Reference: Speedway Store 5313 (Former Tesoro 2Go Mart (T2GM) 101/IFC) - Well Installation Report for Monitoring Wells MW 19-1 and MW 19-2

1 INTRODUCTION

On behalf of Speedway LLC (former Tesoro), Stantec Consulting Inc. (Stantec) is pleased to submit this Technical Memorandum for the June 2019 installation of the monitoring wells MW 19-1 and 19-2 at Speedway Store #5313 (former Tesoro 2Go Mart 101/IFC located at 3569 South Cushman Road, Fairbanks, Alaska (**Figure 1**)).

This Technical Memorandum describes the results of field screening and analytical sampling and well construction details. The findings presented herein were provided to you and Pete Campbell, P.E (ADEC Project Manager) during the annual work plan meeting with Tesoro and ADEC held on December 12, 2019, at the Stantec office in Anchorage, Alaska.

Fifteen soil borings were completed as Optical Image Profiler (OIP) soil borings, manufactured by Geoprobe® in accordance with the work plan dated April 1, 2019. This plan was subsequently approved by Paul Horwath, P.E., ADEC Engineer. Jake Keldsen, EIT Field Engineer with Stantec, completed the OIP soil borings and monitoring wells in a three day period, June 24-26, 2019. Jake completed the field screening and analytical sampling to evaluate the presence of residual petroleum at the subject site. Two of the OIP soil boring were subsequently completed as monitoring wells. The locations of the two completed monitoring wells (MW 19-1 and 19-2) are shown on **Figure 2** (this figure was presented during the December 12, 2019, annual work plan meeting and includes the analytical test results from the October 2019 monitoring event).

2 SOIL BORING AND SAMPLING METHODOLOGY

Drilling and sampling for the June 2019 well installation was performed with a Geoprobe® 8040 track mounted drilling rig “direct push probe” equipped with OIP technology. The OIP uses a light emitting diode (LED) to provide a detailed photograph of the soil structure, log of ultraviolet induced petroleum fluorescence and simultaneously measures the soil formation’s electrical conductivity and permeability (via a hydraulic profiling tool). The OIP was calibrated at the beginning of each new soil boring profile with a sample of Non-Aqueous Phase Liquid (NAPL) collected from the onsite free product recovery system.

The three data sets produced by the probe, which can include visible spectrum imagery at user specified locations, enable a more detailed characterization of the subsurface as compared to typical soil boring methods. The OIP data will be utilized to estimate NAPL distribution, lithology transitions, and horizontal hydraulic conductivity within the vertical boring profile. The field data will provide a real time understanding of the soil lithology and presence of NAPL.

Soil samples were extracted by macrocore with 5-foot disposable 1.6” diameter core sleeves. Monitoring wells were subsequently set 7.5-inch diameter hollow stem auger with an expendable drive point.

2.1 FIELD SCREENING METHODOLOGY AND RESULTS

Field screening head space samples were collected from each soil sample extracted during the geotechnical investigation to just below the groundwater interface. A portion of each soil sample, collected with macrocore by direct push, was transferred to a re-sealable polyethylene bag for screening by photoionization detector (PID). Calibration of the PID was conducted at the start of each day with a 100 part per million calibration standards. Samples were warmed and allowed to volatilize for at least 10 minutes prior to screening. Field screening results along with the location of analytical sample locations are summarized on the two soil boring logs that are provided in **Attachment 1**. PID field screening results ranged from 0.5 to 2,043 parts per million by volume (ppmv) with the highest readings at or near the groundwater interface.

The following is a summary of the field notes completed by Jake during the installation of the OIP borings:

- 15 borings were completed along the northern edge of the site that includes the public right of way (ROW).
 - Scope of work expanded beyond 6 borings to delineate fluorescing locations.
 - Non fluorescing borings were executed (OIP-11 and OIP-15) along northern boundary delineating the area of concern (AOC) along East – West axis.
 - Northern boundary (north of the ROW) could not be delineated due to neighboring site boundary and underground utilities.
 - OIP locations were surveyed with the handheld Trimble GPS unit (see **Figure 3** for boring locations).
 - OIP data was analyzed with the Geoprobe software to assess the relationship between fluorescence and NAPL presence.
- 3 borings were reinvestigated due to probe malfunction and were given the “QA” qualifier in the location name.
 - These were OIP -4, OIP-3, and OIP-2 and indicated fluorescence in the QA borings.

A summary of the OIP data that was collected during the installation of the 15 soil borings is provided in **Attachment 2**. **Table I** provides a tabulation of the 15 OIP borings with the following data: depth of “top” of fluorescence (ultraviolet induced petroleum fluorescence); depth to “bottom” of fluorescence; highest depth of fluorescence; and highest percent (%) of area fluorescence. **Attachment 2** includes individual logs of each OIP boring. The logs provide graphs of % fluorescence, electrical conductivity and permeability (measured with a transducer that is shown as HTP) and a photograph of the soil structure at various depths. These logs include a printout of the field notes for each boring. In summary, the OIP borings discovered the greatest concentration of petroleum at or near the groundwater interface.

