Re: Kasilof Tesoro Monitoring Well Sampling

Dear Mr. Horwath:

The purpose of this letter is to provide you with information you need to be informed of the monitoring well sampling event that EHX will be performing at the Kasilof Tesoro gas station in mid-July. The Kasilof Tesoro gas station is located at 57440 Sterling Highway at approximately milepost 109.5.

Three monitoring wells remain at the site and each of these wells will be sampled after surging, pumping/bailing, and/or water injection. After a series of surging and bailing and the waters turbidity has cleared up, at least three times the water volume in each well will be removed by bailing.

The primary contaminant of concern at this site is benzene. Analytical sampling will be performed in all three wells for GRO and BTEX. The analytical process will be AK101 and EPA 8021B for both respectively.

Please feel free to contact me if you have any questions regarding this or any other related matter. My contact information is included in the footer below.

Sincerely,

A handwritten signature in blue ink, appearing to read "Eric Henry", is written over a thin blue horizontal line.

Eric Henry
