## **Introduction**

The Oil and Hazardous Substance Release Prevention and Response Fund (Response Fund) was created by the Legislature in 1986 to provide a readily available funding source to investigate, contain, clean up and take other necessary action to protect public health, welfare and the environment from the release or threatened release of oil or a hazardous substance. Alaska Statute 46.080.030 states: “ It is the intent of the legislature and declared to be the public policy of the state that funds for the abatement of a release of oil or a hazardous substance will always be available.” (SLA 1986 Sec.1 Ch. 59).

The statutes governing the Response Fund were amended in 1989, 1990, 1991, 1994, 1999, and 2006. These amendments increased the scope that defines how the Response Fund can be used and it also increased the Department of Environmental Conservation’s (DEC) reporting requirements. In addition, the 1994 amendment made major changes to the Response Fund structure by dividing the Response Fund into two separate accounts. The first account is the response account and the second account is the prevention account. The changes became effective on July 1, 1994. The diagram on page three illustrates the current structure of the Response Fund.

The 1999 amendment changed the reporting requirement on the status of the fund from an annual report to the Legislature to a biennial report. The 2006 amendment changed the surcharge levied on crude oil produced in the state. The legislation imposed a prevention account surcharge of \$.04 (formerly \$.03) per barrel of oil produced from each lease or property in the state, less any oil the ownership or right to which is exempt from taxation. Sec. 26 of AS 43.55.201 was also amended to change the response account surcharge from \$.02 to \$.01 per barrel of oil produced from each lease or property in the state.

## **Response Account**

The response account may be used to finance the state’s response to an oil or hazardous substance release disaster declared by the governor, or to address a release or threatened release that poses an imminent and substantial threat to the public health or welfare, or to the environment. To access the response account for any incident other than a declared disaster, DEC must notify the governor and the Legislative Budget and Audit Committee within 120 hours of using the money from this account.

The response account is financed by a \$.01 per barrel surcharge and money recovered from responsible parties. The surcharge is suspended when the combined balance of the surcharge account, the response mitigation account and the unreserved and unobligated balance in the response account reach \$50 million. The account

balance reached \$50 million for the first time during the quarter ending December 31, 1994. Therefore, beginning April 1, 1995, the surcharge collection was suspended.

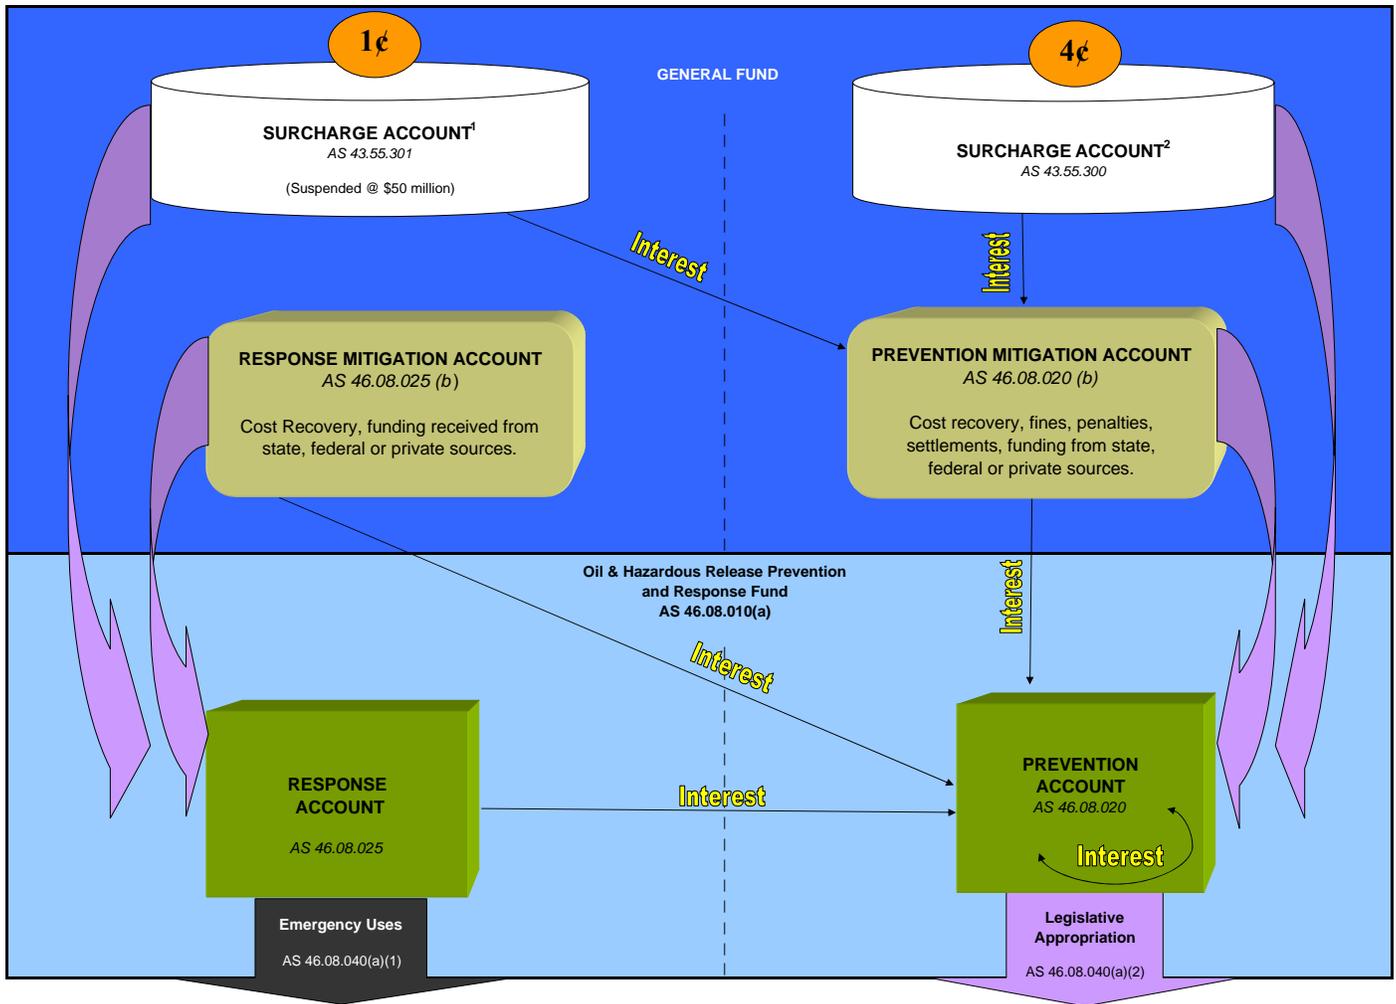

Access to the fund for the response to the North Slope Pipeline spills occurred on November 20, 2006. This action lowered the balance of the account below \$50 million. On April 1, 2007, the Department of Administration imposed the \$.01 cent surcharge to restore the balance to \$50 million. The combined balance of the response account as of June 30, 2009 is \$45.8 million. As a result, the \$.01 cent surcharge has remained on through the Fiscal Year 2010.

### **Prevention Account**

The prevention account may be used to respond to oil and hazardous substance releases that have not been declared a disaster by the governor. In addition, the prevention account is also used to fund Alaska's oil and hazardous substance release response and prevention programs. The Legislature appropriates money from the prevention account to support DEC for spill prevention and preparedness planning activities (AS 46.08.040(a)(2)).

The prevention account is financed with a \$.04 per barrel surcharge and fines, settlements, penalties and interest.

# Oil & Hazardous Substance Release Prevention and Response Fund (OHSRPRF)

- USES:**
- \* Investigate, evaluate, contain, cleanup, monitor and assess a release or threatened release of oil or hazardous substance that poses an imminent and substantial threat to public health or welfare or the environment.
  - \* Match federal funds for release.
  - \* Recover cost to the state, a municipality, a village, or a school district for cleanup.
  - \* Recover state costs.

- USES:**
- \* Investigate, evaluate, contain, and cleanup a release or threatened release of oil or hazardous substances.
  - \* Establish and maintain spill response capability.
  - \* Review oil discharge prevention and contingency plans.
  - \* Maintain spill response contracts and agreements.
  - \* Conduct training, response exercises, inspections, and tests.
  - \* Verify or establish preparedness of the state.
  - \* Verify proof of financial responsibility.
  - \* Acquire, repair and improve spill response equipment caches.
  - \* Prepare, review and revise regional and state spill plans and local Hazmat plans
  - \* Participate in federal oil discharge cleanup activities.
  - \* Assess effects of a release.
  - \* Recover state costs.
  - \* Restore the environment.

<sup>1</sup> House Bill 3001C amended AS 43.55.201 Sec. 26 and changed the Surcharge from \$.02 to \$.01 effective 4/1/2006

<sup>2</sup> House Bill 3001C amended AS 43.55.300 Sec. 28 and changed the Surcharge from \$.03 to \$.04 effective 4/1/2006

**Note 2:** These amounts include reimbursable federal, Commercial Passenger Vessel Environmental Compliance Fund and interagency receipts within the response fund.

**Table B****Fiscal Year 2009 Prevention Mitigation and Response Mitigation Revenues**

This table summarizes by project, deposits made in Fiscal Year 2009 to the prevention and response mitigation accounts. All monies collected by the department as cost recovery, fines, penalties or settlement payments related to activity funded by the Oil and Hazardous Substance Release Prevention and Response Fund (Response Fund) are deposited in the mitigation accounts. These amounts do not include settlements that involved a Supplemental Environmental Project undertaken directly by the spiller.

**Revenue Sources**

This table summarizes the various funding sources appropriated to the Oil & Hazardous Substance Release Prevention and Response Fund (Response Fund). "Program Receipts" are revenues collected from an outside party for specific program expenditures. "Mitigation Revenue" includes interest earned on surcharge deposits, cost reimbursement, fines, penalties or settlement payments from parties financially responsible for incidents or sites for which the state expended money from the Response Fund. "Oil Surcharge Revenue" represents collection in the prior year of the conservation surcharge imposed on oil produced in the state.

**Tables H, I, and J** list all the sites inventoried in the DEC's contaminated sites and leaking underground storage tank sites database as of June 30, 2009.

**Table H** summarizes the numbers of active sites by location and by priority ranking based on the threat to the public health or welfare or to the environment. The database contains the following totals for each priority category.

High Priority	1,013
Medium Priority	678
Low Priority	280
Unranked	<u>406</u>
<b>Total Active Sites</b>	<b><u>2,377</u></b>

**Table I** lists all DEC active Contaminated and Leaking Underground Storage Tanks sites alphabetically by location as June 30, 2009.

**Table J** lists all DEC closed Contaminated and Leaking Underground Storage Tanks sites alphabetically by location as of June 30, 2009.

**Appendix 1:** Community Spill Response - No costs incurred for communities in Fiscal Year 2009.

**Appendix 2:** Project Summaries - This appendix summarizes information for contaminated sites or pollution incidents for which the department made direct expenditures of \$10,000.00 or more during Fiscal Year 2009 from the Oil and Hazardous Substance Release Prevention and Response Fund (Response Fund). Indirect expenditures, expenditures paid from other sources and expenditures for budgeted legal services provided by the Department of Law are not included. Direct department response activities involve cleanup, control, containment, investigation and oversight.

Project/Site Name: **314 Wendell Ave (formerly MC Commercial Cleaners)**

Location: Fairbanks

Project Manager Ann Farris

Tel: (907) 451-2104

Site ID Number 3821

Ledger Code: 14981360

**Situation:**

The results from Phase I and Phase II studies in 2001 and 2002 indicated a chlorinated solvent plume in the Wendell Avenue Area in downtown Fairbanks. A dry cleaner (formerly MC Commercial Cleaners) at 314 Wendell Avenue was suspected as one source area. There were also reports of former dry cleaning operations in the Midnight Mine, located immediately to the east of 314 Wendell, and evidence of some soil contamination near the sewer line there. There were no resources available from responsible parties to address the investigation requirements.

**FY09 Actions:**

The ADEC conducted an areawide release investigation in FY09 that confirmed 314 Wendell as a source area. Tetrachloroethene, trichloroethene, dichloroethene, and vinyl chloride were detected in soil, groundwater, and air throughout the site and down gradient. Groundwater flow is to the north-northwest and pore water samples collected adjacent to the Chena River indicate chlorinated solvents are reaching the surface water. In addition, the air samples indicate vapor intrusion is occurring at the building on site and to the south. Access has not been permitted, but it's highly likely that significant vapor intrusion is occurring into the buildings immediately to the east and west.

FY09 Response Fund Expenditures: \$242,703.43

FY09 Cost Recovery: \$ 0.00

**FY10 Projected Actions and Expenditure Amounts:**

Further characterize the chlorinated solvent sources at and around 314 Wendell Avenue through ground penetrating radar and drilling. Develop long-term monitoring and remediation strategy for the site through work plans and completing an alternatives analysis. Determine extent of contamination reaching the Chena River.

Estimated FY10 Costs: \$160,000.00

Project/Site Name: **ADEED Hooper Bay School Fire**

Location: Hooper Bay, Alaska

Project Manager: Deborah Williams

Site ID Number: 4687

Telephone: (907) 451-5174

Ledger Code: 14271280

**Situation:**

The old Hooper Bay School and surrounding buildings were destroyed in a fire on August 3, 2006. The only building remaining is the teacher housing, located on the northwest side of the site. Several private residences on the south side of the school site were also destroyed. Hydrocarbon contamination was documented in a November 2006 report for the Lower Yukon School District. Selected excavation and characterization in September 2006 were the subject of this report, which concluded that fuel contamination in soil near two former above ground storage tank (AST) locations remains above DEC cleanup levels. The Alaska Department of Natural Resources was conveying the property via quit claim deed to the Lower Yukon School District (LYSD), which in turn intends to transfer it to the Sea Lion Corporation, who will lease it to the Alaska Commercial Company (ACC) for construction and operation of a new retail store for the village. Satisfactory cleanup, or a better understanding of the residual contamination, is necessary to enable reuse of the site and make this project successful.

**FY09 Actions:**

During FY09, a limited site characterization was conducted on the Hooper Bay School Property. During the site characterization, forty-nine test pits were advanced to a maximum depth of 6.5 feet below ground surface. The results of the site characterization indicate contaminated soil remains in front of the teacher's housing (270 cubic yards) and in the former generator area (150 cubic yards). However, the proposed location for the development of the new store would not likely be impacted by the identified subsurface impacts, enabling the transfer and construction to move forward.

FY09 Response Fund Expenditures: \$ 37,396.13

FY09 Cost Recovery: State Owned-No Cost Recovery

**FY10 Projected Actions and Expenditure Amounts:**

There are no plans for additional work for the Hooper Bay School Fire area for FY10.

Estimated FY10 Costs: \$ 0.00

Project/Site Name: **ADOT&PF Cordova Maintenance Station**

Location: Cordova, Alaska

Project Manager: Bill O'Connell

Site ID Number: 1305

Telephone: (907) 269-3057

Ledger Code: 14682480

**Situation:**

Spills and leaks from a waste oil storage tank resulted in chlorinated solvent contamination upgradient of the facility water well. Contaminated soil excavated from an underground storage tank at the site was landspread at the nearby Cordova Locke Property

**FY09 Actions:**

During FY09 five groundwater samples were collected from on-site monitoring wells and landfarmed soil was sampled to evaluate remaining contaminant concentrations.

FY09 Response Fund Expenditures: \$ 23,312.86

FY09 Cost Recovery: State Owned-No Cost Recovery

**FY10 Projected Actions and Expenditure Amounts:**

During FY10, continue the groundwater monitoring program.

Estimated FY10 Costs: \$ 20,000.00

Project/Site Name: **ADOT&PF Deadhorse Blk 700 Lots 7A and 8**  
Location: Deadhorse, Alaska  
Project Manager: Bill O'Connell  
Site ID Number: 1963  
Telephone: ( 907) 269-3057  
Ledger Code: 14219080

**Situation**

During a 1992 Phase I Environmental Site Assessment (ESA) of this property, heavily stained surface soils were observed both inside and around the shop facilities. The ESA identified the following areas of concern: drum and materials storage area on the eastern side of the warm storage building; subsurface soils surrounding the on-site aboveground storage tanks; the area surrounding the fuel dispensing station; and the maintenance shop floor.

During a Phase II ESA, a contractor advanced 33 soil borings throughout Lots 7A and 8. The analytical testing discovered no benzene present in any of the samples, although elevated concentrations of xylene and diesel-range hydrocarbons were found on-site. The elevated diesel samples were collected from within two shop buildings. Tetrachloroethene (PCE) was also detected at the site in low concentrations.

A site visit conducted in 2007 found the surface water bodies had been filled and gravel pad extended; however, heavily stained soil was present on the gravel floor of the shop building.

**FY09 Actions:**

During FY09, soil samples were collected from boreholes in the Shop Building to evaluate for the presence of contaminants first detected during 1992 sampling.

FY09 Response Fund Expenditures: \$16,588.92  
FY09 Cost Recovery: State Owned-No Cost Recovery

**FY10 Projected Actions and Expenditure Amounts:**

During FY10, site cleanup activities will include excavation and treatment of fuel contaminated soil from the ADOT vehicle maintenance building.