2.2 MONITOR WELL CONSTRUCTION

Based on the field results from the OIP investigation, Jake Keldsen determined the optimal locations for placement of the two proposed groundwater monitoring wells. These wells were placed at locations (see **Figure 2**) that met the requirements of the work plan as approved and requested by Paul Horwath. The following is a summary of the field notes completed by Jake during the construction of the monitoring wells MW 19-1 and MW 19-2:

- Both borings have identical well construction details:
 - Completed to 15' below ground surface (BGS).
 - Screened from 15-5 with a 2" prepack PVC well casing.

April 8, 2020

Anastasia Duarte, REHS/RS

Page 3 of 6

Reference: **Speedway Store 5313 (Former T2GM 101/IFC) - Well Installation Report for MW 19-1 and 19-2**

- Internal sand of prepack consist of 20-40 sand.
- 10-20 sand was utilized to fill the annulus and placed 2' above the screen (3' BGS).
- Hydrated Bentonite chips were installed from 3' – 1' BGS.
- Pea Gravel was installed from 1' BGS to ~3' within the well monument.
- Well Monuments consisted of 6" circular steel pipe painted bright yellow, are sunk 2' into the ground surface and are finished ~4' above ground.
- Both wells were developed to 10x well volumes and sampled on 6/26 (although neither achieved stability).
- Both wells indicated ~7' of water column before and after development.
- MW-19-1 had a slight reading of NAPL on the Interface Probe although neither exhibited NAPL during development.
- Both wells exhibited a sheen and strong petroleum like odor and were clear of turbidity after development.
- A duplicate sample was collected at the shallow soil boring of MW-19-1 as well as the water sample.
- Soil and Water samples were shipped via Goldstreak to Test America Seattle.
- There were 2 drums of purge water stored securely onsite and 1 drum of soil cuttings.

Several photographs taken during the drilling of the OIP borings and installation of the monitoring wells are provided in **Attachment 3**. In addition, on August 27, 2019, written approval was obtained from ADEC that allowed for the discharge of the two drums of purge water into the on-site water treatment aeration tank. On September 6, 2019, ADEC approved the transport, treatment and disposal of contaminated media of the drum of soil cuttings by NRC Alaska LLC (NRC) in Fairbanks. **Attachment 4** includes a copy of the August 27, 2019, email approval for the on-site treatment of the purge water, signed approval form for off-site treatment of the drum of soil cuttings, and the non-hazardous waste manifest from NRC dated September 6, 2019, for the pickup of the soil cuttings drum.

3 ANALYTICAL SAMPLING METHODOLOGY AND RESULTS

Soil and groundwater analytical samples were submitted to Eurofins TestAmerica, Inc. (TestAmerica) for analysis of the Alaska list of volatile organic compounds (VOCs) by United States Environmental Protection Agency (EPA) Method 8260C, the standard list of polynuclear aromatic hydrocarbons (PAHs) by EPA Method 8270D Selective Ion Monitoring (SIM), gasoline range organics (GRO) by Alaska Test Method (AK) 101, and diesel range organics (DRO) by AK102. The laboratory analytical report is provided in **Attachment 5**.

Soil analytical results were compared to 18 Alaska Administrative Code (AAC) 75 Method Two Migration-to-Groundwater Soil Cleanup Levels (SCLs). A summary of soil analytical detections and exceedances are provided in **Table 2** (see **Attachment 5**). Detected exceedances for VOCs, PAHs, GRO, and DRO were found at MW 19-1 and MW 19-2. As shown in **Table 2**, several additional analytes exhibited practical quantitation limits (PQLs) that exceeded their SCLs. These occurrences however pertained to analytes which were not predominantly contaminants of concern for the site.

Groundwater analytical results were compared to 18 AAC 75 Groundwater Cleanup Levels (GCLs). A summary of groundwater analytical detections and exceedances are provided in **Table 3** (see **Attachment 5**). Detected exceedances for VOCs, PAHs, GRO, and DRO were found at MW 19-1 and MW 19-2. As shown in **Table 3**, several additional

April 8, 2020

Anastasia Duarte, REHS/RS

Page 4 of 6

Reference: **Speedway Store 5313 (Former T2GM 101/IFC) - Well Installation Report for MW 19-1 and 19-2**

analytes exhibited PQLs that exceeded their GCLs. The groundwater GRO results for MW 19-1, MW 19-2, and Dup-01 were flagged by the laboratory with notes indicating the GRO concentrations reported were due to the presence of discrete peaks. In addition, the DRO results for MW 19-1, MW 19-2, and Dup-01 were flagged by the laboratory with notes indicating the samples contained hydrocarbon patterns in the diesel range, but the elution patterns were later than the typical diesel fuel pattern used by the laboratory for quantitative purposes.

