Prevention and Emergency Response Program

SITUATION REPORT

INCIDENT NAME: M/V Selendang Ayu

SITREP #: 95

SPILL NUMBER: 04259934301

LEDGER CODE: 14142160

TIME/DATE OF INCIDENT: The M/V Selendang Ayu grounded at approximately 6:00 PM on December 8, 2004 near Unalaska Island between Skan Bay and Spray Cape. The U.S. Coast Guard reported at 7:14 PM on December 8, 2004 that the vessel had broken in half.

TIME/DATE OF SITUATION REPORT: 1:00 PM July 21, 2005

TIME/DATE OF THE NEXT REPORT: 1:00 PM July 28, 2005

TYPE/AMOUNT OF PRODUCT SPILLED: The actual amount of fuel spilled is unknown. Total volume of fuel initially on board the vessel was approximately 446,280 gallons of intermediate fuel oil (IFO 380) and 31,573 gallons of marine diesel oil. An estimated 321,052 gallons of IFO 380 and 14,680 gallons of marine diesel/miscellaneous oils have been released to the environment. The total estimated amount of all oils released to the environment is 335,732 gallons. Approximately 60 thousand tons of soybeans were on board as cargo destined for China.

LOCATION: The vessel wreck's position is at 53° 38' 04" N, 167° 07' 30" W on Unalaska Island between Skan Bay and Spray Cape. This site is approximately 25 air miles southwest or 50 nautical miles from Dutch Harbor.

CAUSE OF SPILL: The vessel grounded and broke in half on the evening of December 8, 2004.

POTENTIAL RESPONSIBLE PARTY (PRP): Ayu Navigation Snd, Bhd, Port Klang, Malaysia (IMC Shipping)

RESPONSE ACTIONS:

SCAT/ Pre-Inspection Endpoint Inspection: All SCAT surveys of the 806 segments have been completed. This leaves a total of 101 segments approved by the UC to be treated.

The following is the status of the segments surveyed:

Total Segments	Total Segments Surveyed	Segments no treatment or no further treatment	Segments Identified by SCAT requiring treatment	Segments approved by UC for treatment
806 (474 miles, 763 km)	806 (100% of total)	683 (85% of total, 404 miles, 650 km)	123 (15% of total, 70 miles, 113 km)	123 (13% of total, 55 miles, 88.5 km)

The following is the status of the segments requiring treatment:

Total segments requiring treatment	Segments treated and submitted for pre-inspection	Total segments pre-inspected	Total segments ready for final landowner inspection	Segments for sediment relocation	Final UC Approval Cleanup
123	90	82	76	3	3

With completion of the initial SCAT survey, the SCAT teams have been renamed the Pre-inspection Endpoint Assessment Team (PEST) and are conducting helo-supported post-treatment inspections of segments prior to landowner inspections. The PEST verifies that cleanup operations were successful in achieving the established cleanup criteria. If additional cleanup is deemed necessary, the team will recommend what additional measures are appropriate. DEC field monitors together with contractors meet with the teams during inspections to insure discrepancies are corrected. A final inspection team designated by Unified Command and landowner

representatives will then visit each cleaned segment and forward their recommendation to the Unified Command for consideration. On July 12th, the first of the final inspections were completed and three segments were forwarded to the Unified Command which received approval for cessation of treatment.

Cleanup Operations:

Cleanup crews have completed work on 54 segments in Makushin Bay, Skan Bay and southwest division areas. Twenty-one (21) vessels are currently deployed with approximately 212 cleanup response workers (not inclusive of vessel support crews). The work area includes divisions in Makushin Bay, Skan Bay and one division in the southwest area. Current plans are to continue manual and mechanical cleanup using heavy equipment. Both mechanical manual dry tilling treatment and sediment relocation are being conducted based on unified field decisions by the Bay Manager, ADEC and USCG field monitors. Further details of the cleanup are available on the Unified Command website.

Salvage/Removal Status: Magone Marine has completed the cleanup of oil in the engine room and dive work on the bow section. During this cleanup, approximately 21,000 gallons of oils and hazardous materials (e.g., paints, solvents) were removed from the engine room.

Proposals for the removal of the wreck were submitted to the State from the vessel owners on June 24th and a meeting was held on July 6th to discuss the proposals. Additional negotiations and evaluations will continue between the state and the vessel owners for the wreck removal.

Fisheries/Subsistence: An ADEC Environmental Health representative is coordinating with Dutch Harbor seafood processors to evaluate seafood products as necessary. The EH Officer in Dutch Harbor inspected a delivery of halibut caught in the Skan and Makushin Bay area of Unalaska Island on July 7th. The state has closed the area to commercial fishing but the International Pacific Halibut Commission did not. Any product caught in the area must be inspected by ADEC before processing occurs and this has been the sole delivery from that area. There was no oil contamination found on the fish, vessel or gear.

The results of the samples of subsistence foods taken at two locations in Unalaska Bay on June 23rd to June 26th came back with no oil contamination for PAHs and organoleptic testing. Monitoring of subsistence food will continue in accordance with a plan devised by the Subsistence Work Group.

Wildlife: No additional reports of oiled wildlife have been received since the last report.

Soybeans: On-going monitoring of the soybeans on the beach indicates that they are continuing to decompose and be removed from the beach by high tides and occasional storm events.

Staffing: Nine (9) State staff are currently in Dutch Harbor. This includes 4 staff in the Incident Command Post providing Incident Management functions and 2 staff in the Incident Command Post doing helicopter field inspections, and 3 vessel-based cleanup operations monitors.

SOURCE CONTROL: Unchanged. See previous Sitreps.

RESOURCES AFFECTED: Unchanged. Wildlife search and recovery teams may be activated if required. The protection of cultural and subsistence resources continues to be a high priority for the Unified Command. No additional wildlife impacts have been reported since the commencement of Spring/Summer operations.

FUTURE PLANS AND RECOMMENDATIONS: Shoreline assessment and cleanup operations will continue as weather allows in Makushin Bay, Skan Bay and the western part of the impacted area. Coordinate with State, Federal and private land owners to initiate final inspections of the segments identified as meeting cleanup endpoint criteria. Complete baseline sampling at segment SKN-5, and then proceed with sediment relocation at the site.

MEETINGS: The Native stakeholder meeting was held on July 20th and the next meeting will be held July 27th at 9:30 AM. A public meeting is scheduled for July 28 at 6:30 PM.

WEATHER: Weather for July 21st, winds variable 20 knots, seas 5 ft., rain likely, temperatures in the upper 50s.

UNIFIED COMMAND AND PERSONNEL

F.O.S.C. : Captain Mark DeVries, USCG
 S.O.S.C. : Walt Sandel, ADEC
 R.P.I.C. : Howard Hile, Gallagher Marine Systems, Inc.
 F.O.S.C. Rep : LCDR C. Mc Nutt, USCG