Estimated FY10 Cost \$70,000

Project/Site Name: **ADOT&PF Glennallen Highway Maintenance Camp**

Location: Glennallen, Alaska

Project Manager: John Carnahan

Telephone: (907) 451-2166

Site ID Number: 3821

Ledger Code: 14250380

**Situation:**

In 2008, Department of Environmental Conservation (DEC) removed buried tanks on the northern portion of the Alaska Department of Transportation (DOT) Maintenance facility. The investigation identified subsurface petroleum impacts and groundwater contamination requiring further delineation. The former Maintenance facility has had other suspected sources of contamination across the site, including buried and above ground storage tanks located across the properties, potential injection wells, a large septic system, and drummed chemical storage. Abandoned buried tanks were also reported on the southern property across the highway. Additional assessment is required to delineate groundwater impacts, assess additional fuel management areas, identify the presence of other buried tanks, and evaluate future land use potential for the properties in conjunction with state agency and community input, through the Reuse and Redevelopment (R&R) Program.

**FY09 Actions:**

During FY09, a site characterization and underground storage tank closure activities were completed at the former Alaska Department of Transportation and Public Facilities Glennallen Maintenance Station. Five test pits and three underground storage tanks were removed from the ground during FY09.

FY09 Response Fund Expenditures: \$ 84,910.34

FY09 Cost Recovery: State Owned-No Cost Recovery

**FY10 Projected Actions and Expenditure Amounts:**

During FY10, a property assessment and cleanup plan will be completed that will summarize the history of property development, identify all environmental hindrances across the properties, provide proposed future-use scenarios as determined by the state and community, and provide an action plan for the state to address future assessment and cleanup activities.

Estimated FY10 Costs: \$ 25,000

Project/Site Name: **ADOT&PF Kotzebue Airport**

Location: Kotzebue, Alaska

Project Manager: Tamara Cardona-Marek

Site ID Number: Multiple: 25111 and 3251

Telephone: (907) 451-2192

Ledger Code: 14243780

**Situation:**

The Contaminated Sites database has listed several sites in Kotzebue that are currently active, state-owned, and for which exposure pathways have been determined to be complete. Therefore, remediation and/or mitigation are necessary to address any risks to human health and/or the environment, including to ecological receptors in the nearby Kotzebue Sound and Kotzebue Lagoon.

Several data-gaps in the knowledge of the hydrogeology of Kotzebue currently exist. It has been determined that addressing these data gaps and designing a pilot-study to mitigate the migration of contamination from the Kotzebue Airport to the Kotzebue Sound and Lagoon is a priority.

This project also includes the Kotzebue Drum Dump, where a recent inventory of the site indicates that several drums remain on the property, some of them containing what seems to be waste oil.

**FY09 Actions:**

During FY09, it was determined that the surface water exposure pathway was complete by collecting pore-water samples from the groundwater- surface water interface of the Kotzebue Sound and Kotzebue Lagoon. Surface water standards for total aromatic hydrocarbons (TAH) and total aqueous hydrocarbons (TaqH) were exceeded as well as groundwater cleanup levels for DRO and benzene. In addition, an inventory of remaining drums at the Kotzebue Sewage Lagoon Drum Dump site indicated that some empty drums and others (apparently containing waste oil) are still present on site.

FY09 Response Fund Expenditures: \$ 49,785.95

FY09 Cost Recovery: State Owned-No Cost Recovery

**FY10 Projected Actions and Expenditure Amounts:**

During FY10, DEC plans to:

- fill in existing data gaps related to the hydrogeology at the Kotzebue Airport;
- design a pilot-study to mitigate the migration of contamination from the Kotzebue Airport to the Kotzebue Sound and Lagoon;
- sample drum contents at the Kotzebue Sewage Lagoon Drum Dump contaminated site, and
- follow up with the investigation done during FY09 in which the status of the contamination at several sites in Kotzebue was assessed.

Estimated FY10 Costs: \$ 60,000

Project/Site Name: **ADOT&PF Peger Road Facility**

Location: Fairbanks

Project Manager: Ann Farris

Site ID Number: 1402

Tel: 907-451-2104

Ledger Code: 14800780

**Situation:**

The Alaska Department of Transportation and Public Facilities (ADOT&PF) Operations and Maintenance facility is located on Peger Road in Fairbanks. Environmental investigations of solvent and petroleum spills began in the early 1990s, first under the direction of the Department of Transportation (DOT), then continuing since 1998 under the direction of the Department of the Environmental Conservation (DEC).

The release of chlorinated solvents, specifically trichloroethylene (TCE), and gasoline and diesel fuels have contaminated soil and groundwater at the facility. There are groundwater contaminant plumes that extend off-site in the general direction of the regional groundwater flow (to the northwest) to residential areas with private water wells. There are two TCE groundwater plumes and a petroleum plume. The TCE groundwater plume associated with the Materials Laboratory is the longest off-site plume.

**FY 09 Actions:**

In FY09, DEC performed the following activities:

- sampled residential wells (and all were below regulatory levels)
- sampled select wells within the monitoring well network and the plume appears stable
- decommissioned damaged wells, and,
- evaluated vapor intrusion.

FY09 Response Fund Expenditures: \$77,489.43

FY09 Cost Recovery: State Owned - No Cost Recovery

**FY10 Projected Actions and Expenditure Amounts:**

Monitor the groundwater plume and sample the residential wells. Evaluate the need to turn on the depressurization system at the Materials laboratory. Work with DOT to become in compliance with their injection well closure program.

Estimated FY 09 Costs: \$75,000.00

Project/Site Name: **ADOT&PF – Regional Complex Juneau**

Location: Juneau, Alaska

Project Manager: Bruce Wanstall

Site ID Number: 25131 (Source Area #77612)

Telephone: (907) 465-5210

Ledger Code: 14223080

**Situation:**

Contaminated soil was left in place after closure by removal of five regulated underground storage tanks in several locations on the property. A network of monitoring wells was installed to investigate ground water contamination. Elevated concentrations of gasoline range hydrocarbons and benzene have been detected in water samples from five monitoring wells and elevated concentrations of diesel range hydrocarbons have been detected in seven monitoring wells. During construction of a new office building, gasoline vapors were detected in utility trenches that connect the new building to the main office structure. Ground water data also indicated that gas vapors were likely present and could pose an exposure risk along the vapor intrusion pathway to indoor air of the new building.

In 2007, groundwater monitoring of all wells and field testing of ambient air in one of the occupied buildings on the property was completed. Results indicate that benzene and gasoline range hydrocarbon concentrations in groundwater between the source area and occupied buildings are declining as a result of active treatment. Sub-slab soil vapor and indoor air sample data collected in 2007 indicate that indoor air exposure from the soil vapor intrusion pathway was not a current risk for the building that was tested.

**FY09 Actions:**

During FY09, the 2008 field work included ground water sampling at each of the monitoring wells and vapor intrusion assessment for an office building. After collection of the water samples, fresh oxygen release compound “ORC” socks were placed in the water wells to promote bacterial breakdown attenuation of the petroleum in the soil and ground water. Results indicate that concentrations of benzene and gasoline range hydrocarbon in groundwater between the source area and occupied buildings are declining. The sub-slab soil vapor and indoor ambient air sample data indicate that indoor air exposure from the soil vapor intrusion pathway was not a current risk for occupants of the building. Although tetrachloroethylene (PCE) was detected in sub-slab soil vapor in concentrations above the Environmental Protection Agency (EPA) screening levels, the compound was not detected in ambient indoor air samples. PCE is used in vehicle maintenance but has not been a contaminant of concern for soil ground water contamination near the building property.

FY09 Response Fund Expenditures: \$13,925.02

FY09 Cost Recovery: State Owned-No Cost Recovery

**FY10 Projected Actions and Expenditure Amounts:**

Annual sampling of ground water monitoring wells to incorporate testing for PCE, with further vapor intrusion assessment dependent on the detection of PCE in groundwater.

Estimated FY10 Costs: \$35,000 .00

**Project/Site Name: ADOT&PF Silvertip Highway Maintenance Station**

**Location: Mile 60 Seward Highway**

**Project Manager: Pam Clemens**

**Telephone: (907) 269-7551**

**Site ID Number: 23444**

**Ledger Code: 14950780**

**Situation:**

This former Alaska Department of Transportation and Public Facilities (ADOT&PF) Silvertip Highway Maintenance Station facility had diesel and gasoline tanks removed in the late 1980s. A site assessment was performed after a gasoline underground storage tank (UST) and a diesel UST were removed in 2006. Approximately 100 cubic yards of contaminated soil were excavated in conjunction with the 2006 tank removal, and stored in Supersacks until the soil was landspread in May, 2008. Confirmation soil samples for hydrocarbon contamination was below soil cleanup levels. Groundwater monitoring for petroleum hydrocarbon contaminants began in 2006 and by 2007 groundwater (GW) monitoring results indicated a decreasing trend. In 2008 the groundwater monitoring showed only one exceedance of DRO in monitoring well (MW) 5 with gasoline and volatile constituents below the groundwater cleanup levels. It is recommended that future site work include sampling of MW5 and the landspread soil to determine if the gasoline and diesel contaminant concentrations meet the Department of Environmental Conservation (DEC) soil cleanup levels. If so, the site could be closed.

**FY09 Actions:**

During FY09, DEC received the Groundwater Monitoring Report prepared by Clarus Technologies, LLC under contract to Hart Crowser, Inc.

FY09 Response Fund Expenditures: \$10,850.00

FY09 Cost Recovery: State Owned-No Cost Recovery

**FY10 Projected Actions and Expenditure Amounts:**

During FY10, no work or expenditures are planned

Estimated FY10 Costs: \$0.00

Project/Site Name: **ADOT&PF SREB – Unalakleet**

Location: Unalakleet

Project Manager: Grant Lidren

Site ID Number: 4109

Telephone: (907) 269-8685

Ledger Code: 14936280

**Situation**

The Alaska Department of Transportation and Public Facilities (ADOT&PF) Unalakleet snow removal equipment building (SREB) is located on Norton Sound, adjacent to the airport, near the village of Unalakleet. In 1997, an underground storage tank (UST) was removed from the Federal Aviation Administration (FAA) maintenance building west of the Alaska Department of Transportation (ADOT) property, which prompted a release investigation (RI) in year 2000. The RI identified petroleum constituents in the groundwater close to the ADOT property line. One well-point just west of the SREB property contained free-phase product exceeding 6 inches in measurement in one observation well. During the 2000 RI, a fuel line was discovered abandoned in place located between the ADOT&PF SREB and the FAA maintenance building.

**FY09 Actions**

During FY09, work performed at the site included an evaluation of the source of the free-phase petroleum hydrocarbons and groundwater contamination at the site, and an assessment of the historic underground pipeline. Analysis of the sample data indicates petroleum contamination at the site begins at or slightly above the ground water interface at 8 feet below ground surface (bgs). Samples collected at the pipeline depth, at 3 to 5 feet bgs, contained little or no petroleum constituents; therefore the pipeline does not appear to be a contamination source. Subsurface soil samples collected, at 8 to 15 feet bgs, contained measurable diesel range and benzene above cleanup levels. Water samples collected from five monitoring wells contained contaminant concentrations above maximum allowable concentrations. Source of contamination remains unknown.

A Conceptual Site Model (CSM) completed by the consultant indicates incidental soil ingestion, ingestion of groundwater, and indoor and outdoor air inhalation are complete. The risk to these exposures is considered low. This area is located in an industrial zone, and there are limited volatile fractions present and no drinking water wells exist on the site. Furthermore, due to the vicinity to the ocean, salt water intrusion is most likely making the water non potable thus eliminating the drinking water pathway.

FY09 Response Fund Expenditures: \$ 19,788.66

FY09 Cost Recovery: State Owned-No Cost Recovery

**FY10 Projected Actions and Expenditure Amounts:**

During FY10, no action will be taken at this site.

Estimated FY10 Costs: \$0.00

Project/Site Name: **ADOT&PF Tanana Maintenance**

Location: Tanana, Alaska

Project Manager: Janice Wiegers

Site ID Number: 4375

Telephone: (907) 451-2127

Ledger Code: 14231480

**Situation:**

Several abandoned drums were identified behind the Alaska Department of Transportation and Public Facilities maintenance shop at the Tanana Airport in 2004. The drums were suspected to contain waste oil and were in a former location of a leaking above ground storage tank that was removed in 2006. The site is also a former location of a leaking above ground storage tank that was removed in 2006.

**FY09 Actions:**

In FY09, drum removal was completed. Soil characterization activities were also completed confirming that cleanup activities associated with the drums and the aboveground storage tanks was complete. However, petroleum contamination was found near an abandoned pipeline encountered during characterization activities.

FY09 Response Fund Expenditures: \$14,315.52

FY09 Cost Recovery: State Owned - No Cost Recovery

**FY10 Projected Actions and Expenditure Amounts:**

Based on the FY09 work, it was determined that contamination remaining at this site results from abandoned pipelines that are associated with surrounding Federal Aviation Administration sites. No actions are planned for FY10 at this time.

Estimated FY10 Costs: \$0.00

Project/Site Name: **ADOT&PF Tudor Road Maintenance Facility (DOT Maintenance Yard)**  
Location: Anchorage  
Project Manager: Bill O'Connell  
Site ID Number: 926  
Telephone: (907) 269-3057  
Ledger Code: 14978980

**Situation:**

Three distinct source areas are present at the site: (1) gasoline underground storage tanks (USTs) at Building 4801; (2) diesel USTs at Building 5820; and (3) a disposal pit at Building 5750. At Building 4801, free-phase product has been present in the area and observed in MW-4 for several years. At Building 5820, groundwater contamination has largely attenuated, though monitoring continues. At Building 5750, the disposal of solvents in an unlined pit led to solvent contamination in groundwater which has also largely attenuated downgradient of the source area.

In addition to the sources discussed above, several other environmental issues are present at the site that must be addressed prior to considering the long term status of the site. These issues include:

- A storm drain at the site is being infiltrated by contaminated groundwater from Buildings 4801 and 5750 and transporting contaminated water to the storm water detention pond;
- The storm water detention pond has contaminated sediment that produces hydrocarbon sheen when disturbed; and
- The storage of sand mixed with salt leading to chloride contaminated runoff that may impact the flora and fauna off of the property to the southeast.

Groundwater monitoring has been conducted at the site since the 1990's to delineate the extent and characterize the nature of groundwater contamination at the site. In 2007, 28 monitoring wells that were no longer needed were decommissioned, leaving approximately 17 monitoring wells in place for future use.

**FY09 Actions:**

Activities conducted in FY09 included excavation and treatment of petroleum hydrocarbon contaminated soil using a chemical oxidant and the mechanical removal of free product from the water table using a vacuum truck.

FY09 Response Fund Expenditures: \$22,272.01  
FY09 Cost Recovery: State owned – No Cost Recovery

**FY10 Projected Actions and Expenditure Amounts:**

No activities planned for FY10.

Estimated FY10 Costs: \$0.00

Project/Site Name: **ADOT&PF Willow Maintenance Station**

Location: Willow, Alaska

Project Manager: Todd Blessing

Site ID Number: 1809

Telephone: (907) 269-7699

Ledger Code: 14229280

**Situation:**

In 1993, a 1,000 gallon heating oil tank was removed from the site and diesel contaminated soil was discovered. In 1997, two 3,000 gallon underground storage tanks (USTs) and associated dispensers were removed from the northeast portion of the site. The material excavated during the removal was used to backfill the excavation. A fire destroyed the former maintenance station in the early 2000s. In 2007, Department of Environmental Conservation's (DEC) contractor conducted a site characterization. Twenty-one test pits were dug and eight soil borings were advanced and completed as groundwater monitor wells. Soil and groundwater samples verified that both media were impacted above DEC cleanup criteria.

**FY09 Actions:**

DEC's contractor excavated contaminated soil from four source areas and stockpiled excavated soil as "clean," "potentially clean," or "contaminated." Activities also included sampling the on-site drinking water well and two existing wells for contaminants of concern, and decommissioning the on-site drinking water well.

FY09 Response Fund Expenditures: \$38,530.30

FY09 Cost Recovery: State Owned – No Cost Recovery

**FY10 Projected Actions and Expenditure Amounts:**

DEC's contractor will prepare a site investigation/cleanup work plan; perform groundwater sampling to verify all excavated areas are clean; landfarm stockpiled contaminated soil; and provide a final report to DEC.

Estimated FY10 Costs: \$35,000.00

Project/Site Name: **Alaska Real Estate Parking Lot**

Location: Anchorage, Alaska

Project Manager: Todd Blessing

Site ID Number: 4084

Tel: (907) 269-7699

Ledger Code: 14144960

**Situation:**

The property is presently operating as a parking lot and is located on 4th Avenue, between Gambell Street and Hyder Street, in Anchorage, Alaska. The property is owned by Fourth Avenue and Gambell Associates LLC. The subject property was formerly occupied by a variety of businesses, including C&K Cleaners (which was a likely dry cleaners) from approximately 1968 through 1970, and NC Tire Center, which was the last occupant of the last building on the site (eastern portion) prior to being demolished.

