Re: Institutional Controls (ICs) Verification for: Fairview Service Station; Located at the Northeast corner of Airport Way and Cowles Street at the FNSB Library property

Dear Ms. Mota:

The Contaminated Sites Program conducts periodic verification of closed sites where institutional controls (land use restrictions) are required under 18 AAC 75.375. We have identified Fairview Service Station as a site with institutional controls.

As the current land manager of the property you should be aware that there are ongoing obligations for this site.

In order to prevent people from being exposed to any remaining contamination on the property, **this letter is being sent as a <u>reminder</u>** of the conditions placed on the property as part of the 2014 Decision Document granted by the Alaska Department of Environmental Conservation (ADEC). At the time of closure, soil and groundwater contamination were documented as remaining on the property. Formerly, there was a gas station on this corner that operated until 1968 and was part of the former Weeks Field airstrip.

Please be advised that the Fairview Service Station site is subject to the following standard and site-specific conditions and/or institutional controls:

Any future change in land use may impact the exposure assumptions cited in the 2014 Decision
Document. If land use and/or ownership changes, current institutional controls may now be protective
and ADEC may require additional remediation and/or institutional controls. Therefore, FNSB will
report to ADEC every five years to document land use, or as soon as FNSB becomes aware of any
change in land ownership and/or use. The report can be sent to the local ADEC office or submitted
electronically to <u>CS.Submittals@alaska.gov</u>.

- 2. A Notice of Environmental Contamination (deed notice) has been recorded in the State Recorder's Office, identifying the nature and extent of contamination at the Fairview Service Station property and any conditions that the owners and operators are subject to in accordance with the 2014 Decision Document granted by ADEC. A copy of the recorded deed notice is enclosed for your reference.
- 3. Installation of groundwater or drinking water wells will require notification to and approval from ADEC.
- 4. Soil contamination is located at 5-13.5 feet below ground surface (bgs), near TB-19. If the soil is to be disturbed or excavated beyond a depth of 2 feet bgs within the area delineated in Figure 1 of the 2014 Decision Document, the soil must be evaluated and contamination addressed in accordance with an ADEC-approved work plan.
- 5. ADEC approval is required prior to moving any soil or groundwater off any site that is subject to the site cleanup rules [see 18 AAC 75.325(i)]. A "site" [as defined by 18 AAC 75.990 (115) / 18 AAC 78.995(134)] means an area that is contaminated, including areas contaminated by the migration of hazardous substances from a source area, regardless of property ownership. In the future, if soil will be excavated or groundwater will be brought to the surface (for example to dewater in support of construction) it must be characterized and managed following regulations applicable at that time and ADEC approval must be obtained before moving the soil or water off the property. *This is a standard condition*.
- 6. Movement or use of contaminated material in a manner that results in a violation of 18 AAC 70 water quality standards is prohibited. *This is a standard condition*.
- 7. Groundwater throughout Alaska is protected for use as a water supply for drinking, culinary and food processing, agriculture including irrigation and stock watering, aquaculture, and industrial use. Contaminated site cleanup complete determinations are based on groundwater being considered a potential drinking water source. In the event that groundwater from this site is to be used for other purposes in the future, such as aquaculture, additional characterization and treatment may be required to ensure the water is suitable for its intended use. *This is a standard condition*.

<u>In addition to the conditions above, you are required to notify the ADEC if there are any changes</u> <u>in land use or ownership.</u> Failure to maintain these requirements may result in re-opening the site by the Contaminated Sites Program, in which case, further remediation could be mandatory.

In accordance with 18 AAC 75.380(d)(2), ADEC may require additional site assessment, monitoring, remediation, and/or necessary actions at this facility should new information become available that indicates contamination at this site may pose a threat to human health or the environment.

If you seek to have the institutional controls removed from this site, you can choose at any time to voluntarily conduct additional assessment, monitoring or further cleanup to demonstrate that contamination at the site now meets the applicable cleanup levels under 18 AAC 75.

This site information is a matter of public record and is available through ADEC's online database record at: http://dec.alaska.gov/Applications/SPAR/PublicMVC/CSP/SiteReport/25462

The ADEC will issue a reminder letter such as this on a scheduled basis, every five years. If you have any questions regarding this site, please contact me at (907) 465-5229 or evonne.reese@alaska.gov and I will be glad to assist you.

Sincerely,

You may submit any needed documentation electronically. If your submittal is too large to email (i.e. exceeds 20 megabytes), you may submit it to me through the Alaska ZendTo "drop-off" option at https://drop.state.ak.us/drop/. The Division of SPAR/Contaminated Sites Program prefers and encourages electronic submittals.
