Subject: Private Groundwater Well Search – PFAS Contamination Hagevig Fire Training Center

The City & Borough of Juneau (CBJ) has recently discovered PFAS contamination in soil and groundwater at the Hagevig Fire Training Center. Cox Environmental Services (CES) has been hired by the City & Borough of Juneau (CBJ) to investigate PFAS contamination at the Hagevig Fire Training Center. As part of the investigation, CES conducted a private groundwater well search within a 1/2-mile radius of the site to identify private groundwater wells within the project area. The well search was a combination of door to door canvassing, telephone communication, and a mailed letter and survey. The boundary of the private groundwater well search is visually depicted on the attached figure *1/2-Mile Radius Private Groundwater Well Search*. The well search included properties on Sherwood Lane, Engineers Cut Off, Pederson Street, Glacier Highway, Jensine Street, Bentwood Place, Barrett Avenue, Camden Place, Dawson Place, Crazy Horse Drive, and Industrial Boulevard. The properties on Hamilton Street, Frank Maier Road, and Wildmeadow Lane were excluded from the search based on being upgradient of the project site and that properties on those streets are connected to CBJ water.

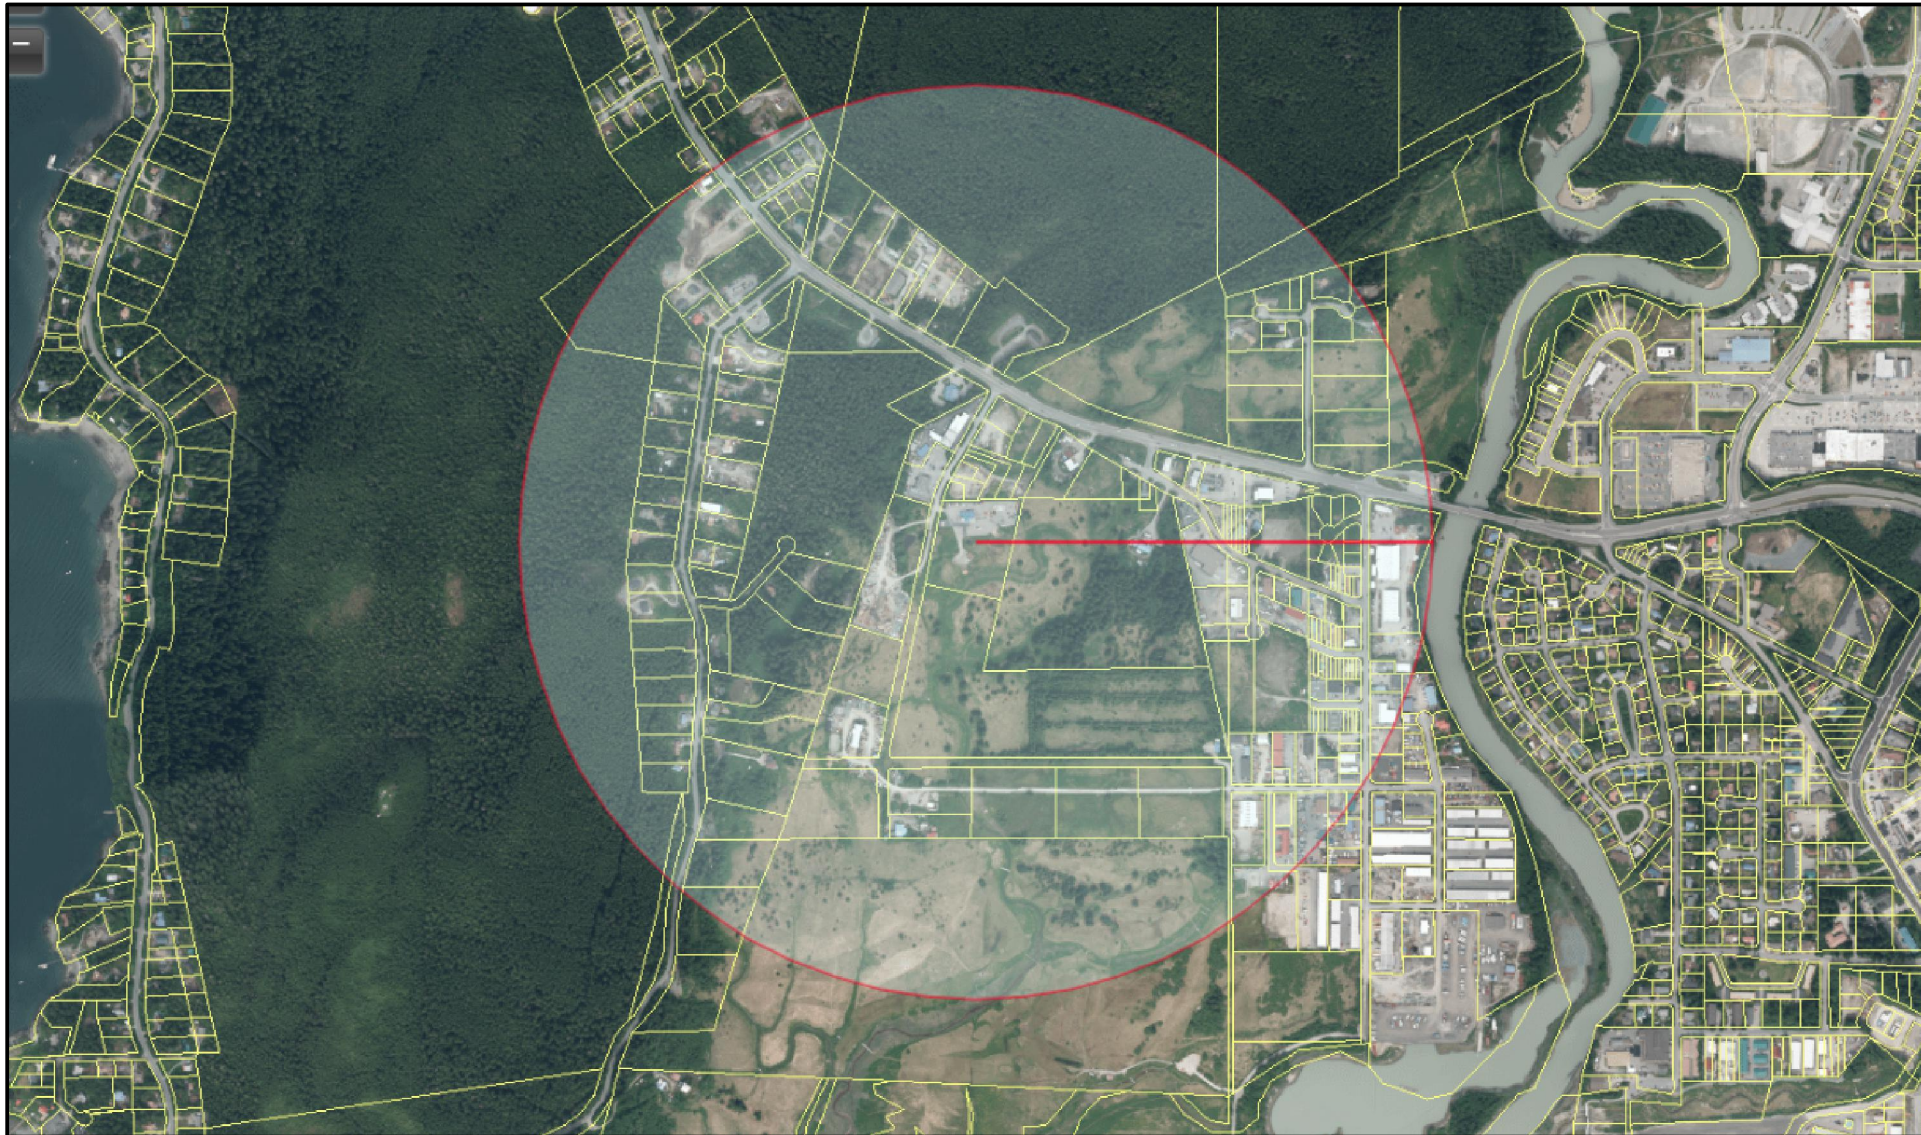

The well search included 197 properties, 74 of which CBJ lists as having no CBJ water connection and 123 which have a CBJ water connection. CBJ public water is available within the entire 1/2-mile project area. The 74 properties which have no CBJ water connection are mainly undeveloped vacant properties or owned by CBJ. The remaining nine properties with no CBJ water connection are commercial and were found to not have an in use private groundwater well.

The survey did not identify any private drinking water wells currently in use within the project area. Seven properties were found to have private groundwater wells no longer in use as they are now connected to CBJ water service.

If CBJ or CES identify or become aware of any in use private drinking water wells within the project area in the future that knowledge will be conveyed to ADEC.