Four site investigations have been conducted at the subject site since 1993. The primary contaminants found above the Department of Environmental Conservation (DEC) cleanup levels are tetrachloroethylene, also known as perchloroethylene or PCE, and contaminants produced during degradation, including trichloroethylene (TCE) dichloroethylene (DCE), and vinyl chloride. Other contaminants of concern include: ethylbenzene, diesel range organics, toluene, 1,2,4-trimethylbenzene, n-butylbenzene, sec-butylbenzene, 1,3,5-trimethylbenzene, p-isopropyltoluene, arsenic, barium, cadmium, lead, and chromium. PCE was found to be present in soil and groundwater on-site and on properties north of the site at levels that exceed DEC cleanup values for soil and groundwater. Groundwater was determined to be roughly 40 feet below ground surface and flows northeasterly.

DEC assumed the lead role on the project in 2008 following the responsible parties' statements that they were unable to fund any additional investigations. DEC had contractors evaluate the levels of PCE in soil and groundwater, develop a conceptual site model, and evaluate risks posed by the contamination.

**FY09 Actions:**

DEC's contractor was tasked with installing three soil gas probes for soil gas sampling, and collecting indoor and outdoor air samples on properties north of the subject site (i.e. Lots 1-6, Block 26A East Addition). The levels of PCE measured in soil gas and indoor air exceeded DEC's residential target levels established in DEC's July 2009 Draft Vapor Intrusion Guidance document. Consequently, data suggests that there may be a PCE exposure to residents in houses on Lots 1-6, Block 26A East Addition, that could cause harm if inhaled over a 20 or 30 year period.

FY09 Response Fund Expenditures: \$ 67,435.49

FY09 Cost Recovery: \$ 1,395.33

**FY10 Projected Actions and Expenditure Amounts:**

DEC's contractor will prepare a site investigation work plan; conduct a passive soil gas survey to delineate the extent of contamination; continue monitoring of indoor air, outdoor air and soil gas on Lots 1-6, Block 26A East Addition during the summer and winter; and provide a final report to DEC.

Estimated FY10 Costs: \$80,000

Project/Site Name: **Alyeska Pipeline**  
Location: Alyeska Pipeline Corridor and Valdez Marine Terminal  
Project Manager: Keather McLoone Tel: (907) 269-7526  
Site ID Number: Various-See below Ledger Code: 14818360

**Situation:**

This ledger code is used for various Contaminated Sites for which Alyeska Pipeline Services Company (Alyeska) is the responsible party (RP). There are 41 open/active sites and 38 conditionally closed sites listed on the Contaminated Sites database where Alyeska is considered to be the RP.

**FY09 Actions:**

Cost recoverable activities conducted at these sites in FY09 include Department of Environmental Conservation participation and/or oversight for the following: review and approval of corrective action plans; reports; meetings; site visits; file reviews for site decisions; and database updates. In addition, this ledger code may also be used for cost recovery for projects which are related to various contaminated sites where Alyeska is the RP such as the review of Stockpile Management Plans and requests for approval to transport contaminated soil for thermal treatment.

FY09 Response Fund Expenditures:       \$11,676.50  
FY09 Cost Recovery:                       \$30,400.25

**FY10 Projected Actions and Expenditure Amounts:**

FY 10 activities will generally be the same as those listed above for FY 09.

Estimated FY10 Costs:       \$15,000

**Project/Site Name:** Aniak White Alice Site / Middle School

**Location:** Western Alaska, Aniak

**Project Manager:** John Halverson

**Site ID Number:** 692

**Tel:** (907) 269-7545

**Tracking Number:** 14812960

**Situation:**

The Aniak White Alice Site was constructed and operated by the Air Force and its contractors in the 1950s through the late 1970s. The buildings were turned over to the School District, which renovated the main building and has used it for school district activities since 1983. The Alaska Department of Transportation and Public Facilities (ADOT&PF) has owned the property since 1965 and currently leases the site to the Kuskokwim School District and ALASCOM, Inc.

During White Alice operations and during renovation of the site into a school, polychlorinated biphenyls (PCBs) were spilled resulting in widespread soil contamination. Hazardous materials in drums were also moved to various locations on the property, where additional spills reportedly occurred. Trichloroethylene (TCE) contamination was found in the septic system and surrounding soil and groundwater.

Numerous site characterization and cleanup projects have been conducted over the years and extensive contamination remains.

**FY09 Actions:**

During FY09 Shannon and Wilson, under contract to the Department of Environmental Conservation , removed the old White Alice Site septic system and approximated 3,000 cubic yards of contaminated soil and other cleanup materials were hauled off-site for disposal. A concrete spill containment pad for the fuel loading rack had to be removed; fuel lines and associated electrical lines had to be temporarily removed and replaced. A significantly larger volume of PCB contaminated soil was identified than anticipated. Due to funding and field season limits, excavated areas were backfilled. The 1 mg/kg PCB soil cleanup goal was not achieved. Security fencing was placed along the above ground fuel lines to prevent potential damage and limit access to areas with residual PCB contamination. TCE contaminated soil and groundwater were also encountered and a subsequent vapor intrusion assessment was conducted, which showed TCE vapors were migrating into the Joe Parent school building at concentrations above the target indoor air levels. DEC worked closely with the Kuspuk School District on developing plans to address the vapor intrusion issue. Some contaminated soil was staged in Aniak for later off-site disposal

FY09 Response Fund Expenditures: \$ 3,580,524.03

FY09 Cost Recovery: \$ 0.00

**FY10 Projected Actions and Expenditure Amounts:**

Additional site characterization and cleanup work is needed to better define the extent of contamination and develop cleanup plans. Mitigation work is planned to prevent TCE vapors from moving into the school building at levels that are above the target indoor air concentrations. Settlement negotiation with the PRPs will continue with respect to cost recovery.

Estimated FY10 Costs: \$1,880,000 .00

Project/Site Name: **BPXA North Slope Sites**  
Location: Prudhoe Bay and surrounding area  
Project Manager: Bill O'Connell  
Site ID Number: Various-See below

Tel: (907) 269-3057  
Ledger Code: 14237960

**Situation:**

This ledger code covers various Contaminated Sites for which BP Exploration (Alaska) is the responsible party including:

<u>Hazard ID</u>	<u>Site Name</u>
398	BPX Crude Oil Topping Unit South
588	BPX Drill Site Maintenance Pad - Shop Site (ARCO)
880	BPX/ARCO Hangar Disposal Site
1176	BPX Tuboscope, Inc. Lease Tract
2672	BPX PBOC Generator Module (former ARCO)
2686	BPX/AMOCO Foggy Island Bay State #1
3116	BPX Well Pad H Spill
3258	BPX Building U-21
3262	BPX Endicott SM 605 Spill
3263	BPX Well Pad W Spill
3707	BPX Milne Point A Pad

4594	BPX South Hangar Pad
4657	BPX Crude Oil Topping Unit North
4056	BPX Red Barn Storage Pad
4259	BPX Lake State 1

**FY09 Actions:**

Cost recoverable activities conducted at these sites in FY09 include the ADEC project manager time and/or oversight for the review of work plans, reports, risk assessments/evaluations and analytical data, site visits, and meetings with BPXA and other interested stakeholders. In addition to regulatory oversight of these existing contaminated sites, this ledger code may be used for cost recovery for BPXA projects with contaminated site issues such as the review of Temporary Water Use Permits, Facility Upgrade Plans, Contaminated Soil Handling Plans, Contaminated Material Storage Cell Approvals, and Soil Treatment Reports.

FY09 Response Fund Expenditures: \$13,715.80  
FY09 Cost Recovery: \$23,919.27

**FY10 Projected Actions and Expenditure Amounts:**

During FY10, activities will be similar to those listed above for FY09.

Estimated FY10 Costs: \$20,000.00

Project/Site Name: **Candle Airstrip**  
Location: Candle, Alaska  
Project Manager: Brian Jackson  
Site ID Number: 09389914101

Tel: (907) 451-2145  
Ledger Code: 14273060

**Situation:**

Sometimes during the winter months of 2008-09, a fuel truck located at the Candle Airstrip that was parked along the Candle Creek released an estimated 400 gallons of #1 fuel oil. The release went unnoticed until break up in May 2009. Fuel that did not go into the gravel substrate was flushed out on melt water down Candle Creek and into the Kilwalik River.

**FY09 Actions:**

The responsible party was determined to be Triple D Mining who holds mining claims in the Candle area. Department of Environmental Conservation (DEC) personnel traveled to the site to evaluate the extent of the oiling and potential mitigating activities that could be done to protect the watershed from additional contamination.

FY09 Response Fund Expenditures: \$11,805.36  
FY09 Cost Recovery: \$ 0.00

**FY10 Projected Actions and Projected Actions:**

DEC worked with Triple D Mining to develop a plan to remove the contaminated gravel and place in a lined area for bioremediation activities. The site will be sampled and the need for future actions will be assessed.

Estimated FY10 Costs: \$0.00

Project/Site Name: **City of Kotzebue**  
Location: Kotzebue, Alaska  
Project Manager: Tamara Cardona-Marek  
Site ID Number: 394

Telephone: (907) 451-2104  
Ledger Code: 14981360

**Situation:**

In the 1980's reports of contamination in Kotzebue emerged and free-phase product was observed seeping into the elementary school basement and the Kotzebue Sound. The source was believed to be the pipeline that supplied fuel to the school and hospital. Based on the potential threat to local fisheries posed by oil leaching into the Sound and the risks the children at the elementary school were potentially being exposed to, Department of Environmental Conservation (DEC) hired a contractor to install and operate an oil recovery system, therefore becoming a State-lead site at the time. This system included the installation of an oil barrier at the beach, installation of recovery/monitoring wells, and installation of an oil recovery trench in Second Avenue north of the former hospital. The performance and cost-effectiveness of the oil recovery trench were below expectations; therefore the installed equipment was left on-site for future recovery attempts. Such attempts were not pursued by DEC, leaving the recovery trench along Second Avenue in place for twenty years. Additional assessment of the area was never pursued, thus the current status of the contamination is not known and potential exposures pathways have not been evaluated.

**FY09 Actions:**

During FY09, DEC conducted a limited evaluation of some of the potentially completed exposure pathways as a result of the above mentioned spill. Pore-water samples along the Kotzebue Sound were collected to determine if contamination present in groundwater is reaching surface water. Soil vapor samples were also collected to determine if the vapor intrusion pathway is complete at the elementary school. Results indicated that petroleum contamination in groundwater is indeed reaching surface water. Surface quality standards for total aromatic hydrocarbons (TAH) and total aqueous hydrocarbons (TaqH) were exceeded as well as groundwater cleanup levels for DRO and benzene. Soil vapor samples indicated that, although vapors above screening levels were not measured in the vicinity of the school, contamination continues to be present in the area.

An attempt to remove the oil recovery trench was performed in the late summer0J owever, the contractor was not able to locate the trench. It is believed to have been removed during road work.

Additionally, DEC's contractor developed a feasibility study in which they evaluated potential mitigation alternatives to prevent the continuous seepage of contaminants to the Sound. Existing data gaps were also identified in the event that any of the proposed alternatives are considered.

FY09 Response Fund Expenditures: \$ 32,053.97  
FY09 Cost Recovery: \$ 0.00

**FY10 Projected Actions and Expenditure Amounts:**

During FY10, DEC plans to fill in some of the existing data gaps identified during FY09. Data gaps include the specific hydrogeology of Kotzebue, and the current status of the source area. Obtaining additional information will allow DEC to evaluate the feasibility of some of the proposed alternatives such as no action or monitored natural attenuation.

Estimated FY10 Costs: \$55,000.00

Project/Site Name: **Coastal Drilling**

Location: Soldotna, Alaska

Project Manager: Paul Horwath

Site ID Number: 464

Telephone: (907) 262-5210 x250

Ledger Code: 14932960

**Situation:**

The Coastal Drilling site was reported to the Department of Environmental Conservation (DEC) on July 2, 1988, under the Kenai Special Projects program. The Kenai Special Projects program was designed to identify and inventory historical contaminated sites on the Kenai Peninsula. Coastal Drilling is an abandoned industrial site, primarily comprised of two buried waste disposal pits. These pits were formerly used to dispose of industrial waste associated the oil field drilling activities for approximately 25 years. An estimated 7,000 cubic yards of contaminated soil and solid waste are present on the site. The contaminants include used oil, chlorinated solvents, batteries, diesel fuel and various types of solid waste.

The site is located on 7.4 acres in Soldotna, Alaska, approximately 3,000 feet northwest of the junctions of the Kenai Spur Highway and the Sterling Highway. One 3,500 square foot building and two concrete building foundations are present. The site is unfenced private land located approximately 200 feet from the playground area of the Soldotna Elementary school. The immediate area is now served by the City of Soldotna public water system. A municipal water well for the City of Soldotna lies within ½ mile of the site.

A number of monitoring wells have been previously installed and sampled onsite. Groundwater is periodically sampled to monitor groundwater quality, and to ensure that the contamination is not migrating offsite. Based on past groundwater quality monitoring data, the contamination appears to be largely confined within the two buried disposal pits.

**FY09 Actions:**

During FY09, DEC hired a term contractor to inspect and assess the current condition and suitability of all monitoring wells at the site. Damaged monitoring wells were repaired or decommissioned. All remaining monitoring wells were then sampled under a long-term groundwater monitoring program. A final report was prepared and provided to the department documenting all work tasks completed at the site. The report included the current status of groundwater quality at all sampling points, as well as an interpretation of findings and conclusions. This FY09 water sampling data continues to indicate that the contamination identified at this site is predominantly confined within the two buried pits, and that contaminated groundwater is not migrating offsite.

FY09 Response Fund Expenditures: \$20,457.20

FY09 Cost Recovery: \$ 0.00

**FY10 Projected Actions and Expenditure Amounts:**

During FY10, no work or expenditures are planned at Coastal Drilling.

Estimated FY10 Costs: \$0

Project/Site Name: **CPA DS1L-22 Produced Water Release**

Location: Kuparuk, Deadhorse Alaska

Project Manager: Paul Lhotka

Site ID Number: 08399936001

Telephone: (907) 451-2175

Ledger Code: 14123360

**Situation:**

On December 25<sup>th</sup> 2009, at approximately 4:16 PM, ConocoPhillips Alaska Inc. (CPAI) reported produced water spill at Drill Site 1L at Kuparuk. CPAI estimated 94,920 gallons (2,260 barrels) of produced water and crude was released due to internal corrosion of a 6" water injection. Approximately 4.8 acres of tundra and gravel pad was affected.

**FY09 Action:**

DEC staff reviewed and approved CPAI cleanup plans to remove product from 2.95 acres of lightly misted snow-covered tundra and 1.83 acres of gravel pad. DEC responders monitored excavation and removal of contaminated snow and gravel from the site, and disposal of waste by grind and subsurface injection. Confirmation sampling of treated areas was conducted to assure cleanup end points have been reached.

DEC staff conducted a follow-up site visit in July 09 and found contamination remaining at the site. CPAI submitted revised clean-up and sampling plans to clean up the residual product.

FY09 Response Fund Expenditures:       \$ 35,194.40

FY09 Cost Recovery:                         \$       0.00

**FY10 Projected Actions and Expenditure amounts:**

Conduct final site visit to assure clean-up end points are met.

Estimated FY10 Costs: \$0.00

**Project/Site Name:** **Drift River Terminal Coordination**

**Location:** Cool Inlet Pipeline Terminal, Drift River, West Side of Cook Inlet, Alaska

**Project Manager:** Gary Folley

**Telephone:** (907)262-5210

**Site ID Number:** 092329908201

**Ledger Code:** 14254760

**Situation:**

On January 23, 2009, after months of increased seismic activity, the Alaska Volcano Observatory raised the alert level for Mount Redoubt from Yellow to Orange. At that time, the Drift River Oil Terminal (DROT), located approximately 35 kilometers to the east, held over six million gallons of crude oil in two of the six 270,000-barrel storage tanks.

On March 22, 2009, Mount Redoubt Volcano produced a series of five explosive eruptions that each lasted from 4 to 30 minutes. Central Alaska Response Team (CART) and the U. S. Coast Guard (USCG) personnel conducted an over-flight the following day and found that the resultant lahars (or volcanic mudflows) caused extensive flooding at DROT. However, no oil releases occurred from either of the two operational storage tanks and there was no damage to the protective tertiary dike system or the individual tank secondary containment systems.

**FY09 Action:**

Beginning in late January 2009, CART began an assessment of potential impacts by working with Cook Inlet Pipeline (CIPL) and other state and federal agencies. CART made presentations to the public informing them of current and potential options to reduce any environmental impacts throughout this event.

The CART State On-scene Coordinator (SOSC) and staff were part of a state/federal Joint Incident Management Team (JIMT) and State Crisis Management Team established to discuss situation updates from the Alaska Volcano Observatory, Department of Environmental Conservation (DEC), USCG and other attending Incident Management Team (IMT) agencies. The Joint Incident Management Team conducted daily teleconferences to review and discuss each of the response objectives/strategies and state Incident Action Plan (IAP) and discuss new issues and safety concerns related to the incident. A joint State/Federal Command website was created for the incident to facilitate access to the general public.

