Introduction

The Oil and Hazardous Substance Release Prevention and Response Fund (Response Fund) was created by the Legislature in 1986 to provide a readily available funding source to investigate, contain, clean up and take other necessary action to protect public health, welfare and the environment from the release or threatened release of oil or a hazardous substance. Alaska Statute 46.080.030 states: “ It is the intent of the legislature and declared to be the public policy of the state that funds for the abatement of a release of oil or a hazardous substance will always be available.” (SLA 1986 Sec.1 Ch. 59).

The statutes governing the Response Fund were amended in 1989, 1990, 1991, 1994, 1999, and 2006. These amendments increased the scope that defines how the Response Fund can be used and it also increased the Department of Environmental Conservation’s (DEC) reporting requirements. In addition, the 1994 amendment made major changes to the Response Fund structure by dividing the Response Fund into two separate accounts. The first account is the response account and the second account is the prevention account. The changes became effective on July 1, 1994. The diagram on page three illustrates the current structure of the Response Fund.

The 1999 amendment changed the reporting requirement on the status of the fund from an annual report to the Legislature to a biennial report. The 2006 amendment changed the surcharge levied on crude oil produced in the state. The legislation imposed a prevention account surcharge of \$.04 (formerly \$.03) per barrel of oil produced from each lease or property in the state, less any oil the ownership or right to which is exempt from taxation. Sec. 26 of AS 43.55.201 was also amended to change the response account surcharge from \$.02 to \$.01 per barrel of oil produced from each lease or property in the state.

Response Account

The response account may be used to finance the state’s response to an oil or hazardous substance release disaster declared by the governor, or to address a release or threatened release that poses an imminent and substantial threat to the public health or welfare, or to the environment. To access the response account for any incident other than a declared disaster, DEC must notify the governor and the Legislative Budget and Audit Committee within 120 hours of using the money from this account.

The response account is financed by a \$.01 per barrel surcharge and money recovered from responsible parties. The surcharge is suspended when the combined balance of the surcharge account, the response mitigation account and the unreserved and unobligated balance in the response account reach \$50 million. The account

balance reached \$50 million for the first time during the quarter ending December 31, 1994. Therefore, beginning April 1, 1995, the surcharge collection was suspended.

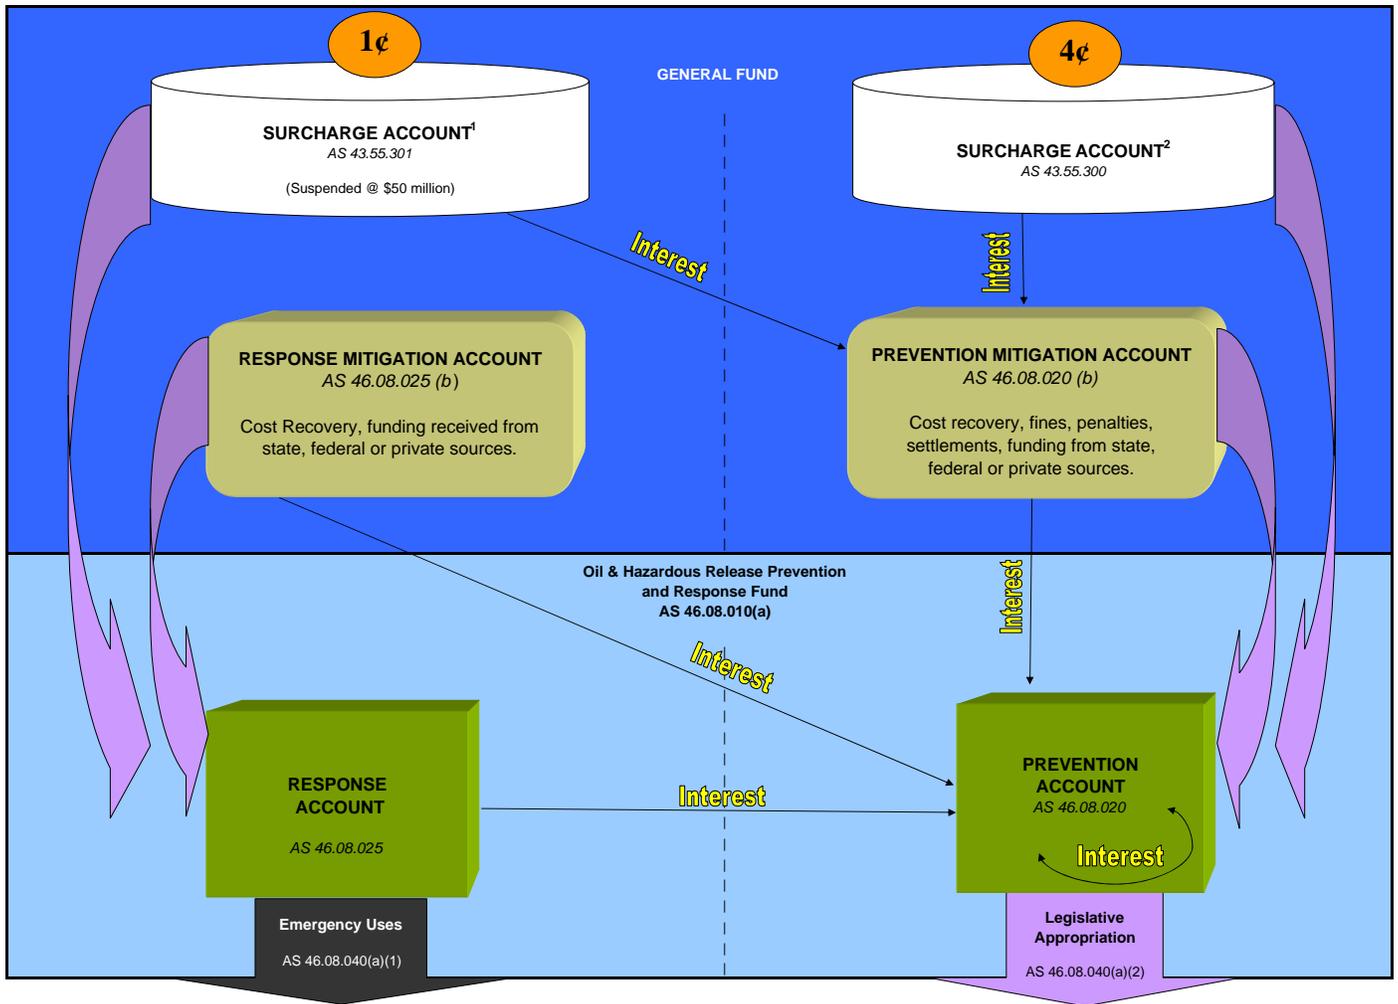

Access to the fund for the response to the North Slope Pipeline spills occurred on November 20, 2006. This action lowered the balance of the account below \$50 million. On April 1, 2007, the Department of Administration imposed the \$.01 cent surcharge to restore the balance to \$50 million. The combined balance of the response account as of June 30, 2008 is \$43.2 million. As a result, the \$.01 cent surcharge has remained on through the fiscal year 2008.

Prevention Account

The prevention account may be used to respond to oil and hazardous substance releases that have not been declared a disaster by the governor. In addition, the prevention account is also used to fund Alaska's oil and hazardous substance release response and prevention programs. The Legislature appropriates money from the prevention account to support DEC for spill prevention and preparedness planning activities (AS 46.08.040(a)(2)).

The prevention account is financed with a \$.04 per barrel surcharge and fines, settlements, penalties and interest.

Oil & Hazardous Substance Release Prevention and Response Fund (OHSRPRF)

- USES:**
- * Investigate, evaluate, contain, cleanup, monitor and assess a release or threatened release of oil or hazardous substance that poses an imminent and substantial threat to public health or welfare or the environment.
 - * Match federal funds for release.
 - * Recover cost to the state, a municipality, a village, or a school district for cleanup.
 - * Recover state costs.

- USES:**
- * Investigate, evaluate, contain, and cleanup a release or threatened release of oil or hazardous substances.
 - * Establish and maintain spill response capability.
 - * Review oil discharge prevention and contingency plans.
 - * Maintain spill response contracts and agreements.
 - * Conduct training, response exercises, inspections, and tests.
 - * Verify or establish preparedness of the state.
 - * Verify proof of financial responsibility.
 - * Acquire, repair and improve spill response equipment caches.
 - * Prepare, review and revise regional and state spill plans and local Hazmat plans
 - * Participate in federal oil discharge cleanup activities.
 - * Assess effects of a release.
 - * Recover state costs.
 - * Restore the environment.

¹ House Bill 3001C amended AS 43.55.201 Sec. 26 and changed the Surcharge from \$.02 to \$.01 effective 4/1/2006

² House Bill 3001C amended AS 43.55.300 Sec. 28 and changed the Surcharge from \$.03 to \$.04 effective 4/1/2006

Table A

Summary of Fiscal Year 2007 & 2008 Expenditures and Obligations

This table summarizes the expenditures and year-end obligations for appropriations funded by the Oil and Hazardous Substance Release Prevention and Response Fund (Response Fund) in Fiscal Year 2007 & 2008.

Table B

**Prevention Mitigation and Response Mitigation Revenues
Fiscal Year 2007 & 2008 Summary**

This table summarizes by project, deposits made in Fiscal Year 2007 & 2008 to the prevention and response mitigation accounts. All monies collected by the department as cost recovery, fines, penalties or settlement payments related to activity funded by the Oil and Hazardous Substance Release Prevention and Response Fund (Response Fund) are deposited in the mitigation accounts. These amounts do not include settlements that involved a Supplemental Environmental Project undertaken directly by the spiller.

Table C**Revenue Sources**

This table summarizes the various funding sources appropriated to the Oil & Hazardous Substance Release Prevention and Response Fund (Response Fund). "Program Receipts" are revenues collected from an outside party for specific program expenditures. "Mitigation Revenue" includes interest earned on surcharge deposits, cost reimbursement, fines, penalties or settlement payments from parties financially responsible for incidents or sites for which the state expended money from the Response Fund. "Oil Surcharge Revenue" represents collection in the prior year of the conservation surcharge imposed on oil produced in the state.

(In Thousands)

Fiscal Year	Program Receipts	Mitigation Accounts	3 Cents Oil Surcharge	4 Cents Oil Surcharge Note 1	1 Cent Oil Surcharge Note 2	Other General Fund	Total
FY02	-	\$6,194.7	\$9,295.2	-	-	-	\$ 15,489.9
FY03	-	\$6,490.0	\$9,597.0	-	-	-	\$ 16,087.0
FY04	-	\$3,157.0	\$9,232.9	-	-	-	\$ 12,389.9
FY05	-	\$1,392.8	\$9,052.5	-	-	-	\$ 10,445.3
FY06	-	\$1,688.8	\$8,330.5	-	-	-	\$ 10,019.3
FY07	-	\$3,731.1	\$7,758.7	-	-	\$1,800.0	\$ 13,289.8
FY08	-	\$2,316.7	\$2,880.9	\$6,629.7	\$593.2	\$2,000.0	\$ 14,420.4
FY09	-	\$8,248.9	-	\$9,476.2	\$2,333.70	-	\$ 20,058.8

Note 1: AS 43.55.300 is amended to change the surcharge levied on every producer of oil from \$.03 to \$.04 per barrel of oil produced from each lease or property in the state, less any oil the ownership or right to which is exempt from taxation. The amendment changing surcharge to \$.04 was effective on April 1, 2006.

Note 2: The amendment changing the surcharge to \$.01 was effective on April 1, 2006.

Table D

Summary of Response Contracts & Purchases in Excess of \$10,000

This table lists contracts the department signed that are associated with response activities funded by the Oil and Hazardous Substance Release Prevention and Response Fund (Response Fund) and which exceeded \$10,000.00 in FY07 & FY08 payments.

Fiscal Year 2007

CONTRACTOR	PROJECT NAME	DESCRIPTION	TOTAL CONTRACT	FY 07 PAYMENTS

Tables H, I, and J list all the sites inventoried in the Department of Environmental Conservation's contaminated sites and leaking underground storage tank sites database as of June 30, 2008.

Table H summarizes the numbers of active sites by location and by priority ranking based on the threat to the public health or welfare or to the environment. The database contains the following totals for each priority category.

High Priority	1,011
Medium Priority	269
Low Priority	695
Unranked	<u>442</u>
Total Active Sites	<u>2,417</u>

Table I lists all DEC active Contaminated and Leaking Underground Storage Tanks sites alphabetically by location as June 30, 2008.

Table J lists all DEC closed Contaminated and Leaking Underground Storage Tanks sites alphabetically by location as of June 30, 2008.

Appendix 1: Community Spill Response - No costs incurred for communities in Fiscal years 2007 & Fiscal Year 08.

Appendix 2: Project Summaries - This appendix summarizes information for contaminated sites or pollution incidents for which the department made direct expenditures of \$10,000.00 or more during Fiscal year 2007 & 2008 from the Oil and Hazardous Substance Release Prevention and Response Fund. Indirect expenditures, expenditures paid from other sources and expenditures for budgeted legal services provided by the Department of Law are not included. Direct department response activities involve cleanup, control, containment, investigation and oversight.

Project/Site Name: 6-Mile Groundwater Monitoring

Location: Fairbanks/North Pole, Alaska

Project Manager: Ann Farris

Tel: (907) 451-2104

Site ID Number: 1987310924701

Ledger Code: 14621570

Situation:

In 1995/1996, an area-wide trichloroethylene (TCE) groundwater plume was discovered in the Six-Mile Richardson Highway area. The plume is over a mile in length, up to 1200 feet wide, and up to 100 feet in depth. It extends in a northwesterly direction from south of the New Richardson Highway to the Six-Mile Village Subdivision area.

The plume impacted fifteen residential drinking water wells and the homeowners were provided financial assistance to install water treatment systems (e.g., carbon filters) to remove the TCE from their drinking water. Individual site investigations were conducted concurrently with the initial phases of the area wide groundwater investigation. Site investigations at the McCall, Holder, Walsky, and 6-Mile Truck Shop properties concluded that there are multiple source areas where TCE was discharged to the ground. The individual source areas are creating groundwater plumes that eventually merge together to form the area-wide plume. The source areas appear to be located on the Holder and Walsky properties.

In 1996, an annual long-term groundwater program was initiated that included permanent monitor wells and a selected number of residential wells. The data indicates a decreasing trend in contaminant concentrations over time.

FY07 Actions:

Continue the annual long-term ground water monitoring program and treatment system of residential water wells that are impacted.

FY07 Response Fund Expenditures: \$ 49,350.00

FY07 Cost Recovery: State Owned – No Cost Recovery

FY08 Actions:

Continue the annual long-term ground water monitoring program and treatment system of residential water wells that are impacted.

FY08 Response Fund Expenditures: \$ 50,300.00

FY08 Cost Recovery: State Owned – No Cost Recovery

FY09 Projected Actions and Expenditure Amounts:

In FY09, the long-term monitoring will be continued along with residential well sampling. Additionally, the contractor will complete an inventory of homes over the plume area to determine if the vapor intrusion pathway is potentially complete.

Estimated FY 09 Costs: \$35,525

Project/Site Name: **ADNR Asphalt Drum Site**

Location: Delta Junction, Alaska

Project Manager: Neal Everson

Site ID Number: 1156

Tel: (907) – 451-2117

Ledger Code: 14258680

Situation:

In 1990 ADEC investigated a public complaint regarding abandoned drums with unknown contents leaking on the ground. 16 corroded drums were found and determined to contain liquid asphalt. The extent of contamination and threat to human health was unknown. A 1998 site visit identified 22 drums of asphalt product. Drums were further deteriorated with bullet holes and corrosion. Given the remote location and lack of receptors, the site ranked as low priority. The drums are located 12 miles from Delta Junction at Mile 278 of the Richardson Highway behind Timber Station and appear to have been abandoned ten or more years ago. Site is several hundred feet northwest of the Haines Pipeline Timber Pump Station. The drums are located on state land managed by DNR.

FY08 Actions:

The drums were characterized and disposed. The soil contamination was also characterized.

FY08 Response Fund Expenditures: \$24,271.00

FY08 Cost Recovery: State Owned – No Cost Recovery

FY09 Projected Actions and Expenditure Amounts:

The final report was pending and the contract ended before completion. Additional funds are for completion of the final report.

Estimated FY09 Costs: \$8,200

Project/Site Name: **ADNR Ptarmigan Creek Trailhead**

Location: Chugiak, Alaska

Project Manager: Jim Frechione

Site ID Number: 1997210024607

Tel: (907) 451-5175

Ledger Code: 14231780

Situation:

The site currently serves as a parking area for the ADNR Chugach State Park – Ptarmigan Creek Trailhead. The past use of the property - possibly as a gravel pit - reportedly had a 10,000-gallon diesel tank installed by Denali Fuel Service. It was later removed by US Park Service. There was minimal assessment data to indicate if contamination existed on site and it was determined to assess the current conditions in order to make a determination regarding its environmental status.

FY07 Actions:

The assessment report by ADEC term contractor provided site specific information to issue a decision document regarding the environmental status of the site.

FY07 Response Fund Expenditures: \$ 12,034.00

FY07 Cost Recovery: State Owned - No Cost Recovery

FY08 Actions:

No activity and no further action is anticipated.

FY08 Response Fund Expenditures: \$ 0.00

FY08 Cost Recovery: State Owned – No Cost Recovery

Project/Site Name: **ADOT&PF 7 Mile Maintenance Stati**

Location: MilePost 62 Dalton Highway, Alaska

Project Manager: Jim Frechione

Tel: (907) 451-5175

Site ID Number: 1989720102401

Ledger Code: 14209680

Situation:

The ADOTPF 7 Mile Maintenance Station was developed as a gravel extraction area and currently serves as a state maintenance facility. The activities required fuel storage for power generation; heating and/or vehicle use. There were numerous spills documented over the years with an estimated 18,000 gallons released in the 1980s. There was also a used oil tank (and contaminated soil) removed in 1995 and this area was subsequently buried beneath a new portion of the shop building. There was contaminated soil left in place because it could not be excavated due to building foundation and the utilities located there.

A 2006 site investigation installed three soil borings that were converted into groundwater monitor wells. The locations were intended to assess soil and groundwater around the shop building and the drinking water well. Soil contamination (DRO) was detected in all of the borings and groundwater (8 to 14 feet bgs) had DRO; GRO and benzene above cleanup levels. The drinking water well was sampled with no detection of contamination.

FY07 Actions:

The assessment report by ADEC term contractor provided site specific information to issue a decision document regarding the environmental status of the site.

FY07 Response Fund Expenditures: \$ 31,636.00
FY07 Cost Recovery: State Owned – No Cost Recovery

FY08 Actions:

No activity in this period.

FY08 Response Fund Expenditures: \$ 0.00
FY08 Cost Recovery: State Owned – No Cost Recovery

FY09 Projected Actions and Expenditure Amounts:

Possible groundwater monitoring to establish concentration trends.

Estimated FY09 Costs: Unknown

Project/Site Name: **ADOT&PF Aniak Airport**

Location: Aniak, Alaska

Project Manager: Don Seagren

Site ID Number: 1992250133501

Tel: (907)262-5210 (ext 233)

Ledger Code: 14812980

Situation:

The Aniak Airport managed by ADOTPF has a number of environmental issues associated with hazardous substance contamination. They include: ADOTPF Maintenance Station; Bldg 301; Runway Apron; and the City of Aniak Shop property. In an effort to evaluate the contamination at the airport facility versus an individual site approach, ADEC initiated an area wide groundwater assessment to determine the nature and extent of contamination. The Aniak Airport facility was reviewed for hazardous substance contamination and impacts to groundwater. There were numerous sites previously addressed as separate areas but the 2003 effort was intended to assess the facility on an "area wide" approach. Site status was documented and soil samples collected from known and potential source areas to identify contaminants of concern for the purpose of site characterization and to assist with future cleanup decisions.

FY07 Actions:

The groundwater monitor plan was reviewed and long term monitor wells were identified and other wells were identified for decommission. The groundwater continued to be monitored and an area of the runway was investigated for possible buried drums.

FY07 Response Fund Expenditures: \$ 20,676.00

FY07 Cost Recovery: State Owned – No Cost Recovery

FY08 Actions:

No activity during this period.

FY09 Projected Actions and Expenditure Amounts:

One round of groundwater monitoring will be conducted.

