

Alaska Department of Environmental Conservation

Revised Total Coliform Rule- Sample Siting Plan for Seasonal Systems

All public water systems (PWS) are required to have an approved sample siting plan. These plans are required to be updated when changes occur that could alter the number of samples collected or the sample locations. *Examples: population increase or decrease, water line extensions, changes in monitoring frequency, etc.*

I. General Information	
PWS Name:	PWSID #:
PWS Address:	
Contact Name:	Phone #:
E-mail:	Fax #:
Water System Type: Non-Transient Non-Community Transient Non-Community	
Population Served (# of): _____ Residents _____ Non-Transient _____ Transient _____ Total Pop	
Number of Service Connections: _____	
Source Types: (Check all that apply)	Ground Water Purchased Ground Water Surface Water Purchased Surface Water or GWUDISW* GWUDISW* Filtration Avoidance System (Surface Water)
<small>*Ground Water Under Direct Influence of Surface Water</small>	
Dates of Operation: _____ to _____	
Is your entire system pressurized year-round? Yes No <small>* If yes, you are not required to complete start-up procedures (unless otherwise directed by the DEC).</small>	
Number of Routine Samples Required: _____ per Month Quarter	
If you are on Quarterly (reduced) Monitoring, enter the month or months your system is most vulnerable* in each quarter you are operating: _____ <small>*The most vulnerable times for a water system are typically at the beginning of the season (if your system is not pressurized year round) and during the times when you are serving the most people/highest water demand. As a reminder, quarters within a calendar year are January-March, April-June, July-September, and October-December.</small>	

Guidelines for Sample Site Selection

- * Identify total coliform sample locations that adequately represent the entire distribution system(s)
- * Swivel taps, automatic/motion-sensing faucets, and water treatment devices should be avoided
- * Do NOT collect samples from outside taps or hoses
- * Routine sample sites should be accessible for routine and repeat testing
- * Three Repeat samples are required following each total coliform positive routine sample (Systems with wells must also collect a raw source water sample from each active well). Repeat sampling sites should be selected as follows:
 - * One must be collected from the original routine site that tested total coliform positive
 - * One must be collected from within five service connections upstream
 - * One must be collected from within five service connections downstream
- * For systems on quarterly monitoring, you will be required to collect 3 samples the month following a total coliform positive sample. Since the sample site selection will depend on the specific circumstances surrounding the positive sample(s) these sample sites do not need to be included in this plan
- * Ground water source samples must be taken from raw water sample taps

Please return this form to your DEC Drinking Water Program Office.

A copy of this completed sample siting plan must be maintained on file at the PWS.

II. Sampling Information

A. Routine Sample Rotation Schedule: If you are on Quarterly (reduced) monitoring, enter the month or months your system is most vulnerable* in each quarter you are operating.

Routine Sample Site	1st Quarter			2nd Quarter			3rd Quarter			4th Quarter		
	Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec
1.												
2.												
3.												
4.												
5.												

*The most vulnerable times for a water system are typically at the beginning of the season (if your system is not pressurized year round) and during the times when you are serving the most people/highest water demand.

B. Routine and Repeat Sample Locations

Routine Sample Sites Location/Address	Repeat Sample Sites Location/Address
1.	1-1 Original sample site
	1-2 Upstream
	1-3 Downstream
2.	2-1 Original sample site
	2-2 Upstream
	2-3 Downstream
3.	3-1 Original sample site
	3-2 Upstream
	3-3 Downstream
4.	4-1 Original sample site
	4-2 Upstream
	4-3 Downstream
5.	5-1 Original sample site
	5-2 Upstream
	5-3 Downstream

C. Reasons for Choosing Routine Sample Locations

1.
2.
3.
4.
5.

D. System Schematic

Provide a line drawing in the space below or attach a separate sheet or map of this public water system that **identifies** water system facilities (sources, storage, treatment, distribution, and pressure zones) and sample point locations.

E. Groundwater Rule Triggered Source Water Monitoring

If you answer "No" to the question below, you are required to perform source water monitoring, from each active well under the Groundwater Rule in the event of a routine total coliform positive sample. This sampling is in addition to the repeat sampling required by the RTCR. Enter your source sample site information in the table below. If you need more space, attach additional sheets.

Do you provide DEC-approved 4-log treatment of viruses for all your groundwater sources?

Yes

No

N/A- We do not have any wells or all of our water is treated as SW or GWUDISW
(There are no wells in the distribution system that bypass surface water treatment.)

Groundwater Rule Triggered Source Water Monitoring	
Source ID/Name	Description of location of raw water sample tap

DEC Area Office: _____ Date Received: ____/____/____

Was a dual purpose sample approved?

Yes No

Date discussed with Supervisor: ____/____/____

NOTE: The only systems eligible for using a dual purpose sample are Groundwater systems, serving 1,000 or fewer people, that only have 1 well, and serve a single building with 2 or fewer sample taps.

Sample Siting Plan deemed complete and satisfactory?

Yes No