A second major eruption occurred on March 28, 2009. On March 31, 2009, an IMT was activated at a "Command Post" at the Sheraton Hotel in Anchorage. A Unified Command (UC) consisting of the USCG Federal On-scene Coordinator (FOSC), ADEC SOSC, and the CIPL Incident Commander provided unified response objectives. The primary objectives were to ensure the protection of citizens and response personnel and the protection of the environment. To better facilitate meeting these objectives, three workgroups (Facility Restart/Oil Movement, Spill Response, and Lahar/Flood Forecasting) were established and daily IAPs were generated. CART participated in over-flights of the DROT and participated as members of the JIMT and State Crisis Management Team.

On April 6, 2009, after a two-day delay due to volcanic eruptions, the T/V *Seabulk Arctic* completed the transfer of approximately 60 percent of the crude oil from the two tanks in service at the DROT facility. Both operational tanks were ballasted with seawater as a precaution to maintain tank stability if significant flooding occurred at the facility inside the secondary containment. On the evening of April 6, 2009, all CIPL crew were safely evacuated from the oil terminal and Christy Lee loading platform.

The Command Post was deactivated on April 7, 2009 and response personnel were placed on standby. On April 21, 2009, the T/V *Mississippi Voyager* arrived from California to remove as much of the remaining crude oil as possible from the terminal. Measurements and confirmation by a third party after transfer to the tanker was completed determined that approximately 841,680 gallons (20,040 barrels) of crude oil remained in the tanks at DROT. This amount is about 13 percent of the original 6.2 million gallons (148,000 barrels).

On June 23, 2009, the UC approved plans to remove oil and ballast water from the tanks at the DROT facility in a continuing response to the threat from the Mount Redoubt Volcano.

FY09 Response Fund Expenditures: \$ 102,386.48

FY09 Cost Recovery: \$ 0.00

**FY10 Projected Actions and Expenditure amounts:**

On July 13, 2009, CIPL announced that pipeline operations were expected to resume by mid-August. Resumption of operations was contingent upon the completion of modifications at CIPL's DROT and Trading Bay facilities and was also subject to regulatory approval. The facility modifications were completed and all necessary regulatory approvals were received. CIPL planned to transport oil stored at facilities at Granite Point and Trading Bay and ship it through CIPL's 42-mile pipeline for direct delivery to tankers berthed at the Christy Lee Platform. This modified procedure was designed to bypass the tanks at DRT (tight line operation). Crude oil storage operations at the terminal were to remain suspended.

On August 3, 2009, DEC issued a "Minor Amendment Approval" for the CIPL Oil Discharge Prevention and Contingency Plan (No. 07-CP-2081). The changes associated with this amendment were temporary, and because the current status of the facility included manning and other response resources and capabilities as described in the currently approved plan, they did not diminish CIPL's ability to respond to an oil discharge. Approval was on condition that the records documenting the weekly visual inspections described in Section 3.11.3 of the amendment were sent to the DEC contact on a monthly basis. In addition, ADEC required an amendment to the contingency plan prior to resumption of "normal" operations, including use of crude oil storage tanks number 1 and 2, or in the event of any other changes to the facility operations that may require changes to the approved plan.

On August 4, 2009, the T/V *Overseas Boston*, under contract with Tesoro, arrived at the Christy Lee Platform to load oil and ballast water from the tanks at the DRT facility. This offloading operation was in accordance with a plan approved by the Unified Command in a continuing response to the threat from Mount Redoubt Volcano. Upon completion of the oil and ballast water removal, the T/V *Overseas Boston* loaded crude oil from Chevron Upstream, Exxon Mobil, and Pacific Energy a tight line configuration. Upon departure from the Christy Lee Platform, the T/V *Overseas Boston* proceeded to the Tesoro Refinery in Nikiski to offload the crude oil. The ballast water was taken to Emerald Services in Washington State.

On August 7, 2009, CIPL completed removal of oil and water from tanks 1, 2, and 3. Removal of all oil and water was not feasible due to current operating conditions. Tanks 1 and 2 were taken out of service and flanged off after the oil and water was removed. Currently, tanks 1 and 2 each contain 1,396 bbls of oil and 4,636 bbls of water. Tank 3 was pumped down to 999 bbls of oil. The Unified Command "stood down" following the completion of the oil and ballast water offloading to the T/V *Overseas Boston*. Regulatory oversight of the DRT Facility then transitioned back to normal agency functions.

The Unified Command and Drift River Terminal Coordination met with the Kenai Peninsula residents on Monday, August 24, 2009, to provide an update on the CIPL interim operations.

No additional actions are anticipated in FY10.

Project/Site Name: **Eskimo Creek Seep**  
Location: King Salmon, Alaska  
Project Manager: Rich Sundet  
Site ID Number: 2152

Tel: (907) 269 - 7578  
Ledger Code: 14875960

**Situation:**

The Department of Environmental Conservation (DEC) was contacted in 1994 regarding a petroleum hydrocarbon seep into Eskimo Creek in the vicinity of Eddie's Fireplace Inn. The source(s) of contamination was unknown but sample analysis indicated a diesel range fuel product. Possible suspect areas included a former heating oil tank buried behind Eddie's Fireplace Inn and possible debris and/or runoff from the King Salmon Airport.

DEC assumed the lead role in the site investigations at Eddie's Fireplace Inn because the owner had died and his estate was unwilling or unable to do so. The former heating oil tank had previously been decommissioned by the former owner without any sample data. It was suspected as a source and the DEC investigation identified soil and groundwater contamination in the former tank location. Interim corrective action included the installation of recovery wells to intercept product before it entered the creek. However, soil contamination at (and adjacent to) the seep area continued to cause sheen and product release to the creek.

In November 2001, DEC's term contractor installed an interception trench and recovery system. The 70 cubic yards of petroleum contaminated soil excavated from the trench was transported off site and stored at the community landfill. In October 2002, 30 cubic yards of contaminated soil was excavated adjacent to Eskimo Creek and transported off site to the landfill. The contaminated soil was thermally treated in 2003 and used as landfill cover material. Since 2001, DEC has annually monitored the interception trench and recovered free product, and periodically sampled the onsite drinking water well and existing monitoring wells.

**FY09 Actions:**

ADEC continued to perform free product recovery in the interception trench and recovery wells at the site. Groundwater monitoring continued from the drinking water well on site.

FY09 Response Fund Expenditures: \$ 14,345.00  
FY09 Cost Recovery: \$ 4,000.00

**FY10 Projected Actions and Expenditure Amounts:**

Continue the operation of the interception trench and free-phase product recovery system. Sample groundwater for water quality conditions, including the public drinking water well and existing monitoring wells onsite.

Estimated FY10 Costs: \$20,000.00

Project/Site Name: **Fire Lake Flying Club**

Location: Eagle River, Alaska

Project Manager: Robert Weimer

Site ID Number: 24733

Tel: (907) 269-7525

Ledger Code: 14114360

**Situation:**

In May 1995, two aviation fuel tanks, piping and dispenser were removed and replaced by a new tank and piping in 1998. Contamination was found along the piping and at the dispensers. The shallow groundwater was found to be contaminated. Four soil/groundwater areas were sampled in 2004 and were found to be contaminated just to the south of the drinking water well. In June 2006, the responsible party excavated 68 tons of contaminated soil (to the north of the drinking water well) and transported it off site for thermal treatment. Three groundwater monitor wells were installed and contamination in soil and groundwater above site cleanup levels was identified. Groundwater is shallow (4 feet below ground surface) and the remaining contamination is located near the drinking water well. Fire Lake is also within 40 feet of contamination. Between June and October 2007, 651 tons of contaminated soil and 23,000 gallons of contaminated groundwater was removed and treated. Three replacement monitoring wells were installed in 2007. The three monitoring wells and the drinking water well were sampled in the fall of 2007 and the spring of 2008.

**FY 09 Actions:**

DEC made a determination that the responsible party was no longer willing (or able) to conduct further assessment and cleanup activities. A DEC term contractor was hired to continue to monitor the groundwater and drinking water at this site.

FY09 Response Fund Expenditures:       \$10,533.99  
FY09 Cost Recovery:                         \$       0.00

**FY10 Projected Actions and Expenditure Amounts:**

Collect groundwater samples from three monitoring wells, and collect a water sample from the on property drinking water well in the fall of 2009 and the spring of 2010. Prepare a report of the results of the two groundwater monitoring events. Also, evaluate remedial options to address the remaining soil and groundwater contamination at the site.

Estimated FY10 Costs: \$20,000.00

Project/Site Name: **Fish Creek Abandoned Drums**

Location: Steese Highway, Alaska

Project Manager: Janice Wiegers

Site ID Number: 25292

Telephone: (907) 451-2127

Ledger Code: 14270280

**Situation:**

Three abandoned drums were found at an Alaska Department of Natural Resources (ADNR) material site south of the Steese Highway near Mile 100. The location is an active gravel pit used by Alaska Department of Transportation and Public Facilities (ADOT& PF). The contents of the drums were unknown. This site is listed as non-qualifying in the Contaminated Site Program (CSP) database.

**FY 09 Actions:**

The drum contents were sampled. The drums contained on-specification and off-specification mixed oil and were disposed of accordingly through Emerald Alaska, Inc. The drums were not leaking and no indications of spills to the land were encountered. Some solid waste remains at the site.

FY09 Response Fund Expenditures: \$10,176.60

FY09 Cost Recovery: State Owned – No Cost Recovery

**FY10 Projected Actions and Expenditure Amounts:**

No actions are planned for FY10 at this time.

Estimated FY10 Costs: \$0.00

Project/Site Name: **Forest Service 3030 Road – Road Impacts Under Emergency Response**  
Location: Coffman Cove Prince of Wales Island  
Project Manager: Bruce Wanstall – Louis Howard      Telephone: (907) 465-5210  
Site ID Number: 4643      Ledger Code: 14270060

**Situation:**

Beginning on or before July 13, 2007, at the Coffman Cove Road Project near Coffman Cove, Alaska, the Western Federal Lands Highway Division (WFLHD) conducted an operation that periodically resulted in an alleged violations of the water quality standards for certain parameters. Such actions are in violation of 18 AAC 70.010(a) and 18 AAC 70.020 (b)(6). Material borrow source B-5 rock was placed as fill material for highway construction through a corridor of high value streams and wetlands above Sweetwater Lake on Prince of Wales Island. When exposed to air and/or water, the B-5 pyritic shale oxidizes to form sulfuric acid drainage which readily dissolves any heavy metals complexed in native material. In fall 2006, Alaska Department of Fish and Game Office of Habitat Management and Permitting (OHMP) observed low pH and iron (III) hydroxide, "yellow-boy" turbid conditions in catalogued streams. The observed conditions continued to worsen and in December 2007 field and laboratory sampling data was sent to the DEC Water Division Clean Water Act 401 Permit Program, who then issued an Enforcement Compliance Letter to WFLHD requesting prompt site characterization and mitigation to halt Water Quality violations that degrade habitat and threaten aquatic life.

The Department's allegations are based partially on self-reported sampling data. The May, 2008 *Coffman Cove Road Water Quality Assessment* reported to DEC that the WFLHD contractor documented low pH levels at four culvert crossings within the project area beginning on July 13, 2007. These culverts were identified as Station 19+964, 22+196, 23+965, and 24+701. All road building materials at these sites originated at borrow source B-5.

As a resource trustee for the federal lands, the Forest Service (FS) invoked lead cleanup authority under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). When a federal resource trustee invokes CERCLA authority as On-Scene Coordinator (OSC) for emergency removal actions, the State role in the decision process becomes advisory, providing comments to the OSC on how to best select a site cleanup remedy that serve the State's interests, such as protecting and maintaining water quality and habitat resources. As a result of having a long track record of pursuing the State's interest with federal agencies in the CERCLA process, DEC Contaminated Sites Program assumed the lead for the Department. The site was designated Forest Service 3030 Road on the Contaminated Sites Database and scored high priority using the Environmental Tracking Module.

A resource trustee technical advisory team consisting of WFLHD, EPA, and FS federal agencies and DEC and ADF&F/OHMP State agencies met to consider response objectives and available options. The FS OSC chose to use the current WFLHD road construction contractor for a Time Critical Removal Action (TCRA) to remove the B-5 acid-producing rock from embankments at two culvert crossings with the 3027 catalogued stream for transfer to borrow site B-1 where the acid-producing rock was layered with limestone and covered. DEC requests for widespread water quality and habitat assessment simultaneous with the removal action and adoption of at least a best management practice plan for consolidation of B-5 rock were considered not practicable.

**FY09 Actions:**

During FY09, the DEC quickly mobilized an environmental contractor to the site to conduct a thorough baseline assessment of water quality and habitat conditions in the 3.5 mile complex network of streams and wetlands. The result is Oasis Environmental January 2009 *PHASE I FINAL REPORT - PRINCE OF WALES ISLAND FOREST ROAD 3030 SURFACE WATER AND SEDIMENTS ASSESSMENT*. The report stated that "The study found at least one exceedance of Alaska Water Quality standards at each site, ranging from three to 16 exceedances per site. Exceedances were seen for these metals: aluminum (55), cadmium (24), cobalt (4), copper (26), iron (35), lead (10), manganese (33), mercury (8), nickel (16), selenium (1), and zinc (18). Exceedances were also seen for these other parameters: chloride (1), color (8), pH (35), dissolved oxygen (11), sulfate (10), total dissolved solids (9), and zinc (18) (page vi)."

The Department acknowledges that the report also found that “Exceedances of WQS criteria for some metals were observed at sites that didn’t appear to be below where B-5 material had been placed: aluminum, iron, lead, and mercury. Although these exceedances were almost all slight, the results suggest their natural concentrations are relatively high and at levels near WQS criteria. Therefore, additional loading of these metals into the streams from the B-5 material may be of particular concern (page vi).”

Although stream health appears to be on the road to recovery where complete removal of B-5 material was performed, the 2009/2010 TCRA workplan provides WFLHD with the option for partial removals of B-5 material at the remaining impacted highway-water body crossings. The State resource trustees are opposed to the high-risk TCRA plan option adopted by the FS OSC and finds full removal as the only viable option to protect water quality and habitat resources above Sweetwater Lake. In addition, B-5 consolidation plan at the B-1 borrow source is not consistent with DEC solid waste mining industry standard practice for acid-producing rock. The B-1 borrow source is next to Hatchery Creek, arguably the highest value subsistence and sport fishing stream on Prince of Wales Island. The current estimated volume of B-5 material scheduled for removal and transfer to the B-1 borrow source is 80,000 cubic yards.

FY09 Response Fund Expenditures:       \$ 255,519.07  
FY09 Cost Recovery:                           0.00

**FY10 Projected Actions and Expenditure Amounts:**

Due to the high-risk options chosen by the federal agencies, the DEC and OHMP will conduct regular site visits in FY10 to observe and monitor federal agency TCRA plan removals.

ADF&G/OHMP recommends biological surveys in spring 2010 for initial assessment of reproductive success of salmonids species in each of the streams intersecting the highway in the corridor. DEC recommends additional Water Quality and habitat assessment.

The State may propose to contract assessment of restoration alternatives and compensatory measures for irreparable damage to aquatic and riparian natural resources caused by the acid rock drainage from embankments of the Forest Service 3030 Road. The development of criteria and collection of data are needed to evaluate the past, present and future economic loss resulting from the loss of salmon harvest opportunities, both subsistence and recreational, as well as the interruption of transportation through the corridor to the City of Coffman Cove.

Estimated FY10 Costs:   \$750,000.00

Project/Site Name: **Forest Service 3030 Road – CERCLA**

Location: Coffman Cove, Prince of Wales Island

Project Manager: Louis Howard – Bruce Wanstall

Site ID Number: 4643

Tel: (907) 269-7552

Ledger Code: 14263760

**Situation:**

The Coffman Cove Road improvement project began in 2002 to reconstruct a 4.9 mile old logging road on mostly Forest Service property. The western division of the Federal Highway Administration began upgrades to widen and improve the road for general use. The road links the City of Coffman Cove to the main north/south route on the island, North Prince of Wales Road.

Water quality concerns surfaced in June 2007 when representatives of the Western Federal Lands Highway Division noticed excessive corrosion of a culvert in place for only eight months. Water quality monitoring that year revealed a pH of 2.3 units just downstream of the culvert, a violation of the Alaska water quality standards. Normal pH levels in Southeast Alaska can range from 4.5 to 7.0. Low pH readings at four other culvert locations, all fish-bearing streams, also exceeded the standards, as did high levels of iron and copper.

Iron stains and related flocculation are visible downstream of the road in several streams near Sweetwater Lake along a 3-1/2-mile stretch. The federal highways agency notified DEC of water quality violations in December 2007 and conducted some monitoring early in 2008. Their preliminary effort documented acidic stream conditions and elevated metal concentrations.

Fish are leaving the affected streams and the insects are being killed. These conditions have halted the life cycles of many fish species. Potential human health impacts so far seem limited to a Forest Service Cabin on Sweetwater Lake. The Forest Service posted a caution for people who may rent the public recreation cabin on an island in Sweetwater Lake. There are no dwellings on any of the affected streams.

Current owners and operator (Potentially Responsible Parties or PRPs) of the site are the US Federal Highway Administration (operator), US Forest Service (3.65 miles of the road) and the Department of Natural Resources (landowner on 1.25 miles of the road).

