RE: March 2024 Groundwater Monitoring Report
Former Kiewit Facility, 2050 Peger Road, Fairbanks, Alaska
ADEC File Number: 102.38.164 and Hazard Identification Number: 25680

Ms. Fifer,

NORTECH is pleased to present Kiewit Corporation (Kiewit) with this March 2024 Groundwater Monitoring Report. Six monitoring wells were sampled on March 19 - 27, 2024, at the former Kiewit Facility located at 2050 Peger Road, Fairbanks, Alaska (the Site). Attached are site figures, summary data tables, field notes, site photographs, and laboratory data reports.

Site Location and Background

Location and site maps are provided in Attachment 1 as Figures 1 and 2, respectively. The Site legal description in the Fairbanks North Star Borough (FNSB) database is Block 15A E M Jones out of Block 15 E M Jones Subdivision. In 2016, Kiewit sold the property to GGATS LLC, with Construction Machinery Industrial, LLC (CMI) currently occupying the land and buildings. CMI's primary shop is located on the adjacent parcel to the west, and CMI uses the Site parcel for additional equipment storage.

Existing soil and groundwater contamination are related to a former used oil aboveground storage tank (AST) and buried fuel delivery line (FDL) removed in 2011. Because of contamination from the AST and FDL during Kiewit's ownership, Kiewit remains the responsible party for the Site cleanup.

Two wells were decommissioned in August 2019: MW-1 and the former Tesoro investigation well G-4. Four remaining monitoring wells (MW-2, MW-3, MW-4, and MW-5) on the former Kiewit property and the adjacent parcel occupied by CMI were sampled. A fifth shallow well MW-403B, belonging to the Alaska Department of Transportation & Public Facilities (Alaska DOT&PF) in the 20th Avenue right of way (ROW), was also sampled. Adjacent Alaska DOT&PF well MW-403A is screened at a deeper depth and was the sixth well sampled. The well locations are shown in Figure 2 in Attachment 1.

Previous and Current Results Overview

Twenty rounds of groundwater samples have been collected since 2012. Eight rounds (April 2015, April 2018, April 2019, May 2020, May 2021, March 2022, March 2023, and March 2024) were collected during low and rising groundwater level conditions during late winter/early spring. Twelve rounds (October 2012, July-August 2014,

October 2014, September 2015, August 2016, September 2017, October 2018, October 2019, September 2020, October 2021, October 2022, and September 2023) were collected during transient or high groundwater conditions during late summer/early fall. Groundwater sampling was not conducted in 2013. Historical Groundwater Analytical Data from 2012 to Present are provided in Attachment 2, Table 3.

NORTECH measured and removed light non-aqueous phase liquid (LNAPL [free product]) from MW-2 in the former FDL source area monthly between October 2018 and December 2020. Free product was observed intermittently, and an estimated 0.266 gallon of free product was removed during twenty-one events. Groundwater analytical sampling of MW-2 was not implemented if more than 0.03 feet of free product was present. MW-2 was not sampled in October 2018 and April 2019 due to the presence of free product. Free product has not been detected in the other network monitoring wells.

In upgradient well MW-1, all tested analytes were below Alaska Department of Environmental Conservation (ADEC) cleanup levels (CLs) from 2014 to 2019. In MW-2 and MW-3, diesel range organics (DRO) has been detected above ADEC CL each year since 2012. In MW-4, DRO was detected above ADEC CL in 2015, 2020, 2021, 2022, and 2023. In MW-5, DRO was detected below ADEC CL in 2012 and 2016, and the analyte has not been detected in the well since 2016. In MW-403A, first sampled by Kiewit in May 2020, and in MW-403B, first sampled by Kiewit in October 2019, DRO has not been detected.

Scope of Work and Methodology

NORTECH's scope of work for the March 2024 monitoring event was to complete groundwater sampling of the existing monitoring wells in accordance with Section 9 of the ADEC-approved *Former Kiewit Facility, 2019 Remedial Action Work Plan* (GHD [July 26, 2019]). Groundwater monitoring was completed by a qualified environmental professional (QEP) as defined by 18 Alaska Administrative Code (AAC) 75, 18 AAC 78, and the ADEC January 2022 Field Sampling Guidance (2022 FSG). Methods were in general accordance with the 2022 FSG, and as further described below. This included analytical, sampling, and product recovery methods and associated quality assurance/quality control (QA/QC).

NORTECH completed groundwater sampling of the existing six monitoring wells currently present on or adjacent to the Site. MW-2 and MW-3 are on the Site. MW-4 and MW-5 are on the property to the west. MW-403A and MW-403B are located in the 20th Avenue ROW on the north edge of the Site. To be consistent with previous years, these wells were sampled at regional and Site low groundwater conditions which typically occur annually during late winter/early spring. Groundwater samples were analyzed for DRO, volatile organic compounds (VOCs), and polycyclic aromatic hydrocarbons (PAHs). Reported VOCs consisted of the following analytes: benzene, toluene, ethylbenzene, and xylenes (BTEX); naphthalene; 1,2,4-trimethylbenzene; and 1,3,5-trimethylbenzene.

As in Fall 2021, Spring 2022, Fall 2022, Spring 2023, and Fall 2023, Kiewit requested additional analyses during the Spring 2024 groundwater monitoring event to support a natural source zone depletion (NSZD) evaluation of biodegradation of the dissolved source zone mass. The NSZD evaluation includes sampling each of the six wells for nitrate; sulfate; total and dissolved iron and manganese; and dissolved methane/ethane/ethene.

During the Spring 2024 groundwater sampling event, depth to free product (if detected) and depth to groundwater were measured in the six network wells using an electronic oil/water

interface indicator probe (oil/water interface probe) capable of 0.01-foot accuracy and recorded in the field notes. Total well depth was also measured to calculate well volume. If free product were detected in a well, the well was not to be sampled; however, the product would be removed, and the well purged of three well volumes.

March 2024 Groundwater Sampling

Depth to groundwater and total depth were measured in each well using an oil/water interface probe. In wells without a sheen or product, water quality parameters were obtained using a flow-through cell. Where a well has historically exhibited a sheen, the flow-through cell was not used. Water clarity was evaluated by visual observation before the water entered the flow-through-cell and was recorded as clear or turbid. Field parameters measured during purging were obtained using a calibrated YSI ProDSS water quality meter.

Water quality parameters were considered stable when three successive readings, collected 3-5 minutes apart, were within a recommended limit of variance for five parameters of temperature, dissolved oxygen, conductivity, pH, and oxidation-reduction potential (ORP) or three to five well volumes had been removed from the well. The parameters and visual clarity were monitored and recorded on the groundwater sample forms presented in Attachment 3. MW-2 and MW-3 were sampled using a peristaltic pump, and the other four wells were sampled using a submersible pump, which was decontaminated between wells to avoid cross-contamination. Low-flow technique was implemented for each well to minimize turbidity and suspended solids.

In MW-2 and MW-3, a peristaltic pump and disposable tubing were used to purge and sample the wells to preclude contaminating and damaging the submersible pump and water quality meter with oily water. To minimize potential VOC loss, the peristaltic pump was operated such that air bubbles were not entrained with the water during purging and sampling efforts.

After purging, water samples were collected directly from the pump discharge tubing into laboratory-supplied sample bottles as outlined in the 2022 FSG. New disposable gloves were worn to collect samples and gloves were changed between sample locations.

Samples were collected in the order of volatility, volatiles first; containers filled and sealed, with rims cleaned before tightening the lid. Volatile samples were collected without headspace in the container. Other sample jars were filled and sealed as indicated by the laboratory for the method. Teflon-lined screw caps provided by the laboratory were used to seal the containers.

Laboratory Analysis

Groundwater samples from the six wells were submitted to SGS North America Inc. (SGS) an ADEC-approved laboratory in Anchorage, Alaska, for analysis by the following methods:

Groundwater Analytical Sampling Program

Monitoring Well	Analysis
MW-2	DRO (AK102); VOCs (US Environmental Protection Agency [EPA] 8260D); Nitrate (EPA 300.0); Sulfate (EPA 300.0); Total Iron and Manganese (EPA 6020); Dissolved Iron and Manganese (EPA 6020); Dissolved Methane/Ethane/Ethene (EPA RSK-175)
MW-3 (and Field Duplicate of DRO; VOCs; and PAHs, only)	DRO (AK102); VOCs (EPA 8260D); PAHs (EPA 8270D SIM); Nitrate (EPA 300.0); Sulfate (EPA 300.0); Total Iron and Manganese (EPA 6020); Dissolved Iron and Manganese (EPA 6020); Dissolved Methane/Ethane/Ethene (EPA RSK-175)
MW-4	DRO (AK102); VOCs (EPA 8260D); Nitrate (EPA 300.0); Sulfate (EPA 300.0); Total Iron and Manganese (EPA 6020); Dissolved Iron and Manganese (EPA 6020); Dissolved Methane/Ethane/Ethene (EPA RSK-175)
MW-5	DRO (AK102); VOCs (EPA 8260D); Nitrate (EPA 300.0); Sulfate (EPA 300.0); Total Iron and Manganese (EPA 6020); Dissolved Iron and Manganese (EPA 6020); Dissolved Methane/Ethane/Ethene (EPA RSK-175)
MW-403A	DRO (AK102); VOCs (EPA 8260D); Nitrate (EPA 300.0); Sulfate (EPA 300.0); Total Iron and Manganese (EPA 6020); Dissolved Iron and Manganese (EPA 6020); Dissolved Methane/Ethane/Ethene (EPA RSK-175)
MW-403B	DRO (AK102); VOCs (EPA 8260D); Nitrate (EPA 300.0); Sulfate (EPA 300.0); Total Iron and Manganese (EPA 6020); Dissolved Iron and Manganese (EPA 6020); Dissolved Methane/Ethane/Ethene (EPA RSK-175)

Note: Reported VOCs consist of benzene, toluene, ethylbenzene, and xylenes (BTEX); naphthalene; 1,2,4-trimethylbenzene; and 1,3,5-trimethylbenzene

Quality Assurance/Quality Control

QA/QC objectives were followed as described in the 2022 FSG. Field QA/QC procedures included adherence to the 2019 Work Plan, handling samples under chain-of-custody procedures, submitting samples within specified holding times, collecting a field duplicate, and including a trip blank in the sample cooler with volatile analytes. An equipment blank was collected and submitted for analysis, as a submersible pump was used for sampling. The trip blank was transported with volatiles samples and submitted for analysis. Laboratory QA/QC procedures include analysis of method blanks; laboratory control spikes (LCS) and LCS duplicates (LCSD); and matrix spikes (MS) and MS duplicates (MSD).

Monitoring Well Survey

At the request of Kiewit, ***NORTECH*** contracted Design Alaska, Inc. (Design Alaska) to complete a professional monitoring well survey on November 4, 2020. Design Alaska provided well coordinates, top of casing (TOC) elevation, and top of monument elevation for the six network wells. ***NORTECH*** used the Design Alaska survey data and November 2020, May 2021, October 2021, March 2022, October 2022, March 2023, September 2023, and March 2024 depth to groundwater measurements to estimate inferred groundwater flow direction at the Site.

Field Activities

Field sampling was conducted from March 19 to 27, 2024. Purge water treatment and disposal were conducted on May 15, 2024. The wells were in good condition for sampling, and no repairs were necessary. Field notes and groundwater sample forms are presented in Attachment 3, and Site Photographs are provided in Attachment 4.

Groundwater Sampling

MW-2

Pre-purge depth to water was measured at 9.87 feet below TOC. The total well depth was measured at 13.90 feet below TOC. Free product was not detected using an oil/water interface probe. The well was purged and sampled from the screened section 12.0 feet below TOC. Water quality parameters were not collected due to historic elevated contaminant levels and historic sheen. Three to five well volumes of water were purged using a peristaltic pump. Approximately four gallons of water were removed and containerized. Purge water from the well did not exhibit petroleum sheen; however, the water exhibited petroleum odor. Groundwater sample MW-2 was collected. The well appeared in good condition; although, a damaged rim prevented completely sealing the monument cover.

MW-3

Pre-purge depth to water was measured at 10.22 feet below TOC. The total well depth was measured at 12.92 feet below TOC. Free product was not detected using an oil/water interface probe. The well was purged and sampled from the screened section 12.0 feet below TOC. Water quality parameters were not collected due to historic elevated contaminant levels and historic sheen. Nearly three well volumes of water were purged using a peristaltic pump. The well was purged dry and slow to recharge. Approximately two gallons of water were removed and containerized. Purge water from the well did not exhibit petroleum sheen; however, the water exhibited petroleum odor. Primary groundwater sample MW-3 and duplicate sample MW-300 (DRO, VOCs, and PAHs) were collected. The well appeared in good condition.

