Site Characterization and Corrective Action - Request for Work Plan

Dear Mr. Browning,

The Alaska Department of Environmental Conservation's (ADEC), Contaminated Sites Program (CSP) received the Release Investigation Activities report prepared by Shannon & Wilson, dated July 14, 2021. The report was received on July 14, 2021. The report is approved.

Reviewing the Underground Storage Tank Closure Assessment report (November 2019), it appears that there has been a release at the former tank sites and dispenser island. ADEC will require that a corrective action work plan be submitted to our office.

Soils remaining in the footprint of the diesel tank, fuel island and the gasoline tanks that were abandoned in place exceed the migration to groundwater cleanup levels. The work plan should assess groundwater impacts at the UST tank site and remediation of the impacted soils and potentially impacted groundwater.

You are required to submit a work plan to our office by September 22, 2021. If you have any questions or need further assistance, please feel free to contact me at 907-262-3412 or by email at peter.campbell@alaska.gov.

Sincerely,

Peter Campbell
