

**ALASKA DEPARTMENT OF ENVIRONMENTAL CONSERVATION
Division of Air Quality**

SITUATION REPORT

**AIR QUALITY ADVISORY
Central Interior AK #2010-03**

LOCATION(S) IMPACTED: Yukon Flats.

TIME/DATE OF UPDATE: Monday, August 16, 2010, 2:00 PM.

VALID TIME: Valid August 16 at 2:00 PM until August 17 at 10:00 AM.

TIME/DATE OF THE NEXT REPORT: Tuesday, August 17 10:00 AM.

ADVISORY: Air Quality in the Yukon Flats is currently affected by the Canvasback Lake, Pat Creek and Three Sleep fires. The particulate monitor in Fort Yukon is indicating that conditions are **unhealthy for sensitive groups** to **unhealthy** so an air quality advisory is issued for the rest of today. Fort Yukon and other communities near these fires will experience periods of smoke and potentially poor air quality conditions throughout the evening.

The forecast for the Yukon Flats is for partly cloudy skies and isolated showers and thunderstorms. Winds will be shifting to be from the south and east this evening.

Keep in mind that areas immediately downwind of any fire will experience **hazardous** levels of smoke. Generally, worse conditions occur overnight and during the early morning hours, as the atmosphere cools and brings smoke to the surface. During the day, surface heating will mix smoke and carry it upwards, temporarily improving air quality. Alternatively, hot, dry weather may lead to extensive fire activity, dramatically increasing smoke production, and thus causing the worst visibilities to occur in the late afternoon and early evening hours.

SMOKE AND PUBLIC IMPACT: This is an area forecast, and as such is a general forecast for portions of Interior Alaska. Smoke intensity will vary depending on precise location and local wind flow patterns. Smoke concentrations will be such that they could impact public health at times. It is advised that travelers check local weather as smoke conditions may vary considerably from one locality to the next. The most recent weather observations may be found on National Weather Service's homepage at <http://pafc.arh.noaa.gov/obs.php>.

CURRENT BURN RESTRICTIONS: None.

DEC advises anyone with respiratory illness or heart disease, the elderly, and children to avoid exposure to smoke. All others are cautioned to avoid outdoor activities or physical exertion when conditions reach unhealthy levels, as defined below:

The following table is the Air Quality Index for Particle Pollution.

Index Values	Levels of Health Concern	Cautionary Statements
0-50	Good	None
51-100	Moderate	Unusually sensitive people should consider reducing prolonged or heavy exertion.
101-150	Unhealthy for Sensitive Groups	People with heart or lung disease, the elderly and children should reduce prolonged or heavy exertion.
151-200	Unhealthy	People with respiratory or heart disease, the elderly and children should avoid prolonged exertion; everyone else should limit prolonged exertion.
201-300	Very Unhealthy	People with respiratory or heart disease, the elderly and children should avoid any outdoor activity; everyone else should avoid prolonged exertion.
Over 300	Hazardous	Everyone should avoid any outdoor exertion; people with respiratory or heart disease, the elderly and children should remain indoors.

When air quality data is unavailable, the following **Air Quality Smoke Reference Guide** may be used to estimate air quality levels and potential health impacts:

Visibility	Air Quality
10+ miles	Good
6 - 9 miles	Moderate
3 - 5 miles	Unhealthy for sensitive groups
1.5 - 2.5 miles	Unhealthy
0.9 - 1.4 miles	Very Unhealthy
0.8 miles or less	Hazardous