Estimated FY09 Costs: \$36,100

Project/Site Name: **ADOT&PF Bernice Lake Maintenance Facility**

Location: Kenai, Alaska

Project Manager: N/A

Tel: N/A

Site ID Number: 4606

Ledger Code: 14242880

Situation:

During the removal of two 2,500 gallon diesel underground storage tanks (UST) that were not registered, a small area of DRO contamination of 769 mg/kg was collected underneath the piping. The extent of the area contaminated was very limited and it was close to the east edge of the UST excavation where no DRO impacts were observed. Groundwater was not encountered or impacted. Approximately 60 cubic yards of soil was excavated, screened and PID readings were less than 1ppmV and the soil was used as backfill in the excavation. Tanks pre dated the time of the Underground Storage Tanks registration, and were not used after the property was transferred from the Department of Natural Resources to Department of Transportation through an Interagency Land Management Transfer in May of 1964. At the time of property transfer records did not disclose the presence of an underground storage tank.

FY08 Actions:

A contractor was hired to perform site characterization and underground storage tank closure. FY08 cleanup actions resulted in a determination that no further assessment or cleanup action was needed and the risk to human health and the environment was minimal at the site.

FY08 Response Fund Expenditures: \$28,777.00

FY08 Cost Recovery: State Owned – No Cost Recovery

FY09 Projected Actions and Expenditure Amounts:

None.

Estimated FY09 Costs: \$0

Project/Site Name: **ADOT&PF DPS Ketchikan**

Location: Ketchikan, Alaska

Project Manager: Wanstall, Bruce

Site ID Number: 3991

Tel: (907) 465-5210

Ledger Code: 14158680

Situation:

An unknown volume of petroleum contaminated material currently remains in mixed sand & gravel just above bedrock where regulated underground storage tanks were removed in 1999. The lens of residual contamination on the north side of the excavation is saturated by groundwater. The dispenser island piping was capped at the excavation and left in place under a concrete pad and awning cover over the main drive near the main building. The stockpile of contaminated material was stored on a liner on the property. In 2005 and in 2007, ADEC observed no sheen in sediment or water during inspection of a year-round stream located 20 feet from the former UST site.

FY08 Actions:

In 2008, soil borings advanced to bedrock found no groundwater under the concrete dispenser island and piping run. Three monitoring wells were installed at the former UST excavation in a line parallel with the stream. Analysis of water samples from the wells found weathered gasoline in concentrations below ground and surface water standards. Analysis of the samples from contaminated soil stockpile detected none of the hydrocarbon analytes.

FY08 Response Fund Expenditures: \$14,800.00

FY08 Cost Recovery: State Owned – No Cost Recovery

FY09 Projected Actions and Expenditure Amounts:

Collect water samples from the three monitoring wells and analyze for GRO, DRO and RRO.

Estimated FY09 Costs: \$10,000

Project/Site Name: **ADOT&PF Dillingham Maintenance Station**

Location: Dillingham, Alaska

Project Manager: Don Seagren

Tel: (907) 262-5210 (X 233)

Site ID Number: 2000250006701

Ledger Code: 14205180

Situation:

In September 1999, 3 underground storage tanks were removed and contaminated soil was identified. There was 35 cubic yards of soil excavated and stored on site. The sample data indicated contamination remained above cleanup levels in the ground and the soil stockpile.

FY07 Actions:

DEC contracted with term contractor to evaluate current site conditions and collect samples from the site. Current data indicated contamination was lower than previously reported but areas still exceeded cleanup levels. The current data resulted in a conditional closure decision for the site.

FY07 Response Fund Expenditures: \$ 59,920.00

FY07 Cost Recovery: State Owned – No Cost Recovery.

FY08 Actions:

No activity in this period.

FY08 Response Fund Expenditures: \$ 0.00

FY08 Cost Recovery: State Owned – No Cost Recovery

FY09 Projected Actions and Expenditure Amounts:

Continue groundwater monitoring to establish trends in concentrations.

Estimated FY09 Costs: \$30,000.00

Project/Site Name: **ADOT&PF Griffin Building**

Location: Kodiak, Alaska

Project Manager: N/A

Tel: N/A

Site ID Number: 489

Ledger Code: 14242380

Situation:

Leaking heating fuel tanks installed during WWII and 100 cubic yards of contaminated soil were removed from this site in 1989. A recovery well was installed and remained in place until 2007.

FY08 Actions:

A DEC contractor conducted a site assessment including soil and groundwater sampling. No contamination above cleanup levels was detected. DEC approved site closure.

FY08 Response Fund Expenditures: \$21,428.00

FY08 Cost Recovery: State Owned – No Cost Recovery

FY09 Projected Actions and Expenditure Amounts:

None.

Estimated FY09 Costs: \$0

Project/Site Name: **ADOT&PF Haines Maintenance Station**

Location: Haines, Alaska

Project Manager: Bruce Wanstall

Site ID Number: 2000110001001

Tel: (907) 465-5210

Ledger Code: 14228480

Situation:

In October 1999, two underground storage tanks, piping and dispensers were removed. Petroleum contaminated soil was found in surface soil and four feet below ground surface where ground water was encountered. Contamination extended to six feet and 50 cubic yards of soil was excavated and transported off-site. Soil sample data identified contamination (approximately 20 cubic yards) remaining on-site. A heating oil tank was identified in 2004 as another possible source of contamination.

FY 07 Actions:

In late April 2007, field activities at the Haines property were limited by unusual shallow groundwater levels at less than three feet depth resulting from the excessive winter snowfall. Attempts to dewater the buried heating oil tank to allow closure by removal were determined to be impractical. ADEC decided to close the tank in-place using clean sand. Test pits were excavated to collect soil samples at the tank ends. The contaminated groundwater was treated and discharged on-site. Reconnaissance of the site and adjacent properties was completed for the conceptual site model.

FY07 Response Fund Expenditures: \$ 26,654.00

FY07 Cost Recovery: State Owned – No Cost Recovery

FY 08 Actions:

In October 2007, Hoefler Consulting Group delivered *Groundwater Assessment Report for Haines ADOT&PF Haines, Alaska* for a project in FY07 that closed a heating oil tank and installed ground water monitoring wells to assess petroleum contamination from USTs removed and closed on the property. Although visual and olfactory evidence of diesel fuel was observed in soil borings, the analytical data on water samples collected from the wells detected petroleum concentrations below 18 AAC 75 Table C cleanup criteria. Although the approved final report recommends no further action at the site, 18 AAC 75.345(h) regulation requires that a trend in contaminant concentrations be established through long term monitoring to include seasonal variation.

FY08 Response Fund Expenditures: \$19,433.00

FY08 Cost Recovery: State Owned – No Cost Recovery

FY09 Projected Actions and Expenditure Amounts:

Groundwater samples must be collected in spring 2009 to establish a seasonal trend in contaminated groundwater.

Estimated FY 09 Costs: \$12,000

Project/Site Name: **ADOT&PF Homer Maintenance Station**

Location: Sterling Highway, Homer, Alaska

Project Manager: Don Seagren

Tel: (907) 451-5175

Site ID Number: 1989230023003

Ledger Code: 14205380

Situation:

An estimated 700 gallons was spilled from a 1000 gallon used oil tank as a result of a faulty oil/water separator and possible tank overflow. The fuel product spilled into the floor drain and under the building and through the pipes that lead to a roadside ditch. Approximately 80 yards of soil was removed and transported off site. Further site assessment and cleanup generated 400 cubic yards of contaminated soil that was also transported off site. Contamination remains under the slab and adjacent to the foundation, along with contaminated perched groundwater.

FY07 Actions:

The site assessment report by ADEC term contractor provided information regarding current status of soil and groundwater contamination.

FY07 Response Fund Expenditures: \$21,705.00
FY07 Cost Recovery: State Owned – No Cost Recovery

FY08 Actions:

No activity in this period.

FY08 Response Fund Expenditures: \$ 0.00
FY08 Cost Recovery: State Owned – No Cost Recovery

FY09 Projected Actions and Expenditure Amounts:

Possible groundwater monitoring to establish concentration trends.

Estimated FY09 Costs: \$ 4,000.00

Project/Site Name: **ADOT&PF Kodiak Airport SREB**

Location: Kodiak, Alaska

Project Manager: N/A

Site ID Number: 2610

Tel:

Ledger Code: 14697580

Situation:

During assessment activities in conjunction with the demolition of the Snow Removal Equipment (SRE) building at the Kodiak Airport, petroleum contaminated soils were encountered in association with the heating oil tank at the building. Monitoring wells were installed and excavated soil was stockpiled.

FY08 Actions:

Cleanup completed. Stockpile was spread at the airport. Water monitoring indicated that remaining contamination could be expected to attenuate over time. The site is in a flight zone of the Kodiak Airport and land use is restricted to no buildings or obstructions.

FY08 Response Fund Expenditures: \$42,247.00

FY08 Cost Recovery: State Owned – No Cost Recovery

FY09 Projected Actions and Expenditure Amounts:

None.

Estimated FY09 Costs: \$0

Project/Site Name: **ADOT&PF Kotzebue Airport Maintenance Station**

Location: Kotzebue, Alaska

Project Manager: Cardona-Marek, Tamara

Tel: (907) 451-2192

Site ID Number: 25111

Ledger Code: 14243780

Situation:

The Contaminated Sites (CS) database has listed several sites in Kotzebue that are currently active and for which the risks for human health and/or the environment have not been assessed. These risks will be assessed through CIP funding for FY09. However, petroleum contamination risks are expected to be present at ADOT&PF Kotzebue Airport Maintenance Station and the Kotzebue Drum Dump which may require further site characterization and clean up.

The purpose of this contract will be to follow up with the investigation done during FY09 in which the status of the contamination at several sites in Kotzebue is planned to be assessed. This contract will include actions such as additional monitoring or cleanup work at the Kotzebue sites.

FY08 Actions:

Consultant reviewed all the files and generated a work plan to fill data gaps and understand area wide hydrology.

FY08 Response Fund Expenditures: \$ 21,654.00

FY08 Cost Recovery: State Owned – No Cost Recovery

FY09 Projected Actions and Expenditure Amounts:

The proposed work will cover additional characterization work needed to determine the extent of contact with surface water in Kotzebue Lagoon and Kotzebue Sound and the potential ecological impact to fisheries if contaminants migrate to surface water.

Estimated FY09 Costs: \$44,600

Project/Site Name: **ADOT&PF McGrath Airport Retardant Ramp**

Location: McGrath, Alaska

Project Manager: N/A

Tel:

Site ID Number: 23291

Ledger Code: 14679280

Situation:

The site is owned by the State of Alaska ADOTPF; it is leased by BLM and sub leased to DNR for fire suppression activities. The site was originally used by the military and the runway was built over an old dumpsite; buried drums were reported to be visible off the end of the runway following spring flooding. There are reports of BLM fuel spills in the early 1970's. ADNR (Division of Forestry) removed two underground fuel tanks in 1991. Soil and groundwater contamination was noted in assessments in 1991; 1993; 1995; 1997 and 2001. Since the site was active (i.e., continued use as a fire fighting staging area), cleanup options were limited. A soil vapor extraction system operated from 1995 until it was removed in 2007.

FY08 Actions:

DEC hired a term contractor to assess the current status of groundwater wells and soil vapor extraction system in place at this site, sample groundwater, and decommission installations that are no longer needed. DEC determined that cleanup is complete. Although soil and groundwater contamination remain on site, this area continues to be used as an active fire suppression staging area and the contamination was determined to be stable. Site specific conditions were established that require DEC contact before soil or groundwater are proposed for off-site transport and groundwater wells are prohibited without DEC approval.

FY08 Response Fund Expenditures: \$ 18,590.00

FY08 Cost Recovery: State Owned – No Cost Recovery

FY09 Projected Actions and Expenditure Amounts:

None.

Estimated FY09 Costs: \$0

Project/Site Name: **ADOT&PF Nome Maintenance Station**

Location: Nome, Alaska

Project Manager: Jim Frechione

Site ID Number: 1993320028101

Tel: (907) 451-5175

Ledger Code: 14204080

Situation:

The ADOTPF Nome Maintenance Station had underground storage tanks for fuel (both gasoline and diesel) and heating oil. The tanks were removed in the 1993 and 1994 with evidence of soil contamination. The tanks passed a tightness test but they were directly beneath the dispensers with evidence of surface releases and spills. The soil sample results from the gasoline and diesel tank areas were elevated at the time of removal but the heating oil tank had low level DRO.

A 2006 assessment of the former tank locations resulted in four test pits being excavated to assess the current soil and groundwater conditions. The soil sample results detected DRO and benzene contamination at the former gasoline and diesel tanks but not above the ingestion and inhalation. It was concluded that the contamination was limited in extent. In addition, the two water wells on site and the well on the adjacent residential property were sampled but did not detect contamination.

FY07 Actions:

The assessment report by ADEC term contractor provided site specific information to issue a decision document regarding the environmental status of the site.

FY07 Response Fund Expenditures: \$ 22,251.00

FY07 Cost Recovery: State Owned – No Cost Recovery

FY08 Actions:

No activity in this period.

FY08 Response Fund Expenditures: \$ 0.00

FY08 Cost Recovery: State Owned – No Cost Recovery

FY09 Projected Actions and Expenditure Amounts:

Possible groundwater samples may be collected to ensure no impacts to groundwater on (and off) site.

Estimated FY09 Costs: \$ 6,200.00

Project/Site Name: **ADOT&PF Northway Lakeview Maintenance Station**

Location: Northway, Alaska

Project Manager: Jim Frechione

Tel: (907) 451-5175

Site ID Number: 1988330111101

Ledger Code: 14203580

Situation:

The site is located near Yarger Lake on the Alaska Highway North of Northway Junction. In addition to the ADOTPF Maintenance Facility, the site also served as the location of a former Haines/Fairbanks Pipeline Pump Station. The pipeline was decommissioned in 1960 but three above ground fuel storage tanks with associated piping and a fuel island remained at the facility. ADOTPF is currently using one of the ASTs and the dispenser island. An undetermined amount of fuel has been released at the site and impacted the drinking water well.

FY07 Actions:

The April 2007 assessment report by ADEC term contractor provided site specific information from 12 test pits excavated and sampled for petroleum hydrocarbons. The hydrogeology is shallow top soil underlain by fractured bedrock. The drinking water well (280 feet) had benzene at 740 ppb. Additional characterization is required at the above ground tank location.

FY07 Response Fund Expenditures: \$ 41,773.00

FY07 Cost Recovery: State Owned – No Cost Recovery

FY08 Actions:

Three above ground tanks were removed and 450 cy of contaminated soil was stockpiled on-site. Soil samples were collected in the excavation and stockpile. The on-site drinking water well was sampled and contained benzene above 500 ug/L.

FY08 Response Fund Expenditures: \$95,328.00

FY08 Cost Recovery: State Owned – No Cost Recovery

FY09 Projected Actions and Expenditure Amounts:

None. The next planned expenditure will occur in FY10.

Estimated FY09 Costs: \$0

Project/Site Name: **ADOT&PF Peger Road Maintenance Station**

Location: Fairbanks, Alaska

Project Manager: Ann Farris

Tel: 907-451-2104

Site ID Number: 1991310907201

Ledger Code: 14800780

Situation:

The Alaska Department of Transportation and Public Facilities (ADOTPF) Operations and Maintenance facility is located on Peger Road in Fairbanks. Environmental investigations began in the early 1990s, first under the direction of the ADOTPF, then continuing since 1998 under the direction of the Alaska Department of the Environmental Conservation (ADEC).

The release of chlorinated solvents, specifically trichloroethylene (TCE), and gasoline and diesel fuels have contaminated soil and groundwater within the facility. There are ground water contaminant plumes that extend off-site in the general direction of the regional ground water flow (southeast to northwest). There are two TCE ground water plumes and a petroleum plume. The TCE ground water plume associated with the Materials Laboratory is the longest off-site plume.

The TCE plume extends beyond 17th Avenue and during site characterization - other contaminants (benzene) were detected. Additional assessment activities in this neighborhood continued to define the distal end of the TCE and benzene plumes.

FY07 Actions:

The efforts to delineate the TCE and benzene plumes and identify other source areas continued. Additional ground water monitoring wells were installed and sample results were evaluated to define the nature and extent of the contamination.

In 2006-07, a GIS system of ground water and residential well data was initiated for future data retrieval and analysis. There were 12 residential water wells sampled and three new monitor wells installed. The monitor data was evaluated for updates to the conceptual site model.

FY07 Response Fund Expenditures: \$124,499.00

FY07 Cost Recovery: State Owned – No Cost Recovery

FY 08 Actions:

The plume delineation was completed for both the benzene and TCE plumes. Initial vapor intrusion samples were collected at the Materials Lab and the O&M building, which indicated high soil gas concentrations.

FY08 Response Fund Expenditures: \$139,867.00

FY08 Cost Recovery: State Owned – No Cost Recovery

FY09 Projected Actions and Expenditure Amounts:

The groundwater plumes have been fully delineated as of the end of FY08. The FY09 work plan is to gather data on 11 monitoring wells that do not yet have established trends or have increasing trends. Several old, damaged labs will be decommissioned. The GIS will be maintained. The vapor intrusion pathway will be further evaluated to determine if the depressurization system should be operated at the materials lab.

Estimated FY 09 Costs: \$96,534

Project/Site Name: **ADOT&PF - Regional Complex - Juneau**

Location: Juneau, Alaska

Project Manager: Wanstall, Bruce

Site ID Number: 25131

Tel: (907) 465-5210

Ledger Code: 14223080

Situation:

Elevated concentrations of gasoline range hydrocarbons and benzene were detected in water samples from five of the monitoring wells and elevated concentrations of diesel range hydrocarbons were detected in seven of the wells located at former UST sites on the property. ORC socks were installed in monitoring wells to promote natural attenuation of petroleum contamination of the groundwater. Vapor badges were placed in six locations to screen for benzene in the ambient air of the office buildings in 2003; results were non-detect. LUST event ID 2594 comprises contaminated soil left in-situ at 5 UST closures by removal locations on the property.

FY08 Actions:

Ground water monitoring of all wells and field testing of ambient air in one of the occupied buildings on the property was completed in 2007 and 2008. Results indicate that benzene and gasoline range hydrocarbon concentrations in groundwater between the source area and occupied buildings are declining. Exposure along the indoor air vapor intrusion pathway is not a current risk for the building that was tested.

FY08 Response Fund Expenditures: \$42,162.00

FY08 Cost Recovery: State Owned – No Cost Recovery

FY09 Projected Actions and Expenditure Amounts:

Additional ground water monitoring is needed in FY09 and FY10 and the use of oxygen releasing compounds (ORC) socks to promote the attenuation trend is recommended. A temporary contaminated soil stockpile should be removed and remediated off-site in FY09 or FY10. Indoor air assessment/monitoring is not recommended unless the declining groundwater concentration trend is reversed in the FY09 data.

Estimated FY09 Costs: \$30,000

Project/Site Name: **ADOT&PF Silvertip Maintenance Station**

Location: MilePost 60 Seward Highway, Alaska

Project Manager: Don Seagren

Tel: (907) 451-5175

Site ID Number: 1990230013606

Ledger Code: 14950780

Situation:

This former ADOTPF Silvertip Maintenance facility had diesel and gasoline tanks removed in the late 1980s but the site was not assessed for the nature and extent of contamination. A recent ADEC assessment of the site identified another tank and impacted soil.

FY07 Actions:

The site assessment report by ADEC term contractor provided information regarding removal of the tanks and further characterization of contamination.

FY07 Response Fund Expenditures: \$ 35,072.00

FY07 Cost Recovery: State Owned – No Cost Recovery

FY08 Actions:

No activity in this period.

FY08 Response Fund Expenditures: \$ 0.00

FY08 Cost Recovery: State Owned – No Cost Recovery

FY09 Projected Actions and Expenditure Amounts:

Possible groundwater monitoring to establish concentration trends.

Estimated FY09 Costs: \$10,000.00

Project/Site Name: **ADOT&PF Sitka Airport Maintenance Station**

Location: Sitka, Alaska

Project Manager: Wanstall, Bruce

Site ID Number: 23179

Tel: (907) 465-5210

Ledger Code: 14240680

Situation:

Diesel range hydrocarbons and gasoline hydrocarbons were detected in soil samples collected at the water table interface at three feet below ground surface. DRO and GRO concentrations were 16,000 mg/kg and 640 mg/kg respectively; benzene was not detected.