In June 2008, DEC requested that the PRPs: submit a conceptual site model, submit a draft removal action plan, submit a plan that addresses proper transport and storage of the B-5 material, characterize the B-5 material, establish and monitor contamination trends in groundwater and surface water, conduct an ecological risk assessment, and submit a draft plan to restore safe and productive habitat and repopulate resident fish in the streams.

The Forest Service, using their CERCLA authority, conducted their first time critical removal action of B5 material from Stream 3, B-5 Cut, D-2 Pit and consolidation of the material at the B-1 Pit during the fall of 2008, installed monitoring wells and conducted surface water quality measurements.

**FY09 Actions:**

During FY09, DEC reviewed (in accordance with State environmental regulations/statutes) CERCLA time-critical removal action work plan/scopes of works, and schedules to address the acidic rock drainage at the Stream 3, B-5 Cut, D-2 Pit. DEC attended comment resolution meetings, teleconferences, and site visits.

FY09 Response Fund Expenditures: \$ 28,849.60

FY09 Cost Recovery: \$ 0.00

**FY10 Projected Actions and Expenditure Amounts:**

During FY10, DEC will continue to review (in accordance with State environmental regulations/statutes) and comment on an additional Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) removal action work plan, schedules, long-term surface water monitoring results, and scopes of work for additional Forest Service time-critical removal actions of acidic rock (B-5 material) at three other streams.

Estimated FY10 Costs: \$30,000.00

Project/Site Name: **Former Alaska Packers Association Cannery (Pilot Point)**  
Location: Pilot Point, Alaska  
Project Manager: John Carnahan Telephone: (907) 451-2166  
Site ID Number: 1028 Ledger Code: 14614160

**Situation:**

Several thousand gallons of bunker-C oil were reportedly released from a vertical above ground tank in the late 1980's. DEC Spill Response visited the site in 1996 and recommended corrective action and unsuccessfully attempted to contract cleanup actions. In 2006, the City of Pilot Point applied for, and successfully received, a DEC Brownfield Assessment to conduct a Phase I ESA, which made recommendations for further site characterization. The community of Pilot Point intends to work toward redeveloping the cannery site and some of the buildings to support tourism and the community, to provide economic opportunities for the region.

**FY09 Actions:**

During FY08, a release investigation was completed at the former cannery involving soil testing across the site in multiple locations. The report identified an estimated 1,000 cubic yards of petroleum contaminated soil. Lead-based paint was identified in soil as weathered chips that exceeded industrial maximum contaminant levels (MCLs). Groundwater is assumed contaminated, although it is not used for drinking, it may be used for ice generation. Recommendations for corrective action were provided. Although the work was completed in FY08, some of the invoices were not completed prior to fiscal year end.

FY09 Response Fund Expenditures: \$ 30,164.12  
FY09 Cost Recovery: \$ 0.00

**FY10 Projected Actions and Expenditure Amounts:**

During FY10, the Phase 2 Site Characterization Report was finalized.

Estimated FY10 Costs: \$2,150.00

Project/Site Name: **Former Auto Salvage Yards**

Location: 5625 Old Seward Highway, Anchorage

Project Manager: Eileen Olson

Site ID Number: 2028

Tel: (907) 269-7527

Ledger Code: 14995260

**Situation:**

The Former Auto Salvage Yards site includes two adjacent auto salvage yard sites that were subject to multiple surface spills of waste oil, gasoline and diesel over decades of commercial salvage yard activities. The two sites were administratively combined into a single site during FY09 because the nature and occurrence of contamination was similar, the sites occupied tax parcels that were about to be replatted into one parcel, and the proposed new construction a 55,000 square foot warehouse would straddle the boundary between the sites. Both of the sites were conditionally closed by 2004, but subsequent investigation done in anticipation of new development identified previously undocumented groundwater contamination that exceeded DEC cleanup levels. In addition, the planned land use changed from the current vacant status to a proposed building site. The changed knowledge of site conditions and proposed change in land use necessitated modifications to the existing conditions of closure. A new Record of Decision for the combined sites was issued in February 2009 that required additional groundwater and soil investigation by the property developer.

**FY09 Actions:**

During FY09, staff administratively combined two adjacent auto salvage yards based on similar contaminant types and occurrences and on other factors; reviewed reports documenting groundwater contamination that was previously undocumented; and modified and reissued the conditional site closure documents as a single document for the combined site. The final Record of Decision for the consolidated former sites upholds the existing conditional closure status granted to the former sites but includes additional conditions based on the proposed changed land use from vacant land, and the documentation of previously unknown groundwater contamination. At the end of FY09, Department of Environmental Conservation (DEC) had reviewed and approved a plan by the prospective purchaser of the site to install and sample new monitoring wells, and to sample or decommission certain of the existing monitoring wells.

FY09 Response Fund Expenditures: \$ 11,490.04

FY09 Cost Recovery: \$ 53,958.28

**FY10 Projected Actions and Expenditure Amounts:**

During FY10, DEC will continue to review site assessment and monitoring submittals to ensure compliance with the changed conditions of the revised record of decision, including reviewing of an environmental management plan to be submitted prior to pre-construction excavation or other activities.

Estimated FY10 Costs: \$4,000.00

Project/Site Name: **FS2 Flow Line 9A Crude and Gas Release**

Location: Flow Station 2 (FS2), Prudhoe Bay Oil Field

Project Manager: Tom DeRuyter

Site ID Number: 09399904902

Telephone: (907) 451-2145

Ledger Code: 14218660

**Situation:**

On February 18, 2009 a small hole caused by external corrosion was discovered in the 9A Flow Line. The hole in the line had allowed the release of primarily gas but also crude oil and produced water to the gravel pad near Flow Station 2. All of the liquids that were released were able to be contained on the pad, there were no tundra impacts. The final volume of released fluids was estimated to be 5,000 ft<sup>3</sup> of gas, 42 gallons of crude oil and 1,890 gallons of produced water. The 9A Flow Line is used to transport reservoir fluids from Drill Site 9 to FS2 for processing.

**FY09 Actions:**

BPXA immediately shut in the flow line and developed a safety plan for accessing the area. A bypass plan was implemented to keep the line flowing to avoid freeze-up until repairs could be implemented. The contaminated snow was removed from site, melted and injected down hole and the contaminated gravel was sent to the Grind and Inject plant. A plan was developed and implemented for the repair to the line.

FY09 Response Fund Expenditure: \$ 21,818.67

FY09 Cost Recovery: \$ 0.00

**FY10 Projected Actions:**

No further work or expenditures are planned for FY10.

Estimated FY10 Costs: \$0.00

Project/Site Name: **F/V Mar-Gun Grounding**

Location: St George Island, Pribilof Islands, Alaska

Project Manager: John Brown

Site ID Number: 09259906401

Telephone: (907)269-7688

Ledger Code: 14251760

**Situation:**

On March 5, 2009, the F/V *Mar-Gun* grounded on the north shore of St. George Island at Staraya Artil, a fur seal rookery and significant archaeological and paleontological site. The vessel's five crew members were safely evacuated by the U.S. Coast Guard (USCG). An undetermined amount of fuel was released from ruptured tanks on board. One Central Alaska Response Team (CART) employee, along with the USCG Pacific Strike Team, traveled to St. George for the response. Additionally, Department of Environmental Conservation (DEC), USCG, and the responsible party, represented by O'Brien's Response Management, Inc., formed an Incident Management Team (IMT) in Anchorage to oversee the response. Over the next two months, pollution hazards were removed from the vessel, it was surveyed and prepared for salvage, and the shoreline was monitored for impacts. The CART State On-scene Coordinator (SOSC) and other IMT personnel participated in daily or weekly meetings and teleconferences to provide state oversight. CART on-site activity included monitoring removal of fuel, oil, and other chemicals from the vessel, monitoring waste management, conducting shoreline assessments, and watching for wildlife impacts. A total of 18,371 gallons of fuel and oil were successfully removed from the *Mar-Gun*. On May 13, 2009, the vessel was safely refloated and towed to Dutch Harbor for repairs.

**FY09 Actions:**

The vessel ran aground on March 5, 2009 and response activities continued to May 15, 2009 when the vessel was safely moored in Dutch Harbor.

On May 22, 2009, subsistence seafood sampling was conducted at three separate locations around the grounding location. The subsistence sampling found no contamination above previous background levels.

FY09 Response Fund Expenditures: \$ 23,899.70

FY09 Cost Recovery: \$ 0.00

**FY10 Projected Actions and Expenditure amounts:**

None expected.

Project/Site Name: **Gaffney Road Area-Wide**

Location: Fairbanks, Alaska

Project Manager: Ann Farris

Site ID Number: 2919

Telephone: (907)451-2104

Ledger Code: 14622260

**Situation:**

The historical release of tetrachloroethene (PCE) at the former Royal Master Launderette (now the Good News Bible and Bookstore (GNBB)) has caused localized soil contamination and an area-wide groundwater contaminant plume. Additional releases of PCE from the public wood-stave sewer system and other dry cleaning operations have also been documented in the soil and groundwater south of Airport Way and East of Cushman Street. These combined releases have created two areawide plumes that extend beneath downtown Fairbanks. These plumes have been labeled the western and eastern Gaffney plumes. The eastern plume is smaller and may have a trichloroethene (TCE) source as well as a PCE source. The western plume extends to approximately 1000-1200 feet up gradient from the public well field.

The contaminant of concern is primarily PCE, however the breakdown products have also been detected so the entire list includes TCE, dichloroethenes, and vinyl chloride. Department of Environmental Conservation's assessment to date has used passive soil gas surveys, direct push drilling techniques for soil and groundwater sampling, and sewer line sampling to define the nature and extent of the contamination. The exposure pathways of concern are the migration of the groundwater plume(s) towards the Chena River, possible risk to the community's public drinking water supply, and vapor intrusion into surrounding buildings. Groundwater plumes do appear to be stable at this time and contamination is not reaching either the river or the drinking water wells. Vapor intrusion, however, is occurring in areas where this is significant soil contamination or the overlying building has a significant negative pressure. This has been documented to date at two buildings, the GNBB and Jim Magoffin's Law Office. Other buildings south of Airport Way and east of Cushman Street are in the preliminary evaluation stages, but initial soil gas results indicate a potential risk.

**FY09 Actions:**

During FY09, the area east of Cushman Street was investigated. Three of the buildings east of Cushman are experiencing vapor intrusion. The soil south of these buildings is impacted, but the contamination does not extend south of airport way. Two potential sources have been identified.

Additionally in FY09, treatability and feasibility studies were conducted at the GNBB and soil vapor extraction (SVE) was selected as the preferred remedial alternative. This also satisfies the settlement agreement requirements. Annual groundwater monitoring of both the western and eastern plumes was conducted.

FY09 Response Fund Expenditures:	\$276,248.47
FY09 Cost Recovery:	\$ 0.00

**FY10 Projected Actions and Expenditure Amounts:**

During FY10, the remediation system will be installed and brought online. A long-term monitoring and maintenance plan will be developed for the SVE system and west plume. An alternatives analysis will be completed for the east plume and a draft long-term monitoring plan will be developed. Vapor intrusion in the three buildings will be evaluated further for a more accurate risk evaluation. Annual groundwater monitoring will be completed.

Estimated FY10 Costs: \$ 160,000.00

Project/Site Name: **GC2 and FS2 Oil Spills and Corrosion Investigation**  
Location: North Slope  
Project Manager: Department of Law Telephone: (907) 269-8927  
Site ID Number: NA Ledger Code: 14223760

**Situation:**

The Flow Station 2 oil transit line spill on the North Slope began on August 6, 2006. Approximately 2,281 gallons of crude oil were released to the tundra. The spill was discovered when BPXA was shutting down the line in response to a smart pig operation. The pig data revealed 16 anomalies in 12 locations along this line with corrosion related pipeline wall thinning. For these reasons, BPXA shut down the Greater Prudhoe Bay oilfield, which is the largest oilfield in the United States accounting for approximately 8 percent of the nation's domestic oil production.

The Gathering Center 2 oil transit line release was discovered on March 2, 2006 by BPXA operators. The location of the release was a 34 inch single phase transit line between Gathering Center 2 and Pump Station 1 in the Western Operating Unit of Prudhoe Bay.

After the August 2006 BP Flow Station 2 transit line spills and resulting partial shutdown of the Prudhoe Bay Field, the Department of Law requested an RSA from DEC to fund the investigation of the oil spills and BP's pipeline maintenance and corrosion management practices.

The investigation began during FY07 and is continuing into FY09.

**FY09 Actions:**

In FY09 RSA was re-established between the Department of Law and DEC in the amount of \$3,413,697.00 to continue with the investigation.

FY09 Response Fund Expenditures: \$ 4,055,288.70  
FY09 Cost Recovery: \$ 0.00

**FY10 Projected Actions and Expenditure Amounts:**

None.

Estimated FY10 Costs: \$0.00

Project/Site Name: **Gustavus Tank Farm**

Location: Gustavus

Project Manager: Bruce Wanstall

Site ID Number: 4368

Telephone: (907) 465-5210

Ledger Code: 14230260

**Situation:**

Historic fuel release from multiple 10,000-gallon and 20,000-gallon above ground storage tanks is documented in the *1992 FAA Environmental Compliance Investigation Report*, which states the following: bulk fuel tanks are in direct contact with the ground, soils adjacent to the tanks within a berm of assembled concrete structures were stained with petroleum products, the fuel line extending from the tank farm to the marine head was in good condition with no evidence of soil staining beneath the pipeline. No analytical samples were taken in support of the observations.

**FY09 Actions:**

During FY09, DEC contracted to advance a grid of soil borings for soil sample collection and analysis. In addition, monitoring wells were installed at strategic locations to collect ground water samples for analysis. The soil and water data were presented with conclusions and recommendations in the *Gustavus Tank Farm Site Characterization Report* dated December 2008. The Report data indicate that petroleum contamination of surface soil is limited to the footprint of the fenced bulk fuel tank farm site. Petroleum contamination outside the perimeter of the tank farm exists as a lens of weathered petroleum in low concentrations at the depth of the water table extending south from the tank farm beneath the road in the direction of the dock. The water table is generally 8 to 10 feet below the surface and is influenced by tidal fluctuation of marine waters rendering it non-potable.

FY09 Response Fund Expenditures: \$79,680.54

FY09 Cost Recovery: \$ 0.00

**FY10 Projected Actions and Expenditure Amounts:**

During FY10, DEC will mobilize equipment to install a series of wells to investigate groundwater contamination, and complete groundwater monitoring.

Estimated FY10 Costs: \$55,000.00

Project/Site Name: **Kaktovik Underground Gas Piping Release**

Location: Kaktovik, Alaska

Project Manager: Paul Lhotka

Site ID Number: 08399926001

Telephone: (907) 451-2164

Ledger Code: 14932460

**Situation:**

On September 16, 2008, North Slope Borough (NSB) Public Work employees contacted DEC to report the release of approximately 2000 gallons of gasoline. An investigation into the release revealed that fuel leaked from damaged underground piping during a transfer of fuel from the village's bulk fuel storage tanks to the gas station. NSB Public Works employees trained as hazardous materials responders worked to isolate the source and remove free standing fuel pooled in a tundra depression.

**FY09 Action:**

DEC staff reviewed and approved work plans submitted by the NSB to characterize the site. A partial site characterization began September 26, but was temporarily suspended due to inclement weather. When NSB failed to resume and complete the site characterization by a designated date, a Notice of Violation (NOV) was issued with conditions to complete the work prior to the onset of winter conditions.

Additionally, the NSB was requested to submit repair plan prior to conducting work on the damaged underground piping. On March 23, 2009, NSB remobilized to the site with drilling equipment to complete the site characterization and sampling. DEC staff reviewed the site characterization report and transferred the site to DEC Contaminated Sites program when site characteristics and sampling results revealed unrelated contaminants at the site.

FY09 Response Fund Expenditures: \$ 14,979.19

FY09 Cost Recovery: \$ 10,451.58

**FY10 Projected Actions and Expenditure Amounts:**

None Anticipated.

Estimated FY10 Costs: \$0.00

Project/Site Name: **Kincaid Park Former Biathlon Range**

Location: Immediate vicinity of 9401 W. Raspberry Road, Anchorage

Project Manager: Eileen Olson

Tel: (907) 269-7527

Site ID Number: 4650

Ledger Code: 14264260

**Situation:**

DEC and the U.S. Environmental Protection Agency (EPA) are coordinating regulatory oversight of this lead-contaminated site and at the end of FY09 were awaiting submittal of a characterization plan for review and comment by both agencies. The site encompasses a new soccer field and stadium complex adjacent to the Kincaid Outdoor Center on the west end of Raspberry Road in Anchorage. In May 2008 the non-profit group Kincaid Project Group (KPG) responsible for upgrading recreational facilities at Kincaid Park began pre-construction work for the soccer field complex, part of which was to be built at the location of the biathlon range which had been closed in late 2007. Kincaid Park is owned by the Municipality of Anchorage (MOA). Information was provided in June 2008 that the range was removed as part of extensive earthwork and re-contouring of the area. Pre-construction work included removing the biathlon range targets and excavating and/or moving lead contaminated soil and lead fragments associated with the range, with the result that approximately 30 tons of contaminated soil was stockpiled away from the construction area. Contaminated soil and lead not otherwise accounted for has not been characterized and is reportedly somewhere within the estimated 15,000 cubic yards of fill that make up the soccer field, supporting embankment and side slopes. The site was fully fenced in June 2008 and contaminated media are not accessible to the public.