MW-4

Pre-purge depth to water was measured at 11.58 feet below TOC. The total well depth was measured at 13.95 feet below TOC. Free product was not detected using an oil/water interface probe. The well was purged and sampled from the screened section 13.0 feet below TOC. Water was purged from the well using a submersible pump, and water quality parameters were measured until stable. Approximately seven gallons of water were removed and containerized. Purge water from the well did not exhibit petroleum sheen or petroleum odor. Groundwater sample MW-4 was collected. The well appeared in good condition.

MW-5

Pre-purge depth to water was measured at 11.36 feet below TOC. The total well depth was measured at 34.50 feet below TOC. Free product was not detected using an oil/water interface probe. The well was purged and sampled from the screened section 33.0 feet below TOC. Water was purged from the well using a submersible pump, and water quality parameters were measured until stable. Approximately eight gallons of water were removed and containerized. Purge water from the well did not exhibit petroleum sheen or petroleum odor. Groundwater sample MW-5 was collected. The well appeared in good condition.

MW-403A

Pre-purge depth to water was measured at 9.49 feet below TOC. The total well depth was measured at 47.85 feet below TOC. Free product was not detected using an oil/water interface

probe. The well was purged and sampled from the screened section 46.0 feet below TOC. Water was purged from the well using a submersible pump, and water quality parameters were measured until stable. Approximately eight gallons of water were removed and containerized. Purge water from the well did not exhibit petroleum sheen or petroleum odor. Groundwater sample MW-403A was collected. The well appeared in good condition.

MW-403B
Pre-purge depth to water was measured at 9.45 feet below TOC. The total well depth was measured at 14.93 feet below TOC. Free product was not detected using an oil/water interface probe. The well was purged and sampled from the screened section 12.0 feet below TOC. Water was purged from the well using a submersible pump, and water quality parameters were measured until stable. Approximately eight gallons of water were removed and containerized. Purge water from the well did not exhibit petroleum sheen or petroleum odor. Groundwater sample MW-403B was collected. The well appeared in good condition.

Investigation-Derived Waste (IDW) Management
Approximately 38 gallons of purge water was generated from the six wells during sampling on March 19 to 27, 2024. The water waste was characterized based on groundwater analytical results from March 2024 and per- and polyfluoroalkyl substances (PFAS) results from late 2019.

On May 15, 2024, ***NORTECH*** processed and treated the purge water from each well using a portable Granular Activated Carbon (GAC) System. The treated water was disposed of on Site by pouring to the ground surface a minimum of 100 feet away from drinking water wells or surface water.

Used/disposable sampling supplies were double-bagged and disposed of with other non-hazardous waste in a trash receptacle for transport to the FNSB Landfill.

Laboratory Results and Discussion
The SGS Laboratory Reports are provided in Attachment 5. The laboratory analytical results for the March 2024 groundwater monitoring event are summarized in Attachment 2, Tables 1 (DRO and VOCs) and 2 (PAHs). Historical Groundwater Analytical Data from 2012 to Present are summarized in Attachment 2, Table 3. Laboratory results in Tables 1, 2, and 3 are compared to current ADEC 18 AAC 75 Table C Groundwater Cleanup Levels as amended through October 18, 2023.

The March 2024 monitoring event is the eleventh since 2019. The intent of these events is to identify potential seasonal trends in groundwater contaminant concentrations.

Groundwater Results
MW-2
The results for source well MW-2 were above the ADEC CL for three analytes. DRO was detected at a concentration of 3.16 milligrams per liter (mg/L) (CL of 1.5 mg/L). Other analytes with concentrations exceeding their respective CLs were 1,2,4-trimethylbenzene at 135 micrograms per liter (µg/L) (CL of 56 µg/L) and naphthalene at 26.7 µg/L (CL of 1.7 µg/L). 1.3,5-Trimethylbenzene, ethylbenzene, and total xylenes were detected at concentrations below their respective CLs. Benzene and toluene were non-detect. These results are consistent with previous results and confirm that this well is within the source area of the contaminant plume.

MW-3
The results for source well MW-3 were above the ADEC CL for two analytes. Primary and duplicate samples had DRO concentrations of 7.11 and 3.10 mg/L, respectively, both above the ADEC CL. Naphthalene by VOCs analysis was detected in the primary and duplicate samples at concentrations above the ADEC CL. The VOCs 1,2,4-trimethylbenzene; 1,3,5-trimethylbenzene; benzene; toluene; and total xylenes were detected at concentrations below their respective CLs. Ethylbenzene was non-detect. The PAHs 1-methylnaphthalene, 2-methylnaphthalene, acenaphthene, fluorene, and naphthalene were detected in the primary and duplicate samples at concentrations below their respective CLs. These results are consistent with previous results for the former AST source area well.

MW-4
The results for downgradient well MW-4 had detections of DRO and benzene at concentrations below their CLs. No other analytes were detected in MW-4. These results are consistent with previous results for DRO and benzene.

During the October 2022 sampling event, naphthalene was detected for the first time in the well since 2015 and at a concentration above CL. In 2015, naphthalene was detected below the CL. In every other sampling event, including March 2024, naphthalene has been non-detect.

MW-5
No tested analytes were detected in downgradient well MW-5. This is consistent with previous sampling events. The depth of the well was measured at approximately 35 feet below ground surface (bgs). Based on absence of contamination in MW-5, which is closer to the source area than MW-4, a historical review of the well log installation was undertaken to determine the elevation of the screened interval. This information allows evaluation of the comparability of the data to other shallow wells that are screened across the water table.

In Fall 2020, the well log was obtained from Kiewit and indicates the well is screened in the interval from 30 feet to 35 feet bgs, the screened interval does not intersect the top of the groundwater table, and the well is screened approximately 20 feet below the groundwater surface. Data is flagged in the report tables to indicate that it may not represent contamination near the groundwater surface.

MW-403A
This downgradient monitoring well is located in the Alaska DOT&PF ROW immediately outside the northern property boundary. MW-403A had benzene as the only analyte detected at a concentration far below the ADEC CL. The results are consistent with the eight previous sampling events conducted by Kiewit in 2020, 2021, 2022, and 2023; however, benzene was detected for the first time in the well during the October 2022 sampling event. The monitoring well was installed as part of the Alaska DOT&PF Maintenance Facility investigation. The well is located approximately 3 feet east of MW-403B, discussed below. The depth of the well was measured at approximately 48.5 feet bgs. The well is located approximately 145 feet and 205 feet downgradient from the former AST and FDL, respectively.

In Fall 2020, a historical review of the well log installation was conducted to determine the elevation of the screened interval. The well log obtained from Alaska DOT&PF indicates the well is screened in the interval from 44 feet to 48 feet bgs, the screened interval does not intersect the top of the groundwater table, and the well is screened more than 30 feet below the

groundwater surface. MW-403A analytical data is flagged in the report tables to indicate that it may not represent contamination near the groundwater surface.

MW-403B
This downgradient monitoring well is located in the Alaska DOT&PF ROW immediately outside the northern property boundary. MW-403B had benzene as the only analyte detected at a concentration far below the ADEC CL. The results are consistent with the nine previous sampling events conducted by Kiewit in 2019, 2020, 2021, 2022, and 2023. The monitoring well was installed as part of the Alaska DOT&PF Maintenance Facility investigation. The depth of the well was measured at approximately 15.5 feet bgs. The well is located approximately 145 feet and 205 feet downgradient from the former AST and FDL, respectively.

In Fall 2020, a historical review of the well log installation was conducted to determine the elevation of the screened interval. The well log obtained from Alaska DOT&PF indicates the well is screened in the interval from about 5.5 feet to 15.5 feet bgs, and the screened interval intersects the top of the groundwater table.

Field Water Quality Parameters and NSZD Evaluation Results
Final field water quality parameters of monitoring well purge water from each well prior to groundwater sample collection are provided in Attachment 2, Table 4. The NSZD evaluation included sampling each of the six wells for nitrate; sulfate; total and dissolved iron and manganese; and dissolved methane/ethane/ethene. The NSZD analytical results are summarized in Attachment 2, Table 5. Kiewit intends to evaluate the water quality and NSZD data to determine future actions at the Site.

Quality Assurance/Quality Control
Part of the data quality objectives (DQOs) for the project were to produce data of adequate quality as outlined in the 2022 FSG for comparison to the 18 AAC 75.345 groundwater cleanup levels. The primary tool used to assess data quality was the ADEC Laboratory Data Review Checklist (LDRC). A LDRC was completed for each of the two laboratory work orders and are included with the laboratory reports in Attachment 5. The SGS laboratory report case narrative was reviewed against the ADEC LDRC for potential laboratory QC issues. The laboratory case narratives for the SGS work orders are located on Page 2 of the laboratory reports.

QA/QC procedures included adherence to the 2019 Work Plan, handling samples under chain-of-custody procedures, submitting samples within specified holding times, collecting a field duplicate, and including a trip blank in the sample cooler with volatile analytes. An equipment blank was collected, as a submersible pump was used for sampling the wells. Laboratory QA/QC procedures included analysis of method blanks; laboratory control samples (LCS) and LCS duplicates (LCSD); and matrix spike samples (MS) and MS duplicates (MSD).

Comparison of LOQs to Cleanup Levels
A QA/QC check was completed to compare the laboratory limit of quantitation (LOQ) of the analytes with ADEC CLs. As shown on Attachment 2, Tables 1 and 2, the LOQs of the contaminants of concern were below the ADEC CLs, confirming the results represent Site groundwater quality.

Duplicate Pair Relative Percent Difference
Duplicate pairs are a QC check on field sampling techniques and laboratory error. Precision, expressed as the relative percent difference (RPD) between field duplicate sample results, is an

indication of consistency in sampling, sample handling, preservation, and laboratory analysis. The RPD (the difference between the field duplicate results expressed as a percentage of the average of those results) was calculated according to the 2022 FSG. For field duplicate water samples, below 30% for calculated RPDs is preferred for meeting DQOs with no impact to usability.

Tables 1 and 2 in Attachment 2 present the calculated RPDs for detected results from the field duplicate pair MW-3 / MW-300. Thirteen analytes were detected in the duplicate pair. Five analytes had RPDs greater than the 30% recommended for water ranging from 31.9% to 85.6%. The associated well was pumped dry, was slow to recharge, and purge water from the well exhibited petroleum odor. The RPD exceedances are attributed to non-homogenous sample matrix.

Data quality and usability are not adversely affected. The higher value of each detected analyte in the duplicate pair was consistent with previous sampling events and was used for decision purposes.

Equipment Blank and Trip Blank
An equipment blank sample was collected during the sampling event. The equipment blank sample was collected by running distilled water over and through the submersible pump after sampling MW-4 and decontamination. No DRO or VOCs were detected in the equipment blank sample.

Laboratory-prepared trip blank samples accompanied the volatile samples during collection through submittal to SGS. The trip blanks were non-detect for VOCs.

QA/QC Summary
The data quality review for this sampling event indicates there were no significant data quality issues associated with the laboratory reports. The data quality of the laboratory reports is adequate, and results can be used to characterize contaminant concentrations of the groundwater and to evaluate NSZD at the Site. The data quality issues associated with the laboratory reports and the issues discussed above are also reviewed in the ADEC LDRCs. The laboratory analytical data generated during the March 2024 monitoring event is usable as described in this monitoring report.

Annual Groundwater Elevation Variation
A review of monthly depth to water readings from October 2018 to December 2020 at MW-2 indicates the groundwater elevation at the Site was lowest during late winter (mid-February to mid-March) and highest during late summer (mid-August to mid-September). Annual depth to water at MW-2 ranged from approximately 10.0 feet bgs during late winter to 6.0 feet bgs during late summer. The March 2024 groundwater monitoring event during a period of low groundwater level conditions during late winter/early spring.

Groundwater Flow Direction and Gradient
The groundwater flow direction was estimated using the monitoring well survey data provided by Design Alaska on November 4, 2020, and depth to water measurements collected by ***NORTECH*** on March 19, 26, and 27, 2024. The survey data and well measurements are presented in Attachment 2, Table 6.

Due to frost-jacking of the casings and the resultant change in TOC elevations since the November 4, 2020, survey associated with downgradient wells MW-4, MW-5, MW-403A, and MW-403B, the groundwater flow direction and gradient could not be accurately determined. In Fall 2021 and subsequent monitoring events, ***NORTECH*** repaired the four wells by trimming the casings and resetting the well monuments to ground surface. The potentiometric difference between wells MW-2 and MW-3 measurements calculated on March 27, 2024, provides limited support of past data that has determined that the inferred groundwater flow direction is to the north-northwest.

