

ALASKA DEPARTMENT OF ENVIRONMENTAL CONSERVATION
Division of Spill Prevention and Response
Prevention and Emergency Response Program

SITUATION REPORT

INCIDENT NAME: Flow Station 2 Transit Oil Line Release

SITREP #: 2

SPILL NUMBER: 06399921801

LEDGER CODE: 14163560

TIME/DATE OF SPILL: In response to recently gathered inspection data, BPXA began shutting down the line at 6:30 AM August 6, 2006. During the shutdown operation, the spill was discovered by Alaska Clean Seas (ACS) Spill Response Team (SRT) at 8:40 AM, August 6, 2006. The spill was reported to ADEC by the State Troopers at 9:10 AM, August 6, 2006.

TIME/DATE OF SITUATION REPORT: 11:00 AM August 8, 2006.

TIME/DATE OF THE NEXT REPORT: 10:00 AM August 9, 2006

TYPE/AMOUNT OF PRODUCT SPILLED: BPXA reported that an estimated 4 -5 barrels (168 – 210 gallons) of crude oil has been released to the tundra. As of 6:00 AM on August 8, approximately 197 barrels (8274 gallons) have been recovered from portable “fold-a-tanks”. As of 6:00 AM this morning, oil has stopped leaking from the pipeline.

LOCATION: A crude oil transit line between Flow Station 2 (FS-2) and FS-1, Eastern Operating Unit, Prudhoe Bay, Alaska.

CAUSE OF SPILL: Leaking FS-2 Transit Line. The cause is under investigation. Data collected from a smart pig operation on Friday August 4, 2006 revealed 16 anomalies in 12 locations along this line. These anomalies are associated with corrosion related pipeline wall-thinning. As a result of the inspection data and associated spill, BPXA is shutting down the Prudhoe Bay oilfield. The shutdown is expected to be completed within the next 3 to 5 days.

POTENTIAL RESPONSIBLE PARTY (PRP): BP Exploration Alaska (BPXA)

RESPONSE ACTION: 24 hour operations are in effect. SRT personnel are maintaining portable “Fold-A-Tanks” to contain crude oil leaking from the line and have placed shore-seal boom around the spill site to contain the oil to the immediate area and prevent migration to the adjacent water body.

As of 6:00 AM this morning oil has stopped leaking from the pipeline into the fast tank. At this time all fluids are being stored in vacuum trucks. No fluids will be disposed of without agency approval. BPXA will store this material until coordination and approval from the agencies for the ultimate disposal or recycle method.

Approximately two barrels (84 gallons) have been removed from the tundra via a rope-mop system. Plywood walkways have been placed on the tundra to prevent damage due to foot traffic. BPXA continues to remove standing crude oil/water from the water cover tundra using rope mops and vacuum trucks.

Once the standing crude oil/water has been removed, BPXA will coordinate with ADEC, additional tundra clean up as necessary. An initial cleanup plan has been submitted to the Department and been approved.

ADEC has two responders on the North Slope.

SOURCE CONTROL: The line has zero pressure. The leak from the line has stopped. BPXA is in the process of placing patches on the 16 anomalies sites found in the line during the smart pigging of the line. Due to the

possibility of creating other leaks BPXA has stopped examining the other pipeline anomalies until the pipeline has been de-inventoried.

RESOURCES AFFECTED: Tundra inundated with standing fresh water. No impacts to wildlife have been reported at this time.

FUTURE PLANS AND RECOMMENDATIONS: BPXA will develop and submit for ADEC approval, a disposal plan and sampling plan. Additional response actions include: determining final volume released and sampling the spill site to confirm cleanup.

WEATHER: Overcast, 48 degrees F with calm winds.

UNIFIED COMMAND AND PERSONNEL:

Incident Commander:	Greg Alexander (BPXA)
F.O.S.C.:	Matt Carr (EPA)
S.O.S.C.:	Ed Meggert (ADEC)
Field .S.O.S.C.:	Toivo Luick (ADEC)

FOR ADDITIONAL INFORMATION CONTACT: Walt Sandel 907-451-2126 or Ed Meggert 907-451-2124

Photographs and other spill information are available for viewing at the following Unified Command website:
