**RE: Summary – 2017 Work  
Miller Salvage Project  
State of Alaska CT 18-3001-17/NTP 180000156**

**Purpose**

The purpose of the work was to immediately abate ongoing releases at the Miller Salvage property in Fairbanks, Alaska in order to protect human health, welfare, and the environment.

**Task 1 – Site Security**

NRC Alaska LLC., arrived on site August 22, 2017 with Alaska Department of Conservation (ADEC) to perform a site walk, identify potential work plans, and develop a safety plan. The site was overgrown with trees and brush. There was partial fence surrounding the property, that had fallen over and had pieces missing. NRC had a survey crew come out to the site and flag the boundaries of the property. NRC then cleared the brush and trees from the edge of the property for the permanent chain link fence to be installed. The 3,015 lineal feet of 6-foot high 11-gauge chain link fencing that included two double drive gates was completed September 7, 2017. Signs were placed on the fence to notify the public and response personnel of hazardous conditions and asbestos on site.

**Task 2 – Management Activities**

NRC cleared brush inside the property to be able to utilize equipment to contain the leaking drums. While the brush was being cleared, NRC utilized a Trimble Geo 7X Unit to obtain GPS locations of the leaking drums (Appendix A). Samples were taken from 97 different drums and areas of the site. The analytical results (Appendix B) showed the presence Polychlorinated Biphenyls (PCB), Lead, and other hazardous substances.

NRC overpacked 85 leaking or non-shippable drums. We consolidated several leaking and damaged smaller containers into 31 maverick boxes. We then used our vacuum truck to consolidate drums of oily sludge, antifreeze and fuels into totes. NRC rendered all cylinders safe on site. In late October, NRC excavated some of the surface soil that was contaminated with lead. The hazardous waste has been transported offsite and is being disposed of (Manifest copies can be found in Appendix C).