Figure 3 in Attachment 1 provides a potentiometric surface map of groundwater elevations taken during a previous monitoring event unaffected by frost-jacking conducted on May 12, 2021. The May 12, 2021, data were entered in the EPA *On-line Tools for Site Assessment Calculation* to determine groundwater flow direction and gradient. Based on the well survey and depth to water measurements, the inferred groundwater flow direction is to the north-northwest at a gradient of approximately 0.001925 foot per linear foot. Based on past data and limited March 2024 data, groundwater at the Site appears to flow similar to known regional groundwater direction and gradient. This has been consistent during all monitoring events at the Site. A new survey and continued groundwater gradient evaluation are not recommended.

Summary, Conclusions, and Recommendations

NORTECH completed March 2024 groundwater monitoring at the former Kiewit facility located at 2050 Peger Road in Fairbanks, Alaska. The March 2024 groundwater sampling event was conducted during a period of low groundwater level conditions during late winter/early spring. Based on field observations, laboratory results, and Site conditions, ***NORTECH*** has the following summary, conclusions, and recommendations:

Free Product Testing and Recovery and General Observations

- An oil/water interface probe was used in the field to test for free product in the six network wells
- None of the wells exhibited measurable free product, and no free product was recovered from the wells
- Based on the absence of measurable free product, the six wells underwent groundwater sampling for laboratory analysis
- No well had purge water exhibiting sheen

March 2024 Groundwater Results

- DRO
  - Remains above the ADEC CL in source area wells MW-2 and MW-3
  - Detected below the ADEC CL in downgradient well MW-4
  - Not detected in downgradient wells MW-5, MW-403A, or MW-403B
- BTEX
  - Benzene was detected below the ADEC CL in MW-3, MW-4, MW-403A, and MW-403B consistent with previous sampling events
  - Toluene was detected below the ADEC CL in MW-3
  - Ethylbenzene was detected below the ADEC CL in MW-2
  - Total xylenes was detected below the ADEC CL in MW-2 and MW-3
  - BTEX was not detected in MW-5
- 1,2,4-Trimethylbenzene
  - Detected above the ADEC CL in MW-2 and below the CL in MW-3

  - Not detected in MW-4, MW-5, MW-403A, or MW-403B
- 1,3,5-Trimethylbenzene
  - Detected below the ADEC CL in MW-2 and MW-3
  - Not detected in MW-4, MW-5, MW-403A, or MW-403B
- Naphthalene (as a VOC by EPA Method 8260D)
  - Detected above the ADEC CL in MW-2 and MW-3
  - Not detected in MW-4, MW-5, MW-403A, or MW-403B
- PAHs (analyzed for MW-3 only)
  - 1-Methylnaphthalene, 2-methylnaphthalene, acenaphthene, fluorene, and naphthalene were detected below respective ADEC CLs
  - No other PAHs were detected

Field Water Quality Parameters and NSZD Evaluation Results

- NSZD evaluation included sampling each of the six wells for nitrate; sulfate; total and dissolved iron and manganese; and dissolved methane/ethane/ethene
- Kiewit intends to evaluate the water quality and NSZD data to determine future actions at the Site

Monitoring Well Observations

- The six network wells were in satisfactory condition for groundwater sampling, and no repairs were necessary
- MW-5 and MW-403A were measured at a total depth of approximately 35 and 48 feet bgs, respectively
  - Historical review of the MW-5 well log indicates the well is screened in a 5-foot interval approximately 20 feet below the top of the groundwater table
  - Historical review of the MW-403A well log indicates the well is screened in a 4-foot interval more than 30 feet below the top of the groundwater table
  - MW-5 and MW-403A analytical data is flagged in the report tables to indicate that it may not represent contamination near the groundwater surface

Monitoring Well Survey and Inferred Groundwater Flow Direction

- In November 2020, the six network monitoring wells were surveyed for well coordinates and TOC elevation by a professional engineering firm
- In November 2020 and May 2021, inferred groundwater flow at the Site was to the north-northwest, consistent with the known regional groundwater conditions
- Based on past data and limited March 2024 data, groundwater at the Site appears to flow north-northwest similar to previous observations
- A new survey and continued groundwater gradient evaluation are not recommended

IDW

- Approximately 38 gallons of purge water was generated from the six monitoring wells during the March 2024 sampling event
- ***NORTECH*** processed and treated the purge water from each well using a portable GAC System, and the treated water was disposed of on Site by pouring to the ground surface a minimum of 100 feet away from drinking water wells or surface water
- Used/disposable sampling supplies were disposed of with other non-hazardous waste in a trash receptacle for transport to the FNSB Landfill

MW-5 and MW-403A, respectively, are screened 30 and 44 feet bgs, and the screened intervals are at least 20 feet below the top of the groundwater table. Analytical data does not represent contamination near the groundwater surface. MW-5 has been sampled since 2012, and no tested analytes have been detected above CLs. Additionally, no analytes have been detected above LOQ in MW-5 since 2016. MW-403A has been sampled nine times for this project since May 2020, and no tested analytes have been detected above CLs. ***NORTECH*** recommends seeking approval from ADEC to discontinue analytical sampling of these two wells.

NORTECH recommends submitting this letter report to ADEC as documentation of the March 2024 groundwater monitoring at the Site.

We trust that this information is sufficient at present. Please contact us if you have questions or comments.

Sincerely,
NORTECH

William L. Watts
Environmental Project Manager

Peter Beardsley, PE
Principal, Environmental Engineer

Notes:

Analytical results were imported from Pastor, Behling & Wheeler, LLC, which was acquired by Golder Associates, Inc in 2018.
Analytical results are compared to ADEC 18 AAC 75 Table C Groundwater Cleanup Levels as amended through November 18, 2021

<	Analyte was not detected at the specified Level of Quantitation (LOQ) or Detection Level (DL)
J/JH	Estimated value/Estimated value biased high due to surrogate recovery
mg/L	Milligram per liter
U	Analyte not detected at the reported LOQ
H	Result is biased low due to laboratory error. Analyte extraction occurred outside method hold time
L	Result is biased low due to low laboratory control spike (LCS) percentage recovery in the quality control sample
XXXX	LOQ/Non-detected concentrations exceed ADEC Cleanup Levels Updated in 2021 / 2020 / 2018 / 2016
XXXX	Analyte was detected below ADEC Cleanup Levels Updated in 2021 / 2020 / 2018 / 2016
XXXX	Analyte was detected above ADEC Cleanup Levels Updated in 2021 / 2020 / 2018 / 2016
---	Analyte was not analyzed during sample event
*	Analyte is not currently included in Method 8260 laboratory analyte list
**	Analyte was added by ***NORTECH*** and is included in current Method 8260 analyte list
***	Data for MW-403A and MW-5 may not represent contamination near the groundwater surface, as the screened interval at each well does not intersect the top of the groundwater table

Notes:

Analytical results were imported from Pastor, Behling & Wheeler, LLC, which was acquired by Golder Associates, Inc in 2018.
Analytical results are compared to ADEC 18 AAC 75 Table C Groundwater Cleanup Levels as amended through November 18, 2021
< Analyte was not detected at the specified Level of Quantitation (LOQ) or Detection Level (DL)
J/JH Estimated value/Estimated value biased high due to surrogate recovery
mg/L Milligram per liter
U Analyte not detected at the reported LOQ
H Result is biased low due to laboratory error. Analyte extraction occurred outside method hold time
L Result is biased low due to low laboratory control spike (LCS) percentage recovery in the quality control sample
XXXX LOQ/Non-detected concentrations exceed ADEC Cleanup Levels Updated in 2021 / 2020 / 2018 / 2016
XXXX Analyte was detected below ADEC Cleanup Levels Updated in 2021 / 2020 / 2018 / 2016
XXXX Analyte was detected above ADEC Cleanup Levels Updated in 2021 / 2020 / 2018 / 2016
--- Analyte was not analyzed during sample event
* Analyte is not currently included in Method 8260 laboratory analyte list
** Analyte was added by ***NORTECH*** and is included in current Method 8260 analyte list
*** Data for MW-403A and MW-5 may not represent contamination near the groundwater surface, as the screened interval at each well does not intersect the top of the groundwater table

Notes:

Analytical results were imported from Pastor, Behling & Wheeler, LLC, which was acquired by Golder Associates, Inc in 2018.
Analytical results are compared to ADEC 18 AAC 75 Table C Groundwater Cleanup Levels as amended through November 18, 2021
< Analyte was not detected at the specified Level of Quantitation (LOQ) or Detection Level (DL)
J/JH Estimated value/Estimated value biased high due to surrogate recovery
mg/L Milligram per liter
U Analyte not detected at the reported LOQ
H Result is biased low due to laboratory error. Analyte extraction occurred outside method hold time
L Result is biased low due to low laboratory control spike (LCS) percentage recovery in the quality control sample
XXXX LOQ/Non-detected concentrations exceed ADEC Cleanup Levels Updated in 2021 / 2020 / 2018 / 2016
XXXX Analyte was detected below ADEC Cleanup Levels Updated in 2021 / 2020 / 2018 / 2016
XXXX Analyte was detected above ADEC Cleanup Levels Updated in 2021 / 2020 / 2018 / 2016
--- Analyte was not analyzed during sample event
* Analyte is not currently included in Method 8260 laboratory analyte list
** Analyte was added by ***NORTECH*** and is included in current Method 8260 analyte list
*** Data for MW-403A and MW-5 may not represent contamination near the groundwater surface, as the screened interval at each well does not intersect the top of the groundwater table

Table 4
March 2024 Final Field Water Quality Parameter Measurements
Former Kiewit Facility, 2050 Peger Road, Fairbanks, Alaska

Monitoring Well	Temperature (^{o}C)	Dissolved O_2 (mg/L)	Conductivity (µS/cm)	pH (pH unit)	ORP (mV)	Visual Clarity (observed)	Odor (Y / N)	Sheen (Y / N)
MW-2	NM	NM	NM	NM	NM	Clear	Y	N
MW-3	NM	NM	NM	NM	NM	Slight Yellow Tint	Y	N
MW-4	1.6	0.35	698	6.79	-98.1	Slight Yellow Tint	N	N
MW-5	1.6	0.31	432	6.86	-81.7	Clear	N	N
MW-403A	0.7	0.50	869	6.97	-92.4	Clear	N	N
MW-403B	0.9	0.50	987	7.11	-61.3	Clear	N	N

Notes:

^{o}C	Degree centigrade
mg/L	Milligram per liter
µS/cm	Microsiemen per centimeter
pH unit	Potential of hydrogen defined as the decimal logarithm of the reciprocal of the hydrogen ion activity on a scale used to specify the acidity or basicity of an aqueous solution
mV	Millivolt
Y / N	Yes / No
NM	Not measured

Table 5
March 2024 Natural Source Zone Depletion Evaluation Results Summary
Former Kiewit Facility, 2050 Peger Road, Fairbanks, Alaska

Monitoring Well	Nitrate (mg/L)	Sulfate (mg/L)	Total Iron (mg/L)	Dissolved Iron (mg/L)	Total Manganese (mg/L)	Dissolved Manganese (mg/L)	Methane (µg/L)	Ethane (µg/L)	Ethene (µg/L)
MW-2	0.200 U	0.200 U	50.9	49.1	2.98	2.88	3450	1.0 U	1.0 U
MW-3	0.200 U	3.39	57.8	44.9	2.77	2.55	1460	1.0 U	1.0 U
MW-4	0.200 U	0.259	99.5	102	2.42	2.41	735	1.0 U	1.0 U
MW-5	0.200 U	20.8	16.0	17.1	1.55	1.56	251	1.0 U	1.0 U
MW-403A	0.200 U	20.3	17.3	17.1	1.45	1.49	308	1.0 U	1.0 U
MW-403B	0.200 U	23.7	24.0	24.1	1.35	1.41	293	1.0 U	1.0 U

Notes:

mg/L	milligram per liter
µg/L	microgram per liter
U	Analyte not detected at the listed limit of quantitation (LOQ) or reporting limit (RL), as applicable

Table 6
Monitoring Well Survey and Groundwater Measurements
Former Kiewit Facility, 2050 Peger Road, Fairbanks, Alaska

Well ID	Northing	Easting	Top of Casing Elevation (ft)	Ground Elevation (ft)	Depth to Water (ft BTOC)	Groundwater Elevation (ft)
MW-2	3961474.8	1362999.2	436.08	436.5	9.87	426.21
MW-3	3961533.4	1363031.6	436.34	436.8	10.22	426.12
MW-4	3961674.5	1362920.6	NS	437.8	11.58	NC
MW-5	3961614.6	1362948.3	NS	437.9	11.36	NC
MW-403A	3961682.0	1363033.7	NS	436.0	9.49	NC
MW-403B	3961681.3	1363031.1	NS	436.0	9.45	NC

Alaska State Plane NAD83, Zone 3, NAD88 Elevation
TBM: 6" spike, south side first power pole south of 20th Ave. Elev. = 437.17 ft
Surveyed November 4, 2020
Depth to water and groundwater elevation measurements were obtained on March 19, 26, and 27, 2024
MW-4, MW-5, MW-403A, and MW-403B exhibited frost jacking of well casings that occurred subsequent to the November 4, 2020 survey. The top of casing elevations of the wells have not been re-surveyed.