FY08 Actions:

In November, 2007, term contractor SLR completed ground water assessment of soil and groundwater for regulated underground storage tank closures and with the new data developed a conceptual site model for the facility. *ADOT&PF Airport Maintenance Shop Site Assessment Report Sitka, Alaska* indicated that target analytes were detected in soil and ground water below applicable Method Two screening levels with the exception of benzene in soil from HB04 at 0.00295mg/kg.

SLR 2007 Report data determined that since ground water at the facility is shallow (4.1 feet below ground surface) and the underground storage tanks are in the zone of ground water influence, a direct release from the existing buried tanks could occur. Even though no contaminant concentrations exceeded cleanup levels, ground water is considered an impacted media with regards to the conceptual site model. Other completed exposure pathways include incidental soil ingestion or dermal contact and indoor or outdoor air. The level of risk is abated by the presence of an asphalt cap across the site.

FY08 Response Fund Expenditures: \$29,717.00

FY08 Cost Recovery: State Owned – No Cost Recovery

FY09 Projected Actions and Expenditure Amounts:

Sample the monitoring wells and analyze for BTE, GRO, DRO, and RRO

Estimated FY09 Costs: \$12,000.00

Project/Site Name: **ADOT&PF Tanana Maintenance Station**

Location: Tanana, Alaska

Project Manager: Jim Frechione

Site ID Number: 2004310127501

Tel: (907) 451-5175

Ledger Code: 14231480

Situation:

Several abandoned drums were identified behind the ADOT&PF maintenance shop at the Tanana Airport in 2004. The drums were suspected to contain waste oil and were in a former location of a leaking above ground storage tank that was removed in 2006.

FY07 Actions:

The interim removal action and site assessment were intended to provide site specific information to issue a decision document regarding the environmental status of the site.

FY07 Response Fund Expenditures: \$ 21,124.00

FY07 Cost Recovery: State Owned – No Cost Recovery

FY 08 Actions:

The interim removal action and site assessment were intended to provide site specific information to issue a decision document regarding the environmental status of the site. DEC prepared a proposal to have the 4 drums transported off site (to an approved facility) and to address the soil contamination in the area of the leaking drums and the above ground tank

FY08 Response Fund Expenditures: \$ 19,050.00

FY08 Cost Recovery: State Owned – No Cost Recovery

FY09 Projected Actions and Expenditure Amounts:

Possible groundwater samples may be collected to ensure no impacts to groundwater on (and off) site. The final report from FY08 is pending. Recommendations will follow.

Estimated FY 09 Costs: \$52,900

Project/Site Name: **ADOT&PF Trims Maintenance Station**
Location: MilePost 218 Richardson Highway, Alaska
Project Manager: Jim Frechione
Site ID Number: 1988330129109

Tel: (907) 451-5175
Ledger Code: 14209580

Situation:

The ADOTPF Trims Maintenance facility had numerous spills of fuel product over the years. There were underground tanks removed in 1986 and 1998 with soil contamination identified. However, a release investigation was not conducted but it was recognized that the shop and former leach field required assessment. An August 2002 sample of the drinking water well did not detect contamination.

FY07 Actions:

The assessment report by ADEC term contractor provided site specific information to issue a decision document regarding the environmental status of the site.

FY07 Response Fund Expenditures: \$ 26,479.00
FY07 Cost Recovery: State Owned – No Cost Recovery

FY08 Actions:

No activity in this period.

FY08 Response Fund Expenditures: \$ 0.00
FY08 Cost Recovery: State Owned – No Cost Recovery

FY09 Projected Actions and Expenditure Amounts:

Possible groundwater monitoring (drinking water well) to determine any impacts

Estimated FY09 Costs: \$ 5,000.00

Project/Site Name: ADOT&PF Tudor Road Maintenance Station
Location: Boniface Parkway and Tudor Road, Anchorage, Alaska
Project Manager: Bill O’Connell Tel: (907) 269-3057
Site ID Number: 1990210918601 **Ledger Code:** 14978980

Situation:

The 20-acre site is used to store and maintain road maintenance vehicles and store materials and chemicals for road maintenance since the early 1970’s. Contamination of the property (soil and groundwater) resulted through releases from five former UST’s, direct discharge of liquid waste to the ground surface, and facility practices. There are approximately 40 monitoring wells at the site to characterize three main groundwater plumes. Free phase gasoline and its plume at building 4801, gasoline/diesel groundwater contamination at building 5820, and chlorinated solvent contaminated groundwater at building 5750. Four clustered monitoring wells have been installed near building 5750 to determine any vertical concentration gradient. Data indicates that groundwater contaminant concentrations are higher in the upper portion of the aquifer. This information will be used to determine remedial actions to be implemented.

FY07 Actions:

Groundwater and surface water sampled and decommissioned 31 wells. Surface water samples were collected from the storm water detention pond.

FY07 Response Fund Expenditures: \$ 11,997.00
FY07 Cost Recovery: State Owned – No Cost Recovery

FY08 Actions:

Activities conducted in FY 08 included surface water and sediment sampling, groundwater sampling, and sampling of soil near the sand/salt storage area to evaluate impacts to offsite ecological receptors.

FY08 Response Fund Expenditures: \$42,808.00
FY08 Cost Recovery: State Owned – No Cost Recovery

FY09 Projected Actions and Expenditure Amounts:

None.

Estimated FY09 Costs: \$0

Project/Site Name: **ADOT&PF Willow Maintenance Station**

Location: Willow, Alaska

Project Manager: Todd Blessing

Site ID Number: 1993220112701

Tel: (907) 451-5175

Ledger Code: 14229280

Situation:

In 1993, a 1,000 gallon heating oil tank was removed from the site and diesel contaminated soil was discovered. In 1997, two 3,000 gallon underground storage tanks (USTs) and associated dispensers were removed from the northeast portion of the site. The material excavated during the removal was used to backfill the excavation. A fire destroyed the former maintenance station in the early 2000s. In 2007, ADEC's contractor, Shannon and Wilson, conducted a site characterization. Twenty one test pits were dug and eight soil borings were advanced and completed as groundwater monitor wells. Soil and groundwater samples indicated that both media were impacted above ADEC cleanup criteria.

FY07 Actions:

The assessment report by ADEC term contractor provided site specific information to issue a decision document regarding the environmental status of the site.

FY07 Response Fund Expenditures: \$ 43,000.00

FY07 Cost Recovery: State Owned – No Cost Recovery

FY08 Actions:

ADEC's contractor provided a final report, including a conceptual site model, documenting 2007 field activities to characterize soil and groundwater contamination. The report included: project background, a description of field activities, all field and laboratory test results, a site plan, soil boring logs, photographs, groundwater flow characteristics, field observations, any deviations from the work plan, an interpretation of findings and conclusions and recommendations for further assessment, monitoring and corrective actions.

FY08 Response Fund Expenditures: \$ 6,309.00

FY08 Cost Recovery: State Owned – No Cost Recovery

FY09 Projected Actions and Expenditure Amounts:

ADEC's contractor will prepare a site investigation/cleanup work plan; coordinate with EPA's Underground Injection Control Program for injection well decommissioning, excavate and dispose of impacted soil at the former heating oil UST, holding tank, former diesel and gasoline USTs, and dry well locations; sample the on-site drinking water and monitoring wells; decommission the drinking water well; and provide a final report to ADEC.

Estimated FY09 Costs: \$53,213.06

Project/Site Name: **ADPS State Troopers - Peger Road**

Location: Fairbanks, Alaska

Project Manager: Ann Farris

Site ID Number: 1999310015901

Tel: 907-451-2104

Ledger Code: 14997960

Situation:

The Alaska Department of Public Safety, State Troopers facility is located on Peger Road in Fairbanks. Two fuel storage tanks (a gasoline and aviation fuel) were removed in 1999. There is a groundwater contaminant plume in the area and this site was investigated to determine if it a possible source area for benzene contamination.

FY07 Actions:

The assessment report by ADEC term contractor provided site specific information to issue a decision document regarding the environmental status of the site. There was no contamination identified at this site.

FY07 Response Fund Expenditures: \$ 41,992.00

FY07 Cost Recovery: State Owned – No Cost Recovery

FY08 Projected Actions and Expenditure Amounts:

No further action proposed.

Estimated FY08 Costs: \$0.00

Project/Site Name: **Alyeska Pipeline WID**

Location: Alyeska Pipeline Corridor and Valdez Marine Terminal

Project Manager: McLoone, Keather

Tel: (907) 269-7526

Site ID Number: Various

Ledger Code: 14818360

Situation:

This is an “umbrella” financial code for all Alyeska Pipeline Services sites. Currently there are 36 conditionally closed and 43 open sites.

FY 08 Actions:

Activities performed on these sites are limited to ADEC oversight which includes review and approval of plans and reports, meetings, site visits, file review for site decisions, database updates etc.

FY08 Response Fund Expenditures: \$ 24,090.00

FY08 Cost Recovery: \$ 12,984.00

FY09 Projected Actions and Expenditure Amounts:

FY 09 activities will be generally the same as those in FY 08.

Estimated FY 09 Costs: \$90,000.00

Project/Site Name: **Aniak White Alice Site / Middle School**

Location: Aniak, Western Alaska

Project Manager: John Halverson

Tel: (907) 269-7545

Site ID Number: 198925X902506

Tracking Number: 14812960

Situation:

Aniak is located on the south bank of the Kuskokwim River in the Yukon-Kuskokwim Delta with a population of 528. It lies 92 air miles northeast of Bethel and 317 miles west of Anchorage. The Aniak Middle School building and property was initially developed and used by the Air Force in the 1950s as a "White Alice" communication system during the Cold War. By the late 1970s the military facility was obsolete and was turned over to the School District, which renovated the main building and used it for a school from 1981 until 2003. The Alaska Department of Transportation and Public Facilities has owned the property since 1965 and currently leases the site to the Kuskokwim School District and ALASCOM, Inc.

During White Alice operations and renovation of the school by contractors, fluids containing polychlorinated biphenyls (PCBs) were spilled in and around the generator room and onto the ground outside the building, resulting in soil contamination. Hazardous materials were placed into drums that were moved to various locations on the property, where additional spills reportedly occurred.

The U.S. Air Force and ADEC conducted PCB cleanup at the site between 1979 and 1983 and attempted to remove all PCB contaminated material and soil containing more than 50 parts per million (ppm) PCB. After additional contamination was discovered in 1994, the Army Corps of Engineers assumed responsibility for the military's portion of the contamination under "Formerly Used Defense Site Program".

In 1997, the U.S. Environmental Protection Agency released a report that showed PCBs remained in soil outside the middle school wood shop, which was the former generator room at the White Alice Site. Subsequent sampling inside the school documented that PCBs had been tracked into the building. With DEC oversight, the Corps' contractors cleaned the inside of the Middle School and covered PCB-contaminated soil outside the school with a temporary liner and six inches of clean soil.

Since 1998, DEC has been working with the potentially responsible parties (PRPs) for PCB contamination at the site including: the federal government, the State (as the landowner), the Kuspuk School District and its contractors that renovated the site, and the Air Force contractors that operated the White Alice site.

Between 1998 and 2003, DEC hired contractors to better characterize the extent and location of remaining PCB contamination, cleanup a portion of the site, and complete a feasibility study to evaluate alternatives for completing the cleanup. Excavation and off-site disposal of soil containing more than 1 ppm PCB was recommended as the best overall alternative when considering regulatory compliance, protection of human health and safety, implementability, effectiveness and cost.

In 2004, the Alaska Department of Law sent letters to the potentially responsible parties (PRPs) requesting reimbursement of past State costs for responding to the PCB contamination and completion of the cleanup as outlined in the feasibility study report during 2004, or the State would conduct the cleanup and seek full cost recovery. DEC, the Dept. of Law, and the PRPs have been negotiating through an alternative dispute resolution process in an effort to reach a settlement agreement on the past and future cleanup costs and work. Extensive records reviews and information exchange have been completed, witness lists were created, depositions held, and negotiations are continuing. Questions were raised on PCB contamination in and potentially around the White Alice site septic system.

FY07 Actions:

Settlement negotiations continued. The parties involved agreed further characterization is needed at and around the former WACS septic system. DEC contracted with Shannon and Wilson to conduct further sampling during October 2006. The septic system lines were excavated, but not removed, and soil samples collected beneath them. A grid system was used to guide surface and shallow subsurface soil samples

around the septic system manholes. Additional sampling was conducted in an area between the "equipment building" and the runway apron.

The Shannon and Wilson site characterization report prepared in May 2007 documents concentrations of PCBs, arsenic, chromium and TCE above cleanup levels in soil samples collected along the septic system piping. Samples collected from the septic system contained up to 262 mg/kg PCB, 3.27 mg/kg TCE and associated daughter products, along with elevated inorganics. Samples from soil borings installed around the septic system indicate contamination is fairly localized. A groundwater sample from a monitoring well adjacent to the septic system contained TCE at 0.0056 mg/l, slightly above the cleanup standard of 0.005 mg/l. PCB contaminated surface soil (up to 433 ppm) was documented around the septic system and behind the new truck fill containment pad for the above ground fuel tanks. TCE was also found in an upgradient soil boring at a depth of approximately 18 feet below ground and a concentration of 0.305 mg/kg.

FY07 Response Fund Expenditures: \$ 20,676.00
FY07 Cost Recovery: \$ 38,093.00

FY08 Actions:

During FY08 Shannon and Wilson, under contract to DEC, installed and sampled several soil borings and monitoring wells to further define the extent of TCE contamination and implemented what was planned as the final PCB cleanup work. However, a larger extent and volume of PCB contaminated soil was found than anticipated. A recently installed truck loading rack for a bulk fuel storage system had to be removed. Contaminated soil was excavated, contained and staged in Aniak for shipment to permitted disposal facilities in the lower 48.

FY08 Response Fund Expenditures: \$ 581,877.00
FY08 Cost Recovery: \$ 0.00

FY09 Projected Actions and Expenditure Amounts:

PCB cleanup work extended into FY09. Additional contaminated soil was excavated, the old septic system was removed, contaminated materials were shipped off-site for disposal and reports are being written to document the work completed. Due to the larger area and volume of contamination that were found, additional cleanup is planned in FY09/10 (calendar year 2009) to complete the project. Settlement negotiation with the PRPs will continue with respect to cost recovery.

Estimated FY09 Costs: \$3,753,683

Project/Site Name: **Anvik - Old School Site**
Location: Anvik, Alaska
Project Manager: Carnahan, John
Site ID Number: NA (reuse/redevelopment)

Tel: (907) 451-2166
Ledger Code: 14244160

Situation:

The school was built by the Territory of Alaska in the mid 1950's with land deeded or leased to them by the Episcopal Church. In 1959 the school was turned over to the State of Alaska which ran the school until the late 1970's when it was turned over to the Iditarod Area School District. This site sits on about two acres on which one abandoned building still stands. The local tank farm is located on the northwest corner of the lot, approximately 100 feet from the main site. Suspected contaminants are restricted to the site and a small area surrounding the lot. A pipeline was built from the site, carrying electrical material and fuel for the generator, back through the woods to where the City of Anvik offices are now located. The property boundaries are not clear and it is not known if a survey was ever conducted. A private home owner believes a portion of his lot sits on the northeast to east corner of the Old School Site.

In the early 1980's the Iditarod Area School District contracted with a local resident (William Kruger) to clean up the Old School Site. The individual that was awarded the contract went in and demolished the school structure, removed some outlying buildings for personal use, and left rubble that still sits on the lot today. Most of the rubble has been covered or hidden by vegetation that has since grown over the lot. A pipeline also ran from the riverbank to the school's holding tanks, hauling fuel for the schools use. This pipeline was in operation for approximately 20 years and was believed to have leaks that were never tended to in a timely manner.

Asbestos, lead (remnant hazardous building materials) and possibly petroleum contamination is suspected at the site. It is assumed that any contamination is restricted to, and extends to a limited area surrounding the site.

FY08 Actions:

A modified Phase I Environmental Site Assessment was conducted in compliance with ASTM E1527-05 at the site and a work plan was developed. Field visits were conducted to determine the potential risk of exposure for future use. Upon completion of the field effort, the consultant prepared a final report that summarized their findings and made a recommendation for reuse of the site by the community.

FY08 Response Fund Expenditures: \$14,111.00
FY08 Cost Recovery: State Owned – No Cost Recovery

FY09 Projected Actions and Expenditure Amounts:

None

Estimated FY09 Costs: \$0

Project/Site Name: **Badger Road Area-wide**

Location: Fairbanks/North Pole

Project Manager: Jim Frechione

Site ID Number:

Tel: 907-451-5175

Tracking Number: 14136260

Situation:

There were volatile organic compounds (VOC) detected at low concentrations (below drinking water cleanup levels) in several residential drinking water wells. The residential wells were originally tested as part of the Badger Chevron leaking underground storage tank (LUST) investigation in 2002 but the contaminants identified were not normally associated with a typical LUST site. Additional assessment activity was determined appropriate and residential wells were re-tested in 2005 to determine if there might be other source areas not associated with Badger Chevron. The 2005 test results were not conclusive and the source of the low level ground water contamination remains unknown.

FY07 Actions:

DEC hired a term contractor to assess current groundwater quality conditions in the Badger Road area and determine any risk to drinking water wells.

FY07 Response Fund Expenditures: \$ 41,993.00

FY07 Cost Recovery: \$ 0.00

FY08 Actions:

No activity in this period.

FY08 Response Fund Expenditures: \$ 0.00

FY08 Cost Recovery: \$ 0.00

FY09 Projected Actions and Expenditure Amounts:

The area will be researched for all possible sources of contamination and the ground water sampling associated with the Badger Chevron LUST site will continue.

Estimated FY09 Costs: \$10,000.00

Project/Site Name: **BPXA North Slope Sites**

Location: Prudhoe Bay and surrounding area, Alaska

Project Manager: O'Connell, Bill

Tel: (907) 269-3057

Site ID Number: Various-See below

Ledger Code: 14237960

Situation:

This ledger code covers various Contaminated Sites for which BP Exploration (Alaska) is the responsible party including:

<u>Hazard ID</u>	<u>Site Name</u>
398	BPX Crude Oil Topping Unit South
588	BPX Drill Site Maintenance Pad - Shop Site (ARCO)
880	BPX/ARCO Hangar Disposal Site
1176	BPX Tuboscope, Inc. Lease Tract
2672	BPX PBOC Generator Module (former ARCO)
2686	BPX/AMOCO Foggy Island Bay State #1
3116	BPX Well Pad H Spill
3258	BPX Building U-21
3262	BPX Endicott SM 605 Spill
3263	BPX Well Pad W Spill
3707	BPX Milne Point A Pad
4254	BPX Kuparuk State 7-11-12
4256	BPX Abel State 1
4263	BPX T Pad
4265	BPX Milne Point B Pad
4266	BPX Central Gas Facility Therminol Spill
4320	BPX MCC Old Fuel Dock
4328	BPX North Prudhoe Bay State #1
4335	BPX Vehicle Collision F & G Pad Roads Intersection
4386	BPX North Kuparuk State 26-12-12
4387	BPX Flow Station 1
4548	BPX Flow Station 3 Natural Gas Liquids Release
4551	BPX Drill Site 9 Well 11
4594	BPX South Hangar Pad
4657	BPX Crude Oil Topping Unit North
4056	BPX Red Barn Storage Pad
4259	BPX Lake State 1

FY08 Actions:

Cost recoverable activities conducted at these sites in FY08 include the review of work plans, reports, risk assessments/evaluations and analytical data, site visits, and meetings with BPXA and other interested stakeholders. In addition regulatory oversight of these existing contaminated sites, this ledger code is used for cost recovery for projects with contaminated site issues that may not be listed as such on the database such as the review of Temporary Water Use Permits, Facility Upgrade Plans, Contaminated Soil Handling Plans, Contaminated Material Storage Cell Approvals, and Soil Treatment Reports.