3.1 ANALYTICAL SAMPLING QUALITY ASSURANCE (QA) AND QUALITY CONTROL (QC)

TestAmerica did not meet all laboratory QA/QC criteria during the analysis of soil and groundwater samples, as described in **Table 4** (see below), which provides a summary of the laboratory QC objectives and outcomes for soil and groundwater. To evaluate QA/QC criteria, duplicate soil and groundwater sample sets were collected to determine the precision of the field collection and laboratory analysis, and the laboratory holding times for soil and groundwater samples were evaluated to determine if there were any exceedances. **Table 4** shows the precision for the duplicate sample sets for analytes that were detected above the PQLs and SCLs/GCLs and the relative percent differences (RPDs) could be calculated (RPDs could not be calculated for analytes that were non-detect in one or both of the primary and duplicate samples). Laboratory QC data and the Alaska Department of Environmental Conservation (ADEC) Laboratory Data Review Checklist are included with the laboratory report in **Attachment 5**.

For the soil samples, sample Dup-01 is a duplicate of MW 19-1 (4.5-5). As shown in **Table 4**, the precision was not within the established QA criteria tolerances for any of the analytes in soil. This may be in part due to the soil conditions encountered and inability to collect a sample from the same location. The holding times for PAHs, GRO, and DRO in the soil samples were within established criteria but holding time issues were observed for VOCs. Due to laboratory QC failures for several VOCs in the initial extraction, all of the VOC samples were re-extracted out of holding time and re-analyzed. The re-extracted batch met laboratory QC criteria. Both sets of data were reported by the laboratory. The higher of the two reported values for each sample is listed in this report (**Table 2**).

For the groundwater samples, sample Dup-01 is a duplicate of MW 19-1. As shown in **Table 4**, the precision was within the established QA criteria tolerances for all the analytes in groundwater. The holding times for VOCs, PAHs, and GRO in the groundwater samples were within established criteria but holding time issues were observed for DRO. Due to laboratory QC failures in the initial extraction, all of the DRO samples were re-extracted out of holding time and re-analyzed. The re-extracted batch met laboratory QC criteria. Both sets of data were reported by the laboratory. The higher of the two reported values for each sample is listed in this report (**Table 3**).

4 CONCLUSIONS AND RECOMMENDATIONS

The purpose of this report was to provide a summary of the field and laboratory data collected during the drilling of the OIP soil borings and installation of new monitoring wells MW 19-1 and MW 19-2. On October 23, 2019, the annual groundwater monitoring event was conducted at the subject site and included sampling MW 19-1 and MW 19-2. The site plan shown in **Figure 2** shows the analytical test results for the groundwater samples that were collected during this monitoring event. MW 19-1 had a slight petroleum sheen but MW 19-2 had approximately 0.95-feet of free product.

During the December 12, 2019, annual work plan meeting with ADEC and Speedway, Stantec presented the above findings and proposed a work plan task to install a 6-inch diameter free product recovery well in the near proximity to MW 19-2. The new recovery well will be installed during the 3rd and 4th quarter of 2020. The well will be located just north of Recovery Well WRW on Speedway Store 5313 property and needs to be on the downgradient side of the existing groundwater interceptor trench similar to the position of Recovery Well CRW-2. The new recovery well will be designed similar to the current remediation system used in Recovery Well CRW-2. A separate work plan for the construction of the proposed free product recovery well will be prepared by Stantec and submitted to Speedway for acceptance, and subsequently, submitted to ADEC for approval prior to implementation.

Please feel free to contact me if you have any questions regarding the findings reported herein.

Subject: Treatment & disposal well purge water Tesoro store 101

Hello Pete,

We are working in Fairbanks this week and want to inform you of our plans to treat and dispose of well development purge water. In accordance with a work plan approved by paul, 2 monitoring wells were drilled over a month ago at the Tesoro store number 101 in Fairbanks. We briefly discussed the drilling of the wells and an OIP investigation when we met with you and Paul Horwath prior to Paul's departure.

We have several gallons of purge water that we would like to discharge into our on-site treatment tank. This treatment tank is used to collect discharge from our onsite groundwater capture well and treats the effluent with aeration and discharge to an existing infiltration system. Normally we run our purge water through a GAC system and land spread the water on site but in this case I think it would be more effective by discharging our purge water into the aeration treatment tank that works exceptionally well.

We will proceed with this plan while we are in Fairbanks unless we hear otherwise from you. Please give me a call at 907-227-9883 or send me a response to this email if you have any questions regarding this procedure.

Thank you,
Bob

DEC USE ONLY

Based on the information provided, ADEC approves transport of the above-described media for treatment in accordance with the approved facility operations plan. The Responsible Party or their consultant must submit to the DEC Project Manager a copy of weight/volume receipts of the loads transported to the facility and a post treatment analytical report. If the media is contaminated soil, it shall be transported as a covered load in compliance with 18 AAC 60.015.

Key:

1 – Analyzed by EPA Method 8260C.

2 – Due to laboratory QC failure in the initial extraction, these samples were re-extracted out of holding time and re-analyzed. The re-extracted batch met laboratory QC criteria.

Both sets of data were reported by the laboratory. The higher of the two concentrations for each sample is listed in this table.

3 – Analyzed by EPA method 8270D Selective Ion Monitoring (SIM).

AK – Alaska Test Method

DRO – Diesel range organics, analyzed by AK102.

EPA – U.S. Environmental Protection Agency

GCLs – Groundwater cleanup levels, per Alaska Department of Environmental Conservation 18 Alaska Administrative Code 75.345, Table C, updated September 29, 2018.