**FY09 Actions:**

During FY09, DEC reviewed submittals by the MOA and KPG and coordinated with KPG, MOA and EPA following EPA enforcement actions. EPA issued a Notice of Violation (NOV) to MOA and KPG on July 17, 2008 for Resource Conservation and Recovery (RCRA) violations associated with a soil stockpile created in May 2008 and later, in May 2009 broadened the scope of the violations to include KPG and MOA's creation of RCRA-regulated land disposal units when KPG moved lead and lead-contaminated soil from the former location of the biathlon range into fill areas. KPG submitted a work plan to DEC and EPA on April 16, 2009. Subsequently EPA notified KPG and the MOA the April 16<sup>th</sup> work plan did not appear to provide for sufficient characterization. KPG advised DEC and EPA that it would submit a revised characterization plan, with the plan yet to be submitted at the end of FY09.

FY09 Response Fund Expenditures: \$ 28,057.57

FY09 Cost Recovery: \$ 0.00

**FY10 Projected Actions and Expenditure Amounts:**

During FY10, DEC will continue to review and comment on submittals and to provide regulatory oversight for issues under the purview of the Contaminated Sites Program, and continue to coordinate with KPG, MOA and EPA.

Estimated FY10 Costs: \$20,000.00

Project/Site Name: **Kuparuk 2U-2W 24-inch Common Line Produced Water Oil Spill**  
Location: Kuparuk, Alaska  
Project Manager: John Ebel  
Site ID Number: 07399935001  
Telephone: (907) 451-2102  
Ledger Code: 14247160

**Situation**

The 24-inch diameter produced oil line that connects Drill Sites 2W and 2U to Drill Site 2V, known as the 2WU Produced Oil line, leaked in the early morning on December 16, 2007, spilling approximately 102 barrels of oil and produced water onto the tundra. The failure was determined to be a 6-inch long rupture through the pipe wall, due to corrosion under insulation, at the 9 o'clock position on the pipe.

The crude oil misted on approximately 350,223 square foot (sq. ft.) of frozen lake surface; 183,824 sq. ft. of snow covered tundra; and released "heavy" contamination to approximately 7,405 sq. ft. of snow covered tundra. In response to the release ConocoPhillips (CPAI) removed the misted oil from the lake and tundra plumes and the pooled oil and contaminated snow beneath the flow-lines. The heavily oiled area was divided into six treatment cells, which were flooded with water to float and recover remaining oil, and reduce the salinity concentration from the produced water.

After the contaminated snow was removed from the tundra and lake plume, and the flood tactic executed in the "heavily" oiled site beneath the vertical support member (VSM), analytical samples were collected to assess the concentration of petroleum hydrocarbons remaining in the soil, snow, and lake ice. Analytical tests were performed in the treatment cells to assess the salinity remaining from the produced water which may affect redevelopment of tundra vegetation. The analytical results support a favorable cleanup performance as determined by Department of Environmental Conservation (DEC) cleanup regulations.

**FY09 Actions:**

Personnel from DEC, Alaska Clean Seas (ACS), and Alaska Biological Research (ABR) monitored the site throughout the season. Tundra reestablishment is progressing, non-vascular species are most prominent

FY09 Response Fund Expenditures: \$16,605.34  
FY09 Cost Recovery: \$22,964.18

**FY10 Projected Actions and Expenditure Amounts:**

Restoration monitoring.

Estimated FY10 Cost: <\$5,000.00

Project/Site Name: **MarkAir – King Salmon**

Location: King Salmon

Project Manager: Bill O’Connell

Site ID Number: 1879

Telephone: (907) 269-3057

Ledger Code: 14803580

**Situation:**

Groundwater in the area of the airport terminal has been impacted by leaking aboveground and underground fuel storage tanks as well as poor fuel handling and transfer practices. The resulting groundwater contamination is suspected of impacting a nearby potable water well and free-phase product remains on the surface of the groundwater. Additional site characterization in 2007 did not fully delineate the extent of contaminated groundwater and free product recovery begun in 2007 continues into 2008. Alaska Department of Transportation (ADOT) is in the process of re-aligning the road in front of the terminal building potentially impacting existing monitoring wells, so additional site characterization will be coordinated with ADOT construction activities.

**FY09 Actions:**

During FY09, free-phase product recovery was conducted at select monitoring wells at the site, and the dissolved-phase groundwater contaminant plume was further delineated downgradient of the source area.

FY09 Response Fund Expenditures: \$38,241.95

FY09 Cost Recovery: State Owned - No Cost Recovery

**FY10 Projected Actions and Expenditure Amounts:**

FY10 work will include: continued sampling of the existing monitoring well (MW) network; installation and repair of new MWs as necessary; and free-phase product removal.

Estimated FY10 Costs: \$70,000

Project/Site Name: **Mat-Su Town Site Drums**

Location: 8862 C Street East, near Palmer, Alaska

Project Manager: Mark Sielaff

Site ID Number: 06239908801

Tel: (907)269-7532

Ledger Code: 14123260

**Situation:**

On March 29, 2006, Terry Berger with the Mat-Su Borough Solid Waste Program reported to the Department of Environmental Conservation (DEC) that there was possible ground contaminated resulting from oil and other hazardous materials at the Mat-Su Town Site, 8862 C Street East, near Palmer, AK. (old Mat-Su Town Site, N 61.54100 W 149.22690).

Mr. Gerald Poirier was identified as the property owner. DEC conducted a site visit to investigate the Mat-Su Borough's report. During the site visit, it was found that the property was littered with various garbage, 55- gallon drums, 5-gallon containers, and derelict vehicles. Some drums were found to be empty and others were found to contain some unknown amount of liquids. The property is located on a muskeg area; therefore, part of the property was saturated with water. Large portion of the property with standing water was colored green, similar to the color of antifreeze. Mr. Poirier's son was present during the site visit and he indicated that it was a green dye that was in a container. The container rusted through, exposing the dye to the water. He confirmed his claims by adding the powder to the water, which indeed turned green. Mr. Poirier is deceased and his wife, Mrs. Wanda Poirier is the current property owner. Mrs. Poirier was reported to be living on monthly social security checks.

In 2006 and 2007, Mat-Su Borough's vehicle removal program removed approximately 100 vehicles from the property. Mrs. Poirier's son consolidated all the drums and 5-gallon container to one location on the property.

**FY09 Action:**

On August 27, 2008, DEC met with Mrs. Poirier, adjoining property land owners, and Environmental Protection Agency (EPA) at the Mat-Su Town Site to document existing contamination and to identify other possible contaminations. Upon review of the site, EPA agreed to address the hazardous materials identification and disposal and ADEC agreed to consolidate and mitigate the 59 drums and 5-gallon containers, some of which were actively leaking oil. The drums are suspected to contain used oil, lube oil, hydraulic oil, ethylene glycol, and contaminated water.

On October 21, 2008, DEC returned to the site and covered the drums using tarps and deployed absorbents pads to minimize contamination impact to the ground from the leaking drums. On the same day, Mrs. Poirier signed an agreement providing consent for DEC and the contractors to remove oil and hazardous waste from the property.

On April 24, 2009, state contractor completed removed all oil and ethylene glycol products from the property for proper disposal. Fifteen drums containing used oil contaminated with chlorinated solvents were over packed to mitigate the risk to the environment.

On April 27, 2009, EPA contacted DEC and advised that they were unable to provide funding to remove and dispose the drums containing hazardous material as previously committed. Thirty four drums containing hazardous materials are awaiting removal and disposal from the site.

FY09 Response Fund Expenditures:       \$ 11,750.44  
FY09 Cost Recovery:                         \$       0.00

**FY10 Projected Actions and Expenditure amounts:**

Upon funding approval, DEC will contract a response contractor to remove and properly dispose of the 34 drums of hazardous waste from the property.

DEC will continue to work with the property owner to develop a soil remediation plan to address the contaminated soils on the property.

Estimated FY09 costs: \$20,000.00

Project/Site Name: **Milne Point CFP Produced Water Spill**

Location: North Slope, Milne Point Facility

Project Manager: Wes Ghormley

Site ID Number: 09399901201

Telephone: (907) 451-2164

Ledger Code: 14124060

**Situation:**

On January 12, 2009, at 03:00 a crude oil and produced water spill was discovered at the Milne Point Facility by British Petroleum (BP) employees. The volume of the products released was initially estimated at greater than 55 gallons. At approximately 09:15, BP environmental staff increased the volume to 3,360 gallons (80 barrels). However, at ~ 05:00 a delineation and volume survey was conducted by Bell and Associates. They estimated the volume released at 24,078 gallons (573.3 barrels) of which, 6,888 gallons (164 barrels) was confined to secondary containment. They also estimated the area impacted at 6,030 square feet.

On January 13, 2009, BP engineers conducted an additional survey and estimated the volume outside of secondary containment at 17,273.56 gallons (411 barrels) of which, 14,635.56 gallons (348.46 barrels) was crude oil. The fluids were recovered with vacuum trucks and transported to a 400 barrel upright insulated tank for settling purposes and crude oil estimations. Department of Environmental Conservation (DEC) required that fluids be maintained at temperatures greater than 100 degrees for separation purposes. DEC required that an environmental firm be hired to perform the tank strapping, calculate the product recovered, conduct field screening, provide cleanup direction and pull soil samples for laboratory analysis. The environmental firm estimated that 1,864.8 gallons (44.4 barrels) of crude oil was recovered from the spill site.

BP contracted Oasis Environmental of Anchorage, Alaska to perform the field screening, collect confirmation samples and review the data to determine the volume of the release. On April 28, 2009, BP submitted the final report to DEC estimating the final volumes of the release at 4048.8 gallons (96.4 barrels) of crude oil and 5712 gallons (136 barrels) of produced water. The final entries into the DEC database are in the process of being entered and the cleanup has been considered complete.

**FY09 Action:**

During the initial response PERP had responders on site over a period of 14 days who monitored the cleanup, approved plans and coordinated with Industry Preparedness Personnel (IPP) in requiring the removal, cleanup under and replacement of both the sand slurry tank (tank 5417) and the water clarifier tank (5401) secondary containments. The cleanup ceased on February 13, 2009 due to cold weather and commenced again on April 16, 2009, once the weather improved. During the second phase of the cleanup, PERP had responders on site for an additional 12 days.

A Subpoena to preserve and produce documents was issued to BP on January 14, 2009.

A letter of State Interest was issued to BP on February 12, 2009.

A Civil Referral was sent to the Department of Law on March 31, 2009 for the initiation of Civil Enforcement proceedings and Formal Cost Recovery.

FY09 Response Fund Expenditures: \$ 49,245.62

FY09 Cost Recovery: \$ 36,427.99

**FY10 Projected Actions and Expenditure Amounts:**

The Department of Law is reviewing documents acquired during the subpoena process for determination of possible Civil penalties.

Estimated FY10 Costs: \$0.00

Project/Site Name: **NRDA Issues - M/V Selendang Ayu**

Location: Unalaska/Anchorage

Project Manager: Dale Gardner

Site ID Number:

Telephone: (907) 269-7682

Ledger Code: 14142199

**Situation:**

On December 8, 2004, the M/V Selendang Ayu, a freighter carrying soybeans bound for China, ran aground on the north coast of Unalaska Island in the Aleutians. The vessel broke in two, spilling its soybean cargo and dumping over 300,000 gallons of bunker oil and diesel fuel into the ocean waters. The fuel oil contaminated many miles of shoreline. A vigorous effort of shoreline cleanup commenced shortly after the spill, continued until February of 2005, was suspended for several months due to winter weather, and then ran again through the summer months. After one last minor shoreline cleanup project in 2006, the US Coast Guard, the Department of Environmental Conservation (DEC), and the responsible party's incident commander jointly announced the completion of all cleanup operations.

A joint Federal/State Natural Resource Damage Assessment (NRDA) and Restoration process began immediately after the vessel spilled its cargo and fuel, a process that continues today. Federal and State natural resource trustees, which include an DEC representative, completed in the spring of 2007 the "pre-assessment" phase, which is a screening process that looks at possible resource damages to determine if additional action is warranted, and began the "assessment" phase, wherein they gather the data necessary to quantify the injuries and determine damages. Restoration of damages is the ultimate goal.

**FY09 Actions:**

The trustees generally met about once a month, with smaller technical committees meeting more often to deal with specific issues, including several studies, such as harlequin ducks exposure and mortality rates and a survey of spill-impacted shores for lingering oil. In August of 2009, a research team, which included two DEC personnel, conducted a series of site visits on Unalaska Island to collect sediment and mussel samples on previously oiled shorelines to determine the amount of lingering hydrocarbons resulting from the spill.

FY09 Response Fund Expenditures: \$21,087.86

FY09 Cost Recovery: \$22,126.72

**FY10 Projected Actions and Expenditure Amounts:**

NRDA trustee meetings continue, as well as ongoing negotiations with the responsible party to determine the most appropriate restoration projects in light of results from the various studies. DEC staff will continue to represent the department as a NRDA resource trustee.

Estimated FY10 Costs: \$12,000.00

Project/Site Name: **Pedro Bay Former Dena'ina School**

Location: Pedro Bay

Project Manager: Keather McLoone

Site ID Number: 1860

Telephone: (907) 269-7526

Ledger Code: 14896480

**Situation:**

Pedro Bay village administrators first contacted the department in 1993 with reports of diesel fuel odors in the school and the presence of occasional sheen on the water at the shore of Lake Iliamna. Department of Environmental Conservation (DEC) involvement as state lead began in 1997.

Historic fuel storage methods involved storage of up to 500 drums in the playground area. An addition to the school building was later constructed over the area used to store drums. Spills had also occurred at the tank farm and generator building. Soil and groundwater had been contaminated with benzene and diesel. Lead had also been found in past groundwater results above cleanup levels. A past estimate suggested the area of petroleum contamination to be approximately one acre. However, concentrations and extent of subsurface contamination were unknown prior to FY09. Soil sampling results within the past ten years had been limited to a few surface soil samples for petroleum contamination.

Lake and Peninsula School District conducted a limited interim remedial action for soils within the playground area in 1995, and about 4 cubic yards were removed. This was the first of two excavations that took place at this site prior to FY09. In 1999, DEC stockpiled additional excavated soil and installed a groundwater remediation system to address hydrocarbon seepage into water bodies. The stockpile remained on site. Site structures were removed by 2007.

**FY09 Actions:**

During FY09 additional site characterization was performed to address data gaps before finalizing a Corrective Action Plan. Following multiple teleconference meetings to include various stakeholders, the Corrective Action Plan was finalized.

FY09 Response Fund Expenditures: \$46,351.47

FY09 Cost Recovery: State Owned - No Cost Recovery

**FY10 Projected Actions and Expenditure Amounts:**

In FY10, a second field effort will focus on "hot spot" removal and excavation of highly contaminated soil in one source area. This contaminated soil will be placed in an on-site landfarm which will be tilled periodically through FY10. Other FY10 activities will include reporting and ADEC oversight.

Estimated FY10 Costs: \$35,000.00

Project/Site Name: **Pile Bay Tanker Trailer Spill**

Location: Pile Bay Road at the Iliamna River Bridge

Project Manager: John Brown

Site ID Number: 09269915701

Telephone: (907) 269-7688

Ledger Code: 14274760

**Situation:**

On June 6, 2009, the Central Alaska Response Team (CART) received a report of a spill on the Pile Bay Road near Lake Iliamna. A 9,500 gallon tanker trailer operated by Iliamna Development Corporation (IDC) had been unhitched from a truck tractor in the early afternoon, leaving it on *blocked landing gear and* parked on a 5 percent downgrade slope approximately 200 feet from the Iliamna River old bridge crossing. Approximately five hours later, the tanker trailer was discovered lying on the ground spilling fuel. The investigation determined that approximately 1,400 gallons of diesel was spilled when the trailer landing gear collapsed causing a hairline crack along a weld and a quarter-size hole in the tank. The spill migrated downhill from the source to approximately 50 feet from the edge of the river. On June 8, 2009, IDC staff began removing heavily saturated soil from the approximately 160 foot by 25 foot spill area with heavy equipment. CART staff was on site monitoring the excavation activities. On June 9, 2009, fuel sheen was discovered entering the Iliamna River through fractures in the bedrock underlying the spill site. The sheen is contained along the river bank using protective water boom, and absorbent boom and pads. Department of Environmental Conservation (DEC) and IDC response personnel are continuing to monitor the site. The response contractor and IDC staff completed excavation activities and collected confirmation soil samples on June 17, 2009.

The setting up of a soil remediation plan was problematic because IDC does not own any property on the Pile Bay side of Lake Iliamna. IDC was eventually able to obtain a 5 year lease for 5 acres of land from a private property owner just a few miles from the spill location.

**FY09 Action:**

On June 6, 2009 the incident was reported to DEC and a response effort was coordinated with IDC.