FY08 Response Fund Expenditures: \$20,837.00

FY08 Cost Recovery: \$18,197.00

FY09 Projected Actions and Expenditure Amounts:

FY09 activities will be similar to those listed above for FY08

Estimated FY09 Costs: \$24,000.00

Project/Site Name: BP Exploration of AK (BPXA), Well Cellar Investigation

Location: Prudhoe Bay

Project Manager: Tom DeRuyter

Tel: (907) 451-2145

Spill Number: 06399921101

Tracking Number: 14163460

Situation:

In June of 2006 a written complaint was received by the Department of Environmental Conservation that BPXA was operating wells in the Prudhoe Bay oil field that were known to leak oil and that the oil was migrating both over the surface of the gravel pad and subsurface to the adjacent tundra ponds. Although, in this letter there were other complaints against BPXA, it was this issue that fell clearly under the regulations that the Prevention and Emergency Response Program enforces.

FY07 Actions:

In July 2007 ADEC and AOGCC initiated a joint investigation of this complaint. Over 70 wells were inspected to look for leakage and other management issues that were alleged in the complaint. These particular wells were selected for investigation due to waivers issued by BPXA allowing them to operate these wells with known surface casing leaks.

It was discovered that many of the well cellars did contain some oil from leaking surface casings and hydraulic fittings. Some of these well cellars contained oil in quantities that should have been reported to the Department. It was also clear that in some instances BPXA was not following their own internal policies for reporting and cleanup of oil leaks / spills in these well cellars.

BPXA developed a working group to define the problem and institute solutions. This working group has been reporting their progress to the Department.

FY07 Response Fund Expenditures: \$ 13,038.00

FY07 Cost Recovery: \$ 11,559.00

FY08 Actions:

No activity in this period.

FY08 Response Fund Expenditures: \$ 0.00

FY08 Cost Recovery: \$ 1,645.00

FY09 Projected Actions and Expenditure Amounts:

The BPXA working group will continue to refine their well management practices and initiate the identified action items in FY08. This will involve the installation of secondary containment around wells that are known to leak oil, cleanup of the well houses, removal of the contaminated gravel to eliminate subsurface migration and redesign of the hydraulic panels so that they have fewer leaking fittings.

The ADEC Prevention and Emergence Response Program will continue to advise the BPXA working group and oversee the cleanup activities of the contaminated gravel in the well cellars.

Estimated FY08 Costs: \$5,00 0.00.

Project/Site Name: **Buckland Tank Farm Diesel Spill**

Location: Buckland, Alaska

Project Manager: Wes Ghormley

Site ID Number: 08389909601

Tel: (907) 451-2164

Ledger Code: 14257460

Situation:

On April 5, 2008 while refueling equipment, the superintendent of Kuskokwim Architect Engineers (KAE) discovered a pool of diesel near the tank farm piping and reported it to the ADEC. The initial reports were that an estimated 1,000 gallons of diesel had been released and that 100 square feet of frozen wetlands had been impacted. KAE employees were instructed to hire an environmental firm to accurately conduct a site assessment and to further delineate the size of the impacted area.

FY08 Actions:

KAE response contractor Alaska Chadux Corporation and an ADEC representative arrived on site on April 6, 2008. After reviewing fueling records, further site assessment and delineation of the wetlands the amount of fuel released was estimated at 7,750 gallons and the area impacted increased to 5,850 square feet. The cause of the release was determined to be from a split fueling pipe that connected to the pump shed.

KAE hired local village responders to work directly under Alaska Chadux supervision. Cleanup crews used heavy equipment and hand tools to segregate clean snow from contaminated snow. Responders removed 306 cubic yards of contaminated snow and 150 cubic yards of clean snow from the impacted area. In addition, they used a 2 inch transfer pump to recover "pockets" of fuel that had accumulated under the ice. Containment berms and a boiler system were constructed in the heavy equipment shop to assist in melting the contaminated snow and to recover the spilled fuel. The melted snow was further cleaned by filtering it through an Absorb-W water treatment system before discharging it into the waste water treatment lagoon.

During the response, which lasted 18 days, a total of 26,950 gallons of melted snow were treated and discharged to the lagoon. In addition, 3,100 gallons of diesel were recovered and will be used in the village for heating purposes and 558 cubic feet of contaminated vegetation were burned in Smart Ash burners. Twelve super sacks of contaminated soil were shipped via Northland Barge to Washington State for disposal. Confirmation sampling confirmed that the cleanup had been successful. Earthen dikes were constructed around the impacted area and sorbent booms were deployed to assist in containing fuel sheens and fuel that may have become mobile in the area during annual spring flooding. During the floods ADEC stayed in daily contact with village responders and they reported that no sheens were visible in the spill area.

FY08 Response Fund Expenditures:	\$ 13,496.00
FY08 Cost Recovery:	\$ 0.00

FY09 Projected Actions and Expenditure Amounts:

It has been determined that the cleanup had been successful and the spill will be closed in the database but left open for monitoring purposes. For a precaution, the booms will be deployed again during the spring of 2009 during flooding season and ADEC will be in daily contact with village responders.

Estimated FY 09 Costs: None

Project/Site Name: **Cannery Creek Hatchery HOTs**

Location: Cordova (Prince William Sound), Alaska

Project Manager: N/A

Tel: N/A

Site ID Number: 1020

Ledger Code: 14225780

Situation:

Lab analysis of soil samples following removal of 3 residential heating oil USTs in 1990 found that a fuel distribution valve (Tank 2) leaked over a 10-year period and impacted surrounding soils. Lateral extent and depth of contaminant plume are unknown, groundwater estimated at 12 to 14 feet below ground surface was not encountered in the excavation. Estimates of release quantity for the 10 year period range from 300 gallons (moderate, 0.5%) to 15,000 gallons (25%). Final disposition of the tanks and excavated impacted soil is unclear. USTs replaced with two 500 gallon double walled ASTs. Located in the Chugach National Forest.

FY08 Actions:

Soil and groundwater monitoring reports in FY08 showed only one soil and one water sample with detectable concentrations below the cleanup standards. Cleanup was determined to be complete at this site.

FY08 Response Fund Expenditures: \$36,523.00

FY08 Cost Recovery: State Owned - No Cost Recovery

FY09 Projected Actions and Expenditure Amounts:

None.

Estimated FY09 Costs: \$0

Project/Site Name: **Caribou Inn Spill**

Location: Deadhorse, Alaska

Project Manager: Wes Ghormley

Site ID Number: 08399914401

Tel: (907) 451-2164

Ledger Code: 14261760

Situation:

On May 23, 2008 the management staff of the Caribou Inn discovered that a 2400 gallon above ground storage tank had rolled over and spilled an unknown quantity of what appeared to be used oil onto property owned by Dr. Gaston of Georgia and lands of the State of Alaska. The tank was staged on a large lot behind the Inn and had been moved numerous times around the lot by lease holders of the property. During the spill an extensive investigation into the ownership of the tank was conducted but no owner has been identified. Numerous interviews were conducted, as well as written statements received from lease holders of the lot pertaining to the knowledge of the tank and possible parties involved in moving the tank which may have led to the discharge of its contents. The oil contaminated 43,714 square feet of tundra and a small portion of the gravel pad. The quantity of oil spilled is unknown but the initial estimate of 200-400 gallons appears to be fairly accurate.

FY 08 Action:

Initially, two North Slope spill response companies responded to the spill on May 23, 2008 and an ADEC responder from Fairbanks arrived on the scene on May 24, 2008 to investigate the cause of the spill and to provide spill response guidance. One environmental spill response company was hired by the PRP for the duration of the cleanup which, lasted ten days.

Cleanup crews deployed boom, sorbents and used vacuum trucks and super-suckers to remove oil from the tundra and adjacent tundra pools. Aggressive bird hazing tactics were implemented using cannons, balloons and trained wildlife hazers. A total of 185 barrels of oil/water mixture were vacuumed from the tundra and disposed of through British Petroleum Exploration Alaska (BPXA). In addition, 75 cubic yards of oiled gravel were excavated from the gravel pad and disposed of through the grind and inject facilities of BPXA. A total of 409 bags of oily waste were removed and delivered to Colville Inc. in Deadhorse, Alaska and shipped to Spokane, Washington for incineration and will be converted into electricity.

A North Slope laboratory pulled samples for product identification to assist in the investigation of ownership, disposal purposes and to verify cleanup accuracy. The case was turned over to the environmental crimes unit in Fairbanks for investigation but was denied.

FY08 Response Fund Expenditures:	\$ 51,405.00
FY08 Cost Recovery:	\$ 0.00

FY09 Projected Actions and Expenditure Amounts:

During the summer of 2008 ADEC has performed field visits to the site to determine if the spill warrants closure. It has been determined that the cleanup had been successful and the spill will be closed in the database but left open for monitoring purposes. For a precaution, the bird hazing material was left in place until September 2008 but has been recently removed by the environmental firm.

Estimated FY 09 Costs: During routine North Slope rotations field visits will occur and the site will eventually be closed.

Project/Site Name: City of Kobuk Former Fuel Tank Farm

Location: Kobuk, Alaska

Project Manager: Carnahan, John

Site ID Number: 4615

Tel: (907) 451-2166

Ledger Code: 14244360

Situation:

This is a Reuse/Redevelopment site. The City of Kobuk owns this site and maintained a tank farm prior to the AEA bulk fuel consolidation. Kobuk sought and obtained a Community Development Block Grant (CDBG) from the Department of Commerce, Community and Economic Development (DCCED) to procure a new emergency generator for their community. The site had not been previously assessed, but it was assumed there were historical petroleum impacts that Kobuk wanted to address before reusing the site. In addition to the CDBG, the community also obtained dedicated funds to conduct some cleanup of the site.

FY08 Actions:

A DEC contractor directed and oversaw site characterization and contaminated soil removal using onsite equipment. The intent focused on making the site ready for reuse by the community as a location to house a backup generator. DEC's objective was to maximize the necessary removal of contaminated soil that could impede future use of the site as intended.

Material was removed from the site by the City of Kobuk to an offsite location for future use at the Kobuk landfill. The soil will be used as daily cover for the landfill in the future.

FY08 Response Fund Expenditures: \$31,112.00

FY08 Cost Recovery: \$ 0.00

FY09 Projected Actions and Expenditure Amounts:

None.

Estimated FY09 Costs: \$0

Project/Site Name: **Cook's Corner Tesoro - Sterling**

Location: Sterling, Alaska

Project Manager: Horwath, Paul

Site ID Number: 23742

Tel: (907) 262-5210 Ext 250

Ledger Code: 14951570

Situation:

Contamination of soil and GW by automotive gasoline. This LUST project converted to a State-lead status when the owner refused to comply with State law requiring containment and cleanup response. In May 1989, ADOT&PF notified DEC that soil and GW contamination had been detected at this facility. In June 1989, DEC issued an Notice of Violation/Request for Corrective Action to the owners, asking that they take measures to assess their site and to mitigate any on-going releases. Tank and line tightness testing conducted by the owners in June revealed numerous leaks in the underground fuel line joints and piping connections. Site assessment activities were contracted by ADEC. GW contamination was detected across the Sterling Highway on adjacent property. No other potential sources were identified. Based on this assessment data, the DEC again requested that the owners conduct additional assessment and cleanup work at their site. The owners refused, and in 10/89, the DEC again contracted to perform the required site assessment and cleanup work. The owner / responsible party took the lead when the State Underground Storage Tank Financial Assistance program became available to UST system owners/operators. Substantial assessment and cleanup work has been conducted at this facility over the years. Future work at this site involves maintenance of groundwater monitoring wells and continued long-term groundwater quality monitoring both onsite and offsite. As a result of a legal settlement of environmental liability between the State of Alaska and the potentially responsible parties, the State received a financial settlement in order to tend to the future oversight response costs, and the current and future land owners have been relieved of liability for the historical fuel releases at this site.

FY08 Actions:

Some groundwater monitoring wells that were no longer needed to track groundwater quality were decommissioned. The onsite groundwater treatment system and associated wells and piping were also decommissioned. A conditional closure decision was issued for this project site. Institutional controls were established which serve to notify the public of the presence of residual petroleum contamination at this facility, and required continued long-term groundwater monitoring to ensure groundwater quality continues to improve over time.

FY08 Response Fund Expenditures: \$ 24,354.00

FY08 Cost Recovery: \$546,966.00*

* A legal settlement negotiated by the Alaska Department of Law secured funding to allow for ADEC's continued oversight costs.

FY09 Projected Actions and Expenditure Amounts:

Inspection of the groundwater monitoring wells by ADEC staff.

Estimated FY09 Costs: \$1,000 (staff time only)

Project/Site Name: **DeBarr Wal-Mart (Miller Properties)**

Location: Anchorage, Alaska

Project Manager: Olson, Eileen

Site ID Number: 4321

Tel: (907) 269-7527

Ledger Code: 14112860

Situation:

The site was contaminated by numerous surface and subsurface spills including petroleum products and solvents associated with use of the property since the 1950s for fueling, maintaining, cleaning, and storing heavy equipment and vehicles associated with a construction company. This database record is a combination of the three sites listed below, with each site comprising 8- to 10-acre parcels with separate MOA tax identification numbers:

M-B Contracting North Yard, Reckey 2002210930601;
M-B Contracting West Yard, Reckey 2002210930602; and
M-B Contracting East Yard, Reckey 2000210926401.

Wal-Mart purchased the three parcels in mid-2005 and entered into a Prospective Purchaser Agreement with ADEC. Following purchase, Wal-Mart re-platted the parcels so that the former sites no longer correspond to tax parcel boundaries. The Contaminated Sites Program combined the three former sites in the database as a single site and has recorded environmental actions by Wal-Mart beginning in July 2005 under the site name "DeBarr Wal-Mart." The record of site activities prior to mid-2005 can be found under the individual site names above.

FY08 Actions:

Staff reviewed plans and reports for groundwater monitoring and other environmental work conducted according to the PPA, and will continue to do so in FY09.

FY08 Response Fund Expenditures: \$ 14,626.00
FY08 Cost Recovery: \$ 15,005.00

FY09 Projected Actions and Expenditure Amounts:

Staff will continue to review plans according to the PPA.

Estimated FY09 Costs: \$15,000.00

Project/Site Name: **Drill Site 16 Flowline Release**

Location: Prudhoe Bay, Alaska

Project Manager: Paul Lhotka

Tel: (907)451-2175

Site ID Number: 07399928801

Ledger

Code: 14244860

Situation:

On October 15th, 2008, BPXA reported a release of approximately 1,932 gallons of methanol/water/crude from Drill Site 16 flowline near Flow Station 2 in the Prudhoe Bay Oil Field. Investigation into the incident revealed that workers were using a water/methanol mixture to free ice within the line. Excessive movement, or “slugging” of the flowline caused it to strike the corner of an adjacent horizontal support member and rupture. BPXA made temporary repairs to the line, while spill responders used warm water flushing techniques and vacuum trucks to remove product from the tundra, pond, and adjacent gravel pad. The site was sampled and determined by ADEC to meet the cleanup levels established for that spill site. During August 2008 ADEC personnel had the opportunity to conduct a spill site visit. General observations at the spill site concluded that site was minimally impacted and expected to fully recover. The spill is scheduled for closure, but monitoring.

FY08 Actions:

ADEC dispatched two responders to oversee the cleanup. BPXA made temporary repairs to the line, while contract spill responders used warm water flushing techniques and vacuum trucks to remove product from the tundra, pond, and adjacent gravel pad. The site was sampled and determined by ADEC to meet the cleanup levels established for that spill site. During August 2008 ADEC personnel had the opportunity to conduct a spill site visit. General observations at the spill site concluded that site was minimally impacted and expected to fully recover. The spill is scheduled for closure, but monitoring.

FY08 Response Fund Expenditures: \$ 18,468.00

FY08 Cost Recovery: \$ 12,131.00

FY09 – Projected Actions and Expenditure Amounts:

One additional site visit is expected in July of 2009 to document the site has fully recovered.

Estimated FY09 Costs: \$1,000.00

Project/Site Name: **DS-5 Access Road Vac Truck Rollover**

Location: Prudhoe Bay

Project Manager: Tom DeRuyter

Spill Number: 07399909801

Tel: (907) 451-2145

Tracking Number: 14164660

Situation:

On April 8, 2007, a vac truck driver delivering a load of diesel fuel to DS-5 drove off the access road. The truck rolled over causing the release of 6930 gallons of arctic grade diesel fuel. The fuel oil flowed along the toe of the road and out across tundra to an ice covered tundra pond. The ice in the pond was frozen to the bottom but had many cracks which allowed the oil to infiltrate over half of the ponds surface area.

FY07 Actions:

Response actions included the excavation of the ice from the pond and the contaminated soil at the bottom of the pond and excavation of the contaminated gravel of the road. The oiled tundra was treated by vacuuming up the free standing liquids, packing the tundra with sorbent material and then burning the oiled vegetation. This was followed up by trimming the surface soil to remove the contamination down to cleanup standards. This was done in hopes of leaving some of the living plant root structure in place.

FY07 Response Fund Expenditures: \$ 15,424.00

FY07 Cost Recovery: \$ 0.00

FY08 Actions:

No activity in this period.

FY08 Response Fund Expenditures: \$ 0.00

FY08 Cost Recovery: \$17,436.00

FY09 Projected Actions and Expenditure Amounts:

The tundra plants have been severely damaged and restoration activities will be initiated. In cases like this the true extent of the damage to the tundra may not be known for several years when the plant roots have had a chance to gather enough energy to send out shoots. The tundra will be monitored during the summer months and restoration plans developed for future activities.

Estimated FY08 Costs: \$ 5000.00

Project/Site Name: **Eni Rock Flour #2**
Location: Prudhoe Bay, Alaska
Project Manager: Tom DeRuyter
Spill Number: 07399900401

Tel: (907) 451-2145
Tracking Number: 14164460

Situation:

On January 4, 2007 at the Eni exploratory site known as Rock Flour #2, drilling mud was dumped in to an ice lined storage cell as part of their drilling activities. The quantity of drilling mud dumped in to the cell in that particular batch had enough mass to retain the needed heat energy to melt out through the side wall of the containment. The breach of the containment wall allowed 3,150 gallons of drilling mud and cuttings to flow out onto the tundra surface.

FY07 Actions:

A response team from Alaska Clean Seas (ACS) and personnel and equipment from the drilling company arrived on site to remove the drilling mud. Extreme cold temperatures hampered the response efforts by freezing most of the drilling mud and forcing site laborers indoors to wait for warmer and less windy conditions.

The initial response actions removed most of the gross contaminate. It was decided to wait until late winter to complete the last part of the cleanup with the expectation that the weather conditions would be more suitable to perform the type of cleanup that would be needed to remove the drilling mud but not injure the tundra. The site was mapped using GPS coordinates so that it could easily be found even though the site would be snow covered.

In March, ACS response teams once again accessed the spill site. The snow cover was removed and much the remaining drilling mud was removed using hand tools. A summer site visit revealed that some of the tundra vegetation still retained a coating of drilling mud. The site was accessed again and a low power drum vac was used to remove the mud coating without damaging the vegetation.

FY07 Response Fund Expenditures: \$ 12,808.00
FY07 Cost Recovery: \$ 16,339.00

FY08 Actions:

Inspection completed and case is closed. No further action necessary.

FY08 Response Fund Expenditures: \$ 1,994.00
FY08 Cost Recovery: \$ 0.00

Project/Site Name: **Eskimo Creek Seep**
Location: King Salmon, Alaska
Project Manager: Rich Sundet
Site ID Number: 1994250122801

Tel: (907) 269 - 7578
Ledger Code: 14875960

Situation:

The Alaska Department of Environmental Conservation (ADEC) was contacted in 1994 regarding a petroleum hydrocarbon seep into Eskimo Creek in the vicinity of Eddie's Fireplace Inn. The source(s) of contamination was unknown but sample analysis indicated a diesel range fuel product. Possible suspect areas included a former heating oil tank buried behind Eddie's Fireplace Inn and possible debris and/or runoff from the King Salmon Airport.

ADEC assumed the lead role in the site investigations at Eddie's Fireplace Inn because the owner had died and his estate was unwilling or unable to do so. The former heating oil tank had previously been decommissioned by the former owner without any sample data. It was suspected as a source and the ADEC investigation identified soil and groundwater contamination in the former tank location. Interim corrective action included the installation of recovery wells to intercept product before it entered the creek. However, soil contamination at (and adjacent to) the seep area continued to cause sheen and product release to the creek.

In November 2001, ADEC's term contractor installed an interception trench and recovery system. The 70 cubic yards of petroleum contaminated soil excavated from the trench was transported off site and stored at the community landfill. In October 2002, 30 cubic yards of contaminated soil was excavated adjacent to Eskimo Creek and transported off site to the landfill. The contaminated soil was thermally treated in 2003 and used as landfill cover material.