GRO – Gasoline range organics, analyzed by AK101.

H – Sample was prepped or analyzed beyond the specific holding time

mg/L – milligrams per liter

NT – Not tested

U – Undetected above practical quantitation limit shown in parentheses

Bold indicates the concentration exceeds the GCL or, if not detected, the practical quantitation limit exceeds the GCL

Receipt

Ten samples were received on 6/27/2019 11:30 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 0.0° C.

GC/MS VOA

Method(s) 5035: The following samples were provided to the laboratory with a significantly different initial weight than that required by the reference method: MW-19-1 (4.5-5) (580-87288-1), MW-19-1 (7-7.5) (580-87288-2), MW-19-2 (5.5-6) (580-87288-3), MW-19-2 (7-7.5) (580-87288-4) and Dup-01 (580-87288-5). Deviations in the weight by more than 20% may affect reporting limits and potentially method performance. The method specifies 25g. The amount provided was above this range.

Method(s) 8260C: The laboratory control sample and/or the laboratory control sample duplicate (LCS/LCSD) for analytical batch 580-304834 recovered outside control limits for the following analyte: Carbon disulfide. Carbon disulfide has been identified as a poor performing analyte when analyzed using this method; therefore, re-extraction/re-analysis was not performed.

Method(s) 8260C: The laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) for analytical batch 580-304834 recovered outside control limits for the following analyte: Hexachlorobutadiene. This analyte was biased high in the LCS and was not detected in the associated samples; therefore, the data have been reported.

Method(s) 8260C: The following samples were diluted to bring the concentration of target analytes within the calibration range: MW-19-1 (4.5-5) (580-87288-1), MW-19-1 (7-7.5) (580-87288-2), MW-19-2 (5.5-6) (580-87288-3), MW-19-2 (7-7.5) (580-87288-4) and Dup-01 (580-87288-5). Elevated reporting limits (RLs) are provided.

Method(s) 8260C: The following samples were diluted to bring the concentration of target analytes within the calibration range: MW-19-1 (580-87288-7) and MW-19-2 (580-87288-8). Elevated reporting limits (RLs) are provided.

Method(s) 8260C: Reanalysis of the following samples were performed outside of the analytical holding time MW-19-1 (4.5-5) (580-87288-1), MW-19-1 (7-7.5) (580-87288-2), MW-19-2 (5.5-6) (580-87288-3), MW-19-2 (7-7.5) (580-87288-4), Dup-01 (580-87288-5) and TB-01 (580-87288-6). Both sets of data have been reported.

Method(s) 8260C: Surrogate recovery for the following sample was outside control limits: TB-01 (580-87288-6). Re-extraction and/or re-analysis was performed with concurring results. Both sets of data have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC/MS Semi VOA

Method(s) 8270D SIM: The following analyte(s) recovered outside control limits for the LCS associated with preparation batch 580-304799 and analytical batch 580-304981: Fluorene. This is not indicative of a systematic control problem because these were random marginal exceedances. Qualified results have been reported.

Method(s) 8270D SIM: Surrogate recovery for the following sample was outside control limits: Dup-01 (580-87288-5). Evidence of matrix interference is present; therefore, re-extraction and/or re-analysis was not performed.

Method(s) 8270D SIM: Surrogate recovery for the following sample was outside control limits: MW-19-2 (580-87288-8). Evidence of matrix interference is present; therefore, re-extraction and/or re-analysis was not performed.

Method(s) 8270D SIM: The following sample was diluted due to the nature of the sample matrix: MW-19-1 (4.5-5) (580-87288-1). Elevated reporting limits (RLs) are provided.

Method(s) 8270D SIM: The following samples were diluted to bring the concentration of target analytes within the calibration range: MW-19-1 (7-7.5) (580-87288-2), MW-19-2 (5.5-6) (580-87288-3), MW-19-2 (7-7.5) (580-87288-4) and Dup-01 (580-87288-5). Elevated reporting limits (RLs) are provided.

Case Narrative

Client: Stantec Consulting Services Inc
Project/Site: TNS 101 / IFC

Job ID: 580-87288-1

Job ID: 580-87288-1 (Continued)

Laboratory: Eurofins TestAmerica, Seattle (Continued)

Method(s) 8270D SIM: The following samples were diluted to bring the concentration of target analytes within the calibration range: MW-19-1 (580-87288-7), MW-19-2 (580-87288-8) and Dup-01 (580-87288-10). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC VOA

Method(s) AK101: Surrogate 4-Bromofluorobenzene (Surr) recovery for the following samples were outside control limits: MW-19-1 (4.5-5) (580-87288-1), MW-19-1 (7-7.5) (580-87288-2), MW-19-2 (5.5-6) (580-87288-3), MW-19-2 (7-7.5) (580-87288-4) and Dup-01 (580-87288-5). Evidence of matrix interference is present; therefore, re-extraction and/or re-analysis was not performed.