On June 8, 2009, DEC responder from Anchorage arrived at the spill site to provide cleanup oversight.

On June 17, 2009, IDC, under the oversight of DEC, completed soil excavation activities and soil sampling.

FY09 Response Fund Expenditures: \$ 15,876.25

FY09 Cost Recovery: \$ 0.00

**FY10 Projected Actions and Expenditure amounts:**

On August 5, 2009, under the oversight of DEC, IDC began clearing and preparing the leased property for remediating the contaminated stockpiled soil. Activity for backfilling the excavated area began in conjunction with preparing the leased property for remediation work.

On August 15, 2009 DEC requested a winter recovery and monitoring plan for the river's shoreline. The absorbent boom and pads along the river are expected to become ineffective as winter approaches and therefore other fuel recovery methods needed to be considered

CART staff will continue to monitor the cleanup and site visits will be conducted until the project is completed.

Estimated FY10 Costs: \$10,000.00

Project/Site Name: **Red Dog Mine**  
Location: Kivalina  
Project Manager: Rich Sundet  
Site ID Number: 1423

Tel: (907) 269-7578  
Ledger Code: 14864860

**Situation:**

Fugitive dust from the transportation of the ore concentrate between the mine and the port has resulted in contaminating those areas and along the 52 mile connecting road for zinc, lead and cadmium above background levels. Petroleum contamination is also present at the powerhouse due to release of crankcase oil and fuel oil from sump beneath generators.

**FY09 Actions:**

Department of Environmental Conservation (DEC) reviewed and provided comments to Teck Cominco regarding Teck's "Draft Fugitive Dust Risk Management Plan Red Dog Operations, Alaska" dated August 2008. DEC also public noticed this draft document and participated in public informational meetings at Noatak and Kivalina that were hosted by Teck regarding this plan. The draft plan noted that six more detailed subplans would be submitted to DEC and to the public for review such as monitoring and reclamation. In FY08, DEC had approved of the risk assessment to address fugitive dust at the mine site and in its approval letter, DEC requested a management plan to address the risks to human health and the environment that were identified in the report. DEC also provided comments to DNR who coordinated the State's comments and provided them to EPA regarding EPA's preliminary draft "Supplemental Environmental Impact Statement" developed for the potential expansion to mine the nearby Aqqaluk ore deposit.

FY09 Response Fund Expenditures: \$25,903.75  
FY09 Cost Recovery: \$29,166.17

**FY10 Projected Actions and Expenditure Amounts:**

DEC will issue a Responsiveness Summary to address comments provided by various stakeholders regarding the draft risk assessment report. DEC will review Teck Cominco's draft subplans in association with its risk management plan to address fugitive dust.

Estimated FY10 Costs: \$20,000.00

Project/Site Name: **Residence – 35061 Seward Highway HHOT**  
Location: 35061 Seward Hwy, Moose Pass  
Project Manager: Paul Horwath Telephone: (907) 262-5210 ext. 250  
Site ID Number: 4341 Ledger Code: 14222360

**Situation:**

DEC was informed of a heating fuel release at this property in June, 2006, when an adjacent land owner reported heating fuel flowing onto their property. The fuel spill occurred in the immediate proximity of two residences. The land owner responsible for the heating fuel spill hired an environmental consultant and initiated assessment and cleanup response actions at the site. In 2006, approximately 280 cubic yards of contaminated soil was excavated and removed from the site. About 15 cubic yards was excavated from the neighboring property. Following the completion of field work, the consultant reported contamination remaining onsite, as well as on the adjacent property. Groundwater was encountered at a depth of 13 feet at one location, and was also contaminated by the heating fuel.

Following these initial response efforts, the responsible party notified DEC that he was unable to fund any further cleanup work.

**FY09 Actions:**

During FY09, DEC hired a term contractor to identify the nature and extent of the residual petroleum contamination. Site soils were sampled, and six groundwater monitoring wells were installed and sampled. It was determined that the residual contamination was limited in quantity and concentration, did not present an unacceptable risk to human health or the environment, and that no further State funded cleanup work was necessary.

FY09 Response Fund Expenditures: \$51,202.15  
FY09 Cost Recovery: \$ 0.00

**FY10 Projected Actions and Expenditure Amounts:**

During FY10, no additional work or expenditures are planned.

Estimated FY10 Costs: \$0.00

Project/Site Name: **River Terrace RV Park**

Location: Soldotna, Alaska

Project Manager: Rich Sundet

Site ID Number: 1535

Tel: (907) 269 - 7578

Ledger Code: 14974360

**Situation:**

River Terrace RV Park (RVRVP) is a 10-acre parcel located adjacent to the Kenai River in Soldotna. A dry cleaner facility operated there from the 1960s through the 1980s. Currently the parcel is occupied by a trailer court, a recreational vehicle park and associated facilities, including a Laundromat.

In 1992, a complaint of leaking barrels was received by DEC and 22 barrels of waste oil and other hazardous substances were identified on site. One of the 55 gallon drums was labeled “perchloroethylene” which is also known as tetrachloroethylene or PCE. The owner was requested to have an environmental contractor remove the barrels and investigate the property based on its past use as a dry cleaning facility. The assessments identified soil contamination above DEC cleanup levels for petroleum hydrocarbons and PCE.

In 1997, DEC evaluated the information from the site investigation and established alternative cleanup levels (ACL) for the site. The groundwater monitoring results identified PCE above the ACL and the property owner developed a plan to address the problems. The owner excavated approximately 3,300 cy of soil under the direction of EPA and treated it on-site using a soil vapor extraction system.

Following a settlement agreement with the property owner DEC assumed the lead role to investigate the site and performed a water quality and sediment investigation in the Kenai River adjacent to RTRVP. Furthermore, a Remedial Investigation/Feasibility Study (RI/FS) was prepared that further characterized the site and evaluated several remedial alternatives to treat the contamination. A Record of Decision established cleanup levels at the site and specified Hydrogen Release Compound (HRC) as the method to treat the groundwater. The injections would occur in a phased approach. In fall 2000, 56 HRC injection points were installed in Phase I and in 2001, another 51 injection wells were installed under Phase II.

In 2002 DEC determined that the degradation had stalled at the cis 1,2-dichloroethylene (cis DCE) stage and conducted a pilot bioaugmentation study to determine if microbes could facilitate the breakdown of the cis DCE. DEC continued to monitor the treatment at the site and evaluate trends in contamination in both the groundwater and the sediments in the Kenai River. Between 2002 and 2006, HRC was injected in selected areas in the upper and lower plume in four additional injection events (Phases II-V). In addition to cleanup activities, funding has been provided for legal advice on cleanup matters, litigation of the State’s cost recovery action, and litigation to retain access to the site for the assessment and cleanup work.

**FY09 Actions:**

DEC continued groundwater monitoring at the site by performing semi-annual monitoring in spring and fall. DEC’s contractor finalized reports for work performed in FY08 including a drum characterization and disposal project, and a sediment and pore water investigation. Department of Law (DOL) reviewed correspondence by the property owners’ counsel to amend the Consent Decree.

FY09 Response Fund Expenditures: \$178,210.00

FY09 Cost Recovery: \$203,454.87 through EPA Grant.

**FY10 Projected Actions and Expenditure Amounts:**

DEC performed a Phase VI treatment by injecting HRC into selected injection points in the lower plume area to address an area in the till where PCE remains in elevated concentrations. DEC also performed a vapor intrusion evaluation to determine whether contaminants that were landspread on the 8.5 acre RTRVP tract may pose an indoor air risk. DEC expects also to perform a sediment and pore water investigation of the Kenai River adjacent to the site in spring 2010. In addition, DEC will continue semi-annual groundwater monitoring. DOL will continue to assist DEC on legal issues including addressing the property owners’ request to amend the Consent Decree.

Estimated FY10 Costs: \$200,000.00

Project/Site Name: **Shishmaref Tank Farm Spill**

Location: Shishmaref, Alaska

Project Manager: Paul Lhotka

Spill Number: 08389909901

Telephone: (907)451-2175

Ledger Code: 14257660

**Situation:**

On 4-18-2008, The City of Shishmaref called to report the discovery of 100-200 gallons of diesel fuel near the city's water plant. Local responders began to recover pooled product while Department of Environmental Conservation (DEC) mobilized Alaska Chadux Corporation to assist. Investigation into the cause revealed that approximately 4,300 gallons were released when tank farm operators opened bulk tank valves and inadvertently overfilled the water plant's day tank. The spill site was delineated while responder's worked to remove and stockpile contaminated snow into lined storage cells. Remaining free product was pumped into a designated storage tank while sandbag berms and underflow dams were constructed to catch residual fuel carried by spring run-off. On 6-19-08, DEC returned to complete the clean-up and recover product from the contaminated snow cell. The remaining response equipment was demobilized and the site is being transferred to Contaminated Sites for future monitoring.

**FY09-Projected Actions and Expenditure Amounts:**

Local responders conducted the initial response, while DEC mobilized Alaska Chadux Corporation to assist. The spill site was delineated while responder's worked to remove and stockpile contaminated snow into lined storage cells. Remaining free product was pumped into a designated storage tank while sandbag berms and underflow dams were constructed to catch residual fuel carried by spring run-off. On 6-19-08, DEC returned to complete the clean-up and recover product from the contaminated snow cell. The remaining response equipment was demobilized and the site is being transferred to Contaminated Sites for future monitoring. All these activities took place in FY08. Costs associated with those activities were paid in Fiscal Year 2009 due to delay in vendor's submission of invoices.

FY09 Response Fund Expenditures:	\$127,590.32
FY09 Cost Recovery:	\$ 0.00

**FY10-Projected Actions and Expenditure Amounts:**

Conduct follow-up site visit in conjunction with other work on the Seward Peninsula and staff's time to complete database entry and transfer the site to DEC Contaminated Sites Program.

Estimated FY10 Costs: \$0.00

Project/Site Name: **Six-Mile Truck Shop (Area-wide)**

Location: Fairbanks/North Pole

Project Manager: Ann Farris

Site ID Number: 329

Tel: (907) 451-2104

Ledger Code: 14621570

**Situation:**

In 1995/1996, an area-wide trichloroethylene (TCE) groundwater plume was discovered in the Six-Mile Richardson Highway area. The plume is over a mile in length, up to 1200 feet wide, and up to 100 feet in depth. It extends in a northwesterly direction from south of the New Richardson Highway to the Six-Mile Village Subdivision area.

The plume impacted fifteen residential drinking water wells and the homeowners were provided financial assistance to install water treatment systems (e.g., carbon filters) to remove the TCE from their drinking water. Individual site investigations were conducted concurrently with the initial phases of the area wide groundwater investigation. Site investigations at the McCall, Holder, Walsky, and 6-Mile Truck Shop properties concluded that there are multiple source areas where TCE was discharged to the ground. The individual source areas are creating groundwater plumes that eventually merge together to form the area-wide plume. The source areas appear to be located on the Holder and Walsky properties.

In 1996, an annual long-term groundwater program was initiated that included permanent monitor wells and a selected number of residential wells. The data indicates a decreasing trend in contaminant concentrations over time.

**FY09 Actions:**

In FY09, the long-term monitoring continued along with residential well sampling. Additionally, the contractor completed an inventory of homes over the plume area for a vapor intrusion pathway analysis. There are buildings in the area that may be experiencing vapor intrusion

FY09 Response Fund Expenditures: \$ 34,782.43

FY09 Cost Recovery: \$ 0.00

**FY10 Projected Actions and Expenditure Amounts:**

In FY10, the long-term monitoring will be continued along with residential well sampling. Additionally, the contractor will collect a limited number of soil gas samples to evaluate the vapor intrusion pathway.

Estimated FY10 Costs: \$55,000.00

Project/Site Name: **Togiak Fisheries**  
Location: South side of Togiak Bay  
Project Manager: Eileen Olson  
Site ID Number: 322

Tel: (907) 269-7527  
Ledger Code: 14895460

**Situation:**

The site comprises approximately 10 acres; a five-acre parcel including a spit and uplands owned by North Pacific Seafood, Inc. (NPSI) that is occupied by a fish processing and cannery facility, and a state-owned adjacent 5-acre marine tideland leasehold that surrounds the sea-ward portion of the spit. The site is located across Togiak Bay from the city of Togiak. The site was contaminated by surface and subsurface gasoline and diesel releases in excess of 35,000 gallons that reportedly took place from the early 1980's until late 1987, when DEC and the U.S. Coast Guard investigated and confirmed complaints of ongoing releases. The fuel releases contaminated the groundwater and to an unknown extent, the shoreline and waters of Togiak Bay and the adjacent Togiak River estuary, with a sheen observed on the waters of Togiak Bay and 300 feet of shoreline impacted by fuel. Following enforcement and other legal actions approximately 12,400 gallons of fuel was recovered from groundwater recovery wells over a two-year period and the fuel storage and transfer facilities were upgraded. An additional release of approximately 260 gallons of diesel fuel was documented in 2005 when a valve between a supply tank and incinerator was left open. During 2002 and 2003 approximately 7,300 cubic yards of soil and sediment were excavated and later thermally remediated using an on-site remediation system. An additional 1,100 cubic yards of contaminated soil remains stockpiled at the site. Togiak Fisheries initiated a risk assessment process for the site in 2005, with the final document submitted in August 2007 and approved in November 2008. Remaining to be addressed are actions intended to verify that site characterization is adequate and ongoing migration into the marine environment is not occurring. Prior to the 2010 field season, NPSI will submit a work plan for these actions to include assessing the integrity of the existing monitoring wells, groundwater monitoring and surface water impact monitoring. Following completion of work by NPSI and DEC review, DEC expects to grant site closure with institutional controls status during calendar year 2010.

**FY09 Actions:**

During FY09, staff reviewed new monitoring reports, field notes, and all site information in the Contaminated Sites file for the site and determined that data gaps exist with respect to groundwater and surface water data. Although DEC prepared and provided to NPSI a draft Record of Decision (ROD) that would have allowed closure with institutional controls given the available site information, NPSI elected to forego site closure with institutional controls until additional work is done.

FY09 Response Fund Expenditures:           \$ 17,152.14  
FY09 Cost Recovery:                           \$ 10,117.95

**FY10 Projected Actions and Expenditure Amounts:**

During FY10, NPSI will submit a plan for assessing the integrity of existing monitoring wells, groundwater monitoring and surface water impact monitoring. DEC will complete the draft ROD based on the results of work done, and expects to grant site closure status with institutional controls by the end of FY10 or early in FY11.

Estimated FY10 Costs:   \$11,000.00

Project/Site Name: **Togiak School**

Location: Togiak, Alaska

Project Manager: Deborah Williams

Site ID Number: 4587

Telephone: (907) 451-5174

Ledger Code: 14622260

**Situation:**

A site characterization was conducted October 2007 at the Togiak School property (4.8 acres) in conjunction with building demolition and new school construction. The findings indicated historic contamination, including gasoline and diesel range organics, and benzene above Department of Environmental Conservation (DEC) cleanup levels. Contamination was found at multiple locations on both the northern and southern halves of the property. The site is sometimes referred to as the Togiak Old School. Demolition and construction plans included removal of the south end of the main school building as well as all other buildings and facilities on the southern half of the property. Renovations are planned for the northern half of the property for continued use as a school. After the building demolition plan is complete, the City of Togiak plans to reuse the southern half of the property as a recreation facility, meeting hall, and playground/park. There are also individual residential buildings on site.

**FY09 Actions:**

During FY09, assessment activities were completed during the decommissioning activities at the old school site. Significant contamination was identified and approximately 4,000 cubic yards of contaminated soil were excavated and stockpiled at the landfill. Complete removal of all petroleum-contaminated soil was not possible because of limited resources.

FY09 Response Fund Expenditures: \$ 102,080.59

FY09 Cost Recovery: State Owned – No Cost Recovery

**FY10 Projected Actions and Expenditure Amounts:**

During FY10, recommendations will be developed for stockpile management and additional site characterization will be developed, including vapor intrusion monitoring and sampling. Some additional onsite activities will be scheduled for spring.

Estimated FY10 Costs: \$75,000

Project/Site Name: **Tuntutuliak Former BIA School Site**

Location: Tuntutuliak, Alaska

Project Manager: John Carnahan

Spill Number: 4564

Telephone: (907) 451-2166

Ledger Code: 14247780

**Situation:**

The Department of Education and Early Development (DEED) currently owns land, structures, and associated abandoned tank farm that resides within the community. Of the two primary buildings on the site, one is slated for future demolition and the other is of new enough construction to warrant repair and reuse. The Bureau of Indian Affairs (BIA) built the school on this site in 1957, and there was suspected contamination associated with the structures, petroleum contamination associated with the tank farm, and potential polychlorinated biphenyls (PCBs) associated with former power generation and transformers. Previous investigations by the school identified lead paint and asbestos issues, however PCBs and petroleum contamination remained suspect in soil at the site.

**FY09 Actions:**

During FY09, a site characterization was completed to investigate contaminant releases. Four areas of concern were identified during the investigation: the area east of the generator building; the used oil ash box; the tank farm; and the former day tank area. An onsite water supply well that was not in use was also identified and recommended for closure.