FY07 Actions:

DEC continued to perform free product recovery in the interception trench and recovery wells at the site. Groundwater monitoring continued from existing monitor wells and the drinking water well on site.

FY07 Response Fund Expenditures: \$ 15,530.00
FY07 Cost Recovery: \$ 7,317.00

FY08 Projected Actions and Expenditure Amounts:

Continue the operation of the interception trench and free phase product recovery system. Sample ground and surface water for water quality conditions, including the public drinking water well on site.

Estimated FY08 Costs: \$30,000.00

Project/Site Name: **Fire Lake Flying Club**

Location: Eagle River, Alaska

Project Manager: Rich Sundet

Site ID Number: 1995210013702

Tel: (907) 269-7578

Ledger Code: 14114360

Situation:

In May 1995, two aviation fuel tanks, piping and dispenser were removed and replaced by a new tank and piping in 1998. Contamination was found along the piping and at the dispensers. The shallow groundwater was found to be contaminated. Four soil/groundwater areas were sampled in 2004 and were found to be contaminated, just to the south of the drinking water well. In June 2006, the responsible party excavated 68 tons of contaminated soil (to the north of the drinking water well) and transported it off site for thermal treatment. Three groundwater monitor wells were installed and contamination in soil and groundwater above site cleanup levels was identified. Groundwater is shallow (4 feet below ground surface) and the remaining contamination is located near the drinking water well. Fire Lake is also within 40 feet of contamination. The drinking water well was sampled in 2005 but did not have detectable levels of contamination.

FY07 Actions:

DEC made a determination that the responsible party was no longer willing (or able) to conduct further assessment and cleanup activities. A DEC term contractor was hired to continue the assessment activities and continue excavating contaminated soil.

FY07 Response Fund Expenditures: \$ 31,863.00

FY07 Cost Recovery: \$ 0.00

FY 08 Actions:

DEC made a determination that the responsible party was no longer willing (or able) to conduct further assessment and cleanup activities. A DEC term contractor was hired to continue the assessment activities, continue excavating contaminated soil, and to monitor the groundwater and drinking water at this site.

FY08 Response Fund Expenditures: \$138,062.00

FY08 Cost Recovery: \$ 0.00

FY09 Projected Actions and Expenditure Amounts:

Collect groundwater samples from three monitoring wells, and collect a water sample from the on property drinking water well in the fall of 2008 and the spring of 2009. Preparation of a report of the results of the two groundwater monitoring events. Evaluation of remedial options to address the remaining soil and groundwater contamination at the site. Placement of clean fill in the excavation area to bring it up to grade.

Estimated FY 09 Costs: \$20,000

Project/Site Name: **Flow Station 2 Oil Transit Line Spill**

Location: Prudhoe Bay

Project Manager: Tom DeRuyter

Spill Number: 063989921801

Tel: (907) 451-2145

Tracking Number: 14163560

Situation:

On August 6, 2006 the oil transit line that carries market ready crude oil from the BPXA Flow Station 2 to Skid 50 located at Alyeska Pump Station 1 developed a hole caused by corrosion. The resulting oil spill release 966 gallons of oil to tundra and 7,392 gallons of the oil were collected in fast tanks prior to reaching the tundra surface.

FY07 Actions:

The area of contaminated tundra was surrounded with shore-seal boom and free standing water and oil was vacuumed up using a vac truck. Sorbent pads and rolls of sorbent material were applied to the tundra surface. This material was removed and the oiled tundra vegetation was burned. The site was then flooded and flushed using warm water containing a 1% soap solution to help loosen and float out the residual oil. The oily water was vacuumed up using a vac truck.

A tundra restoration plan has been developed that includes fertilizing the remaining root stock and monitoring plant growth.

FY07 Response Fund Expenditures: \$136,904.00

FY07 Cost Recovery: \$109,283.00

FY08 Actions:

The tundra suffered heavy damage as a result of the spilled oil. FY08 actions involved oversight of BPXA's Site Restoration Plan and monitoring site recovery.

FY08 Response Fund Expenditures: \$ 4,278.00

FY08 Cost Recovery: \$ 45,237.00

FY09 Projected Actions and Expenditure Amounts:

With much of the tundra on this site damaged from the oil spill the insulation value of that tundra was lost. This has resulted in an increase in the active layer depth and settling of the soil surface creating water impoundment areas in the spill site. New restoration plans will be drafted to address this issue. ADEC will continue in provide review and approval of those plans, oversight of activities and monitoring of the tundra to insure success of the project.

Estimated FY09 Costs: \$5000

Project/Site Name: **F/T Westward Grounding**

Location: Klawock, Alaska

Project Manager: Scot W. Tiernan

Spill ID Number: 08119904801

Tel: (907) 465-5378

Ledger Code: 14250260

Situation:

In the early morning hours of February 17, 2008 the Fish Tender vessel Westward (Westward) grounded along the shoreline on Prince of Wales Island approximately six miles northwest of Klawock, Alaska. As a result of the grounding the Westward's hull was holed in way of the bow allowing the vessel to take on water and sink. The vessel discharged an unknown quantity of diesel, lubrication and hydraulic oils as a result of the sinking.

The owner of the Westward, Jay Barnett, called the National Response Center to report the sinking and stated there was a potential for a loss of 4,000 gallons of mixed oils being lost from the vessel. The United States Coast Guard reported the sinking of the Westward to the Alaska State Trooper spill response line at 4:06 AM on February 17th. The Coast Guard Air Station Sitka, Alaska conducted a first light overflight of the area and found a sheen of oil extending 2.5 miles from the vessel.

FY08 Action:

To address the pollution from the Westward, containment boom and spill response gear were accessed for the Alaska Department of Environmental Conservation spill equipment container in Craig, Alaska. During the course of the spill response that lasted for eight days approximately 4,100 gallons of mixed oil and water were removed from the vessel. The Westward also had a cargo of bait herring on board estimated at between 80 and 120 tons. This cargo was removed from the vessel and disposed of outside of State waters with the assistance of ADEC's Water Quality Program and the U.S Environmental Protection Agency.

The exact cause of the casualty has not been determined though it remains under investigation by the Coast Guard. This case was forwarded to the Departments Environmental Crimes Unit for further investigation.

FY08 Response Fund Expenditures: \$ 13,522.00

FY08 Cost Recovery: \$ 0.00

FY09 Projected Actions and Expenditure Amounts:

No further action or expenses are anticipated by the Prevention and Emergency Response Program

Project/Site Name: F/V Nordic Viking Grounding

Location: Port Gravina, Prince William Sound, Alaska

Project Manager: John W. Engles

Tel: (907)835-4698

Site ID Number: 07229920201

Ledger Code: 14240160

Situation:

At approximately 10:35 pm on July 21, 2007, the F/V Nordic Viking ran aground on an island in Port Gravina between Olsen and St. Matthew's Bays. The vessel operator reported that the vessel was hard aground and that at least one fuel tank containing approximately 3,500 gallons of marine diesel fuel had been breached and that the vessel was releasing fuel to the water and was taking on water. The engine room was flooded. A Good Samaritan vessel (F/V Seabrook) was on scene and had the crew on-board. The captain of the Seabrook was asked by the Coast Guard to administer drug and alcohol testing since they had kits available on scene. The three crew members were tested and the Master of the Nordic Viking who was driving at the time of the grounding refused to be tested.

The owner of the vessel contracted with Alaska Chadux to respond to the scene and work to contain the spill around the vessel. He also was represented by Hudson Marine as the – Qualified Individual (QI) Eventually, the M/V Alaska Challenger was brought to the scene and all of the rest of the remaining diesel fuel was lightered to tanks on the Challenger. Other than a few bags of oiled wrack (eel grass) and some sorbents from around the vessel no recovery of product occurred from off of the water. It was determined that only the forward fuel tank was breached and the vessel was refloated and brought to a safe anchorage near the island so it could be checked prior to being towed to Seward and taken into dry dock. On Friday, July 27th the Nordic Viking was towed to Seward and on Saturday the 28th removed from the water in Seward.

FY08 Action:

The vessel ran aground on July 21 and response activities occurred from July 21 to when the vessel was removed from the water in Seward on July 28.

On January 18, 2008 one ADEC responder from Valdez and one USCG representative made a follow-up SCAT visit to the anadromous stream that had been impacted previously by sheen from the Nordic Viking.

On May 27, 2008 the final signature was obtained on a Civil Compliance Order by Consent. The owners of the Nordic Viking agree to the following required actions:

1. Nordic Viking will pay as damages and penalties \$17,500.00 into the ADEC Response Fund.
2. Nordic Viking will engage in a Supplemental Environmental Project (SEP) to benefit the marine environment. Nordic Viking will pay \$10,000.00 to the Gulf of Alaska Keeper for use in the organizations marine debris cleanup efforts.
3. Co-owner William Jacobson agrees to develop and use a US DOT and/or USCG approved drug and alcohol testing program on sister ships F/V Ruff & Ready, F/V Atlantico, and F/V Excalibur II for a period of one year.
4. Co-owner William Prout agrees to develop and use a US DOT and/or USCG approved drug and alcohol testing program on F/V Silver Spray for a period of one year. Prout further agrees to develop and utilize a written drug and alcohol abuse policy for the F/V Silver Spray and to undertake pre-employment drug and alcohol testing for all captains (masters) used on this vessel.

FY08 Response Fund Expenditures: \$ 22,105.00

FY08 Cost Recovery: \$ 42,159.00

FY09 Projected Actions and Expenditure amounts:

No anticipated actions remain in FY09

Project/Site Name: Gaffney Road Area-Wide Groundwater Investigation

Location: Fairbanks, Alaska

Project Manager: Ann Farris

Tel: (907)451-2104

Site ID Number: 19973100931001

Ledger Code: 14622260

Situation:

The Gaffney Road area in Fairbanks has an area-wide groundwater contamination plume. The contaminants of concern include chlorinated hydrocarbons - primarily tetrachloroethylene (PCE); trichloroethene (TCE) and the dichloroethenes. Since there were no reported spills or releases in the area, DEC initiated a groundwater investigation in 1997. The assessment used passive soil gas (PSG) surveys, groundwater monitoring wells, and sewer line sampling methodologies to define the nature and extent of the contamination.

Two groundwater plumes were identified originating in the Gaffney Road area and extending downgradient, generally north-northwest towards the Chena River. The smaller, eastern plume was approximately 600 feet in length while the western plume was approximately 3000 feet long. It was generally concluded that the distribution of contaminants was associated with the sanitary sewer lines in the area. A major concern was the migration of the groundwater plume(s) towards the Chena River and the possible risk to the community's public drinking water supply.

The groundwater monitoring data from 2000 through 2004 identified two short TCE and PCE plumes east of Cushman Street and one longer PCE plume west of Cushman Street. The contamination had not reached the public water wells but there were a small number of private water wells in the area but they reportedly are not used for drinking water. There were two suspect source areas (former dry cleaning facilities) identified on Gaffney Road and DEC must still pursue site assessment actions at them to determine if they are responsible for the contamination.

The information to date indicates that natural attenuation of the contaminants is occurring and there is a documented decrease in concentrations from the Gaffney Road area toward the public water wells. The highest levels of contamination are in the western plume near Gaffney Road. Recent assessment efforts have focused on soil gas issues and vapor intrusion into buildings and structures in the area.

FY07 Actions:

The groundwater monitor plan was evaluated resulting in some wells identified for decommission and some new wells were installed. The sampling of existing groundwater monitor wells and soil gas probes have identified areas of concern for possible vapor intrusion. This led to several sample events of buildings in the area for vapor intrusion and indoor air concentrations.

FY07 Response Fund Expenditures: \$161,825.00

FY07 Cost Recovery: \$ 0.00

FY 08 Actions:

During FY08, the sewer lines running through the Gaffney Road, Airport Way, Cushman Street area were determined to be a larger source of contamination than previously thought. Direct push drilling techniques were used to better characterize the soil and groundwater contamination along these lines as well as completely delineate the extent of vadoze zone contamination at the Good News Bible and Bookstore. Through this work, a new release was found at a sewer line junction south of Airport Way and additional soil contamination was found on the Park and Sell property and along the sewer lines east of Cushman Street near the Coin King Laundromat. The soil contamination in these areas is the ongoing source of the groundwater plumes and may also be causing vapor intrusion into overlying buildings.

Vapor intrusion was evaluated at 11 buildings north of Airport Way and west of Cushman Street; two buildings had vapors intruding into the building at concentrations exceeding ADEC's acceptable risk level. Six buildings were determined to not have a problem at this time and three buildings need further evaluation. The buildings south of Airport Way and east of Cushman Street need additional investigation.

Annual groundwater monitoring of both the western and eastern plumes was conducted.

FY08 Response Fund Expenditures: \$ 275,348.00
FY08 Cost Recovery: \$ 0.00

FY09 Projected Actions and Expenditure Amounts:

During FY09, remediation options will be evaluated for the soil contamination hot spot at the Good News Bible and Bookstore. Direct push drilling will be used to further delineate the soil contamination by the Coin King Laundromat. Vapor intrusion will be evaluated at eight additional buildings near the newly discovered releases. Annual groundwater monitoring will be completed.

Estimated FY 09 Costs: \$ 223,800

Project/Site Name: **GC-2 Oil Transit Line**

Location: Prudhoe Bay, Alaska

Project Manager: Tom DeRuyter

Site ID Number: 06399906101

Tel: (907)451-2145

Ledger Code: 14163060

Situation:

On March 2, 2006 a leak was discovered in the oil transit line (OTL) that carried crude oil from BPXA's Gathering Center 2 facility to skid 50 near Alyeska Pump Station 1. The release was determined to be from a hole in the line caused by internal corrosion. The crude oil that leaked from the OTL contaminated approximately two acres of tundra and several hundred feet of shoreline on Q Pad Lake. In response to the release BPXA removed the pooled oil, contaminated snow and contaminated soil. The site was sampled and determined by ADEC to meet the soil cleanup levels established for that spill site.

BPXA developed a site restoration plan that was approved by ADEC that called for the majority of the site to be covered with chunks of soil and tundra mat known as tundra aggregate that was removed as part of a gravel mine site expansion project. The shoreline of the lake was built up with soil, topped with tundra aggregate and stabilized with matting. An irrigation system was installed so that during the summer months the tundra aggregate could be kept moist. This work was completed late winter of 2006.

A smaller area under the pipeline rack was to be vegetated with tundra mat taken from the same gravel mine site expansion as the tundra aggregate in what resembled a sod project to be overseen by the North Slope Borough as an experimental design. This work was not completed until 2007.

FY08 Actions:

During August 2008 ADEC personnel had the opportunity to conduct a spill site visit. The tundra aggregate had undergone two growing seasons and the tundra mat (sod) one year. General observations at the spill site concluded that moss was the predominate species growing on the tundra aggregate. Although many different species could be found, the percent plant cover of the soil surface remains very low. The soil was moist with no standing water providing a good environment for plant growth. The plants had been grazed by both caribou and geese.

The area of tundra mat that had been placed under the pipelines appeared to be in excellent condition. Although the definition between the blocks of tundra that had been transplanted was noticeable the tundra itself was healthy, intact and growing. The matting along the lake shore used to control erosion was still in place. Erosion was being controlled and the tundra aggregate appeared to be in the same condition as it was on the rest of the spill site.

FY08 Response Fund Expenditures: \$ 10,453.00

FY08 Cost Recovery: \$ 4,007,329.08*

*Includes fines & penalties in the amount of \$4M.

FY09 Projected Actions and Expenditure Amounts:

The Restoration Plan for this site requires BPXA to develop and submit to the Department a report of the restoration activities following the 2009 growing season. In order to complete the report site work will need to be accomplished that identifies the plant species found on-site, the percent of ground cover and the effectiveness of the restoration activities as compared to the performance standards listed in the Restoration Plan.

Estimated FY09 Costs: \$10,000

Project/Site Name: GC-2 Tank 8511 Spill

Location: Prudhoe Bay

Project Manager: Tom DeRuyter

Spill Number: 06399935301

Tel: (907) 451-2145

Tracking Number: 14164360

Situation:

On December 19, 2006 an oil skim tank known as tank 8511 located at the BPXA GC2 facility developed a hole in the bottom of the tank releasing produced water into the secondary containment constructed below the facility. Total volume of the released was 255,278.

FY07 Actions:

The bottom of tank 8511 is has a conical shape that allows solids to settle out of the produced water and be removed through a bottom valve. Several feet above the conical bottom is a pipe-line connection that could be used to empty the tank in the event that the bottom valve became plugged with solids. BPXA used this line to begin draining fluids out of tank 8511. It was known that there would be a thick layer of crude oil floating on the produced water. In order to drain the tank of as much crude oil as possible the oil level was allowed to drain down below the pipe-line and then water was introduced into the tank from the bottom valve to float the oil back above the pipe-line. This gave the oil lay enough residence time at the level of the pipeline to remove as much of the oil as possible before allowing the liquids to continue to drain from the hole in the tank bottom and bottom valve.

Simultaneously with the tank de-inventory process response teams had cleared the sump in the secondary containment of snow and ice and began to remove the crude and produced water with a vac truck. This continued until the tank had been completely emptied of liquids. The secondary containment was then flooded and flushed with warm water to move the remaining crude/produced water in to the sump for collection.

During the initial cleanup process it was discovered that there was a small breach in the secondary containment wall. This area was sand bagged off and liquids were not allowed to accumulate in that area. As a result only about 2 gallons of this spill escaped secondary containment. The wall of the secondary containment was repaired in the summer of 2007.

FY07 Response Fund Expenditures: \$ 13,645.24

FY07 Cost Recovery: \$ 12,161.59

FY08 Actions:

Case closed.

FY08 Response Fund Expenditures: \$ 3,400.00

FY08 Cost Recovery: \$ 5,938.00

FY09 Projected Actions and Expenditure Amounts:

No further expenditures are planned.

Project/Site Name: GC2 and FS2 Oil Spills and Corrosion Investigation

Location: North Slope, Alaska

Project Manager: Department of Law

Tel:

Site ID Number: None

Ledger Code: 14223760

Situation:

The Flow Station 2 oil transit line spill on the North Slope began on August 6, 2006. Approximately 2,281 gallons of crude oil were released to the tundra. The spill was discovered when BPXA was shutting down the line in response to a smart pig operation. The pig data revealed 16 anomalies in 12 locations along this line with corrosion related pipeline wall thinning. For these reasons, BPXA shut down the Greater Prudhoe Bay oilfield, which is the largest oilfield in the United States accounting for approximately 8 percent of the nation's domestic oil production.

The Gathering Center 2 oil transit line release was discovered on March 2, 2006 by BPXA operators. The location of the release was a 34 inch single phase transit line between Gathering Center 2 and Pump Station 1 in the Western Operating Unit of Prudhoe Bay.

After the August 2006 BP Flow Station 2 transit line spills and resulting partial shutdown of the Prudhoe Bay Field, the Department of Law requested an RSA from DEC to fund the investigation of the oil spills and BP's pipeline maintenance and corrosion management practices.

The investigation began during FY07 and is continuing into FY09.

FY 08 Actions:

The FY07 RSA was established between the Department of Law and DEC in the amount of \$8,752,970.

FY07 Response Fund Expenditures: \$1,259,416.00

FY07 Cost Recovery: \$ 0.00

FY09 Projected Actions and Expenditure Amounts:

An FY09 RSA for the continuing investigation was established in the amount of \$3,413,697.00

Estimated FY09 Costs: \$3,413,697.00

Project/Site Name: **Huslia Huntington School ASTs**

Location: Huslia, Alaska

Project Manager: Carnahan, John

Site ID Number: 23

Tel: (907) 451-2166

Ledger Code: 14228380

Situation:

Past complaints from adjacent property owners implied possible migration of petroleum contamination that could be impacting school operations. Contaminated soil was found along 75 feet of water main to a depth of 3 feet, at a distance of 50 feet from the above-ground storage tanks, confirming the concern. The drinking water well is located ~100 feet away from the area, yet there is no indication of contamination at the water supply.

A site characterization was initiated at the Huslia Huntington School grounds in June 2007. Extensive soil contamination was encountered throughout the school grounds, associated with the former tank farm and piping system. Strong odors were noted by the contractor and the school employees during sampling activities. Exposure from vapor intrusion was identified as an immediate concern, as was exposure through direct contact by students who crossed contaminated soil at the school yard.

FY08 Actions:

The site investigation was completed during the field season in calendar year 2007, targeting the tank farm and five abandoned heating oil tanks previously used for heating the school buildings. Soil-gas, water and soil samples were collected within the abandoned tank farm enclosure, near the abandoned tanks, and around the perimeter of the school grounds. An estimated 2,500 square feet of ground was identified as contaminated to a depth of at least 15 feet.

Due to the concern over the high potential that children and employees in the Huslia school buildings may be currently exposed to vapors above an acceptable risk level, the consultant was directed to collect air samples to assess the potential for vapor intrusion into the school buildings. As such, a subsequent vapor intrusion study was conducted at the high school, elementary school, vocational education building, and one of the housing buildings. Costs were associated with completing the previous site characterization study, and initiating a vapor intrusion investigation.

FY08 Response Fund Expenditures: \$ 63,702.00

FY08 Cost Recovery: \$ 0.00

FY09 Projected Actions and Expenditure Amounts:

None.

Estimated FY09 Costs: \$0

Project/Site Name: **Iniakuk River (Bettles Abandoned Drums)**
Location: Ernie Lake above the headwaters of the Iniakuk River
Project Manager: Walt Sandel/Ed Meggert Tel: 451-2124
Spill Number: 04309928901 Tracking Number: 14220880

Situation:

In the summer of 2004 National Park Service (NPS) personnel located and investigated a site containing 28 55 gallon drums, 26 of which were full. The estimated amount of fuel was 1500 gallons. Subsequent investigation indicated that these drums were on state land and ADEC was not able to identify the owner of the drums. Since NPS had personnel and equipment in the area and expertise in drum removal, ADEC executed a Memorandum of Agreement (MOA) with NPS for removal of these drums the following year. In 2005 there were numerous fires in that area making the operation hazardous so the actual removal and disposal did not take place until 2006.

FY07 Actions:

As per MOA signed with NPS. Drums were removed and disposed of.

FY07 Response Fund Expenditures:	\$ 70,815.00
FY07 Cost Recovery:	\$ 0.00

FY08 Actions:

No activity in this period.

FY08 Response Fund Expenditures:	\$ 0.00
FY08 Cost Recovery:	\$ 0.00

FY09 Projected Actions and Expenditure Amounts:

Continue the removal action.

Estimated FY09 Costs: \$\$

Project/Site Name: **Kaltag School Oil Seep**

Location: Kaltag, Alaska

Project Manager: Farris, Ann

Site ID Number: 289

Tel: (907) 451-2752

Ledger Code: 14937680

Situation:

Residents of Kaltag informed ADEC in 1991 that oil seeps were appearing every spring at the Kaltag School. Probable sources include the Alaska Village Electric Cooperative and Yukon Kuskokwim School District tank farms, which occupy the same gravel pad south of the Kaltag School. A historical tank farm serving the Kaltag school (located immediately east of the current tank farms) is also a suspected source. There is a history of fuel oil spills beginning in 1985. Outdated equipment and poor fuel transfer procedures also contributed to chronic leaks and spills from overfills. Site characterization in 1998 and 2000 show heavy soil staining at all three tank farm locations, and that DRO and benzene are the primary contaminants of concern. The suprapermafrost groundwater underneath the school has been impacted, and the contamination has migrated via this pathway underneath the school, along the ditches of the school road, and onto the neighboring Semaken property. General groundwater flow is to the north, parallel to the Yukon River.

In 1998 a DEC contractor performed site characterization and installed as an interim corrective action a roadway seepage control measure and a product recovery trench. Soil samples showed DRO present up to 67,300 mg/kg, GRO up to 1,330 mg/kg, and BTEX above ADEC cleanup levels. Groundwater analysis showed benzene contamination well above ADEC cleanup levels. Soil data for benzene was not conclusive, as the PQL was above ADEC cleanup levels for all samples.

The seepage filtration system (SFS) was to intercept water flow at the site's northern boundary, and to treat and dispose of collected seep water; however, low levels of groundwater have limited the effectiveness of the system. Groundwater monitoring has also been limited by low groundwater levels, and by traffic damage to wellpoints. No assessment of vapor intrusion has been done. School is located on state land. Also see file 850.02.002 and 850.02.003. Name of tank farm was Alaska Village Electrical Coop in 1989. Known spills at site: 200 gallons heating oil (1989), report of oil saturated ground at the tank farm (1987), unknown amount of fuel spilled near school (1986), overfilled diesel tanks next to school (1985).

FY08 Actions:

The seepage filtration system was evaluated for current operational status and determined to no longer be functional. Soil characterization on the former tank farm pad and other areas was completed to fill in data gaps and completely delineate the petroleum-impacted soils. Vapor intrusion was evaluated at the school building.

FY08 Response Fund Expenditures: \$ 22,779.00

FY08 Cost Recovery: State Owned - No Cost Recovery

FY09 Projected Actions and Expenditure Amounts:

None.

Project/Site Name: **Kipnuk Ruptured Fuel Line**

Location: Kipnuk, Alaska

Project Manager: Eric Henry

Site ID Number: 06279918601

Tel: (907) 269-7542

Tracking Number: 14208560

Situation:

On July 5, 2006, the Kugkaktlik Ltd. Native Corporation for the community of Kipnuk reported to ADEC a diesel fuel spill of approximately 7000 gallons. When ADEC and USCG response staff arrived at the spill site they determined that the discharge was from a ruptured flex hose and had impacted approximately 20,000 square feet of wetlands in the immediate area of the release. At the time of the initial report an unknown amount of fuel entered a small unnamed creek, which flowed into the Kugkaktlik River.

FY07 Actions:

The small unnamed creek was boomed off and started recovery released fuel to prevent further fuel migration into the river. Additional response resources were requested from the ADEC Bethel Response Container in order to continue with the cleanup response in the wetlands and in the Kugkaktlik River.

The assessment of local response personnel qualifications indicated that no one in the community or at the fuel storage facility had a current Hazardous Waste Operations & Emergency Response (HAZWOPER) certificate. ADEC and the USCG coordinated an on site HAZWOPER refresher to meet the 29 CFR 1910.120 requirements. At the end of the training the USCG and ADEC staff was able to qualify 20 local personnel to perform limited response activities.

Local responders continued on with the spill cleanup after ADEC responders departed on July 9, 2006. Upon further investigation it was determined that up to 3,500 to 4,000 gallons may have entered the Kugkaktlik River. No impacts to wildlife or other resources were reported or observed during the spill or cleanup. Additional information and photographs of the Kipnuk response can be found on the ADEC web page at: http://www.dec.state.ak.us/spar/perp/response/sum_fy07/060705201/060705201_index.htm

FY07 Response Fund Expenditures: \$ 12, 814.00

FY07 Cost Recovery: \$ 13, 242.00

FY08 Projected Actions and Expenditure Amounts:

None

Project/Site Name: **Kotlik -Former BIA School Playground**

Location: Kotlik, Alaska

Project Manager: Carnahan, John

Site ID Number: NA

Tel: (907) 451-2166

Ledger Code: 14244660

Situation:

This is a Reuse/Redevelopment site. The community expressed concern about a former tank farm that may have leaked and caused the spread of contamination onto this property. The facility was also a location where residents were given tuberculosis vaccinations, and it was reported that used vaccination needles were buried on the property. The community was concerned that the site could be contaminated by petroleum hydrocarbons associated with the former tank farm activities. Additional concern is placed on the physical and bio-hazard presented by discarded syringes that were reportedly buried on the property. This same area was previously used as a children's playground when it was covered with plywood for a basketball court. DEC was sought to complete a historical review of the use of the site, and conduct limited testing to determine if the site is appropriate for reuse by the community.

FY08 Actions:

DEC's consultant completed a modified Phase I Environmental Site Assessment that included interviews, historic review, and a site characterization that included sampling and testing, in order to identify circumstances and events suspected of causing environmental concerns at the property. Upon completion of the field effort, the consultant prepared a final report that summarized their findings and made a recommendation for reuse of the site by the community. There was no evidence of burial of any waste materials on the site, and the petroleum impacts were limited in extent, enabling reuse of the site as proposed.

FY08 Response Fund Expenditures: \$16,187.00

FY08 Cost Recovery: State Owned - No Cost Recovery

FY09 Projected Actions and Expenditure Amounts:

None

Estimated FY09 Costs: \$0

Project/Site Name: **Kuparuk 2U-2W Crude Common Line Spill**

Location: Kuparuk, Alaska

Project Manager: John Ebel

Site File Number: 07399935001

Tel: (907)451-2102

Ledger Code: 14247160

Situation:

The 24-inch diameter produced oil line that connects Drill Sites 2W and 2U to Drill Site 2V, known as the 2WU Produced Oil line, leaked in the early morning on December 16, 2007, spilling approximately 102 barrels of oil and produced water onto the tundra. The failure was determined to be a 6-inch long rupture through the pipe wall, due to corrosion under insulation, at the 9 o'clock position on the pipe.

The crude oil misted on approximately 350,223 square foot (sq. ft.) of frozen lake surface; 183,824 sq. ft. of snow covered tundra; and released "heavy" contamination to approximately 7,405 sq. ft. of snow covered tundra. In response to the release ConocoPhillips (CPAI) removed the misted oil from the lake and tundra plumes and the pooled oil and contaminated snow beneath the flow-lines. The heavily oiled area was divided into six treatment cells, which were flooded with water to float and recover remaining oil, and reduce the salinity concentration from the produced water.

After the contaminated snow was removed from the tundra and lake plume, and the flood tactic executed in the "heavily" oiled site beneath vertical support member #157 (VSM), analytical samples were collected to assess the concentration of petroleum hydrocarbons remaining in the soil, snow, and lake ice. Analytical tests were performed in the treatment cells to assess the salinity remaining from the produced water which may affect redevelopment of tundra vegetation. The analytical results support a favorable cleanup performance as determined by ADEC cleanup regulations.

Passive wildlife hazing and an exclusion fence surrounded the treatment cell area during the 2008 growing season. CPAI will develop a site restoration plan after the first growing season to assess specific treatment strategies and tactics for tundra reestablishment during the next five years.

FY08 Actions:

ADEC personnel conducted site visits to the spill area throughout the growing season. Alaska Clean Seas (ACS) and Alaska Biological Research (ABR) monitored the site throughout the season. The site was generally saturated; tundra reestablishment was inconsequential and limited to non-vascular species. In September 2008, CPAI submitted the final Physical Cause Analysis Report for the corrosion investigation.

FY08 Response Fund Expenditures: \$ 87,545.00

FY08 Cost Recovery: \$ 84,915.00

FY09 Projected Actions and Expenditure Amounts:

ADEC anticipates a Restoration Plan for this site and another iteration of analytical samples collected from the treatment cells.

Estimated FY09 Costs: \$15,000.00

Project/Site Name: **Kwigillingok Former BIA School**

Location: Kwigillingok, Alaska

Project Manager: John Carnahan

Site ID Number: 2002250135101

Tel: (907) 451-2166

Tracking Number: 14221480

Situation:

In 2001 DEC's AST program completed a limited assessment of several former tank farm locations in Kwigillingok, including the *old Bureau of Indian Affairs (BIA) School site*, which has four abandoned fuel tanks and associated piping remaining on the property. Elevated concentrations of both gasoline and diesel were identified and presumed to be impacting the river. Petroleum sheen was observed on surface water across the site, and the Kwigillingok River is about 130 meters east of the property. Due to elimination of funding to conduct tank farm assessments of this nature, no further action occurred.

In the spring of 2006, the Indian General Assistance Program (IGAP) environmental coordinator for Kwigillingok requested an assessment of the old BIA school property through DEC's Brownfield Assessment program. The community would like to take ownership of the currently blighted and contaminated site, which is of no current use to the state, and reuse the site for processing subsistence foods. Following a ranking and prioritization process, this site was selected for a site characterization assessment. State concerns are that the old school buildings contain asbestos and lead paint and are an attractive nuisance that could lead to vandalism and arson, as has occurred in other communities, causing significantly more environmental impact. There is also known fuel-contaminated soil that could be contaminating the river.

FY07 Actions:

In the spring of 2007 a DEC brownfield assessment was conducted by a DEC term contractor. The term contractor delineated the extent of petroleum impacts across the site, collected samples, and documented overall site conditions. Their findings indicate movement of petroleum in surface water and potentially through the subsurface to the Kwigillingok River, as well as extensive areas of petroleum-contaminated soil and tundra. Groundwater is near the surface, but is not used as a source of drinking water. A follow-up visit is planned by DEC response staff, and additional assessment to evaluate appropriate remedial actions is pending.

FY07 Response Fund Expenditures: \$ 35,452.00

FY07 Cost Recovery: State Owned - No Cost Recovery

FY08 Actions:

Consultant participated in a stakeholder and planning session with various parties via teleconference. Consultant then developed and implemented a dynamic site characterization work plan strategy and real time field screening processes to complete a site characterization. Consultant prepared a report that meets the requirements of 18 AAC 75.335(c) and provided recommendations for corrective action. Costs incurred in FY08 were for the contractor to complete the final report for the field effort carried out in FY07.

FY08 Response Fund Expenditures: \$13,101.00

FY08 Cost Recovery: \$ 0.00

FY09 Projected Actions and Expenditure Amounts:

None.

FY09 Estimated Costs: \$ 0.00

Project/Site Name: **M & M Enterprises – Wyoming Drive**

Location: Anchorage, Alaska

Project Manager: Rich Sundet

Tel: (907) 269 - 7578

Site ID Number: 1987210912701

Ledger Code: 14670960

Situation:

M&M Enterprises processed scrap metal and automobile batteries at the above referenced property. The facility is located in a residential neighborhood in Anchorage and was originally investigated based on a complaints regarding the discharge of waste at the property. The site was first investigated in 1991 and elevated concentrations of metals and petroleum were detected. Efforts were made to have the property owner and/or their estate conduct further investigations but it was not until 2000 that DEC assumed the lead role in the investigation.

A site investigation in 2004 identified elevated levels of metals: lead at 84,000 milligrams per kilogram (mg/kg), arsenic at 78 mg/kg, total chromium at 32.1 mg/kg, and mercury at 10.29 mg/kg. In addition, total petroleum hydrocarbons (TPH) were detected at 24,800 mg/kg. Concentrations of mercury, cadmium, lead and total chromium in groundwater were found to exceed drinking water levels.

Additional investigation work determined that the majority of contaminated soil would be classified as hazardous waste according to federal Resource Conservation & Recovery Act (RCRA) regulations. Further sampling efforts identified lead at 92,000 mg/kg in surface soils above the health risk based levels for ingestion and inhalation. The site assessment data was used to conduct a feasibility study and several remedial options were considered on how best to mitigate any human health or environmental risk there. The study recommended excavation of the surface soils to two feet in depth to be replaced by clean surface material and installation of a fence.

FY07 Actions:

DEC further characterized the site where chlorinated solvents had been previously detected prior to the 2005 interim removal. It was suspected that those soils were removed in 2005 but sampling was not done at that time for those compounds. DEC also characterized surface soils in an area that was not subject to the interim removal in 2005. Findings from the investigation confirmed that the soil that contained the chlorinated compounds had been removed during 2005 to below risk levels, but that the other investigated area showed lead levels in the surface above applicable residential cleanup levels. Based upon the elevated surface lead samples, DEC subsequently capped that area with asphalt. DEC also coordinated with the Department of Law in the development of a Prospective Purchaser Agreement (PPA) so that the property could be sold and reused.

FY07 Response Fund Expenditures: \$ 21,734.00

FY07 Settlement: \$200,000.00

FY 08 Actions:

DEC further characterized the site where chlorinated solvents had been previously detected prior to the 2005 interim removal. It was suspected that those soils were removed in 2005 but sampling was not done at that time for those compounds. DEC also characterized surface soils in an area that was not subject to the interim removal in 2005. Findings from the investigation confirmed that the soil that contained the chlorinated compounds had been removed during 2005 to below risk levels, but that the other investigated area showed lead levels in the surface above applicable residential cleanup levels. Based upon the elevated surface lead samples, DEC subsequently capped that area with asphalt. DEC also coordinated with the Department of Law in the development of a Prospective Purchaser Agreement (PPA) so that the property could be sold and reused.

FY08 Response Fund Expenditures: \$ 28,862.00

FY08 Cost Recovery: \$ 309,559.00*

*Include fine & settlement.

FY09 Projected Actions and Expenditure Amounts:

DEC will continue to work with the property owner to address surface drainage issues that he has raised as due to the asphalt capping project. DEC is evaluating methods to modify the existing asphalt cap and expects to modify the cap in FY09.

Estimated FY 09 Costs: \$65,900.00

Project/Site Name: **M/V Cougar Ace**

Location: Unalaska, Alaska

Project Manager: John Brown

Site ID Number: 06259920501

Tel: (907) 269-7688

Tracking Number: 14212360

Situation:

On July 23, 2006, the M/V Cougar Ace, a 654-foot car carrier home ported in Singapore, contacted the U.S. Coast Guard and reported that their vessel was listing at 80 degrees and taking on water. The Alaska Air National Guard and Coast Guard aircraft crews rescued 23 crewmembers on July 24, 2006. The Cougar Ace master estimated that the vessel had approximately 142,184 gallons of intermediate fuel oil 380 (IFO 380) and 34,182 gallons marine diesel oil was on board. In addition, the vessel was carrying 4,813 motor vehicles as cargo.

FY07 Actions:

On July 31, 2006, the tug Emma Foss took the Cougar Ace in tow in a Northeast direction toward the tug Sea Victory which was in route from Seattle Washington to assist. On Aug 2, 2006 the Unified Command gave permission for the tug Sea Victory to take the Cougar Ace in tow and proceed toward Dutch Harbor with the intent of having the Cougar Ace dewatered by the time it made it to Dutch Harbor. In preparation of the transit to Dutch Harbor the Unified Command staff developed a Safe Port of Refuge plan, providing locations along the route to Dutch Harbor in an attempt to get salvage equipment aboard the Cougar Ace in an attempt to dewater the vessel. Vessels that assisted with the escort included the USCG cutters Morgenthau and Sycamore, M/V's Makushin Bay and Redeemer, and tugs Emma Foss and Gladiator. After multiple near-miss events, where both personnel and equipment were put at extreme risk, a decision was made to tow the Cougar Ace into Dutch Harbor, where safe refuge from the weather could be obtained.

On August 8, 2006 the attending tugs assisted in securing the Cougar Ace to two Icicle Seafood mooring buoys in Wide Bay. On August 31, 2006 all the dewatering was completed and the Coast Guard satisfactorily completed the final inspection for the Cougar Ace. The Cougar Ace was towed to Portland, Oregon by the tug Sea Victory in escort by the tug Gladiator. A four person crew was kept on board the Cougar Ace to keep watch around the ship, check the towing arrangement, and maintain the emergency generator. Additional information and photographs of the Cougar Ace response can be found on the ADEC web page at: http://www.dec.state.ak.us/spar/perp/response/sum_fy07/060728201/060728201_index.htm

FY07 Response Fund Expenditures: \$ 21,074.00

FY07 Cost Recovery: \$ 26,069.00

FY08 Projected Actions and Expenditure Amounts:

No further action required.

Project/Site Name: **Manley Hot Springs Gravel Pit**

Location: Manley Hot Springs, Alaska

Project Manager: Jim Frechione

Site ID Number: 1986310911501

Tel: (907) 451-5175

Ledger Code: 14982860

Situation:

The gravel pit has been used by the ADOTPF as a material source since before statehood. There were drums of herbicides stored there that ultimately leaked or spilled resulting in soil contamination (dioxin). An interim cleanup occurred in 1989 when 13 drums of contaminated soil and the original 3 drums of herbicides were transported off site for disposal in 1990. The spill area was fenced and signs were posted to prevent access.

FY07 Actions:

ADEC hired a term contractor to assess the current status of the site and provide any recommendations on future actions.

FY07 Response Fund Expenditures: \$ 85,323.00

FY07 Cost Recovery: State Owned – No Cost Recovery

FY08 Actions:

No activity in this period.

FY08 Response Fund Expenditures: \$ 0.00

FY08 Cost Recovery: State Owned – No Cost Recovery

FY09 Projected Actions and Expenditure Amounts:

Possible remedial measures include: address soil contamination on site or possible off site transport and disposal at an approved facility.