Notes:

ft	Feet
TBM	Temporary benchmark
BTOC	Below top of casing
NS	Not surveyed
NC	Not calculated

Attachment 3

23-1007

Thursday Former Kiewit-Pegasus Rd 21Sep2023

0915- Sample ingrit + mobe for purge water treatment

1000- Deliver groundwater samples to SGS-FAI

1120- Arrive Site

NORTECH Personnel: William Watts

Weather: Mostly Cloudy, 35°F, calm

Set up GAC treatment system at purge water drum

1140- Begin GAC treatment of purge water

Treated all 38 gallons of purge water. Poured to ground surface near MW-3

Load empty 55-gal drum onto Truck

1325- Depart site

1340 - Return to NORTECH office

Demobe

1500- Done

WLW

24-1008

Tuesday Former Kiewit-Pegasus Rd 19Mar2024

0730- Mobe for groundwater monitoring

0900- Arrive Site

NORTECH Personnel: William Watts

Weather: Mostly Clear, 20°F, calm

Approx 2.0' snow on ground

Locate all six wells

Set up purge water 55-gal drum on west side of U-1 Bay Bldg.

0930- Calibrate YSI Meter

Collect samples from MW-403A + MW-403B

1345- Deliver samples to SGS-Fairbanks lab office for Nitrate short hold. Informed that SGS-ANC analyst for Nitrate will be gone Thursday until next week Therefore, remaining 4 MWs will be sampled next week when analyst back on duty. SGS-ANC had been notified last week + again yesterday regarding Nitrate samples + SGS analyst having unplanned absence.

MW

Rite in the Rain

24-1008

Tuesday Former Kiewit-Peger Rd 19 March 2024

1415 - Consolidate purge water, 1480 55-gal drums

1445 - Depart Site

1500 - Return to NORTECH office

Demobe

1600 - Done

WLW

24-1008

Tuesday FORMER Kiewit-Peger Rd 26 March 2024

0745 - Mobe for groundwater sampling

0930 - Arrive Site

NORTECH Personnel: William WATTS

Weather: Partly Cloudy, 28°F, calm

Approx 1.0' snow on ground.

Area of work had been plowed/scraped

Calibrated YSI Meter at office

Collected samples from MW-4 and MW-5. Also, collected Eq. Blank EB-1 after MW-4

1425 - Depart Site

1448 - Deliver samples to SGS - Fairbanks office for Nitrate Short Hold.

1515 - Return to NORTECH office

Demobe/Sample unpack

1645 - Done

WLW

24-1008

Wednesday Fairmont Kiewit-Pegasus Rd. 27 Mar 2024

0800 – Mobe for groundwater sampling

0845 – Arrive site

NORTECH Personnel: William WATTS

Weather – Partly Cloudy, 28°F, calm

Approx 12" snow on ground – yard had been scraped

Collected samples from MW-2 and MW-3. Collected duplicate MW-300 from MW-3

1310 – Depart Site / Samples upon

1400 – Deliver samples to SGS – Fairbanks receiving facility

1450 – Return to NORTECH office

Demob

1545 – Done

WLW

24-1008

Wednesday Fairmont Kiewit-Pegasus Rd 15 May 2024

1300 – Mobe for Purge Water Treatment with Portable GAC System

1330 – Arrive Site

Begin water treatment

Processed ~ 38 gallons of purge water. Poured to ground surface near MW-3. Load ~~Sampled~~

55 gal. drum onto truck

1450 – Depart Site

1500 – Arrive office

Demobe

1545 – Done

Nortech personnel: William Watts, Jacob Fennell

Weather: Clear 60°F, calm

WLW

Groundwater Sample Form

Project: Former Kiewit Facility - 2050 Peger Rd **Site Location:** Fairbanks, Alaska

Project #: 24-1008 **Well Number:** MW-2

Photo 1: *March 27, 2024. Looking west at MW-2 (center) showing the CMI facility (background) as the well is purged using a low flow peristaltic pump instead of a submersible pump due to historic elevated contaminant concentrations. Three to five well volumes of water were removed prior to groundwater sample collection.*

Photo 2: *March 27, 2024. Looking south at MW-3 (center) showing the 4-Bay Building (left) as the well is purged using a low flow peristaltic pump instead of a submersible pump due to historic elevated contaminant concentrations. Three to five well volumes of water were removed prior to groundwater sample collection.*

Photo 3: *March 26, 2024. Looking northeast at MW-4 showing 20th Avenue (background) as the well is purged using a low flow submersible pump. Water quality parameters were measured with a YSI Pro DSS instrument prior to groundwater sample collection.*

Photo 4: *March 26, 2024. Looking southeast at MW-5 showing the CMI yard as the well is purged using a low flow submersible pump while water quality parameters are measured with a YSI Pro DSS instrument prior to groundwater sample collection. The 4-Bay Building is shown (upper left, background).*

Photo 5: *March 19, 2024. Looking east at MW-403A and MW-403B in 20th Avenue ROW. The wells were purged using a low flow submersible pump while water quality parameters were measured with a YSI Pro DSS instrument prior to groundwater sample collection. The 2-Bay Building is shown on the right.*

Photo 6: *May 15, 2024. Looking south from the vicinity of the 4-Bay Building as the approximately 38 gallons of contaminated purge water generated from the six monitoring wells during sampling is processed and treated through a portable Granular Activated Carbon (GAC) system. The treated water was disposed of on Site by pouring to the ground surface a minimum of 100 feet away from drinking water wells or surface water.*

Laboratory Report of Analysis

To: Nortech
2400 College Road
Fairbanks, AK 99707
(907)452-5688

Report Number: **1241074**

Client Project: **Former Kiewit Fac-2050 Peger**

Dear William Watts,

Enclosed are the results of the analytical services performed under the referenced project for the received samples and associated QC as applicable. The samples are certified to meet the requirements of the National Environmental Laboratory Accreditation Conference Standards. Copies of this report and supporting data will be retained in our files for a period of ten years in the event they are required for future reference. All results are intended to be used in their entirety and SGS is not responsible for use of less than the complete report. Any samples submitted to our laboratory will be retained for a maximum of fourteen (14) days from the date of this report unless other archiving requirements were included in the quote.

If there are any questions about the report or services performed during this project, please call Jennifer at (907) 562-2343. We will be happy to answer any questions or concerns which you may have.

Thank you for using SGS North America Inc. for your analytical services. We look forward to working with you again on any additional analytical needs.

Sincerely,
SGS North America Inc.

Stephen C. Ede

Case Narrative

SGS Client: **Nortech**
SGS Project: **1241074**
Project Name/Site: **Former Kiewit Fac-2050 Peger**
Project Contact: **William Watts**

Refer to sample receipt form for information on sample condition.

LCS for HBN 1873731 [VXX/41017 (1756897) LCS

8260D - LCS recovery for trichlorofluoromethane does not meet QC criteria. This analyte was not reported above LOQ in associated samples.

LCSD for HBN 1873731 [VXX/4101 (1756898) LCSD

8260D - LCS/LCSD RPD for trichlorofluoromethane does not meet QC criteria. This analyte was not reported above LOQ in associated samples.

1240966013(1757104MS) (1757109) MS

6020B - Metals MS recoveries for Iron and Manganese do not meet QC criteria. The post digestion spike was successful.

Light Gases by RSK-175 were analyzed by SGS of Orlando, FL.

*QC comments may be associated with the field samples found in this report. When applicable, comments will be applied to associated field samples.

SGS North America Inc.

Laboratory Qualifiers

Enclosed are the analytical results associated with the above work order. The results apply to the samples as received. All results are intended to be used in their entirety and SGS is not responsible for use of less than the complete report. This document is issued by the Company under its General Conditions of Service accessible at <http://www.sgs.com/en/Terms-and-Conditions.aspx>. Attention is drawn to the limitation of liability, indenmification and jurisdiction issues defined therein.

Any holder of this document is advised that information contained hereon reflects the Company's findings at the time of its intervention only and within the limits of Client's instructions, if any. The Company's sole responsibility is to its Client and this document does not exonerate parties to a transaction from exercising all their rights and obligations under the transaction documents. Any unauthorized alteration, forgery or falsification of the context or appearance of this document is unlawful and offenders may be prosecuted to the fullest extent of the law.

SGS maintains a formal Quality Assurance/Quality Control (QA/QC) program. A copy of our Quality Assurance Plan (QAP), which outlines this program, is available at your request. The laboratory certification numbers are AK00971 (DW Chemistry & Microbiology) & 17-021 (CS) for ADEC and 2944.01 for DOD ELAP/ISO17025 (RCRA methods: 1020B, 1311, 3010A, 3050B, 3520C, 3550C, 5030B, 5035A, 6020B, 7470A, 7471B, 8015C, 8021B, 8082A, 8260D, 8270E, 8270E-SIM, 9040C, 9045D, 9056A, 9060A, AK101 and AK102/103). SGS is only certified for the analytes listed on our Drinking Water Certification (DW methods: 200.8, 2130B, 2320B, 2510B, 300.0, 4500-CN-C,E, 4500-H-B, 4500-NO3-F, 4500-P-E and 524.2) and only those analytes will be reported to the State of Alaska for compliance. Except as specifically noted, all statements and data in this report are in conformance to the provisions set forth by the SGS QAP and, when applicable, other regulatory authorities.

The following descriptors or qualifiers may be found in your report:

*	The analyte has exceeded allowable regulatory or control limits.
!	Surrogate out of control limits.
B	Indicates the analyte is found in a blank associated with the sample.
CCV/CVA/CVB	Continuing Calibration Verification
CCCV/CVC/CVCA/CVCB	Closing Continuing Calibration Verification
CL	Control Limit
DF	Analytical Dilution Factor
DL	Detection Limit (i.e., maximum method detection limit)
E	The analyte result is above the calibrated range.
GT	Greater Than
IB	Instrument Blank
ICV	Initial Calibration Verification
J	The quantitation is an estimation.
LCS(D)	Laboratory Control Spike (Duplicate)
LLQC/LLIQC	Low Level Quantitation Check
LOD	Limit of Detection (i.e., 3/4 of the LOQ)
LOQ	Limit of Quantitation (i.e., reporting or practical quantitation limit)
LT	Less Than
MB	Method Blank
MS(D)	Matrix Spike (Duplicate)
ND	Indicates the analyte is not detected.
RPD	Relative Percent Difference
TNTC	Too Numerous To Count
U	Indicates the analyte was analyzed for but not detected.

Note: Sample summaries which include a result for "Total Solids" have already been adjusted for moisture content. All DRO/RRO analyses are integrated per SOP.