Method(s) AK101: The following samples were analyzed at reduced volume due to high concentrations of target analytes: MW-19-1 (7-7.5) (580-87288-2), MW-19-2 (5.5-6) (580-87288-3), MW-19-2 (7-7.5) (580-87288-4) and Dup-01 (580-87288-5). The calculation was done using an initial volume adjustment rather than a dilution factor. The reporting limits have been elevated by the appropriate factor.

Method(s) AK101: Surrogate 4-Bromofluorobenzene (Surr) recovery for the following samples were outside control limits: MW-19-1 (580-87288-7), MW-19-2 (580-87288-8) and Dup-01 (580-87288-10). Evidence of matrix interference is present; therefore, re-extraction and/or re-analysis was not performed.

Method(s) AK101: The Gasoline Range Organics (GRO) concentration reported for the following samples is due to the presence of discrete peaks: MW-19-1 (580-87288-7), MW-19-2 (580-87288-8) and Dup-01 (580-87288-10). Gasoline Range Organics (GRO)-C6-C10

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC Semi VOA

Method(s) AK102 & 103: The following sample was diluted due to the nature of the sample matrix: MW-19-1 (4.5-5) (580-87288-1). Elevated reporting limits (RLs) are provided.

Method(s) AK102 & 103: Surrogate recovery for the following sample was outside control limits: MW-19-1 (4.5-5) (580-87288-1). Evidence of matrix interference is present; therefore, re-extraction and/or re-analysis was not performed.

Method(s) AK102 & 103: Reanalysis of the following samples were performed outside of the analytical holding time due to LCS/LCSD failures in the initial run : MW-19-1 (580-87288-7), MW-19-2 (580-87288-8) and Dup-01 (580-87288-10). Boths sets of data have been reported.

Method(s) AK102 & 103: The following samples contained a hydrocarbon pattern in the diesel range; however, the elution pattern were earlier than the typical diesel fuel pattern used by the laboratory for quantitative purposes: MW-19-1 (580-87288-7), MW-19-2 (580-87288-8) and Dup-01 (580-87288-10).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
*	RPD of the LCS and LCSD exceeds the control limits
*	LCS or LCSD is outside acceptance limits.
E	Result exceeded calibration range.
H	Sample was prepped or analyzed beyond the specified holding time
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
X	Surrogate is outside control limits

GC/MS Semi VOA

Qualifier	Qualifier Description
*	LCS or LCSD is outside acceptance limits.
X	Surrogate is outside control limits

GC VOA

Qualifier	Qualifier Description
X	Surrogate is outside control limits

GC Semi VOA

Qualifier	Qualifier Description
*	LCS or LCSD is outside acceptance limits.
H	Sample was prepped or analyzed beyond the specified holding time

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
□	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Laboratory Data Review Checklist

Completed By:

Erin O'Malley

Title:

Environmental Engineer

Date:

January 14, 2020

Consultant Firm:

Stantec Consulting Services Inc.

Laboratory Name:

Eurofins TestAmerica, Seattle

Laboratory Report Number:

580-87288-1

Laboratory Report Date:

August 1, 2019

CS Site Name:

2Go Mart 101/IFC

ADEC File Number:

100.26.022

Hazard Identification Number:

26295

580-87288-1

Laboratory Report Date:

August 1, 2019

CS Site Name:

2Go Mart 101/IFC

Note: Any N/A or No box checked must have an explanation in the comments box.

1. Laboratory

a. Did an ADEC CS approved laboratory receive and perform all of the submitted sample analyses?

Yes No N/A

Comments:

b. If the samples were transferred to another “network” laboratory or sub-contracted to an alternate laboratory, was the laboratory performing the analyses ADEC CS approved?

Yes No N/A

Comments:

2. Chain of Custody (CoC)

a. CoC information completed, signed, and dated (including released/received by)?

Yes No N/A

Comments:

b. Correct analyses requested?

Yes No N/A

Comments:

3. Laboratory Sample Receipt Documentation

a. Sample/cooler temperature documented and within range at receipt (0° to 6° C)?

Yes No N/A

Comments:

b. Sample preservation acceptable – acidified waters, Methanol preserved VOC soil (GRO, BTEX, Volatile Chlorinated Solvents, etc.)?

Yes No N/A

Comments:

580-87288-1

Laboratory Report Date:

August 1, 2019

CS Site Name:

2Go Mart 101/IFC

c. Sample condition documented – broken, leaking (Methanol), zero headspace (VOC vials)?

Yes No N/A

Comments:

[Large empty rectangular box for comments]

580-87288-1

Laboratory Report Date:

August 1, 2019

CS Site Name:

2Go Mart 101/IFC

- d. If there were any discrepancies, were they documented? For example, incorrect sample containers/preservation, sample temperature outside of acceptable range, insufficient or missing samples, etc.?

Yes No N/A

Comments:

Soil Prep Method 5035 (For Analytical Methods 8260C and AK101): The following soil samples were provided to the laboratory with a significantly different initial weight than that required by the reference method: MW-19-1 (4.5-5) (580-87288-1), MW-19-1 (7-7.5) (580-87288-2), MW-19-2 (5.5-6) (580-87288-3), MW-19-2 (7-7.5) (580-87288-4) and Dup-01 (580-87288-5). Deviations in the weight by more than 20% may affect reporting limits and potentially method performance. The method specifies 25g. The amount provided was above this range.

Method AK101 (soil): The following samples were analyzed at reduced volume due to high concentrations of target analytes: MW-19-1 (7-7.5) (580-87288-2), MW-19-2 (5.5-6) (580-87288-3), MW-19-2 (7-7.5) (580-87288-4) and Dup-01 (580-87288-5). The calculation was done using an initial volume adjustment rather than a dilution factor. The reporting limits have been elevated by the appropriate factor.

Method 8260C (soil): The following samples were diluted to bring the concentration of target analytes within the calibration range: MW-19-1 (4.5-5) (580-87288-1), MW-19-1 (7-7.5) (580-87288-2), MW-19-2 (5.5-6) (580-87288-3), MW-19-2 (7-7.5) (580-87288-4) and Dup-01 (580-87288-5). Elevated PQLs are provided.

Method 8270D SIM (soil): The following sample was diluted due to the nature of the sample matrix: MW-19-1 (4.5-5) (580-87288-1). Elevated PQLs are provided.

Method 8270D SIM (soil): The following samples were diluted to bring the concentration of target analytes within the calibration range: MW-19-1 (7-7.5) (580-87288-2), MW-19-2 (5.5-6) (580-87288-3), MW-19-2 (7-7.5) (580-87288-4) and Dup-01 (580-87288-5). Elevated PQLs are provided.

Method AK102 & 103 (soil): The following sample was diluted due to the nature of the sample matrix: MW-19-1 (4.5-5) (580-87288-1). Elevated PQLs are provided.

Method 8260C (water): The following samples were diluted to bring the concentration of target analytes within the calibration range: MW-19-1 (580-87288-7) and MW-19-2 (580-87288-8). Elevated PQLs are provided.

Method 8270D SIM (water): The following samples were diluted to bring the concentration of target analytes within the calibration range: MW-19-1 (580-87288-7), MW-19-2 (580-87288-8) and Dup-01 (580-87288-10). Elevated PQLs are provided.

580-87288-1

Laboratory Report Date:

August 1, 2019

CS Site Name:

2Go Mart 101/IFC

e. Data quality or usability affected?

Comments:

Yes, the issues noted above for Method 8260C for soil caused significantly elevated PQLs, which in turn caused less accurate data. No effect was caused by the elevated PQLs for the other methods listed above because the PQLs were only slightly elevated or the concentrations were still detected above the PQLs even with the elevated PQLs.

4. Case Narrative

a. Present and understandable?

Yes No N/A Comments:

b. Discrepancies, errors, or QC failures identified by the lab?

Yes No N/A Comments:

c. Were all corrective actions documented?

Yes No N/A Comments:

Not all included in the case narrative, but what wasn't included in the case narrative, was included in the analytical results with data flags, which were identified in the definitions page.

d. What is the effect on data quality/usability according to the case narrative?

Comments:

See below sections.

5. Samples Results

a. Correct analyses performed/reported as requested on COC?

Yes No N/A Comments:

580-87288-1

Laboratory Report Date:

August 1, 2019

CS Site Name:

2Go Mart 101/IFC

b. All applicable holding times met?

Yes No N/A Comments:

Method 8260C (soil): Re-analysis of the following samples were performed outside of the analytical holding time due to QC failure in the initial analysis: MW-19-1 (4.5-5) (580-87288-1), MW-19-1 (7-7.5) (580-87288-2), MW-19-2 (5.5-6) (580-87288-3), MW-19-2 (7-7.5) (580-87288-4), Dup-01 (580-87288-5) and TB-01 (580-87288-6). Both sets of data for these samples are reported.

Method AK102 & 103 (water): Re-extraction and re-analysis of the following samples were performed outside of the analytical holding time due to LCS/LCSD failures in the initial analysis: MW-19-1 (580-87288-7), MW-19-2 (580-87288-8) and Dup-01 (580-87288-10). Both sets of data for these samples are reported.

Quality control issues further described below.

c. All soils reported on a dry weight basis?

Yes No N/A Comments:

d. Are the reported LOQs less than the Cleanup Level or the minimum required detection level for the project?

Yes No N/A Comments:

There are a number of LOQs that exceed the SCLs and GCLs for all samples. See Tables 1 and 2, respectively.

e. Data quality or usability affected?

All non-detect results where the LOQ exceeds the SCL/GCL are affected.

The VOC soil results and DRO groundwater results, where the samples were extracted or analyzed outside of analytical holding time, are usable as qualified. Both sets of data were reported and the highest concentration for each sample was used in the project report.

6. QC Samples

a. Method Blank

i. One method blank reported per matrix, analysis and 20 samples?

Yes No N/A Comments:

580-87288-1

Laboratory Report Date:

August 1, 2019

CS Site Name:

2Go Mart 101/IFC

ii. All method blank results less than limit of quantitation (LOQ) or project specified objectives?

Yes No N/A

Comments:

iii. If above LOQ or project specified objectives, what samples are affected?

Comments:

iv. Do the affected sample(s) have data flags? If so, are the data flags clearly defined?

