

iii. Precision – All relative percent differences (RPD) less than specified project objectives? (Recommended: 30% water, 50% soil)

RPD (%) = Absolute value of: $\frac{(R_1-R_2)}{((R_1+R_2)/2)} \times 100$

Where R_1 = Sample Concentration
R_2 = Field Duplicate Concentration

Yes☒ No☐ N/A☐ Comments:

The relative precision demonstrated between the detected results of both sets of field-duplicate samples was within the recommended DQO of 30%, where calculable.

iv. Data quality or usability affected? (Use the comment box to explain why or why not.)

Comments:

The data quality/usability are not affected; see above.

g. Decontamination or Equipment Blank (If not applicable, a comment stating why must be entered below)?

Yes☒ No☐ N/A☐ Comments:

The equipment blank sample *EB-19* was submitted with this sample set.

1222631

Laboratory Report Date:

06/07/2022

CS Site Name:

Six Mile Richardson Highway Groundwater Investigation

i. All results less than LOQ and project specified objectives?

Yes☒ No☐ N/A☐ Comments:

However, toluene was detected at estimated concentrations below the LOQ in the equipment blank sample.

ii. If above LOQ or project specified objectives, what samples are affected?

Comments:

Toluene was not detected in the project samples; therefore, no qualification is required.

iii. Data quality or usability affected?

Comments:

The data quality/usability are not affected; see above.

7. Other Data Flags/Qualifiers (ACOE, AFCEE, Lab Specific, etc.)

a. Defined and appropriate?

Yes☐ No☐ N/A☒ Comments:

There were no other flags/qualifiers required.

APPENDIX C: QUALITY CONTROL AND QUALITY ASSESSMENT SUMMARY

Appendix C

Quality Control and Quality Assurance Assessment Summary

APPENDIX C: QUALITY CONTROL AND QUALITY ASSESSMENT SUMMARY

OVERVIEW

QC/QA procedures assist in producing data of acceptable quality and reliability. We reviewed the analytical results for laboratory QC samples and conducted our own QA assessment for this project. We reviewed the chain of custody (COC) records and laboratory receipt forms to check that custody was not breached, sample-holding times were met, and the samples were kept chilled (between 0 degrees Celsius [°C] and 6 °C) during shipping. Our QA-review procedures allowed us to document the accuracy and precision of the analytical data, as well as check that the analyses were sufficiently sensitive to meet project-specific sensitivity requirements

Laboratory QC procedures included evaluating surrogate recovery, performing continuing calibration checks, and analyzing method blanks, laboratory control samples (LCS), and matrix spikes (MS) to assess accuracy and precision. LCS, LCS duplicate (LCSD), MS, MS duplicate (MSD), and surrogate recovery analyses were performed to evaluate the accuracy of the analytical process. Analytical precision was assessed by comparing the results of duplicate analyses performed on LCS/LCSD, MS/MSD, and duplicate-sample pairs.

QC procedures in the field included using single-use equipment to reduce the potential for sample cross-contamination. We used a new, clean pair of nitrile gloves when sampling at each sampling point. The laboratory report contains a case narrative and forms documenting sample-receipt conditions. Details regarding the results of our QA review are presented below. Refer to the laboratory report and corresponding DEC LDRC for additional information (Appendix E).

SAMPLE HANDLING

The sampled were hand-delivered to the SGS receiving office in Fairbanks, Alaska. We completed COC forms, which were signed upon delivery to the SGS Fairbanks office. The samples were then repackaged by SGS and shipped to the SGS laboratory in Anchorage, Alaska. The SGS Fairbanks office noted samples were received in good condition and within the acceptable temperature range of 0 °C to 6 °C. The Sample Receipt Checklist noted that the project samples were received in good condition and properly preserved. There were no additional sample handling or receipt discrepancies noted by the laboratory; refer to the DEC LDRC for details (Appendix E).

ANALYTICAL SENSITIVITY

The laboratory's detection limit (DL) is the lowest analyte concentration that can be measured. The laboratory's limit of quantitation (LOQ) is the lowest analyte concentration

that can be routinely measured in the sampled matrix with confidence, the point at which a concentration is considered quantitative. Sample matrix, instrument performance, sample dilutions, and other factors may affect the DL and LOQ. Analytes may be present in samples at concentrations below the DL. In cases where analytes were not detected at concentrations above their DL, the analytical results are presented in our data-summary table with reference to their LODs. If the analyte is detected between the DL and the LOQ, its concentration is considered an estimate; in our tables and the laboratory data packet, this value is flagged with a 'J'. The flag is applied by the laboratory. The laboratory LOD for the requested analytes were sufficiently sensitive for reporting purposes for all analytes, except for 1,2,3-TCP.