SAMPLE RECEIPT FORM

Project Manager Completion				
Was all necessary information recorded on the COC upon receipt? (temperature, COC seals, etc.?)	Yes	No	N/A	
Was temperature between 0-6° C?	Yes	No	N/A	If "No", are the samples either exempt* or sampled <8 hours prior to receipt?
Were all analyses received within holding time*?	Yes	No	N/A	
Was a method specified for each analysis, where applicable? If no, please note correct methods.	Yes	No	N/A	
Are compound lists specified, where applicable? For project specific or special compound lists please note correct analysis code.	Yes	No	N/A	
If rush was requested by the client, was the requested TAT approved?	Yes	No	N/A	If "NO", what is the approved TAT?
If SEDD Deliverables are required, were Location ID's and an NPDL Number provided?	Yes	No	N/A	*If "NO", contact client for information.*
Sample Login Completion				
Do ID's on sample containers match COC?	Yes	No	N/A	
If provided on containers, do dates/times collected match COC?	Yes	No	N/A	Note: If times differ <1 hr., record details below and login per COC.
Were all sample containers received in good condition?	Yes	No	N/A	
Were proper containers (type/mass/volume/preservative) received for all samples? **See form F-083 "Sample Guide"*	Yes	No	N/A	*Note: If 200.8/6020 Total Metals are received unpreserved, preserve and note HNO3 lot here: If 200.8/6020 Dissolved Metals are received unpreserved, log in for LABFILTER and do not preserve. For all non-metals methods, inform Project Manager.*
Were Trip Blanks (VOC, GRO, Low-Level Hg, etc.) received with samples, where applicable*?	Yes	No	N/A	
Were all VOA vials free of headspace >6mm?	Yes	No	N/A	
Were all soil VOA samples received field extracted with Methanol?	Yes	No	N/A	
Did all soil VOA samples have an accompanying unpreserved container for % solids?	Yes	No	N/A	
If special handling is required, were containers labelled appropriately? e.g. MI/ISM, foreign soils, lab filter, Ref Lab, limited volume	Yes	No	N/A	
For Rush/Short Holding time, was the lab notified?	Yes	No	N/A	
For any question answered "NO", was the Project Manager notified?	Yes	No	N/A	PM Initials:
Was Peer Review of sample numbering/labelling completed?	Yes	No	N/A	Reviewer Initials:
Additional Notes/Clarification where Applicable, including resolution of "No" answers when a change order is not attached:

Container Condition Glossary

Containers for bacteriological, low level mercury and VOA vials are not opened prior to analysis and will be assigned condition code OK unless evidence indicates than an inappropriate container was submitted.

OK - The container was received at an acceptable pH for the analysis requested.
BU - The container was received with headspace greater than 6mm.
DM - The container was received damaged.
FR - The container was received frozen and not usable for Bacteria or BOD analyses.
IC - The container provided for microbiology analysis was not a laboratory-supplied, pre-sterilized container and therefore was not suitable for analysis.
NC- The container provided was not preserved or was under-preserved. The method does not allow for additional preservative added after collection.
PA - The container was received outside of the acceptable pH for the analysis requested. Preservative was added upon receipt and the container is now at the correct pH. See the Sample Receipt Form for details on the amount and lot # of the preservative added.
PH - The container was received outside of the acceptable pH for the analysis requested. Preservative was added upon receipt, but was insufficient to bring the container to the correct pH for the analysis requested. See the Sample Receipt Form for details on the amount and lot # of the preservative added.
QN - Insufficient sample quantity provided.

The results set forth herein are provided by SGS North America Inc.

SAMPLE DELIVERY GROUP CASE NARRATIVE

Client: SGS North America, Inc **Job No:** FC14325

Site: 1241074 **Report Date:** 3/27/2024 12:10:53

On 03/26/2024, 2 Sample(s), 0 Trip Blank(s), 0 Equip. Blank(s) and 0 Field Blank(s) were received at SGS North America Inc - Orlando. at a maximum corrected temperature of 4.4 C. Samples were intact and chemically preserved, unless noted below. A SGS North America Inc. - Orlando Job Number of FC14325 was assigned to the project.

Laboratory sample ID, client sample ID and dates of sample collection are detailed in the report's Results Summary Section. Specified quality control criteria were achieved for this job except as noted below. For more information, please refer to the analytical results and QC summary pages.

GC Volatiles By Method RSKSOP-147/175

Matrix: AQ **Batch ID:** GLL3068

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) FC14325-1DUP, FC14325-2MS were used as the QC samples indicated.

SGS North America Inc. - Orlando certifies that data reported for samples received, listed on the associated custody chain or analytical task order, were produced to specifications meeting the Quality System precision, accuracy and completeness objectives except as noted. Estimated non-standard method measurement uncertainty data is available on request, based on quality control bias and implicit for standard methods. Acceptable uncertainty requires tested parameter quality control data to meet method criteria. SGS North America Inc.- Orlando is not responsible for data quality assumptions if partial reports are used and recommends that this report be used in its entirety.

SGS - Orlando Sample Receipt Summary

Job Number: fc14325 **Client:** SGS ALASKA **Project:** 1241074

Date / Time Received: 3/26/2024 9:45:00 AM **Delivery Method:** FEDEX **Airbill #'s:** 642042704324

Cooler Temps (Raw Measured) °C: Cooler 1: (3.4);

Cooler Temps (Corrected) °C: Cooler 1: (4.4);

Cooler Information	Y	or	N
1. Custody Seals Present:	☑		☐
2. Custody Seals Intact:	☑		☐
3. Temp criteria achieved:	☑		☐
4. Cooler temp verification:	IR Gun		
5. Cooler media:	Ice (Bag)		

Trip Blank Information	Y	or	N	N/A
1. Trip Blank present / cooler:	☐		☐	☑
2. Trip Blank listed on COC:	☐		☐	☑

	W	or	S	N/A
3. Type of TB Received	☐		☐	☑

Sample Information	Y	or	N	N/A
1. Sample labels present on bottles:	☑		☐	
2. Samples presented properly	☑		☐	
3. Sufficient volume/containers recv'd for analysis	☑		☐	
4. Condition of sample:	Intact			
5. Sample recv'd within HT	☑		☐	
6. Dates/Times/IDs on COC match sample label	☑		☐	
7. VOCs have headspace	☐		☑	☐
8. Bottles received for unspecified tests	☐		☑	
9. Compositing instructions clear	☐		☐	☑
10. Voa Soil Kits/Jars received past 48hrs?	☐		☐	☑
11. % Solids Jar Received?	☐		☐	☑
12. Residual Chlorine Present?	☐		☐	☑

Misc Information

Number of Encores: 25 Gram 5 Gram

Number of Lab Filtered Metals:

Test Strip Lot #s: pH 0-3: 226422 pH 10-12: Other: (Specify) pH 1.0 - 12.0 222221

Residual Chlorine Test Strip Lot #

ADEC Contaminated Sites Program Laboratory Data Review Checklist

Completed By:	William Watts May 9, 2024	**CS Site Name:**	Kiewit Pacific Company, 2050 Peger Road, Fairbanks, Alaska	**Lab Name:**	SGS North America Inc.
Title:	Project Manager	**ADEC File No.:**	102.38.164	**Lab Report No.:**	1241074
Consulting Firm:	***NORTECH***, Inc.	**Hazard ID No.:**	25680	**Lab Report Date:**	April 4, 2024

Note: *Any N/A or No box checked must have an explanation in the comments box.*

1. **Laboratory**

   a. Did an ADEC Contaminated Sites Laboratory Approval Program (CS-LAP) approved laboratory receive and perform all of the submitted sample analyses?
   Yes ☒ No ☐ N/A ☐
   Comments:

   b. If the samples were transferred to another "network" laboratory or sub-contracted to an alternate laboratory, was the laboratory performing the analyses CS-LAP approved?
   Yes ☒ No ☐ N/A ☐
   Comments: Except for Light Gases (methane, ethane, and ethene) analysis by EPA Method RSK175, all sample analyses were performed by SGS North America Inc. in Anchorage, Alaska. Samples for Light Gases analysis were transferred to SGS-Orlando, Florida network laboratory. The Light Gases analysis was conducted to evaluate natural source zone depletion at the site.

2. **Chain of Custody (CoC)**

   a. Is the CoC information completed, signed, and dated (including released/received by)?
   Yes ☒ No ☐ N/A ☐
   Comments:

   b. Were the correct analyses requested?
   Yes ☒ No ☐ N/A ☐
   Analyses requested: DRO by AK102, VOCs by EPA Method 8260D, and Natural Attenuation Parameters: Methane/Ethane/Ethene by EPA Method RSKSOP 147/175, Nitrate and Sulfate by EPA Method 300.0, and Total and Dissolved Iron and Manganese by EPA Method 6020B.
   Comments:

3. Laboratory Sample Receipt Documentation

a. Is the sample/cooler temperature documented and within range at receipt (0° to 6° C)?
Yes ☒ No ☐ N/A ☐
Cooler temperature(s): 3.5° C and 4.4° C

Sample temperature(s): Click or tap here to enter text.
Comments:

b. Is the sample preservation acceptable – acidified waters, methanol preserved soil (GRO, BTEX, VOCs, etc.)?
Yes ☒ No ☐ N/A ☐
Comments: Click or tap here to enter text.

c. Is the sample condition documented – broken, leaking, zero headspace (VOA vials); canister vacuum/pressure checked and no open valves, etc.?
Yes ☒ No ☐ N/A ☐
Comments: The samples were received in good condition.

d. If there were any discrepancies, were they documented? For example, incorrect sample containers/preservation, sample temperature outside of acceptable range, insufficient or missing samples, canister not holding a vacuum, etc.?
Yes ☐ No ☐ N/A ☒
Comments: There were no discrepancies.

e. Is the data quality or usability affected?
Yes ☐ No ☐ N/A ☒
Comments: Data quality and usability are not affected.

4. Case Narrative

a. Is the case narrative present and understandable?
Yes ☒ No ☐ N/A ☐
Comments:

b. Are there discrepancies, errors, or QC failures identified by the lab?
Yes ☒ No ☐ N/A ☐
Comments:
1240966013(1757104MS) (1757109) MS
6020B - Metals MS recoveries for Iron and Manganese do not meet QC criteria. The post digestion spike was successful.

c. Were all the corrective actions documented?
Yes ☐ No ☐ N/A ☒
Comments: No corrective actions were necessary.

d. What is the effect on data quality/usability according to the case narrative?
Comments: There is no effect on data quality or usability according to the case narrative.

5. Sample Results

a. Are the correct analyses performed/reported as requested on CoC?
Yes ☒ No ☐ N/A ☐
Comments:

b. Are all applicable holding times met?
Yes ☒ No ☐ N/A ☐
Comments:

c. Are all soils reported on a dry weight basis?
Yes ☐ No ☐ N/A ☒
Comments: There were no soil samples submitted with this work order.

d. Are the reported limits of quantitation (LoQ) or limits of detections (LOD), or reporting limits (RL) less than the Cleanup Level or the action level for the project?
Yes ☒ No ☐ N/A ☐
Comments:

e. Is the data quality or usability affected?
Yes ☐ No ☐ N/A ☒
Comments: Data quality and usability are not affected.

6. QC Samples

a. Method Blank

i. Was one method blank reported per matrix, analysis, and 20 samples?
Yes ☒ No ☐ N/A ☐
Comments:

ii. Are all method blank results less than LOQ (or RL)?
Yes ☒ No ☐
Comments:

iii. If above LoQ or RL, what samples are affected?
Comments: No samples are affected. Method blank results are below LOQs.

iv. Do the affected sample(s) have data flags? If so, are the data flags clearly defined?

Yes ☐ No ☐ N/A ☒
Comments: No samples are affected. No data flags are necessary.

v. Data quality or usability affected?
Yes ☐ No ☐ N/A ☒
Comments: Data quality and usability are not affected.

b. Laboratory Control Sample/Duplicate (LCS/LCSD)

i. Organics – Are one LCS/LCSD reported per matrix, analysis and 20 samples? (LCS/LCSD required per AK methods, LCS required per SW846)
Yes ☒ No ☐ N/A ☐
Comments: Click or tap here to enter text.

ii. Metals/Inorganics – Are one LCS and one sample duplicate reported per matrix, analysis and 20 samples?
Yes ☒ No ☐ N/A ☐
Comments: Click or tap here to enter text.

iii. Accuracy – Are all percent recoveries (%R) reported and within method or laboratory limits and project specified objectives, if applicable? (AK Petroleum methods: AK101 60%-120%, AK102 75%-125%, AK103 60%-120%; all other analyses see the laboratory QC pages)
Yes ☒ No ☐ N/A ☐
Comments:

iv. Precision – Are all relative percent differences (RPD) reported and less than method or laboratory limits and project specified objectives, if applicable? Was the RPD reported from LCS/LCSD, and or sample/sample duplicate? (AK Petroleum methods 20%; all other analyses see the laboratory QC pages)
Yes ☒ No ☐ N/A ☒
Comments: Click or tap here to enter text.

v. If %R or RPD is outside of acceptable limits, what samples are affected?
Comments: No samples are affected.

vi. Do the affected sample(s) have data flags? If so, are the data flags clearly defined?
Yes ☐ No ☐ N/A ☒
Comments: No samples are affected. No data flags are necessary.

vii. Is the data quality or usability affected?
Yes ☐ No ☐ N/A ☒
Comments: Data quality and usability are not affected.

c. Matrix Spike/Matrix Spike Duplicate (MS/MSD)

i. Organics – Are one MS/MSD reported per matrix, analysis and 20 samples?
Yes ☐ No ☒ N/A ☐
Comments: MS/MSD samples were not required for this project, and the lab did not run a MS/MSD with the batch. According to the lab, when there is not sufficient volume for MS/MSD analyses an LCS/LCSD is run.

ii. Metals/Inorganics – Are one MS/MSD reported per matrix, analysis and 20 samples?
Yes ☒ No ☐ N/A ☐
Comments: MS/MSD were run on a laboratory batch sample not associated with this project.

iii. Accuracy – Are all percent recoveries (%R) reported and within method or laboratory limits and project specified objectives, if applicable?
Yes ☐ No ☒ N/A ☐
Comments:
1240966013(1757104MS) (1757109) MS
6020B - Metals MS recoveries for Iron and Manganese do not meet QC criteria. The post digestion spike was successful.

iv. Precision – Are all relative percent differences (RPD) reported and less than method or laboratory limits and project specified objectives, if applicable? RPD reported from MS/MSD, and or sample/sample duplicate.
Yes ☒ No ☐ N/A ☐
Comments: Click or tap here to enter text.

v. If %R or RPD is outside of acceptable limits, what samples are affected?
Comments: No samples are affected.

vi. Do the affected sample(s) have data flags? If so, are the data flags clearly defined?
Yes ☐ No ☐ N/A ☒
Comments: No samples are affected. No data flags are necessary.

vii. Is the data quality or usability affected?
Yes ☐ No ☐ N/A ☒
Comments: Data quality and usability are not affected.

d. Surrogates – Organics Only or Isotope Dilution Analytes (IDA) – Isotope Dilution Methods Only

i. Are surrogate/IDA recoveries reported for organic analyses – field, QC, and laboratory samples?

Yes ☒ No ☐ N/A ☐
Comments: Click or tap here to enter text.

ii. Accuracy – Are all percent recoveries (%R) reported and within method or laboratory limits and project specified objectives, if applicable? (AK Petroleum methods 50-150 %R for field samples and 60-120 %R for QC samples; all other analyses see the laboratory report pages)
Yes ☒ No ☐ N/A ☐
Comments: Click or tap here to enter text.

iii. Do the sample results with failed surrogate/IDA recoveries have data flags? If so, are the data flags clearly defined?
Yes ☐ No ☐ N/A ☒
Comments: Click or tap here to enter text.

iv. Is the data quality or usability affected?
Yes ☐ No ☐ N/A ☒
Comments: Data quality and usability are not affected.

e. Trip Blanks

i. Is one trip blank reported per matrix, analysis, and for each cooler containing volatile samples? Yes ☒ No ☐ N/A ☐
Comments: Click or tap here to enter text.

ii. Are all results less than LoQ or RL?
Yes ☒ No ☐ N/A ☐
Comments: Click or tap here to enter text.

iii. If above LoQ or RL, what samples are affected?
Comments: No samples are affected.

iv. Is the data quality or usability affected?
Yes ☐ No ☐ N/A ☒
Comments: Data quality and usability are not affected.

f. Field Duplicate

i. Are one field duplicate submitted per matrix, analysis, and 10 project samples?
Yes ☐ No ☒ N/A ☐
Comments: One field duplicate pair was required for the project and was submitted with a subsequent laboratory work order. A field duplicate was not submitted with this laboratory work order.

ii. Was the duplicate submitted blind to lab?

Yes ☐ No ☐ N/A ☒
Comments: See 6.f.i above.

iii. Precision – All relative percent differences (RPD) less than specified project objectives? (Recommended: 30% water or air, 50% soil)

$$RPD\ (\%) = \left| \frac{R_1 - R_2}{\left(\frac{R_1 + R_2}{2}\right)} \right| X\ 100$$

Where R_1 = Sample Concentration

R_2 = Field Duplicate Concentration

Is the data quality or usability affected? (Explain)

Yes ☐ No ☐ N/A ☒
Comments: See 6.f.i above.

iv. Is the data quality or usability affected? (Explain)
Yes ☐ No ☐ N/A ☒
Comments: See 6.f.i above.

g. Decontamination or Equipment Blanks

i. Were decontamination or equipment blanks collected?
Yes ☐ No ☒ N/A ☐
Comments: One equipment blank was required for the project and was submitted with a subsequent laboratory work order. An equipment blank was not submitted with this laboratory work order.

ii. Are all results less than LoQ or RL?
Yes ☐ No ☐ N/A ☒
Comments: See 6.g.i above.

iii. If above LoQ or RL, specify what samples are affected.
Comments: See 6.g.i above.

iv. Are data quality or usability affected?
Yes ☐ No ☐ N/A ☒
Comments: See 6.g.i above.

7. Other Data Flags/Qualifiers (ACOE, AFCEE, Lab Specific, etc.)

a. Are they defined and appropriate?
Yes ☒ No ☐ N/A ☐
Comments: No additional flags or qualifiers are necessary for this work order.

Laboratory Report of Analysis

To: Nortech
2400 College Road
Fairbanks, AK 99707
(907)452-5688

Report Number: **1241160**

Client Project: **Former Kiewit Fac-2050 Peger**

Dear William Watts,

Enclosed are the results of the analytical services performed under the referenced project for the received samples and associated QC as applicable. The samples are certified to meet the requirements of the National Environmental Laboratory Accreditation Conference Standards. Copies of this report and supporting data will be retained in our files for a period of ten years in the event they are required for future reference. All results are intended to be used in their entirety and SGS is not responsible for use of less than the complete report. Any samples submitted to our laboratory will be retained for a maximum of fourteen (14) days from the date of this report unless other archiving requirements were included in the quote.

If there are any questions about the report or services performed during this project, please call Jennifer at (907) 562-2343. We will be happy to answer any questions or concerns which you may have.

Thank you for using SGS North America Inc. for your analytical services. We look forward to working with you again on any additional analytical needs.

Sincerely,
SGS North America Inc.

Stephen C. Ede

Laboratory Qualifiers

Enclosed are the analytical results associated with the above work order. The results apply to the samples as received. All results are intended to be used in their entirety and SGS is not responsible for use of less than the complete report. This document is issued by the Company under its General Conditions of Service accessible at <http://www.sgs.com/en/Terms-and-Conditions.aspx>. Attention is drawn to the limitation of liability, indenmification and jurisdiction issues defined therein.

Any holder of this document is advised that information contained hereon reflects the Company's findings at the time of its intervention only and within the limits of Client's instructions, if any. The Company's sole responsibility is to its Client and this document does not exonerate parties to a transaction from exercising all their rights and obligations under the transaction documents. Any unauthorized alteration, forgery or falsification of the context or appearance of this document is unlawful and offenders may be prosecuted to the fullest extent of the law.

SGS maintains a formal Quality Assurance/Quality Control (QA/QC) program. A copy of our Quality Assurance Plan (QAP), which outlines this program, is available at your request. The laboratory certification numbers are AK00971 (DW Chemistry & Microbiology) & 17-021 (CS) for ADEC and 2944.01 for DOD ELAP/ISO17025 (RCRA methods: 1020B, 1311, 3010A, 3050B, 3520C, 3550C, 5030B, 5035A, 6020B, 7470A, 7471B, 8015C, 8021B, 8082A, 8260D, 8270E, 8270E-SIM, 9040C, 9045D, 9056A, 9060A, AK101 and AK102/103). SGS is only certified for the analytes listed on our Drinking Water Certification (DW methods: 200.8, 2130B, 2320B, 2510B, 300.0, 4500-CN-C,E, 4500-H-B, 4500-NO3-F, 4500-P-E and 524.2) and only those analytes will be reported to the State of Alaska for compliance. Except as specifically noted, all statements and data in this report are in conformance to the provisions set forth by the SGS QAP and, when applicable, other regulatory authorities.

The following descriptors or qualifiers may be found in your report:

*	The analyte has exceeded allowable regulatory or control limits.
!	Surrogate out of control limits.
B	Indicates the analyte is found in a blank associated with the sample.
CCV/CVA/CVB	Continuing Calibration Verification
CCCV/CVC/CVCA/CVCB	Closing Continuing Calibration Verification
CL	Control Limit
DF	Analytical Dilution Factor
DL	Detection Limit (i.e., maximum method detection limit)
E	The analyte result is above the calibrated range.
GT	Greater Than
IB	Instrument Blank
ICV	Initial Calibration Verification
J	The quantitation is an estimation.
LCS(D)	Laboratory Control Spike (Duplicate)
LLQC/LLIQC	Low Level Quantitation Check
LOD	Limit of Detection (i.e., 3/4 of the LOQ)
LOQ	Limit of Quantitation (i.e., reporting or practical quantitation limit)
LT	Less Than
MB	Method Blank
MS(D)	Matrix Spike (Duplicate)
ND	Indicates the analyte is not detected.
RPD	Relative Percent Difference
TNTC	Too Numerous To Count
U	Indicates the analyte was analyzed for but not detected.

Note: Sample summaries which include a result for "Total Solids" have already been adjusted for moisture content. All DRO/RRO analyses are integrated per SOP.

SAMPLE RECEIPT FORM

Project Manager Completion				
Was all necessary information recorded on the COC upon receipt? (temperature, COC seals, etc.?)	(Yes)	No	N/A	
Was temperature between 0-6° C?	(Yes)	No	N/A	If "No", are the samples either exempt* or sampled <8 hours prior to receipt?
Were all analyses received within holding time*?	(Yes)	No	N/A	
Was a method specified for each analysis, where applicable? If no, please note correct methods.	(Yes)	No	N/A	Separated Nitrate
Are compound lists specified, where applicable? For project specific or special compound lists please note correct analysis code.	(Yes)	No	N/A	See list on COC
If rush was requested by the client, was the requested TAT approved?	Yes	No	(N/A)	If "NO", what is the approved TAT?
If SEDD Deliverables are required, were Location ID's and an NPDL Number provided?	Yes	No	(N/A)	*If "NO", contact client for information.*
Sample Login Completion				
Do ID's on sample containers match COC?	(Yes)	No	N/A	
If provided on containers, do dates/times collected match COC?	(Yes)	No	N/A	Note: If times differ <1 hr., record details below and login per COC.
Were all sample containers received in good condition?	(Yes)	No	N/A	
Were proper containers (type/mass/volume/preservative) received for all samples? **See form F-083 "Sample Guide"*	(Yes)	No	N/A	*Note: If 200.8/6020 Total Metals are received unpreserved, preserve and note HNO3 lot here: If 200.8/6020 Dissolved Metals are received unpreserved, log in for LABFILTER and do not preserve. For all non-metals methods, inform Project Manager.*
Were Trip Blanks (VOC, GRO, Low-Level Hg, etc.) received with samples, where applicable*?	Yes	No	(N/A)	
Were all VOA vials free of headspace >6mm?	Yes	No	(N/A)	
Were all soil VOA samples received field extracted with Methanol?	Yes	No	(N/A)	
Did all soil VOA samples have an accompanying unpreserved container for % solids?	Yes	No	(N/A)	
If special handling is required, were containers labelled appropriately? e.g. MI/ISM, foreign soils, lab filter, Ref Lab, limited volume	Yes	No	(N/A)	
For Rush/Short Holding time, was the lab notified?	(Yes)	No	N/A	Short Hold
For any question answered "NO", was the Project Manager notified?	Yes	No	N/A	PM Initials:
Was Peer Review of sample numbering/labelling completed?	(Yes)	No	N/A	Reviewer Initials: (JW)
Additional Notes/Clarification where Applicable, including resolution of "No" answers when a change order is not attached:				

Sample Containers and Preservatives

Container Id	Preservative	Container Condition	Container Id	Preservative	Container Condition
1241160001-A	HCL to pH < 2	OK			
1241160001-B	HCL to pH < 2	OK			
1241160001-C	No Preservative Required	OK			
1241160001-D	HNO3 to pH < 2	OK			
1241160002-A	HCL to pH < 2	OK			
1241160002-B	HCL to pH < 2	OK			
1241160002-C	No Preservative Required	OK			
1241160002-D	HNO3 to pH < 2	OK			
1241160003-A	HCL to pH < 2	OK			
1241160003-B	HCL to pH < 2	OK			
1241160004-A	HNO3 to pH < 2	OK			
1241160005-A	HNO3 to pH < 2	OK			

Container Condition Glossary

Containers for bacteriological, low level mercury and VOA vials are not opened prior to analysis and will be assigned condition code OK unless evidence indicates than an inappropriate container was submitted.

OK - The container was received at an acceptable pH for the analysis requested.
BU - The container was received with headspace greater than 6mm.
DM - The container was received damaged.
FR - The container was received frozen and not usable for Bacteria or BOD analyses.
IC - The container provided for microbiology analysis was not a laboratory-supplied, pre-sterilized container and therefore was not suitable for analysis.
NC- The container provided was not preserved or was under-preserved. The method does not allow for additional preservative added after collection.
PA - The container was received outside of the acceptable pH for the analysis requested. Preservative was added upon receipt and the container is now at the correct pH. See the Sample Receipt Form for details on the amount and lot # of the preservative added.
PH - The container was received outside of the acceptable pH for the analysis requested. Preservative was added upon receipt, but was insufficient to bring the container to the correct pH for the analysis requested. See the Sample Receipt Form for details on the amount and lot # of the preservative added.
QN - Insufficient sample quantity provided.