FY09 Response Fund Expenditures: \$ 39,764.15

FY09 Cost Recovery: State Owned-No Cost Recovery

**FY10 Projected Actions and Expenditure Amounts:**

There are no plans for additional work for the Tuntutuliak Former BIA School Site for FY10.

Estimated FY10 Costs: \$0

Project/Site Name: **Tununak Former BIA School Tank Farm**

Location: Tununak

Project Manager: Keather McLoone

Site ID Number: 4642

Telephone: (907) 269-7526

Ledger Code: 14263580

**Situation:**

A site reconnaissance funded by the Denali Commission found diesel range organics (DRO) contamination up to 6,290 mg/kg in 2001. Less than 30 feet away from the tank farm is a drinking water well for the Paul T. Albert Memorial School which is used by most of the village residents for drinking water. This well, which is reported to be set at 38 feet below ground surface (bgs) with static water at about 10 ft bgs, is relatively shallow and could potentially be impacted by the DRO contamination from the tank farm.

**FY09 Actions:**

During FY09 additional site characterization was planned. Due to logistical problems and sampling errors, data gaps still exist at this site and further site characterization to address the data gaps is warranted to better assess the groundwater ingestion exposure pathway. Site cleanup would not be practical until tanks are removed and the area under the tank farm can be accessed.

FY09 Response Fund Expenditures: \$27,386.30

FY09 Cost Recovery: State Owned-No Cost Recovery

**FY10 Projected Actions and Expenditure Amounts:**

During FY10, further characterization is needed to address data gaps to better evaluate the groundwater ingestion pathway due to the presence of a village drinking water well located in close proximity to the tank farm.

Estimated FY10 Costs: \$45,000

Project/Site Name: **USFS Salt Chuck Mine**  
Location: Near Kasaan, Prince of Wales Island  
Project Manager: Anne Marie Palmieri  
Spill Number: 2993

Telephone: (907) 766-3184  
Ledger Code: 14878660

**Situation:**

The Salt Chuck Mine is a historic abandoned gold, silver, and copper mine located on the Salt Chuck Bay in the Tongass National Forest on land managed by the United States Forest Service (US Forest Service). Mining at the site began in 1905 and operated discontinuously until 1941 with the mill processing over 326,000 tons of ore. Over 100,000 cubic yards of metals-contaminated tailings are present on site, with the large majority located in the inter-tidal area. The US Forest Service conducted a limited characterization of the site from 2003-2007 and found elevated concentrations of metals, polychlorinated bi-phenyls (PCBs), and petroleum in the upland soil, and metals and PCBs in the inter-tidal sediments. Elevated metals were also found in the surface waters and clams and mussels of Salt Chuck Bay.

**FY09 Actions:**

During FY09, DEC conducted a site visit with the Environmental Protection Agency and US Forest Service. DEC reviewed and commented on technical documents for the site. DEC conducted negotiations with the US Forest Service regarding the potential for site cleanup actions. In response to an EPA request for a State position regarding potential site inclusion on the National Priorities List, DEC staff conducted outreach to State and Federal agencies, industry, tribes, and the affected public to provide information and hear concerns. DEC prepared outreach materials including fact sheets and presentations as well as management briefing materials. DEC participated in a mining symposium on Prince of Wales Island.

FY09 Response Fund Expenditures: \$17,758.59  
FY09 Cost Recovery: \$ 0.00

**FY10 Projected Actions and Expenditure Amounts:**

During FY10, DEC will provide assistance to EPA to assist in its deliberations regarding site inclusion on the National Priorities List. DEC will also participate in negotiations with EPA and US Forest Service regarding a Federal Facility Agreement to cover EPA-funded cleanup actions. DEC will provide technical oversight on the EPA characterization and cleanup activities including reviewing and commenting on documents, participating in comment resolution meetings, participating in public meetings, and conducting site visits. DEC will also provide technical oversight for the US Forest Service's American Recovery and Revitalization Act (ARRA)-funded mine safety and removal actions.

Estimated FY10 Costs: \$5,000.00

Project/Site Name: **West Nome Tank Farm**

Location: Nome , Alaska

Project Manager: Sharon Richmond

Spill Number: 575

Telephone: (907)451-2158

Ledger Code: 14934760

**Situation:**

This former US Air Force (USAF) tank farm was built to support the WWII Lend/Lease Program. The property is owned by the USAF and the tank farm was operated from 1944 to 1991 by the USAF and its lessees, Chevron (Standard Oil) and Crowley Maritime. Soil and groundwater is contaminated with petroleum due to historical spills and refueling operations. Free product has been observed on the property and at the water table on the property boundary. Contaminated groundwater is present on and off-site; fuel impacts extend to the Snake River (an anadromous river) and Snake River sediment. Surface water quality violations have not been observed. Polychlorinated bi-phenyls (PCB)s and pesticides are potential contaminants of concern. The site consists of the former tank farm property, former fill stands, and remaining pipelines associated with the former tank farm. The USAF Relative Risk Evaluation Worksheets (9/4/95) ranked the former tank farm and pipeline sites as MEDIUM and LOW overall risks, respectively. The USAF worksheets also indicated that limited information is available from the 1988 Woodward-Clyde field investigation and the analytical findings from this report are valueless. A section of pipeline that crossed the Snake River was removed in April 1994; potential contamination along the underground portion of this pipeline and other pipelines has not been completely evaluated. Chevron performed significant characterization of soil contamination along the property boundary and management of contaminated soil and groundwater during the City of Nome's utility upgrade along Port Road in 2004/2005. Crowley conducted a site characterization study in 2008 which staff responded to in 2009 stating that the site will require further treatment. The Potentially Responsible Party (PRP) group met in 2009 and planned for treatment feasibility studies, monitoring work, and other evaluations. Contamination and an interim-action treatment system (currently inactive) have interfered with Nome Joint Utility's ability to tie in new utility customers adjacent to the site. Staff are working with the PRP group and the Utility to approve methods for these utility extensions.

**FY09 Actions:**

During FY09, staff participated in meetings with multiple responsible parties, reviewed corrective action plans and status reports, and interfaced with legal on issues of concern. Staff provided comments and approvals to work products.

FY09 Response Fund Expenditures: \$ 30,018.56

FY09 Cost Recovery: \$ 0.00

**FY10 Projected Actions and Expenditure Amounts:**

During FY10, staff will continue to coordinate and work with multiple parties to ensure corrective actions are appropriate and carried forth in a timely manner.

Estimated FY10 Costs: \$ 24,000.00

Project/Site Name: **Wrangell Institute**  
Location: Southeast/Wrangell  
Project Manager: Anne Marie Palmieri  
Site ID Number: 3137

Tel: (907) 766-3184  
Tracking Number: 14646860

**Situation:**

The Wrangell Institute was built in 1932 by the Bureau of Indian Affairs and used as a school for Native children until the 1970s. In 1978, the facility was transferred to the Cook Inlet Regional, Inc., and was used for several years as housing for the Forest Service for the Young Adult Conservation Corps. In 1995, ownership of the property was transferred to the City of Wrangell.

Contamination at the site is the result of leaks and spills along the heating fuel transfer and fueling systems. On-site there were two large 20,000 gallon fuel tanks which stored heating oil for the school. The fuel was transferred from tankers uphill to the tanks by a pipeline and then dispersed to the individual fuel tanks at each building by another pipeline.

In 1999, the City removed all of the tanks and excavated 750 cubic yards of contaminated soil which was stockpiled in a rockpit. In 2001, the City performed a site assessment of the property, demolished all of the buildings, excavated additional contaminated soil which was stockpiled near the site, and collected samples to determine levels of contamination remaining on-site. In fall 2002, DEC contacted the Potentially Responsible Parties (PRPs) to begin discussions about future cleanup actions. In October 2003, DEC performed a thorough site characterization of the site, installing monitoring wells, and collecting soil, sediment, groundwater, and surface water samples.

After several years of negotiations, in June 2007, the US Department of Justice signed a settlement agreement for \$2.35 million for the federal portion of the cleanup action, long-term monitoring, payment of State of Alaska past and future oversight and contractual costs, and payment of City and Borough of Wrangell past cleanup costs. In FY08, the DEC term contractor excavated the majority of the contaminated soil and stockpiled it at site.

**FY09 Actions:**

During FY09, the final site excavating activities were completed with a total of almost 11,000 cubic yards of contaminated soil removed. The DEC term contractor demobilized from the site. DEC contracted with a term contractor specializing in disposal of contaminated soil to send 400 cubic yards of highly contaminated soil to a landfill in Oregon. In FY09, DEC also transported all of the remaining lightly-contaminated soil to the Wrangell Landfill to be used as cover material during the closure of the landfill. The original settlement agreement for the cleanup of the Wrangell Institute specified that the City and Borough of Wrangell would transport the soil, however based upon the increased volume in soil, DEC agreed to transport the soil. DEC also reviewed the groundwater and surface water sampling results submitted by the City and Borough of Wrangell.

FY09 Response Fund Expenditures:	\$ 627,800.28
FY09 Cost Recovery:	\$ 0.00

**FY10 Projected Actions and Expenditure Amounts:**

A small volume of soil remained to be transported to the landfill at the end of FY09. In FY10, the transport of all soil will be completed. A site closure complete letter will be drafted and sent to the City and Borough of Wrangell.

Estimated FY10 Costs: \$1,000.00

Project/Site Name: **Yukon River 09 Flooding**

Location: Yukon River Drainage

Project Manager: Tom DeRuyter

Site ID Number: 09309912302

Telephone: (907) 451-2145

Ledger Code: 14272460

**Situation:**

In May 2009, heavy snow melt and ice dams caused rivers and streams to rise and caused flooding in communities along the Yukon and Kuskokwim river systems. The flooding impacted several communities, damaging many homes, businesses, and public infrastructure. Several areas had to be evacuated. Many public and private drinking water systems were impacted by the flooding, as well as wastewater disposal systems, and landfills. The flood waters damaged or displaced numerous fuel tanks, drums, and other containers in the communities and other locations along the rivers. There were also petroleum spills in many of the flooded communities.

**FY09 Action:**

Eagle: Department of Environmental Conservation (DEC) staff and a contractor was sent to Eagle with the mission to mitigate the effects of the released fuel and collect and/or stabilize drums and tanks that were damaged or displaced by the ice and flood waters. A lined containment area was set up in the gravel pit near the airport in Eagle. Drums with product were collected, over-packed and placed in the lined area. Household hazardous waste (paint, batteries, cleaning products etc.) were collected and placed in fish totes in the lined area. Disturbed fuel tanks were emptied and stabilized. In support of the Department of Transportation mission to reopen the road from Eagle to Eagle Village. DEC removed all hazardous wastes and drained fluids from abandoned wrecked vehicles that were found during the debris removal along the right-of-way.

Tanana: DEC staff traveled to Tanana and worked with our contractor to collect drums that contained product and had been displaced by the flood, stabilize tanks, and sanitize the general area with lime to protect the inhabitants and the response workers from diseases caused by exposure to sewage.

Stevens Village: DEC and a contractor traveled to Stevens Village. Since most of the residence of Stevens Village used wood heat the issue of displaced tanks was not a major concern. However, over 80 drums containing product have been collected from the debris lines downstream of the village. The drums were staged at the barge landing in a lined area.

FY09 Response Fund Expenditures: \$272,365.63

FY09 Cost Recovery: \$269,384.68

**FY10 Completed and Projected Actions:**

Eagle: Through the Federal Emergency Management Agency (FEMA) and the Division of Military and Veterans Affairs (DMVA) the debris removal from personal property has been completed. ADEC will dispose of the household hazardous waste that was collected during this process. No other actions are anticipated at this time.

Tanana: The recovered fuel and household hazardous waste was either recycled or transported out of the Tanana to be disposed of at a licensed facility. No other actions are anticipated at this time.

Stevens Village: The recovered fuel and household hazardous waste was either recycled or transported out of the Tanana to be disposed of at a licensed facility. No other actions are anticipated at this time.

Estimated FY10 Costs: \$50,000.00

Project/Site Name: **ZipMart Store - Sterling**

Location: Sterling, Alaska

Project Manager: Linda Nuechterlein

Site ID Number: 23620

Tel: (907) 269-7530

Ledger Code: 14662160

**Situation:**

The Sterling ZipMart facility was a gas station which opened in 1985. The original underground storage tank (UST) system which consisted of two 10,000 gallon steel tanks with a single wall piping, was owned and operated by Whittier Properties, Inc. from April 1990 to December 2000. In August 1995, when the original USTs were replaced with a new 20,000 gallon, three-compartment tank, minor soil and groundwater contamination was encountered. No cleanup action was conducted because it was not reported as a significant problem.

In December 2001, additional assessment was performed when the responsible party (RP), Whittier Properties, was closing the facility. This 2001 fieldwork (conducted initially by the RP under the Department of Environmental Conservation (DEC) Financial Assistance Program) identified significant soil and groundwater contamination associated with the piping and fuel dispensers. Thirteen inches of fuel product were detected in two 40 foot deep monitor wells. The exact quantity of fuel spilled is unknown, but the DEC has determined that the quantity exceeds 50,000 gallons, based on a review of fuel records.

The contamination migrated in a southeasterly direction and dissolved-phase fuel contamination in excess of DEC groundwater cleanup levels has been encountered in a plume approximately 2,400 feet long and up to 600 feet wide. When the RP was unable to continue, the DEC assumed the lead role for characterization, remediation and monitoring of the fuel release on the former gas station property, as well as on adjacent and down-gradient properties. The groundwater and drinking water wells in the area continue to be monitored by DEC to determine the risk to human health, and to define the extent of contamination.

A product recovery system which was operated from 2002-2005 resulted in the recovery of over 15,000 gallons of product. Following the free-phase product recovery effort, a soil vapor extraction system (SVES) was installed in 2005. In 2007 the SVES was expanded to the east of the existing system which allowed for treatment and cleanup of the secondary source area on the Sterling Baptist Church property. The SVES is currently operational and continues to extract gasoline in the vapor phase from the source area throughout the year.

**FY09 Actions:**

During spring of 2009 an Oxygen Releasing Compound (ORC) Pilot Study was undertaken to evaluate the effectiveness of injecting an oxygen source into the aquifer to enhance bioremediation, and slow the advance of dissolved phase gasoline constituents at the down-gradient end of the contaminant plume. In May 2009 the existing UST, associated fuel dispensers, and piping were removed. Approximately 774 tons of petroleum impacted soil were excavated from the vicinity of the UST system and transported to ASR in Anchorage for thermal treatment. Soil in the bottom of the excavation was treated with ORC Advanced oxygen releasing compound and RegenOX chemical oxidizer to enhance degradation of the petroleum remaining in the subsurface. A passive soil ventilation system was installed in the excavation backfill to facilitate removal of volatile compounds and enhance oxygen movement in the subsurface.

FY09 Response Fund Expenditures:       \$ 354,183.45

FY09 Cost Recovery:                         \$       0.00

**FY10 Projected Actions and Expenditure Amounts:**

During FY10 ADEC will continue the following activities: monitoring of groundwater and drinking water wells in the area; operation, monitoring and maintenance of the Soil Vapor Extraction System; treatment of the contaminated source area; and treatment of the down-gradient portion of the plume by augmenting natural attenuation with Oxygen Releasing Compound (ORC) to protect drinking water wells.

Estimated FY10 Costs:   \$ 330,000

### Appendix 3

## OIL AND HAZARDOUS SUBSTANCE RELEASES

### ALASKA STATUTES

**Sec. 46.08.060. Report.** (a) The commissioner shall make available a report to the legislature not later than the 10<sup>th</sup> day following the convening of each first regular session of the legislature. The commissioner shall notify the legislature that the report is available. The report may include information considered significant by the commissioner but must include:

- (1) the amount of money expended by the department under AS 46.08.040(a) during the preceding two fiscal years.
  - (2) The amount and source of money received and money recovered by or on behalf of the department during the preceding two fiscal years under
    - (A) AS 46.08.020; and
    - (B) AS 46.08.025;
  - (3) a summary of municipal participation in the department's responses that were paid for by the fund;
  - (4) a detailed summary of department activities in responses paid for by the fund during the preceding two fiscal years, including response descriptions and statements outlining the nature of the threat; in this paragraph, "detailed" includes information describing each personal services position and total compensation for that position, each contract in excess of \$10,000, and each purchase in excess of \$10,000; and
  - (5) the projected cost to the department for the next two fiscal years of monitoring, operating, and maintaining sites where response has been completed or is expected to be continued during the next two fiscal years.
- (b) As part of the department's on-going identification efforts associated with oil spill or hazardous substance release or waste sites, the commissioner shall include in the report under this section
- (1) the number of sites that are included in the department's contaminated sites data base, whether the site is active or closed; and
  - (2) a prioritized listing of those sites, both statewide and by community, based on the immediate and long-term threats to the public health or welfare or to the environment.
- (c) In addition to the department's report required under (a) of this section, the governor shall submit a report about use of the fund during the previous two fiscal years to the legislature not later than the 10<sup>th</sup> day following the convening of each first regular session of the legislature. In the report, the governor shall describe in detail the governor's use of money from the fund, with separate explanations, by agency, of the activities that were paid for under the authority of AS 46.08.045.
