

**Status & Trends of Fish Habitat on Private Timberlands in SE Alaska, (Southeast Alaska )**  
Sealaska Corp., \$67,300

This project will complete a study on the status of fish habitat on private lands in Southeast Alaska. Since 1997, several basins that were surveyed have been logged; therefore, post-logging data should be collected at many of these sites to determine the appropriateness of existing practices in protecting fish habitat. Monitoring will be completed on all basins where pre-logging and pre/post-logging data exist to document status and trends in habitat conditions. This will facilitate an evaluation of forestry best management practices (BMPs) effectiveness, and will help Alaska meet one of its priority stewardship actions. Contact Ronald Wolfe, 907-586-9277.