ADEC Contaminated Sites Program Laboratory Data Review Checklist

Completed By:	William Watts May 10, 2024	**CS Site Name:**	Kiewit Pacific Company, 2050 Peger Road, Fairbanks, Alaska	**Lab Name:**	SGS North America Inc.
Title:	Project Manager	**ADEC File No.:**	102.38.164	**Lab Report No.:**	1241160
Consulting Firm:	***NORTECH***, Inc.	**Hazard ID No.:**	25680	**Lab Report Date:**	April 9, 2024

Note: *Any N/A or No box checked must have an explanation in the comments box.*

1. **Laboratory**

   a. Did an ADEC Contaminated Sites Laboratory Approval Program (CS-LAP) approved laboratory receive and perform all of the submitted sample analyses?
   Yes ☒ No ☐ N/A ☐
   Comments:

   b. If the samples were transferred to another "network" laboratory or sub-contracted to an alternate laboratory, was the laboratory performing the analyses CS-LAP approved?
   Yes ☐ No ☐ N/A ☒
   Comments: All sample analyses were performed by SGS North America Inc. in Anchorage, Alaska.

2. **Chain of Custody (CoC)**

   a. Is the CoC information completed, signed, and dated (including released/received by)?
   Yes ☒ No ☐ N/A ☐
   Comments:

   b. Were the correct analyses requested?
   Yes ☒ No ☐ N/A ☐
   Analyses requested: DRO by AK102 and Natural Attenuation Parameters: Nitrate and Sulfate by EPA Method 300.0 and Total and Dissolved Iron and Manganese by EPA Method 6020B.
   Comments:

3. Laboratory Sample Receipt Documentation

a. Is the sample/cooler temperature documented and within range at receipt (0° to 6° C)?
Yes ☒ No ☐ N/A ☐
Cooler temperature(s): 2.6° C

Sample temperature(s): Click or tap here to enter text.
Comments:

b. Is the sample preservation acceptable – acidified waters, methanol preserved soil (GRO, BTEX, VOCs, etc.)?
Yes ☒ No ☐ N/A ☐
Comments: Click or tap here to enter text.

c. Is the sample condition documented – broken, leaking, zero headspace (VOA vials); canister vacuum/pressure checked and no open valves, etc.?
Yes ☒ No ☐ N/A ☐
Comments: The samples were received in good condition.

d. If there were any discrepancies, were they documented? For example, incorrect sample containers/preservation, sample temperature outside of acceptable range, insufficient or missing samples, canister not holding a vacuum, etc.?
Yes ☐ No ☐ N/A ☒
Comments: There were no discrepancies.

e. Is the data quality or usability affected?
Yes ☐ No ☐ N/A ☒
Comments: Data quality and usability are not affected.

4. Case Narrative

a. Is the case narrative present and understandable?
Yes ☒ No ☐ N/A ☐
Comments:

b. Are there discrepancies, errors, or QC failures identified by the lab?
Yes ☐ No ☒ N/A ☐
Comments: There were no discrepancies, errors, or QC failures.

c. Were all the corrective actions documented?
Yes ☐ No ☐ N/A ☒
Comments: No corrective actions were necessary.

d. What is the effect on data quality/usability according to the case narrative?
Comments: There is no effect on data quality or usability according to the case narrative.

5. Sample Results

a. Are the correct analyses performed/reported as requested on CoC?
Yes ☒ No ☐ N/A ☐
Comments:

b. Are all applicable holding times met?
Yes ☒ No ☐ N/A ☐
Comments:

c. Are all soils reported on a dry weight basis?
Yes ☐ No ☐ N/A ☒
Comments: There were no soil samples submitted with this work order.

d. Are the reported limits of quantitation (LoQ) or limits of detections (LOD), or reporting limits (RL) less than the Cleanup Level or the action level for the project?
Yes ☒ No ☐ N/A ☐
Comments:

e. Is the data quality or usability affected?
Yes ☐ No ☐ N/A ☒
Comments: Data quality and usability are not affected.

6. QC Samples

a. Method Blank

i. Was one method blank reported per matrix, analysis, and 20 samples?
Yes ☒ No ☐ N/A ☐
Comments:

ii. Are all method blank results less than LOQ (or RL)?
Yes ☒ No ☐
Comments:

iii. If above LoQ or RL, what samples are affected?
Comments: No samples are affected. Method blank results are below LOQs.

iv. Do the affected sample(s) have data flags? If so, are the data flags clearly defined?

Yes ☐ No ☐ N/A ☒
Comments: No samples are affected. No data flags are necessary.

v. Data quality or usability affected?
Yes ☐ No ☐ N/A ☒
Comments: Data quality and usability are not affected.

b. Laboratory Control Sample/Duplicate (LCS/LCSD)

i. Organics – Are one LCS/LCSD reported per matrix, analysis and 20 samples? (LCS/LCSD required per AK methods, LCS required per SW846)
Yes ☒ No ☐ N/A ☐
Comments: Click or tap here to enter text.

ii. Metals/Inorganics – Are one LCS and one sample duplicate reported per matrix, analysis and 20 samples?
Yes ☒ No ☐ N/A ☐
Comments: Click or tap here to enter text.

iii. Accuracy – Are all percent recoveries (%R) reported and within method or laboratory limits and project specified objectives, if applicable? (AK Petroleum methods: AK101 60%-120%, AK102 75%-125%, AK103 60%-120%; all other analyses see the laboratory QC pages)
Yes ☒ No ☐ N/A ☐
Comments:

iv. Precision – Are all relative percent differences (RPD) reported and less than method or laboratory limits and project specified objectives, if applicable? Was the RPD reported from LCS/LCSD, and or sample/sample duplicate? (AK Petroleum methods 20%; all other analyses see the laboratory QC pages)
Yes ☒ No ☐ N/A ☒
Comments: Click or tap here to enter text.

v. If %R or RPD is outside of acceptable limits, what samples are affected?
Comments: No samples are affected.

vi. Do the affected sample(s) have data flags? If so, are the data flags clearly defined?
Yes ☐ No ☐ N/A ☒
Comments: No samples are affected. No data flags are necessary.

vii. Is the data quality or usability affected?
Yes ☐ No ☐ N/A ☒
Comments: Data quality and usability are not affected.

c. Matrix Spike/Matrix Spike Duplicate (MS/MSD)

i. Organics – Are one MS/MSD reported per matrix, analysis and 20 samples?
Yes ☐ No ☒ N/A ☐
Comments: MS/MSD samples were not required for this project, and the lab did not run a MS/MSD for DRO with the batch. According to the lab, when there is not sufficient volume for MS/MSD analyses an LCS/LCSD is run.

ii. Metals/Inorganics – Are one MS/MSD reported per matrix, analysis and 20 samples?
Yes ☒ No ☐ N/A ☐
Comments: Click or tap here to enter text.

iii. Accuracy – Are all percent recoveries (%R) reported and within method or laboratory limits and project specified objectives, if applicable?
Yes ☒ No ☐ N/A ☐
Comments:

iv. Precision – Are all relative percent differences (RPD) reported and less than method or laboratory limits and project specified objectives, if applicable? RPD reported from MS/MSD, and or sample/sample duplicate.
Yes ☒ No ☐ N/A ☐
Comments: Click or tap here to enter text.

v. If %R or RPD is outside of acceptable limits, what samples are affected?
Comments: No samples are affected.

vi. Do the affected sample(s) have data flags? If so, are the data flags clearly defined?
Yes ☐ No ☐ N/A ☒
Comments: No samples are affected. No data flags are necessary.

vii. Is the data quality or usability affected?
Yes ☐ No ☐ N/A ☒
Comments: Data quality and usability are not affected.

d. Surrogates – Organics Only or Isotope Dilution Analytes (IDA) – Isotope Dilution Methods Only

i. Are surrogate/IDA recoveries reported for organic analyses – field, QC, and laboratory samples?
Yes ☒ No ☐ N/A ☐
Comments: Click or tap here to enter text.

ii. Accuracy – Are all percent recoveries (%R) reported and within method or laboratory limits and project specified objectives, if applicable? (AK Petroleum methods 50-150 %R for field samples and 60-120 %R for QC samples; all other analyses see the laboratory report pages)
Yes ☒ No ☐ N/A ☐
Comments: Click or tap here to enter text.

iii. Do the sample results with failed surrogate/IDA recoveries have data flags? If so, are the data flags clearly defined?
Yes ☐ No ☐ N/A ☒
Comments: Click or tap here to enter text.

iv. Is the data quality or usability affected?
Yes ☐ No ☐ N/A ☒
Comments: Data quality and usability are not affected.

e. Trip Blanks

i. Is one trip blank reported per matrix, analysis, and for each cooler containing volatile samples? Yes ☐ No ☒ N/A ☐
Comments: Samples for volatiles analysis were not submitted with this laboratory work order.

ii. Are all results less than LoQ or RL?
Yes ☐ No ☐ N/A ☒
Comments: Click or tap here to enter text.

iii. If above LoQ or RL, what samples are affected?
Comments: See 6.e.i above.

iv. Is the data quality or usability affected?
Yes ☐ No ☐ N/A ☒
Comments: Data quality and usability are not affected.

f. Field Duplicate

i. Are one field duplicate submitted per matrix, analysis, and 10 project samples?
Yes ☐ No ☒ N/A ☐
Comments: One field duplicate pair was required for the project and was submitted with a subsequent laboratory work order. A field duplicate was not submitted with this laboratory work order.

ii. Was the duplicate submitted blind to lab?
Yes ☐ No ☐ N/A ☒
Comments: See 6.f.i above.

iii. Precision – All relative percent differences (RPD) less than specified project objectives? (Recommended: 30% water or air, 50% soil)

$$RPD\ (\%) = \left| \frac{R_1 - R_2}{\left(\frac{R_1 + R_2}{2}\right)} \right| X\ 100$$

Where R_1 = Sample Concentration

R_2 = Field Duplicate Concentration

Is the data quality or usability affected? (Explain)

Yes ☐ No ☐ N/A ☒
Comments: See 6.f.i above.

iv. Is the data quality or usability affected? (Explain)
Yes ☐ No ☐ N/A ☒
Comments: See 6.f.i above.

g. Decontamination or Equipment Blanks

i. Were decontamination or equipment blanks collected?
Yes ☒ No ☐ N/A ☐
Comments: Click or tap here to enter text.

ii. Are all results less than LoQ or RL?
Yes ☒ No ☐ N/A ☐
Comments: Click or tap here to enter text.

iii. If above LoQ or RL, specify what samples are affected.
Comments: No samples are affected.

iv. Are data quality or usability affected?
Yes ☐ No ☐ N/A ☒
Comments: Data quality and usability are not affected.

7. Other Data Flags/Qualifiers (ACOE, AFCEE, Lab Specific, etc.)

a. Are they defined and appropriate?
Yes ☒ No ☐ N/A ☐
Comments: No additional flags or qualifiers are necessary for this work order.

Laboratory Report of Analysis

To: Nortech
2400 College Road
Fairbanks, AK 99707
(907)452-5688

Report Number: **1241194**

Client Project: **Former Kiewit Fac-2050 Peger**

Dear William Watts,

Enclosed are the results of the analytical services performed under the referenced project for the received samples and associated QC as applicable. The samples are certified to meet the requirements of the National Environmental Laboratory Accreditation Conference Standards. Copies of this report and supporting data will be retained in our files for a period of ten years in the event they are required for future reference. All results are intended to be used in their entirety and SGS is not responsible for use of less than the complete report. Any samples submitted to our laboratory will be retained for a maximum of fourteen (14) days from the date of this report unless other archiving requirements were included in the quote.

If there are any questions about the report or services performed during this project, please call Jennifer at (907) 562-2343. We will be happy to answer any questions or concerns which you may have.

Thank you for using SGS North America Inc. for your analytical services. We look forward to working with you again on any additional analytical needs.

Sincerely,
SGS North America Inc.

Stephen C. Ede

Case Narrative

SGS Client: **Nortech**
SGS Project: **1241194**
Project Name/Site: **Former Kiewit Fac-2050 Peger**
Project Contact: **William Watts**

Refer to sample receipt form for information on sample condition.

