

ALASKA DEPARTMENT OF ENVIRONMENTAL CONSERVATION

Division of Air Quality AIR QUALITY ADVISORY Central and Eastern Alaska #2025-F9 Wednesday July 2, 2025

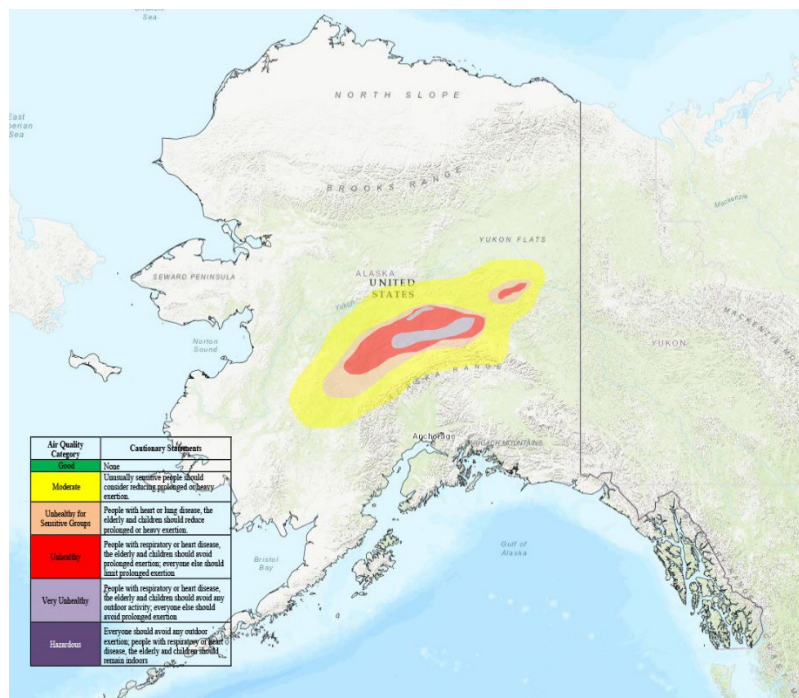

LOCATION(S) IMPACTED: Central and Eastern Alaska.

TIME/DATE OF UPDATE: Wednesday July 2, 2025, 9:00 PM

VALID TIME: Wednesday July 2, 2025, 9:00 PM to Saturday July 5, 2025, 2:00 PM, advisory will be issued until end of the event.

TIME/DATE OF THE NEXT REPORT: Saturday July 5, 2025, 2:00 PM, if needed.

ADVISORY: Numerous fires in the Central Interior have experienced increased activity under the current red flag warnings. This increase activity has filled central Alaska with smoke from those fires. Fire activity may subside during the early morning hours but look for continued smoke production during the day and into the evening hours through the weekend. The region is expected to continue to see significant smoke from the current fires through the advisory period. Communities in the shaded areas below will see smoke impacts. Air Quality will vary between **GOOD** and **Very Unhealthy** in the region, areas downstream of the fire will be greatly impacted. In the image below, the highlighted areas are the forecasted impacted areas associated with this advisory. See the table below for more guidance on the Air Quality Categories and Cautionary Statements.

Be aware that areas immediately downwind of any fire will experience **HAZARDOUS** levels of smoke. Generally, worse conditions occur overnight and during the early morning hours, as the atmosphere cools and brings smoke to the surface. During the day, surface heating will mix smoke and carry it upwards, temporarily improving air quality.

SMOKE AND PUBLIC IMPACT: This is an area forecast, and as such is a general forecast for portions of Southwestern Interior Alaska. Smoke intensity will vary depending on precise location and local wind flow patterns. Smoke concentrations will be such that they could impact public health at times. It is advised that travelers check local weather as smoke conditions may vary considerably from one locality to the next. The most recent weather observations for the surrounding impacted areas may be found on the Federal Aviation Administration Weather Cams homepage at <https://weathercams.faa.gov/>.

In smoke impacted areas, DEC advises people with respiratory or heart disease, the elderly and children should avoid prolonged exertion; everyone else should limit prolonged exertion.

The following table contains the cautionary statements for the Air Quality for Particle Pollution.

Air Quality Category	Cautionary Statements
Good	None
Moderate	Unusually sensitive people should consider reducing prolonged or heavy exertion.
Unhealthy for Sensitive Groups	People with heart or lung disease, the elderly and children should reduce prolonged or heavy exertion.
Unhealthy	People with respiratory or heart disease, the elderly and children should avoid prolonged exertion; everyone else should limit prolonged exertion
Very Unhealthy	People with respiratory or heart disease, the elderly and children should avoid any outdoor activity; everyone else should avoid prolonged exertion

Hazardous	Everyone should avoid any outdoor exertion; people with respiratory or heart disease, the elderly and children should remain indoors
-----------	--

When air quality data is unavailable, the following **Air Quality Smoke Reference Guide** may be used to estimate air quality levels and potential health impacts:

Visibility	Air Quality
10+ miles	Good
6 - 9 miles	Moderate
3 - 5 miles	Unhealthy for sensitive groups
1.5 - 2.5 miles	Unhealthy
0.9 - 1.4 miles	Very Unhealthy
0.8 miles or less	Hazardous

FOR MORE INFORMATION: For information on this advisory, contact Mark Smith with the Division of Air Quality at 907-269-7676.
