

ALASKA DEPARTMENT OF ENVIRONMENTAL CONSERVATION
Division of Spill Prevention and Response
Prevention and Emergency Response Program

SITUATION REPORT

INCIDENT NAME: Pump Station 1 Booster Pump Piping Incident **SITREP #:** 11

SPILL NUMBER: 11399900801

LEDGER CODE: 14307760

TIME/DATE OF SPILL: Alyeska Pipeline Service Company (APSC) employees discovered a spill of crude oil inside the booster pump building at Trans-Alaska Pipeline System (TAPS) Pump Station 1 at 8:16 AM on January 8, 2011. APSC reported the spill to ADEC at 8:39 AM on January 8, 2011. APSC cut the flow of oil to the TAPS line at approximately 8:50 AM, January 8, 2011.

TIME/DATE OF SITUATION REPORT: 4:00 PM on January 18, 2011

TIME/DATE OF THE NEXT REPORT: 4:00 PM on January 19, 2011

TYPE/AMOUNT OF PRODUCT SPILLED: Crude oil appears to have been released from part of the booster pumps' discharge piping located either in the wall of the booster pump building or in a concrete-encapsulated underground section outside the building. Oil seeped into the building where a pipe passed through the basement wall. No oil has been observed outside the booster pump building.

The volume of oil released into the building and recovered prior to the January 11 restart is estimated at 1,776 gallons (42.3 barrels). The volume of oil recovered from the building since the January 11 restart is approximately 11,550 gallons (275 barrels).

LOCATION: TAPS Pump Station 1, Prudhoe Bay. Pump Station 1 is the point at which all oil from the North Slope oil fields enters the TAPS line.

CAUSE OF SPILL: Investigation is ongoing to determine the cause of the release and the precise location of its source.

RESPONSIBLE PARTY (RP): Alyeska Pipeline Service Company (APSC)

RESPONSE ACTION: The Trans Alaska Pipeline System resumed operations at 10:18 AM on January 17. Oil continues to move smoothly through the pipeline.

As of noon today, the North Slope oil producers were providing 525,000 barrels per day to Pump Station 1. Storage tanks at the pump station had stabilized at 11.5 feet with the throughput to the pipeline matching the producers input.

The Unified Command officially stood down at 6:00 AM this morning, January 18. Alyeska's incident management team will remain in place until the pipeline is back to normal operation.

APSC continues to closely monitor the pipeline as the fresh warm oil front moves towards Valdez.

Overflights of the pipeline using forward looking infrared (FLIR) imaging equipment are continuing on a nightly basis.

Field monitors have not observed oil in any of the three monitoring holes, three groundwater drainfield sumps, or during periodic visual checks of the pad surface and perimeter.

SOURCE CONTROL: The TAPS line was shut down shortly after the spill was discovered. A containment tank was constructed and placed in the booster pump building basement to capture leaking oil. Workers placed additional spill containment equipment to isolate and drain the compromised discharge piping after the TAPS line was shut

down for the bypass tie-in. With the completion of the bypass line, oil flow has been rerouted around the leak location.

RESOURCES AFFECTED: Pump Station 1 is surrounded by tundra, marshland and ponds, but due to the location of the booster pump building on the interior of the station's gravel pad, there appears to be no immediate threat to sensitive habitat or wildlife. No oil has been observed outside the booster pump building.

FUTURE PLANS AND RECOMMENDATIONS: The project manager assigned by ADEC will continue to manage the state's response and follow-up to this incident until all necessary oversight and investigation are completed. Pollution monitoring at Pump Station 1 is ongoing.

WEATHER: Forecasts for several locations on the TAPS line for today through tomorrow (temperatures in ° F):

Prudhoe Bay – Tonight, blizzard conditions improving this evening near Deadhorse. Elsewhere, mostly cloudy with flurries and fog. Blowing snow in the evening. Lows -30 to -35° F. West winds 25 mph decreasing to 15 mph after midnight. Wind chill to -45°F.

Fairbanks – Tonight, mostly clear with patchy ice fog. Lows around -35°F except around -15°F in the hills. Light winds.

Glennallen – Tonight, clear. Lows around -35°F except -10 to -20°F through the passes. Light winds.

Valdez – Tonight, clear. Lows around 5°F except around -5°F through the pass. Northeast wind to 15 mph except 15 to 30 mph through the pass.

Prudhoe Bay is located north of the Arctic Circle. The next sunrise will occur at 12:42 PM on January 19, 2011; sunset will occur 44 minutes later.

UNIFIED COMMAND AND PERSONNEL:

Incident Commander: John Baldridge, APSC
F.O.S.C.: Matt Carr, EPA
S.O.S.C.: Tom DeRuyter, ADEC
Field S.O.S.C.: Brian Jackson, ADEC

FOR ADDITIONAL INFORMATION CONTACT: Dale Gardner, ADEC at (907) 269-7682