Yes No N/A

Comments:

No samples affected.

v. Data quality or usability affected?

Comments:

No.

b. Laboratory Control Sample/Duplicate (LCS/LCSD)

i. Organics – One LCS/LCSD reported per matrix, analysis and 20 samples? (LCS/LCSD required per AK methods, LCS required per SW846)

Yes No N/A

Comments:

ii. Metals/Inorganics – one LCS and one sample duplicate reported per matrix, analysis and 20 samples?

Yes No N/A

Comments:

No metal/inorganics analyzed.

580-87288-1

Laboratory Report Date:

August 1, 2019

CS Site Name:

2Go Mart 101/IFC

- iii. Accuracy – All percent recoveries (%R) reported and within method or laboratory limits and project specified objectives, if applicable? (AK Petroleum methods: AK101 60%-120%, AK102 75%-125%, AK103 60%-120%; all other analyses see the laboratory QC pages)

Yes No N/A Comments:

Method 8270D SIM (soil): The following analyte recovered outside control limits for the LCS associated with preparation batch 580-304799 and analytical batch 580-304981: Fluorene.

Method AK102 & 103 (water): Re-extraction and re-analysis of the following samples were performed outside of the analytical holding time due to LCS/LCSD failures in the initial analysis: MW-19-1 (580-87288-7), MW-19-2 (580-87288-8) and Dup-01 (580-87288-10). No QC failure in the re-analysis. Both sets of data for these samples are reported.

Method 8260C (water): The LCS/LCSD for analytical batch 580-304834 recovered outside control limits for the following analyte: Carbon disulfide.

Method 8260C (water): The LCS and LCSD for analytical batch 580-304834 recovered outside control limits for the following analyte: Hexachlorobutadiene.

- iv. Precision – All relative percent differences (RPD) reported and less than method or laboratory limits and project specified objectives, if applicable? RPD reported from LCS/LCSD, and or sample/sample duplicate. (AK Petroleum methods 20%; all other analyses see the laboratory QC pages)

Yes No N/A Comments:

Method 8260C (soil): Re-analysis of the following samples were performed outside of the analytical holding time due to LCS/LCSD RPD QC failure in the initial analysis: MW-19-1 (4.5-5) (580-87288-1), MW-19-1 (7-7.5) (580-87288-2), MW-19-2 (5.5-6) (580-87288-3), MW-19-2 (7-7.5) (580-87288-4), Dup-01 (580-87288-5) and TB-01 (580-87288-6). No QC failure in the re-analysis. Both sets of data for these samples are reported.

- v. If %R or RPD is outside of acceptable limits, what samples are affected?

Comments:

Method 8270D SIM (soil): Fluorene in all soil samples analyzed for PAHs.

Method 8260C (soil): All soil samples (specific analytes listed in laboratory report).

Method AK102 & 103 (water): DRO in all groundwater samples analyzed for DRO.

Method 8260C (water): Carbon disulfide in all water samples.

Method 8260C (water): Hexachlorobutadiene in all water samples.

580-87288-1

Laboratory Report Date:

August 1, 2019

CS Site Name:

2Go Mart 101/IFC

vi. Do the affected sample(s) have data flags? If so, are the data flags clearly defined?

Yes No N/A Comments:

vii. Data quality or usability affected? (Use comment box to explain.)

Comments:

No. Data usable as qualified.

Method 8270D SIM (soil): Fluorene LCS recovery outside control limits in analytical batch 580-304981 is not indicative of a systematic control problem because this was a random marginal exceedance. Data usable as qualified.

Method 8260C (water): LCS/LCSD recovery issues analytical batch 580-304834 Carbon disulfide: Carbon disulfide has been identified as a poor performing analyte when analyzed using this method; therefore, re-extraction/re-analysis was not performed.

Method 8260C (water): LCS/LCSD recovery issues analytical batch 580-304834 Hexachlorobutadiene: This analyte was biased high in the LCS and was not detected in the associated samples; therefore, the data have been reported.

c. Matrix Spike/Matrix Spike Duplicate (MS/MSD)

Note: Leave blank if not required for project

i. Organics – One MS/MSD reported per matrix, analysis and 20 samples?

Yes No N/A Comments:

ii. Metals/Inorganics – one MS and one MSD reported per matrix, analysis and 20 samples?

Yes No N/A Comments:

iii. Accuracy – All percent recoveries (%R) reported and within method or laboratory limits and project specified objectives, if applicable? (AK Petroleum methods: AK101 60%-120%, AK102 75%-125%, AK103 60%-120%; all other analyses see the laboratory QC pages)

Yes No N/A Comments:

580-87288-1

Laboratory Report Date:

August 1, 2019

CS Site Name:

2Go Mart 101/IFC

iv. Precision – All relative percent differences (RPD) reported and less than method or laboratory limits and project specified objectives, if applicable? RPD reported from MS/MSD, and or sample/sample duplicate. (AK Petroleum methods 20%; all other analyses see the laboratory QC pages)

Yes No N/A Comments:

v. If %R or RPD is outside of acceptable limits, what samples are affected?

Comments:

vi. Do the affected sample(s) have data flags? If so, are the data flags clearly defined?

