**Subject:** Non-catalytic wood stoves and EPA certification

Hi Cindy/Steven,

Thanks for the explanation on EPA testing of cats and non-cat stoves. I ran into this article and thought it might be relevant to our discussion.

<http://www.biomassmagazine.com/articles/16236/the-impact-of-government-regulations>

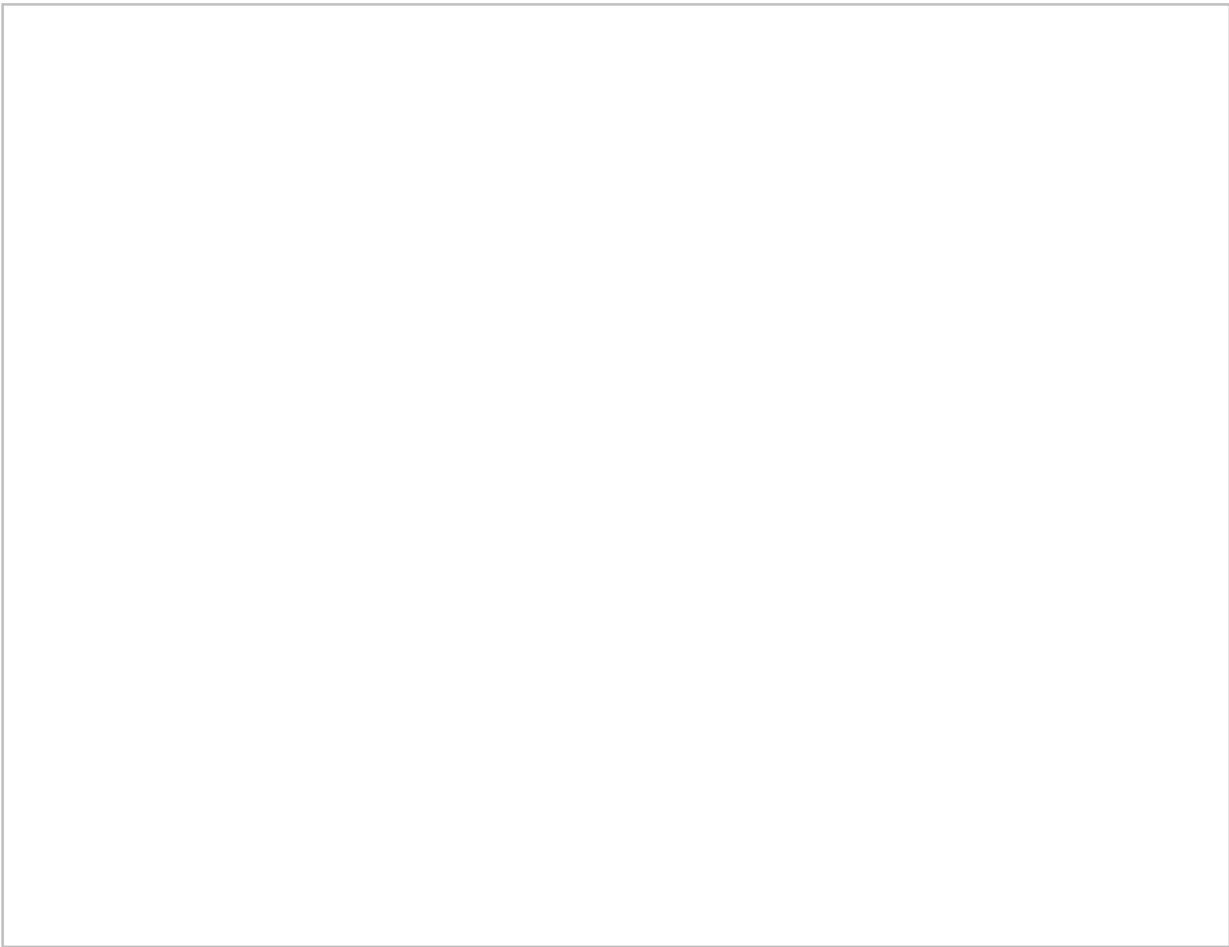

They also posted the following from Quadrafire that went to their dealers, not otherwise public. I'm happy to see the Millenium non-cat series still on their list and reiterate my request that it be included pro forma in the SIP.

Best,

Gary

#### **Quadrafire to discontinue 40% of models**

Bigger stove companies like Quadrafire are starting to lay out which of their stoves will be 2020 compliant before May 2020, which ones after - and which ones are being discontinued. Quadrafire is discontinuing some of its best known stoves, but some of the models being discontinued have had problems.

Best,

Gary Newman