To evaluate the potential for cross-contamination between samples or introduction of contamination from an outside source, laboratory-supplied trip blanks were carried with the samples in their cooler during sampling and shipping. Two trip blanks were analyzed as part of this sampling event for VOCs. Project analytes were not detected in the trip blank samples.

Laboratory method blanks were also analyzed in association with samples collected for this project to check for contributions to the analytical results possibly attributable to laboratory-based contamination. Project analytes were not detected in the method blank samples.

Reusable equipment was used in the collection of the samples for this work order; thus, collection of an equipment black sample was necessary for this work order. Toluene was detected at estimated concentrations below the LOQ in the equipment blank sample. Toluene was not detected in the project samples; therefore, no qualifications were required.

ACCURACY

Accuracy refers to determining the correct analyte concentration and is a comparison between the measured value and a known or expected value. Laboratory analytical accuracy may be assessed through the analyte recoveries from LCS/LCSD analyses and MS/MSD analyses, and the recovery of analyte surrogates (for organic analytes) added to project samples. The LCS/LCSDs are spikes of known analyte concentrations added to a clean matrix; the MS/MSDs are spikes of known analyte concentrations in a matrix similar to field samples. No MS/MSD samples were reported as a part of this work order. Percent recovery for methylene chloride was outside laboratory control limits, biased high, in the LCS and LCSD associated with a number of the samples. Methylene chloride was not detected in any project samples; therefore, the results were unaffected, and no qualification was required.

PRECISION

We collected field-duplicate samples at a frequency of approximately ten percent the total number of samples to evaluate the precision of analytical measurements and reproducibility of our sampling technique. Two field duplicate samples were collected; one from monitoring well MW-17, and one from monitoring well MW-108. The field duplicate samples were submitted "blind" (i.e., the laboratory could not identify it as a duplicate) with a sample name of *MW-917* and *MW-908*, respectively. The duplicates were analyzed by the same test methods as the original samples. To evaluate the precision of the data, we calculated the relative percent difference (RPD; difference between the sample and its duplicate divided by the mean of the two). RPDs can be evaluated only if the results of the analyses for both the primary sample and its duplicate are reported at concentrations greater than the DL. The data quality objective for water samples' RPD is 30 percent. Where concentrations were reported in both samples, we calculated the RPDs. The RPDs were within acceptance criteria.

Laboratory analytical precision can also be assessed by comparing the results of duplicate analyses performed on LCS/LCSD, MS/MSD, and laboratory-duplicate samples, and evaluating the associated RPDs. The data quality objective is 30 percent for the laboratory QC samples. The LCS/LCSD and laboratory-duplicate sample RPDs were within laboratory acceptance criteria.

DATA QUALITY SUMMARY

By conducting our field activities in general accordance with our standard QC/QA procedures, the samples we collected are considered representative of site conditions at the locations and times they were obtained. Based on our QA review, no datum was rejected as unusable due to QC failures, and our completeness goal of obtaining 90-percent useable data was met. In our opinion, the data produced by SGS laboratory for this project are suitable for characterizing groundwater quality at the locations sampled.

IMPORTANT INFORMATION

Important Information

About Your Environmental Report

IMPORTANT INFORMATION

CONSULTING SERVICES ARE PERFORMED FOR SPECIFIC PURPOSES AND FOR SPECIFIC CLIENTS.

Consultants prepare reports to meet the specific needs of specific individuals. A report prepared for a civil engineer may not be adequate for a construction contractor or even another civil engineer. Unless indicated otherwise, your consultant prepared your report expressly for you and expressly for the purposes you indicated. No one other than you should apply this report for its intended purpose without first conferring with the consultant. No party should apply this report for any purpose other than that originally contemplated without first conferring with the consultant.

THE CONSULTANT'S REPORT IS BASED ON PROJECT-SPECIFIC FACTORS.

A geotechnical/environmental report is based on a subsurface exploration plan designed to consider a unique set of project-specific factors. Depending on the project, these may include the general nature of the structure and property involved; its size and configuration; its historical use and practice; the location of the structure on the site and its orientation; other improvements such as access roads, parking lots, and underground utilities; and the additional risk created by scope-of-service limitations imposed by the client. To help avoid costly problems, ask the consultant to evaluate how any factors that change subsequent to the date of the report may affect the recommendations. Unless your consultant indicates otherwise, your report should not be used (1) when the nature of the proposed project is changed (for example, if an office building will be erected instead of a parking garage, or if a refrigerated warehouse will be built instead of an unrefrigerated one, or chemicals are discovered on or near the site); (2) when the size, elevation, or configuration of the proposed project is altered; (3) when the location or orientation of the proposed project is modified; (4) when there is a change of ownership; or (5) for application to an adjacent site. Consultants cannot accept responsibility for problems that may occur if they are not consulted after factors that were considered in the development of the report have changed.