Yes No N/A Comments:

vii. Data quality or usability affected? (Use comment box to explain.)

Comments:

d. Surrogates – Organics Only or Isotope Dilution Analytes (IDA) – Isotope Dilution Methods Only

i. Are surrogate/IDA recoveries reported for organic analyses – field, QC and laboratory samples?

Yes No N/A Comments:

580-87288-1

Laboratory Report Date:

August 1, 2019

CS Site Name:

2Go Mart 101/IFC

- ii. Accuracy – All percent recoveries (%R) reported and within method or laboratory limits and project specified objectives, if applicable? (AK Petroleum methods 50-150 %R; all other analyses see the laboratory report pages)

Yes No N/A Comments:

Method 8260C (soil): Surrogate recovery for the following sample was outside control limits: TB-01 (580-87288-6). Re-extraction and/or re-analysis was performed with concurring results. Both sets of data have been reported.

Method 8270D SIM (soil): Surrogate recovery for the following sample was outside control limits: Dup-01 (580-87288-5).

Method AK101 (soil): Surrogate 4-Bromofluorobenzene (Surr) recovery for the following samples were outside control limits: MW-19-1 (4.5-5) (580-87288-1), MW-19-1 (7-7.5) (580-87288-2), MW-19-2 (5.5-6) (580-87288-3), MW-19-2 (7-7.5) (580-87288-4) and Dup-01 (580-87288-5).

Method AK102 & 103 (soil): Surrogate recovery for the following sample was outside control limits: MW-19-1 (4.5-5) (580-87288-1).

Method 8270D SIM (water): Surrogate recovery for the following sample was outside control limits: MW-19-2 (580-87288-8).

Method AK101 (water): Surrogate 4-Bromofluorobenzene (Surr) recovery for the following samples were outside control limits: MW-19-1 (580-87288-7), MW-19-2 (580-87288-8) and Dup-01 (580-87288-10).

- iii. Do the sample results with failed surrogate/IDA recoveries have data flags? If so, are the data flags clearly defined?

Yes No N/A Comments:

- iv. Data quality or usability affected?

Comments:

No. Data usable as qualified.

Method 8270D SIM (soil), Method AK101 (soil), Method AK102 & 103 (soil), Method 8270D SIM (water), and Method AK101 (water): Evidence of matrix interference is present; therefore, re-extraction and/or re-analysis was not performed.

580-87288-1

Laboratory Report Date:

August 1, 2019

CS Site Name:

2Go Mart 101/IFC

e. Trip Blanks

- i. One trip blank reported per matrix, analysis and for each cooler containing volatile samples?
(If not, enter explanation below.)

Yes No N/A Comments:

- ii. Is the cooler used to transport the trip blank and VOA samples clearly indicated on the COC?
(If not, a comment explaining why must be entered below)

Yes No N/A Comments:

- iii. All results less than LOQ and project specified objectives?

Yes No N/A Comments:

- iv. If above LOQ or project specified objectives, what samples are affected?

Comments:

- v. Data quality or usability affected?

Comments:

No.

f. Field Duplicate

- i. One field duplicate submitted per matrix, analysis and 10 project samples?

Yes No N/A Comments:

- ii. Submitted blind to lab?

Yes No N/A Comments:

For soil, Dup-01 is a duplicate of MW 19-1 (4.5-5). For groundwater, Dup-1 is a duplicate of MW 19-1.

580-87288-1

Laboratory Report Date:

August 1, 2019

CS Site Name:

2Go Mart 101/IFC

- iii. Precision – All relative percent differences (RPD) less than specified project objectives?
(Recommended: 30% water, 50% soil)

$$\text{RPD (\%)} = \text{Absolute value of: } \frac{(R_1 - R_2)}{((R_1 + R_2)/2)} \times 100$$

Where R_1 = Sample Concentration
 R_2 = Field Duplicate Concentration

Yes No N/A Comments:

For soil, RPDs did not meet DQOs for any detected analytes above SCLs.

For groundwater, RPDs met the DQOs for all detected analytes above GCLs.

- iv. Data quality or usability affected? (Use the comment box to explain why or why not.)

Comments:

Unlikely. Reported concentrations were generally consistently above or below the SCL for all analytes in both primary and duplicate samples. RPDs above 50% may be in part due to the soil conditions encountered and inability to collect a sample from the same location.

- g. Decontamination or Equipment Blank (If not applicable, a comment stating why must be entered below)?

Yes No N/A Comments:

No decontamination or equipment blanks were required for this project.

- i. All results less than LOQ and project specified objectives?

Yes No N/A Comments:

No decontamination or equipment blanks submitted.

- ii. If above LOQ or project specified objectives, what samples are affected?

Comments:

No decontamination or equipment blanks submitted.

- iii. Data quality or usability affected?

Comments:

No decontamination or equipment blanks submitted.

580-87288-1

Laboratory Report Date:

August 1, 2019

CS Site Name:

2Go Mart 101/IFC

7. Other Data Flags/Qualifiers (ACOE, AFCEE, Lab Specific, etc.)

a. Defined and appropriate?

Yes No N/A