Estimated FY09 Costs: \$\$

Project/Site Name: **MarkAir – King Salmon**

Location: King Salmon, Alaska

Project Manager: O’Connell, Bill

Site ID Number: 1879

Tel: (907) 269-3057

Ledger Code: 14803580

Situation:

Groundwater in the area of the airport terminal has been impacted by leaking aboveground and underground fuel storage tanks as well as poor fuel handling and transfer practices. The resulting groundwater contamination is suspected of impacting a nearby potable water well and free product remains on the surface of the groundwater. Additional site characterization in 2007 did not fully delineate the extent of contaminated groundwater and free product recovery begun in 2007 continues into 2008. ADOT&PF is in the process of re-aligning the road in front of the terminal building potentially impacting existing monitoring wells, so additional site characterization will not be conducted until the project is complete

FY08 Actions:

Activities conducted in FY 08 included the installation and sampling of additional groundwater monitoring wells to delineate the extent of contamination, free product recovery and handling, and the sampling of potentially impacted drinking water wells.

FY08 Response Fund Expenditures: \$70,175.00

FY08 Cost Recovery: State Lead/Owned – No Cost Recovery

FY09 Projected Actions and Expenditure Amounts:

ADOT&PF is currently conducting a road and runway realignment project that could significantly impact the project area. At a minimum, groundwater sampling and free product recovery will continue, however if the road project destroys exiting monitoring wells, they will need to be replaced.

Estimated FY09 Costs: \$17,100.00

Project/Site Name: **North Delta Tank Farm – End of the Alaska Highway Arch**

Location: Delta Junction, Alaska

Project Manager: John Carnahan

Tel: (907) 451-2166

Site ID Number: 199233X117801

Tracking Number: 14811880

Situation:

The Former North Delta Tank Farm site was part of the Fort Greely Fuel Distribution System and was operated by the U.S. Army between 1954 and 1987. The site contained above-ground fuel tanks, a fuel pump station, and truck fill stands. The site is known to have had petroleum-hydrocarbon spills. Immediately adjoining the site is the Delta Junction Visitor Center owned by the city and operated by the Delta Junction Chamber of Commerce. The site is currently underutilized and one desired reuse project for the site is the “End of the Alaska Highway Arch.”

The Army conducted limited cleanup at the site, but not to the satisfaction of the state or the city. The site is currently owned by the State of Alaska, Department of Natural Resources, which is interested in conveying the property to the city once the environmental problems can be resolved.

In the spring of 2006, the City of Delta Junction applied for an environmental site assessment through DEC’s Brownfield Assessment (DBA) program. Because of the state interest in the site and its strong economic redevelopment potential, DEC completed the brownfield assessment.

FY07 Actions:

In November of 2006, the DEC term contractor completed an assessment that identified limited remaining soil that would likely impact the future use of the site as intended by the community. Contractor collected samples from the walls of the previous excavation completed by the Army, and found remaining diesel-contaminated soil. Plans were made for excavating the remaining contaminated soil and transporting it to Fort Greely for treatment.

FY07 Response Fund Expenditures: \$ 67,264.00
FY07 Cost Recovery: State Owned – No Cost Recovery

FY08 Actions:

After completing the final reporting on the most recent assessment work, a consultant developed the workplan for onsite delineation and excavation of approximately 800 cubic yards of contaminated soil and transport to Fort Greely for remediation. Contractor then arranged for transporting backfill to make the land ready for limited continued use by the community as a farmer’s market. Contractor completed documentation of the activities and provided recommendation for future assessment of groundwater.

FY08 Response Fund Expenditures: \$ 69,976.38
FY08 Cost Recovery: State owned - No Cost Recovery

FY09 Projected Actions and Expenditure Amounts:

The Contaminated Sites Program Federal Facilities section is working with Fort Greely to include funding to conduct a groundwater investigation at this site in the Fort Greely cleanup work plan in FY09.

FY09 Estimated Costs: \$ 0.00

Project/Site Name: **Noyes Slough**

Location: Fairbanks, Alaska

Project Manager: Sonja Benson

Site ID Number: N/A

Tel: (907) 451-2156

Tracking Number: 14231580

Situation:

Noyes Slough has been the subject of much discussion and various environmental projects in Fairbanks for several decades. Over the years DEC has received numerous complaints related to the slough, most notably involving illegal dumping of debris, raw sewage, and snow piles. Several known contaminated sites with associated solvent- and fuel-contaminated groundwater plumes are either adjacent to or near the slough, especially on its eastern end. Results of several historical surface-water and sediment sampling efforts have indicated that the slough itself may have some solvent, fuel, and heavy-metals contamination. Grassroots organizations, including the Noyes Slough Action Committee, which later was reorganized into the Tanana Valley Watershed Association (TVWA), the Fairbanks Paddlers Association, and local elementary school students, have conducted clean-up days and educational programs along the slough. Dredging of the slough has occurred in the past as well, but so far none of the various efforts have been successful in establishing Noyes Slough as a sustainable, freely flowing, and unpolluted water body.

In the summer of 2006, the TVWA applied to the U.S. Environmental Protection Agency (EPA), with DEC assistance, for a Targeted Brownfield Assessment (TBA) of Noyes Slough. This TBA, which EPA awarded to the TVWA in January of 2007, is part of TVWA's efforts to revitalize the slough by creating a canoe trail as a new community asset. In May of 2007 a Triad systematic planning meeting for the TBA was held in Fairbanks, facilitated by EPA and U.S. Army Corps of Engineers (USACE) staff. In support of this Triad meeting and the TBA, DEC initiated a project to develop a summary report and GIS map of environmental information on Noyes Slough. The bulk of information in this report comes from DEC file and complaint log reviews and historical aerial photographs of the area.

FY07 Actions:

In the spring and early summer of 2007 a DEC term contractor reviewed DEC files and complaint logs, interviewed knowledgeable persons, and obtained historical aerial photographs of the area surrounding Noyes Slough. A GIS map was generated of DEC interests, including contaminated sites and potential contamination sources. This information was used in the Triad planning meeting, and will, once revised and completed, form the basis for developing a sampling plan for the TBA that is planned for next year.

FY07 Response Fund Expenditures: \$ 20,257.00
FY07 Cost Recovery: \$ 0.00

FY08 Actions:

In the spring and early summer of 2007 a DEC term contractor reviewed DEC files and complaint logs, interviewed knowledgeable persons, and obtained historical aerial photographs of the area surrounding Noyes Slough. A GIS map was generated of DEC interests, including contaminated sites and potential contamination sources. This information was used in the Triad planning meeting, and will, once revised and completed, form the basis for developing a sampling plan for the TBA that is planned for next year.

FY08 Response Fund Expenditures: \$ 16,914.00
FY08 Cost Recovery: \$ 0.00

FY09 Projected Actions and Expenditure Amounts:

None

Estimated FY09 Costs: \$ 0.00

Project/Site Name: **Old Palmer Laboratory**

Location: Palmer, Alaska

Project Manager: Jim Frechione

Site ID Number:

Tel: (907) 451-5175

Ledger Code: 14224590

Situation:

The former DEC lab in Palmer was no longer needed as a result of the new lab constructed in Anchorage. In order to address the close out of the lease agreement for the former lab property, the facility had to be assessed for hazardous substance contamination in the building. A term contractor was hired to assess and remediate any hazardous substance contamination at the site.

FY07 Actions:

ADEC hired a term contractor to assess the current status of the site and provide any recommendations on future actions.

FY07 Response Fund Expenditures: \$131,730.00

FY07 Cost Recovery: State Owned - No Cost Recovery

FY08 Projected Actions and Expenditure Amounts:

No further action required at this site

Estimated FY08 Costs: \$0

Project/Site Name: **Old Village Store – Mountain Village**

Location: Mountain Village, Alaska

Project Manager: Carnahan, John

Site ID Number: 4156

Tel: (907) 451-2166

Ledger Code: 14244560

Situation:

In 2005, EPA contractors conducted a Targeted Brownfield Assessment of the referenced facility. The tribe is interested in redeveloping this location for mixed-use commercial project. Part of that redevelopment involves assessment and remediation of known and suspected petroleum and chemical releases. Unfortunately, EPA did not complete the interior assessment and was not able to remove waste chemical containers, or sample beneath the structure.

The community requires direction on how best to manage hazardous materials abandoned in the building in order to prevent additional releases resulting from improper storage. There is also a high degree of concern that the structure provides an attractive nuisance and that it is prone to vandalism and possibly fire, which would result in additional releases of hazardous substances to the environment.

FY08 Actions:

DEC contractors completed an inventory of chemicals improperly stored in the abandoned store, and conducted sampling around the structure to provide evidence of potential releases associated with chemical storage. The consultant provided guided direction to the tribe to remove and relocate chemicals to better prevent a future release. Final reporting provided direct steps to ensure the safe and proper demolition of the building in order to complete cleanup associated with adjacent tanks, asbestos, and lead paint.

FY08 Response Fund Expenditures: \$14,978.00

FY08 Cost Recovery: State Owned - No Cost Recovery

FY09 Projected Actions and Expenditure Amounts:

None

Estimated FY09 Costs: \$0.00

Project/Site Name: **Port Heiden Former Tank Farm**

Location: Port Heiden, Alaska

Project Manager: Carnahan, John

Site ID Number: N/A (reuse/redevelopment)

Tel: (907) 451-2166

Ledger Code: 14244760

Situation:

The site is known to be the bulk fuel storage area for the past 20 years. Two 250,000-gallon tanks were once located in the old village of Meshik, but were moved to their current location. The tanks were decommissioned when a new bulk fuel tank farm was completed in 2002. The tanks are situated on the same pad area as the new tank farm. The Meshik Seafood Co-op has plans to redevelop the tanks into shop like storage buildings and utilize them during the off season months to do boat repairs and store boat equipment. However, the tanks are currently situated within a bermed and reportedly lined containment area. It is not clear if the site is actually lined, and if so, whether it was ever breached. The community requires that area surrounding the tanks be assessed to determine the petroleum contaminant concentrations, and delineate the volume of soil that may require management in order to make the tanks readily accessible for use as shop facilities, after they are retrofitted. It is anticipated that much of the soil within the berm may need to be removed as contaminated or relocated in order to create access

FY08 Actions:

A Phase I Environmental Site Assessment was conducted in compliance with ASTM E1527-05 at the site and a work plan was developed. Field visits were conducted to determine the potential risk of exposure for future use. Upon completion of the field effort, the consultant prepared a final report that summarized their findings and made a recommendation for reuse of the site by the community. Based on the findings of the report, the community is moving forward with plans for reuse of the site.

FY08 Response Fund Expenditures: \$42,028.00

FY08 Cost Recovery: State owned - No Cost Recovery

FY09 Projected Actions and Expenditure Amounts:

None.

Estimated FY09 Costs: \$ 0

Project/Site Name: **Red Dog Mine Fugitive Dust Project**

Location: Near Kivalina, Alaska

Project Manager: Rich Sundet

Tel: (907) 269 - 7578

Site ID Number: 1991320926601

Tracking Number: 14864860

Situation:

Red Dog Mine is located about 20 miles south of Kivalina and is one of the world's largest zinc and lead mines. The port and mine sites is operated by Teck Cominco and owned by NANA Corporation. The road is owned by Alaska Industrial Development and Export Authority (AIDEA) which passes through the Cape Krusenstern National Monument, managed by the National Park Service. The mineral soil is processed at the mine, which is located about 50 miles from the ocean, and the concentrate ore is transported by covered trucks to storage buildings at the port. During the open water period, the ore is moved by conveyor belt system from the buildings to barges, and transported from the barges to 3.0 miles off shore and placed into larger vessels.

Elevated levels of zinc and lead were detected along the road corridor between the mine and port in 1991. Subsequent investigations have determined that fugitive dust from the road corridor has resulted in zinc, lead and cadmium contamination along the 52 mile road.

In 2001, Teck Cominco elected to perform a risk assessment to determine whether the contamination poses a risk to human health and the environment. They began collecting soil and water data to assist in characterizing the site and for use in the risk assessment.

FY07 Actions:

DEC continued to review responses from Teck Cominco's contractor in response to comments on the draft risk assessment report.

FY07 Response Fund Expenditures: \$ 45,630.00

FY07 Cost Recovery: \$ 53,896.00

FY08 Actions:

DEC discussed with Teck Cominco comments that remained outstanding regarding Teck Cominco's draft risk assessment report to address fugitive dust issues between the port and Red Dog Mine. DEC entered into comment resolution with Teck Cominco concerning the draft risk assessment report and approved of the final risk assessment report. DEC requested a management plan to address the risks to human health and the environment that were identified in the report.

FY08 Response Fund Expenditures: \$ 37,203.00

FY08 Cost Recovery: \$ 46,193.00

FY09 Projected Actions and Expenditure Amounts:

DEC will issue a Responsiveness Summary to address comments provided by various stakeholders regarding the draft risk assessment report. DEC will review Teck Cominco's draft risk management plan to address fugitive dust.

Estimated FY09 Costs: \$24,800.00

Project/Site Name: River Terrace RV Park

Location: Soldotna, Alaska

Project Manager: Rich Sundet

Site ID Number: 1991230918701

Tel: (907) 269 - 7578

Ledger Code: 14974360

Situation:

River Terrace RV Park (RVRVP) is a 10-acre parcel located adjacent to the Kenai River in Soldotna. A dry cleaner facility operated there from the 1960s through the 1980s. Currently the parcel is occupied by a trailer court, a recreational vehicle park and associated facilities, including a Laundromat.

In 1992, a complaint of leaking barrels was received by DEC and 22 barrels of waste oil and other hazardous substances were identified on site. One of the 55 gallon drums was labeled "Perchloroethylene" which is also known as tetrachloroethylene or PCE. The owner was requested to have an environmental contractor remove the barrels and investigate the property based on its past use as a dry cleaning facility. The assessments identified soil contamination above DEC cleanup levels for petroleum hydrocarbons and PCE.

In 1997, DEC evaluated the information from the site investigation and established alternative cleanup levels (ACL) for the site. The groundwater monitoring results identified PCE above the ACL and the property owner developed a plan to address the problems. The owner excavated approximately 3,300 cy of soil under the direction of EPA and treated it on-site using a soil vapor extraction system.

Following a settlement agreement with the property owner DEC assumed the lead role to investigate the site and performed a water quality and sediment investigation in the Kenai River adjacent to RTRVP. Furthermore, a Remedial Investigation/Feasibility Study (RI/FS) was prepared that further characterized the site and evaluated several remedial alternatives to treat the contamination.

An interim treatment system to treat storm water discharge prior to it entering the Kenai River was installed. A Record of Decision established cleanup levels at the site and specified Hydrogen Release Compound (HRC) as the method to treat the groundwater. The injections would occur in a phased approach. In fall 2000, 56 HRC injection points were installed in Phase I and in 2001, another 51 injection wells were installed under Phase II.

In 2002 DEC determined that the degradation had stalled at the cis 1,2-dichloroethylene (cis DCE) stage and conducted a pilot bioaugmentation study to determine if microbes could facilitate the break down of the cis DCE. DEC continued to monitor the treatment at the site and evaluate trends in contamination in both the groundwater and the sediments in the Kenai River. In addition to cleanup activities, funding as been provided for legal advice on cleanup matters, litigation of the State's cost recovery action, and litigation to retain access to the site for the assessment and cleanup work.

FY07 Actions:

DEC performed a Phase V treatment by injecting Hydrogen Release Compound into selected injection points in the lower plume area as well as into several new injection wells installed at that time. Monitor well 47 was installed to monitor contaminants in the deeper till of the lower plume area. DEC continued groundwater monitoring at the site by performing semi-annual monitoring in spring and fall. Department of Law responded to a motion by the property owners to vacate the 2000 Consent Decree.

FY07 Response Fund Expenditures: \$198,744.00

FY07 Cost Recovery: \$ 0.00

FY08 Projected Actions and Expenditure Amounts:

Continue semi-annual groundwater monitoring and pore water/sediment sampling in spring 2008.

Estimated FY08 Costs: \$120,000

Project/Site Name: **Sand Point Abandoned Drum Site**

Location: Sand Point, Alaska

Project Manager: John Brown

Tel: (907) 269-7688

Site ID Number: 07259904601

Ledger Code: 14241960

Situation:

ADEC responders spent a considerable amount of time in a multi-agency effort to remove 605 abandoned drums in an old rock quarry in Sand Point between the airport and town. The EPA, ADEC, City of Sand Point, Unga Tribal Council, Qagun Tayagungin Tribal Council, and the Aleutian Pribilof Islands Association are coordinating efforts to clean up this site.

Cleanup actions completed thus far, which involved CART staff, included recovering liquids released from the drums, characterizing the contents of the drums, and consolidating the drums contents into their various recyclable groups (e.g. used oil, gasoline, diesel fuel, antifreeze, water, and regulated hazardous waste). Twenty-five drums were segregated as potential hazardous waste. Diesel fuel, gasoline, and antifreeze were consolidated into sound drums and removed from the site for consumption by the City of Sand Point.

The final volumes of consolidated liquids are as follows:

- Gasoline - 18 drums or 990 gallons.
- Diesel fuel – 12 drums or 660 gallons.
- Antifreeze – 10 drums or 550 gallons.
- Used oil – 13,000 gallons.
- Water – 2,500 gallons.
- Regulated Hazardous Waste – potential 25 drums (laboratory analysis pending)

The second phase of the cleanup started in August 2008 with the site characterization. The Qagun Tayagungin Tribal Council sponsored the drafting of a Quality Assurance Program Plan that provides guidance and structure for the elements of Phase II, which will include funding from Federal sources. The Unga Tribal Council hired Braunstein Geological & Environmental Consultants (BGES), an environmental services consultant, to perform the necessary field and analytical work to make a determination on the status of the used oil, impacted soils, and potential hazardous waste at the site. BGES has completed the field work and is drafting a cleanup plan for the impacted soil, and also a report and interpretation of the analytical results for the consolidated liquids.

FY 08 Action:

ADEC reviewed and approved the Quality Assurance Program Plan.

On July 6, 2007 one ADEC responder traveled to the assist with the containment and recovery of the free floating oil in the secondary containment and began the characterization of the contents of the drums. One hundred ninety nine gallons of oil and nine hundred gallons of water were recovered from the spill site.

On August 13, 2007 three ADEC responders traveled to the drum site and completed the drum content characterization. The City of Sand Point hired three additional workers under the direct supervision of ADEC to assist with the liquid consolidation, drum cleaning, and crushing. The drum characterization was completed on August 22, 2007. The City of Sand Point completed the liquids consolidation a week later.

On August 12, 2008 a cost recovery packet was forwarded to the Department of Law for \$46,362.67.

FY08 Response Fund Expenditures: \$ 30,911.00

FY08 Cost Recovery: \$ 0.00

FY09-Projected Actions and Expenditure Amounts:

ADEC will monitor the cleanup of impacted soils at the rock quarry, and review the final cleanup report. In the event the cleanup cannot meet the lowest practicable level of contamination the case will be forwarded to the contaminated sites program for additional oversight.