SUBSURFACE CONDITIONS CAN CHANGE.

Subsurface conditions may be affected as a result of natural processes or human activity. Because a geotechnical/environmental report is based on conditions that existed at the time of subsurface exploration, construction decisions should not be based on a report whose adequacy may have been affected by time. Ask the consultant to advise if additional tests are desirable before construction starts; for example, groundwater conditions commonly vary seasonally.

Construction operations at or adjacent to the site and natural events such as floods, earthquakes, or groundwater fluctuations may also affect subsurface conditions and, thus, the continuing adequacy of a geotechnical/environmental report. The consultant should be kept apprised of any such events and should be consulted to determine if additional tests are necessary.

MOST RECOMMENDATIONS ARE PROFESSIONAL JUDGMENTS.

Site exploration and testing identifies actual surface and subsurface conditions only at those points where samples are taken. The data were extrapolated by your consultant, who then applied judgment to render an opinion about overall subsurface conditions. The actual interface between materials may be far more gradual or abrupt than your report indicates. Actual conditions in areas not sampled may differ from those predicted in your report. While nothing can be done to prevent such situations, you and your consultant can work together to help reduce their impacts. Retaining

IMPORTANT INFORMATION

your consultant to observe subsurface construction operations can be particularly beneficial in this respect.

A REPORT'S CONCLUSIONS ARE PRELIMINARY.

The conclusions contained in your consultant's report are preliminary, because they must be based on the assumption that conditions revealed through selective exploratory sampling are indicative of actual conditions throughout a site. Actual subsurface conditions can be discerned only during earthwork; therefore, you should retain your consultant to observe actual conditions and to provide conclusions. Only the consultant who prepared the report is fully familiar with the background information needed to determine whether or not the report's recommendations based on those conclusions are valid and whether or not the contractor is abiding by applicable recommendations. The consultant who developed your report cannot assume responsibility or liability for the adequacy of the report's recommendations if another party is retained to observe construction.

THE CONSULTANT'S REPORT IS SUBJECT TO MISINTERPRETATION.

Costly problems can occur when other design professionals develop their plans based on misinterpretation of a geotechnical/environmental report. To help avoid these problems, the consultant should be retained to work with other project design professionals to explain relevant geotechnical, geological, hydrogeological, and environmental findings, and to review the adequacy of their plans and specifications relative to these issues.

BORING LOGS AND/OR MONITORING WELL DATA SHOULD NOT BE SEPARATED FROM THE REPORT.

Final boring logs developed by the consultant are based upon interpretation of field logs (assembled by site personnel), field test results, and laboratory and/or office evaluation of field samples and data. Only final boring logs and data are customarily included in geotechnical/environmental reports. These final logs should not, under any circumstances, be redrawn for inclusion in architectural or other design drawings, because drafters may commit errors or omissions in the transfer process.

To reduce the likelihood of boring log or monitoring well misinterpretation, contractors should be given ready access to the complete geotechnical engineering/environmental report prepared or authorized for their use. If access is provided only to the report prepared for you, you should advise contractors of the report's limitations, assuming that a contractor was not one of the specific persons for whom the report was prepared, and that developing construction cost estimates was not one of the specific purposes for which it was prepared. While a contractor may gain important knowledge from a report prepared for another party, the contractor should discuss the report with your consultant and perform the additional or alternative work believed necessary to obtain the data specifically appropriate for construction cost estimating purposes. Some clients hold the mistaken impression that simply disclaiming responsibility for the accuracy of subsurface information always insulates them from attendant liability. Providing the best available information to contractors helps prevent costly construction problems and the adversarial attitudes that aggravate them to a disproportionate scale.

READ RESPONSIBILITY CLAUSES CLOSELY.

Because geotechnical/environmental engineering is based extensively on judgment and opinion, it is far less exact than other design disciplines. This situation has resulted in wholly unwarranted claims

being lodged against consultants. To help prevent this problem, consultants have developed a number of clauses for use in their contracts, reports, and other documents. These responsibility clauses are not exculpatory clauses designed to transfer the consultant's liabilities to other parties; rather, they are definitive clauses that identify where the consultant's responsibilities begin and end. Their use helps all parties involved recognize their individual responsibilities and take appropriate action. Some of these definitive clauses are likely to appear in your report, and you are encouraged to read them closely. Your consultant will be pleased to give full and frank answers to your questions.

The preceding paragraphs are based on information provided by the ASFE/Association of Engineering Firms Practicing in the Geosciences, Silver Spring, Maryland