Estimated FY 09 Costs: \$5,000.00

Project/Site Name: **Selawik Tank Farm Release**

Location: Selawik, Alaska

Project Manager: Paul Lhotka

Site ID Number: 08389902301

Tel: (907)451-2175

Ledger Code: 14248560

Situation: On 1-23-2008, Selawik Native Store employees contacted ADEC to report that an automated overfill protection valve on the tank farm's day tank had malfunctioned and released an estimated 5000 gallons of diesel into secondary containment. ADEC responded with pumps and response equipment and began recovering product. An estimated 2550 gallons of fuel oil were recovered and transferred to a tank dedicated to hold only the recovered oil. Equipment breakdowns, fresh snow in the fuel, extreme cold temperatures and wind hampered the recovery effort. The decision was made to recover the remaining fuel and de-water the containment in spring. On 5-18-08 ADEC continued recovery efforts using a drum skimmer, rope mop, and sorbents to recover the remaining fuel. An additional 1900 gallons were recovered before reaching clean-up end points. The Native Village of Selawik hired a contractor to conduct routine tank farm maintenance and repair the automated fuel transfer overfill protection. The case is closed and no further action is anticipated by ADEC

FY08 Actions:

ADEC responded with pumps and response equipment and began recovering product. An estimated 2550 gallons of fuel oil were recovered and transferred to a tank dedicated to hold only the recovered oil. Equipment breakdowns, fresh snow in the fuel, extreme cold temperatures and wind hampered the recovery effort. The decision was made to recover the remaining fuel and de-water the containment in spring. On 5-18-08 ADEC continued recovery efforts using a drum skimmer, rope mop, and sorbents to recover the remaining fuel. An additional 1900 gallons were recovered before reaching clean-up end points. The Native Village of Selawik hired a contractor to conduct routine tank farm maintenance and repair the automated fuel transfer overfill protection. The case is closed and no further action is anticipated by ADEC

FY08 Response Fund Expenditures: \$ 20,908.00
FY08 Cost Recovery: \$ 0.00

FY08 Projected Actions and Expenditure Amounts:

None projected

Project/Site Name: **Shishmaref Tank Farm Spill**

Location: Shishmaref, Alaska

Project Manager: Paul Lhotka

Spill Number: 08389909901

Tel: (907)451-2175

Ledger Code: 14257660

Situation:

On 4-18-2008, The City of Shishmaref called to report the discovery of 100-200 gallons of diesel fuel near the city's water plant. Local responders conducted the initial response, while ADEC mobilized Alaska Chadux Corporation to assist. Investigation into the cause revealed that approximately 4,300 gallons were released when tank farm operators opened bulk tank valves and inadvertently overfilled the water plant's day tank. The spill site was delineated while responder's worked to remove and stockpile contaminated snow into lined storage cells. Remaining free product was pumped into a designated storage tank while sandbag berms and underflow dams were constructed to catch residual fuel carried by spring run-off. On 6-19-08, ADEC returned to complete the clean-up and recover product from the contaminated snow cell. The remaining response equipment was demobilized and the site is being transferred to Contaminated Sites for future monitoring.

FY08 Actions:

Local responders conducted the initial response, while ADEC mobilized Alaska Chadux Corporation to assist. The spill site was delineated while responder's worked to remove and stockpile contaminated snow into lined storage cells. Remaining free product was pumped into a designated storage tank while sandbag berms and underflow dams were constructed to catch residual fuel carried by spring run-off. On 6-19-08, ADEC returned to complete the clean-up and recover product from the contaminated snow cell. The remaining response equipment was demobilized and the site is being transferred to Contaminated Sites for future monitoring.

FY08 Response Fund Expenditures: \$ 28,267.00

FY08 Cost Recovery: \$ 0.00

FY09-Projected Actions and Expenditure Amounts:

None projected

Project/Site Name: **Sterling ZipMart**

Location: Sterling, Alaska

Project Manager: Linda Nuechterlein

Site ID Number: 1995230028501

Tel: (907)269-7530

Ledger Code: 14662160

Situation:

The Sterling ZipMart facility was a gas station which opened in 1985. The original underground storage tank (UST) system consisted of two 10,000 gallon steel tanks with a single wall pipe leading to a dispenser island. Whittier Properties, Inc. owned and operated the facility from April 1990 to December 2000. In August-September, 1993, the pipeline system was upgraded to double walled piping. In August, 1995, a new 20,000 gallon, three-compartment tank was installed to replace the two original steel tanks. Prior to the tank upgrade, only gasoline was dispensed. After installation of the three compartment tank, both gasoline and diesel fuels were available. Minor soil and groundwater contamination was encountered at the time of a 1995 tank upgrade. No cleanup action was conducted because it was not reported as a significant problem.

In December 2001, when Whittier Properties was closing the facility, additional contamination assessment was performed. The 2001 fieldwork (conducted initially by the Responsible Party (RP) under the ADEC Financial Assistance Program) identified significant soil and groundwater contamination associated with the piping and fuel dispensers. Thirteen inches of fuel product were detected in two 40 foot deep monitor wells.

A broken fill pipe in the upgraded underground storage tank system has been determined to be the cause of significant fuel releases at the Sterling ZipMart facility. The exact quantity of fuel spilled is unknown, but the Department of Environmental Conservation (DEC) has determined that the quantity exceeds 50,000 gallons, based on a review of fuel records.

DEC assumed the lead role on the project following the RP's indication that they were unable to continue. There were numerous monitor wells installed at the site and on properties adjacent to and downgradient of the Sterling ZipMart. The contamination migrated in a southeasterly direction and poses a risk to several drinking water wells in the area. A free product recovery system was installed resulting in more than 14,500 gallons of product recovered. A free product recovery system was installed resulting in more than 14,500 gallons of product recovered. A soil vapor extraction system (SVES) was also installed which recovered about 2,750 gallons of product. In 2007 the SVES was expanded to the east of the existing SVES. This expansion allowed for treatment and cleanup of the secondary source area on the Sterling Baptist Church property. The SVES was operated throughout the winter of 2006-2007 and removed an additional 750 gallons of gasoline.

FY07 Actions:

The groundwater and drinking water wells in the area continued to be monitored and define the distal extent of the contamination. The cleanup actions included: continued operation of a soil vapor extraction system and expand it to the Sterling Baptist Church property.

FY07 Response Fund Expenditures: \$127,228.00

FY07 Cost Recovery: \$ 0.00

FY08 Actions:

The extent of the free product and groundwater (GW) contamination has been reasonably well defined, and a soil vapor extraction (SVE) system continued to operate near the release area. Biannual groundwater monitoring and sampling of target drinking water wells was on-going during FY 08.

FY08 Response Fund Expenditures: \$ 128,476.00

FY08 Cost Recovery: \$ 0.00

FY09 Projected Actions and Expenditure Amounts:

Groundwater monitoring suggests that the dissolved-phase contaminant plume may still be advancing. Therefore, a pilot study has been proposed to evaluate the effectiveness of treating the down-gradient portion of the plume by injecting an oxygen source (ORC) into the aquifer to enhance natural attenuation and slow the further advance of the down-gradient dissolved phase gasoline plume.

There are also plans to decommission the Underground Storage Tank (UST) and stockpile up to 500 cubic yards of petroleum contaminated soil. A DEC contractor will conduct a feasibility study to evaluate various treatment options for the contaminated stockpiled soil.

FY09 Projected Cost: \$338,900

Project/Site Name: **Stevens Village Old School**

Location: Stevens Village, Alaska

Project Manager: Cardona-Marek, Tamara

Site ID Number: 3075

Tel: (907) 269-7578

Ledger Code: 14103080

Situation:

Old BIA School building had three 4,000 gallon ASTs inside a bermed area. Building removed in 2003 and soils characterized. Tanks and contaminated soil removed in 2004. Soil at limits of excavation (up to 8 feet bgs) detected DRO levels up to 25,300 mg/kg. 1,500 cubic yards of stockpiled soil in landfill was characterized in 2007 (DRO ranged from 134-13,100 mg/kg). Site is now location for a medical clinic. Groundwater (approximately 9 feet bgs) characterization was attempted in 2007. Well points along the Yukon River bank showed no contamination above cleanup levels. Record of decision dated February 6, 2008 indicates a conditional closure was granted for this site.

FY08 Actions:

Hired contractor to assess groundwater conditions and the soil stockpile in August 2007. Groundwater was not encountered on site (above permafrost level) but four temporary well points sampled ground -surface water interface along Yukon River. No contamination above cleanup levels was detected in water samples. The soil stockpile (approximately 1400 cubic yards) located at the community landfill was sampled.

FY08 Response Fund Expenditures: \$21, 878.00

FY08 Cost Recovery: State Owned - No Cost Recovery

FY09 Projected Actions and Expenditure Amounts:

No expenditures projected at this time.

Estimated FY09 Costs: \$0

Project/Site Name: **Togiak Fisheries**

Location: Togiak

Project Manager: Eileen Olson

Site ID Number: 1987250132701

Tel: (907) 269-7527

Ledger Code: 14895460

Situation: This five-acre cannery site is located on a spit across Togiak Bay from the city of Togiak. Gasoline and diesel spills (estimated in excess of 45,000 gallons) reportedly occurred there since 1988. The most recent release was a 260-gallon diesel release from a valve on a line between a supply tank and incinerator discovered on August 1, 2005. Extensive groundwater and soil contamination, including contamination of the adjacent river sediments, was largely mitigated through excavation and on-site thermal remediation by 2006. Togiak Fisheries initiated the risk assessment process for their property in 2005, with the final document submitted in August 2007. As of November 2008 the risk assessment was approved and conditional closure is expected to be granted before the end of the calendar year, with only long-term monitoring remaining to be done.

FY07 Actions:

ADEC provided regulatory oversight of the risk assessment process that included review of work plans and associated documents.

FY07 Response Fund Expenditures: \$ 12,334.00

FY08 Cost Recovery: \$ 0.00

FY08 Actions:

Reviewed and approved the risk assessment that will be subject to institutional controls and other conditions to be set forth in Conditional Closure and Record of Decision documents. Received and approved groundwater monitoring report and proposed groundwater sampling schedule.

FY08 Response Fund Expenditures: \$ 1,908.00

FY08 Cost Recovery: \$ 3,701.00

FY09 Projected Actions and Expenditure Amounts:

Issue conditional closure documents, establish institutional controls (ICs); review future groundwater monitoring submittals and monitor for conditions specified in the closure decision document.

Estimated FY09 Costs: \$ 5,000

Project/Site Name: Trans-Alyeska Pipeline, RGV-32

Location: Between Pump Stations 4 and 5 near Coldfoot, Alaska

Project Manager: Walt Sandel/Ed Meggert

Tel: 451-2124

Spill Number: 07399900901

Tracking Number: 14164560

Situations:

On January 9, 2007 Alyeska Pipeline Service Company discovered a spill at the Trans Alaska Pipeline Service (TAPS) Remote Gate Valve (RGV) 32 location. The spill volume was determined to be 400-500 gallons of crude oil. The spill was caused by a loose valve on a 2" threaded O-ring. The spill was from an above ground section of the pipeline to the RGV pad. An Incident Management Team was stood up at the Fairbanks Emergency Operation Center. The pipeline was shut down for a few (about six) hours that day.

FY07 Actions:

Initiated cost recovery procedures/ Case closed.

FY07 Response Fund Expenditures: \$ 11,288.00

FY07 Cost Recovery: \$ 12,633.00

FY08 Projected Actions and Expenditure Amounts:

Case closed.

Project/Site Name: **Weeks Field Area Wide**

Location: Fairbanks, Alaska

Project Manager: Carnahan, John

Site ID Number: none (areawide)

Tel: (907) 451-2166

Ledger Code: 14231680

Situation:

Past investigations associated with the Fairview Manor site indicated that solvents were present that were probably associated with off-site sources. Historical research into the local area identified several possible causes of contamination:

- General use of the area as the Weeks Field airfield prior to 1951;
- A former gas station, Fairway Service Station, located at the northeast corner of Airport Way and Cowles Street, which operated until 1968;
- A dry cleaners located in Shoppers Forum on the south side of Airport Way along Kennicott Avenue, which has operated nearly continuously under various names at least since 1961; and
- A dry cleaners located in the Arctic Bowl at 10th Avenue and Cowles Street that operated from at least 1961 to 1973.

This areawide project was established to investigate the sources of solvents that had been observed in the groundwater and to identify other potential source of contamination associated with the Weeks Field area that may hamper development in the area. When this project began, ADEC was also coordinating the City of Fairbanks and the Environmental Protection Agency on development plans for the Fairview Manor site, which included a \$70 million proposal for senior housing.

FY08 Actions:

An areawide investigation was complete by a contractor in FY2008. The investigation included soil and groundwater sampling in or near areas of suspected source contamination. Sampling activities were completed in state right-of-way, except for sampling conducted on the Fairbanks North Star Borough property. The investigation confirmed that Arctic Bowl and Shoppers Forum were a source of solvent contamination. Petroleum contamination was also found at low levels at the former Fairway Service Station. Additional research into land ownership and tenants was also conducted for two properties in order to identify potentially responsible parties.

FY08 Response Fund Expenditures: \$ 95,182.00

FY08 Cost Recovery: \$ 0.00

FY09 Projected Actions and Expenditure Amounts:

No work is planned for FY09. At locations where contamination was identified, letters will be sent to potentially responsible parties to request further action.

Estimated FY09 Costs: \$0

Project/Site Name: **West Nome Tank Farm**

Location: Nome, Alaska

Project Manager: Sharon Richmond

Site ID Number: 575

Tel: (907) 451-2158

Ledger Code: 14934760

Situation:

This former US Air Force tank farm was built to support the WWII Lend/Lease Program. The property is owned by the USAF and the tank farm was operated from 1944 to 1991 by the USAF and its lessees, Chevron (Standard Oil) and Crowley Maritime. Soil and groundwater is contaminated with petroleum due to historical spills and refueling operations. Free product has been observed on the property and at the water table on the property boundary. Contaminated groundwater is present on and off-site; fuel impacts extend to the Snake River (an anadromous river) and Snake River sediment. Surface water quality violations have not been observed. PCBs and pesticides are potential contaminants of concern. The site consists of the former tank farm property, former fill stands, and remaining pipelines associated with the former tank farm. The USAF Relative Risk Evaluation Worksheets (9/4/95) ranked the former tank farm and pipeline sites as MEDIUM and LOW overall risks, respectively. The USAF worksheets also indicated that limited information is available from the 1988 Woodward-Clyde field investigation and the analytical findings from this report are valueless. A section of pipeline that crossed the Snake River was removed in April 1994; potential contamination along the underground portion of this pipeline and other pipelines has not been completely evaluated. Chevron performed significant characterization of soil contamination along the property boundary and management of contaminated soil and groundwater during the City of Nome's utility upgrade along Port Road in 2004/2005. Crowley conducted a site characterization study in 2008. The USAF is compiling a complete historical site summary report. Contamination and an interim-action treatment system (currently inactive) could interfere with the City's ability to tie in new utility customers.

FY08 Actions:

This federally-owned site is not DSMOA-eligible because there are multiple responsible parties (RPs: US Air Force, Chevron, and Crowley Maritime). CS staff initiated and participated in the development, approval, and implementation of a site characterization plan so that a corrective action plan can be developed, approved, and implemented in 2009. AG Office assisted during cost allocation negotiations among RPs and compelling the RPs to conduct the 2008 fieldwork; enforcement actions will follow if RPs do not meet requirements for timely site investigation and cleanup. DEC and AGO participated in meetings in Nome and Anchorage with RPs and interested stakeholders (Nome Joint Utilities Systems and the City of Nome), reviewed files, and responded to document submittals.

FY08 Response Fund Expenditures: \$17,156.00

FY08 Cost Recovery: \$ 0.00

FY09 Projected Actions and Expenditure Amounts:

CS will review 2008 field documents and reports; develop, review, approve and oversee implementation of 2009 proposed plans and work plans for a final remedial action; develop and implement a community/public outreach and participation plan. Continued AG assistance will be required during cost allocation negotiations, potential enforcement actions, and development of decision documents. Multiple project management meetings, stakeholder meetings, and public meetings will be held in Nome and Anchorage, as appropriate.

Estimated FY09 Costs: \$100,000.00

Project/Site Name: **Wrangell Institute**
Location: Southeast/Wrangell, Alaska
Project Manager: Anne Marie Palmieri
Site ID Number: 1999130128001

Tel: (907) 766-3184
Tracking Number: 14646860

Situation:

The Wrangell Institute was built in 1932 by the Bureau of Indian Affairs and used as a school for Native children until the 1970s. In 1978, the facility was transferred to the Cook Inlet Regional, Inc., and was used for several years as housing for the Forest Service for the Young Adult Conservation Corps. In 1995, ownership of the property was transferred to the City of Wrangell.

Contamination at the site is the result of leaks and spills along the heating fuel transfer and fueling systems. On-site there were two large 20,000 gallon fuel tanks which stored heating oil for the school. The fuel was transferred from tankers uphill to the tanks by a pipeline and then dispersed to the individual fuel tanks at each building by another pipeline.

In 1999, the City removed all of the tanks and excavated 750 cubic yards of contaminated soil which was stockpiled in a rockpit. In 2001, the City performed a site assessment of the property, demolished all of the buildings, excavated additional contaminated soil which was stockpiled near the site, and collected samples to determine levels of contamination remaining on-site. In fall 2002, DEC contacted the Potentially Responsible Parties (PRPs) to begin discussions about future cleanup actions. In October 2003, DEC performed a thorough site characterization of the site, installing monitoring wells, and collecting soil, sediment, groundwater, and surface water samples.

FY07 Actions:

As much as 8,000 cubic yards of petroleum-contaminated soil remained on site in the spring of 2007. The groundwater is also contaminated with diesel-range organics and polycyclic aromatic hydrocarbons. In March 2007, DEC contracted with SLR Alaska, Inc. to develop workplans for soil removal and water monitoring. In April, SLR conducted additional site characterization to help determine soil disposal options.

The Department of Justice signed a Consent Decree in June resolving issues of who pays for which part of the cleanup costs. The State will receive \$2.35 million as reimbursement for past and future costs incurred by both the State and the City of Wrangell. This money will also pay for cleanup and long-term monitoring. The City requested that DEC conduct the work on the City's behalf, brokering the settlement and managing the cleanup.

FY07 Response Fund Expenditures: \$ 36,100.00
FY07 Cost Recovery: \$ 0.00

FY08 Actions:

During FY08, DEC issued a contract to a term contractor for the excavating and stockpiling of contaminated soil. Approximately 5500 cubic yards of contaminated soil was excavated and stockpiled in accordance with DEC regulations. The excavation holes were sampled and backfilled with clean soil. In Fall 2007, fieldwork ceased due to the fall rains and the site was secured for the winter. Fieldwork resumed in Spring 2008 and additional soil was excavated and stockpiled. A total of almost 11,000 cubic yards of soil was excavated and stockpiled on-site. All excavations were sampled and backfilled.

FY08 Response Fund Expenditures: \$ 543,895.00
FY08 Cost Recovery: \$ 1,907,038.00*

*Includes penalties and settlements.

FY09 Projected Actions and Expenditure Amounts:

During FY09, the final site excavating activities will be completed and the stockpiles will be secured. The DEC term contractor demobilized from the site. DEC contracted with a term contractor specializing in disposal of contaminated soil to send 400 cubic yards of highly contaminated soil to a landfill in Oregon.

In FY09, DEC will also transport all of the remaining contaminated soil to the Wrangell Landfill to be used as cover material during the closure of the landfill. The original settlement agreement for the cleanup of the Wrangell Institute specified that the City and Borough of Wrangell would transport the soil, however based upon the increased volume in soil, DEC has agreed to transport the soil. The settlement agreement will be amended to reflect this change.

Estimated FY09 Costs: \$739,570

OIL AND HAZARDOUS SUBSTANCE RELEASES

ALASKA STATUTES

Sec. 46.08.060. Report. (a) The commissioner shall make available a report to the legislature not later than the 10th day following the convening of each first regular session of the legislature. The commissioner shall notify the legislature that the report is available. The report may include information considered significant by the commissioner but must include:

- (1) the amount of money expended by the department under AS 46.08.040(a) during the preceding two fiscal years.
 - (2) The amount and source of money received and money recovered by or on behalf of the department during the preceding two fiscal years under
 - (A) AS 46.08.020; and
 - (B) AS 46.08.025;
 - (3) a summary of municipal participation in the department's responses that were paid for by the fund;
 - (4) a detailed summary of department activities in responses paid for by the fund during the preceding two fiscal years, including response descriptions and statements outlining the nature of the threat; in this paragraph, "detailed" includes information describing each personal services position and total compensation for that position, each contract in excess of \$10,000, and each purchase in excess of \$10,000; and
 - (5) the projected cost to the department for the next two fiscal years of monitoring, operating, and maintaining sites where response has been completed or is expected to be continued during the next two fiscal years.
- (b) As part of the department's on-going identification efforts associated with oil spill or hazardous substance release or waste sites, the commissioner shall include in the report under this section
- (1) the number of sites that are included in the department's contaminated sites data base, whether the site is active or closed; and
 - (2) a prioritized listing of those sites, both statewide and by community, based on the immediate and long-term threats to the public health or welfare or to the environment.
- (c) In addition to the department's report required under (a) of this section, the governor shall submit a report about use of the fund during the previous two fiscal years to the legislature not later than the 10th day following the convening of each first regular session of the legislature. In the report, the governor shall describe in detail the governor's use of money from the fund, with separate explanations, by agency, of the activities that were paid for under the authority of AS 46.08.045.