1241124004(1757750MS) (1757754) MS

300.0 - Anions - MS recovery for sulfate is outside of QC criteria. Refer to LCS for accuracy requirements.

1241124002(1757749MSD) (1757756) MSD

300.0 - Anions - MSD recovery for sulfate is outside of QC criteria. Refer to LCS for accuracy requirements.

LCS for HBN 1874669 [VXX/41057 (1758432) LCS

8260D - LCS recovery for 1,1,2,2-tetrachloroethane does not meet QC criteria. This analyte was not reported above LOQ in associated samples.

LCSD for HBN 1874669 [VXX/4105 (1758433) LCSD

8260D - LCSD recovery for 1,1,2,2-tetrachloroethane does not meet QC criteria. This analyte was not reported above LOQ in associated samples.

RSK-175 Methane/Ethane/Ethene were analyzed by SGS of Orlando, FL.

*QC comments may be associated with the field samples found in this report. When applicable, comments will be applied to associated field samples.

Manual Integration Reason Code Descriptions

Code	Description
O	Original Chromatogram
M	Modified Chromatogram
SS	Skimmed surrogate
BLG	Closed baseline gap
RP	Reassign peak name
PIR	Pattern integration required
IT	Included tail
SP	Split peak
RSP	Removed split peak
FPS	Forced peak start/stop
BLC	Baseline correction
PNF	Peak not found by software

All DRO/RRO analysis are integrated per SOP.

Laboratory Qualifiers

Enclosed are the analytical results associated with the above work order. The results apply to the samples as received. All results are intended to be used in their entirety and SGS is not responsible for use of less than the complete report. This document is issued by the Company under its General Conditions of Service accessible at <http://www.sgs.com/en/Terms-and-Conditions.aspx>. Attention is drawn to the limitation of liability, indenmification and jurisdiction issues defined therein.

Any holder of this document is advised that information contained hereon reflects the Company's findings at the time of its intervention only and within the limits of Client's instructions, if any. The Company's sole responsibility is to its Client and this document does not exonerate parties to a transaction from exercising all their rights and obligations under the transaction documents. Any unauthorized alteration, forgery or falsification of the context or appearance of this document is unlawful and offenders may be prosecuted to the fullest extent of the law.

SGS maintains a formal Quality Assurance/Quality Control (QA/QC) program. A copy of our Quality Assurance Plan (QAP), which outlines this program, is available at your request. The laboratory certification numbers are AK00971 (DW Chemistry & Microbiology) & 17-021 (CS) for ADEC and 2944.01 for DOD ELAP/ISO17025 (RCRA methods: 1020B, 1311, 3010A, 3050B, 3520C, 3550C, 5030B, 5035A, 6020B, 7470A, 7471B, 8015C, 8021B, 8082A, 8260D, 8270E, 8270E-SIM, 9040C, 9045D, 9056A, 9060A, AK101 and AK102/103). SGS is only certified for the analytes listed on our Drinking Water Certification (DW methods: 200.8, 2130B, 2320B, 2510B, 300.0, 4500-CN-C,E, 4500-H-B, 4500-NO3-F, 4500-P-E and 524.2) and only those analytes will be reported to the State of Alaska for compliance. Except as specifically noted, all statements and data in this report are in conformance to the provisions set forth by the SGS QAP and, when applicable, other regulatory authorities.

The following descriptors or qualifiers may be found in your report:

*	The analyte has exceeded allowable regulatory or control limits.
!	Surrogate out of control limits.
B	Indicates the analyte is found in a blank associated with the sample.
CCV/CVA/CVB	Continuing Calibration Verification
CCCV/CVC/CVCA/CVCB	Closing Continuing Calibration Verification
CL	Control Limit
DF	Analytical Dilution Factor
DL	Detection Limit (i.e., maximum method detection limit)
E	The analyte result is above the calibrated range.
GT	Greater Than
IB	Instrument Blank
ICV	Initial Calibration Verification
J	The quantitation is an estimation.
LCS(D)	Laboratory Control Spike (Duplicate)
LLQC/LLIQC	Low Level Quantitation Check
LOD	Limit of Detection (i.e., 3/4 of the LOQ)
LOQ	Limit of Quantitation (i.e., reporting or practical quantitation limit)
LT	Less Than
MB	Method Blank
MS(D)	Matrix Spike (Duplicate)
ND	Indicates the analyte is not detected.
RPD	Relative Percent Difference
TNTC	Too Numerous To Count
U	Indicates the analyte was analyzed for but not detected.

Note: Sample summaries which include a result for "Total Solids" have already been adjusted for moisture content. All DRO/RRO analyses are integrated per SOP.

Sample Summary

Client Sample ID	Lab Sample ID	Collected	Received	Matrix

Detectable Results Summary

Client Sample ID: **MW-300**
Lab Sample ID: 1241194005

	Parameter	Result	Units
Polynuclear Aromatics GC/MS	1-Methylnaphthalene	0.556	ug/L
	2-Methylnaphthalene	0.457	ug/L
	Acenaphthene	0.276	ug/L
	Fluorene	0.322	ug/L
	Naphthalene	0.754	ug/L
Semivolatile Organic Fuels	Diesel Range Organics	3.10	mg/L
Volatile GC/MS	1,2,4-Trimethylbenzene	5.70	ug/L
	1,3,5-Trimethylbenzene	2.50	ug/L
	Benzene	1.20	ug/L
	Naphthalene	3.42	ug/L
	o-Xylene	1.27	ug/L
	P & M -Xylene	2.19	ug/L
	Toluene	1.53	ug/L
	Xylenes (total)	3.46	ug/L

Client Sample ID: **MW-2**
Lab Sample ID: 1241194008

	Parameter	Result	Units
Dissolved Metals by ICP/MS	Iron	49100	ug/L
	Manganese	2880	ug/L

Client Sample ID: **MW-3**
Lab Sample ID: 1241194009

	Parameter	Result	Units
Dissolved Metals by ICP/MS	Iron	44900	ug/L
	Manganese	2550	ug/L

SAMPLE RECEIPT FORM

Project Manager Completion				
Was all necessary information recorded on the COC upon receipt? (temperature, COC seals, etc.?)	Yes	No	N/A	
Was temperature between 0-6° C?	Yes	No	N/A	If "No", are the samples either exempt* or sampled <8 hours prior to receipt?
Were all analyses received within holding time*?	Yes	No	N/A	
Was a method specified for each analysis, where applicable? If no, please note correct methods.	Yes	No	N/A	specified Nitrate
Are compound lists specified, where applicable? For project specific or special compound lists please note correct analysis code.	Yes	No	N/A	See COC
If rush was requested by the client, was the requested TAT approved?	Yes	No	N/A	If "NO", what is the approved TAT?
If SEDD Deliverables are required, were Location ID's and an NPDL Number provided?	Yes	No	N/A	*If "NO", contact client for information.*
Sample Login Completion				
Do ID's on sample containers match COC?	Yes	No	N/A	
If provided on containers, do dates/times collected match COC?	Yes	No	N/A	Note: If times differ <1 hr., record details below and login per COC.
Were all sample containers received in good condition?	Yes	No	N/A	
Were proper containers (type/mass/volume/preservative) received for all samples? **See form F-083 "Sample Guide"*	Yes	No	N/A	*Note: If 200.8/6020 Total Metals are received unpreserved, preserve and note HNO3 lot here: If 200.8/6020 Dissolved Metals are received unpreserved, log in for LABFILTER and do not preserve. For all non-metals methods, inform Project Manager.*
Were Trip Blanks (VOC, GRO, Low-Level Hg, etc.) received with samples, where applicable*?	Yes	No	N/A	
Were all VOA vials free of headspace >6mm?	Yes	No	N/A	
Were all soil VOA samples received field extracted with Methanol?	Yes	No	N/A	
Did all soil VOA samples have an accompanying unpreserved container for % solids?	Yes	No	N/A	
If special handling is required, were containers labelled appropriately? e.g. MI/ISM, foreign soils, lab filter, Ref Lab, limited volume	Yes	No	N/A	
For Rush/Short Holding time, was the lab notified?	Yes	No	N/A	Short Hold
For any question answered "NO", was the Project Manager notified?	Yes	No	N/A	PM Initials:
Was Peer Review of sample numbering/labelling completed?	Yes	No	N/A	Reviewer Initials: JLG
Additional Notes/Clarification where Applicable, including resolution of "No" answers when a change order is not attached:

Container Id	Preservative	Container Condition	Container Id	Preservative	Container Condition

Container Condition Glossary

Containers for bacteriological, low level mercury and VOA vials are not opened prior to analysis and will be assigned condition code OK unless evidence indicates than an inappropriate container was submitted.

OK - The container was received at an acceptable pH for the analysis requested.
BU - The container was received with headspace greater than 6mm.
DM - The container was received damaged.
FR - The container was received frozen and not usable for Bacteria or BOD analyses.
IC - The container provided for microbiology analysis was not a laboratory-supplied, pre-sterilized container and therefore was not suitable for analysis.
NC- The container provided was not preserved or was under-preserved. The method does not allow for additional preservative added after collection.
PA - The container was received outside of the acceptable pH for the analysis requested. Preservative was added upon receipt and the container is now at the correct pH. See the Sample Receipt Form for details on the amount and lot # of the preservative added.
PH - The container was received outside of the acceptable pH for the analysis requested. Preservative was added upon receipt, but was insufficient to bring the container to the correct pH for the analysis requested. See the Sample Receipt Form for details on the amount and lot # of the preservative added.
QN - Insufficient sample quantity provided.

The results set forth herein are provided by SGS North America Inc.

SAMPLE DELIVERY GROUP CASE NARRATIVE

Client: SGS North America, Inc **Job No:** FC14511

Site: 1241194 **Report Date** 4/9/2024 1:35:01 AM

On 04/03/2024, 4 Sample(s), 0 Trip Blank(s), 0 Equip. Blank(s) and 0 Field Blank(s) were received at SGS North America Inc. - Orlando. at a maximum corrected temperature of 3.2 C. Samples were intact and chemically preserved, unless noted below. A SGS North America Inc. - Orlando Job Number of FC14511 was assigned to the project.

Laboratory sample ID, client sample ID and dates of sample collection are detailed in the report's Results Summary Section. Specified quality control criteria were achieved for this job except as noted below. For more information, please refer to the analytical results and QC summary pages.

GC Volatiles By Method RSKSOP-147/175

Matrix: AQ **Batch ID:** GLL3074

Sample(s) FC14504-1DUP, FC14504-3MS were used as the QC samples indicated.

Matrix: AQ **Batch ID:** GLL3075

Sample(s) FC14542-1DUP, FC14542-3MS were used as the QC samples indicated.

SGS North America Inc. - Orlando certifies that data reported for samples received, listed on the associated custody chain or analytical task order, were produced to specifications meeting the Quality System precision, accuracy and completeness objectives except as noted. Estimated non-standard method measurement uncertainty data is available on request, based on quality control bias and implicit for standard methods. Acceptable uncertainty requires tested parameter quality control data to meet method criteria. SGS North America Inc.- Orlando is not responsible for data quality assumptions if partial reports are used and recommends that this report be used in its entirety.

ADEC Contaminated Sites Program Laboratory Data Review Checklist

Completed By:	William Watts May 10, 2024	**CS Site Name:**	Kiewit Pacific Company, 2050 Peger Road, Fairbanks, Alaska	**Lab Name:**	SGS North America Inc.
Title:	Project Manager	**ADEC File No.:**	102.38.164	**Lab Report No.:**	1241194
Consulting Firm:	***NORTECH***, Inc.	**Hazard ID No.:**	25680	**Lab Report Date:**	April 11, 2024

Note: *Any N/A or No box checked must have an explanation in the comments box.*

1. **Laboratory**

   a. Did an ADEC Contaminated Sites Laboratory Approval Program (CS-LAP) approved laboratory receive and perform all of the submitted sample analyses?
   Yes ☒ No ☐ N/A ☐
   Comments:

   b. If the samples were transferred to another "network" laboratory or sub-contracted to an alternate laboratory, was the laboratory performing the analyses CS-LAP approved?
   Yes ☒ No ☐ N/A ☐
   Comments: Except for Light Gases (methane, ethane, and ethene) analysis by EPA Method RSK175, all sample analyses were performed by SGS North America Inc. in Anchorage, Alaska. Samples for Light Gases analysis were transferred to SGS-Orlando, Florida network laboratory. The Light Gases analysis was conducted to evaluate natural source zone depletion at the site.

2. **Chain of Custody (CoC)**

   a. Is the CoC information completed, signed, and dated (including released/received by)?
   Yes ☒ No ☐ N/A ☐
   Comments:

   b. Were the correct analyses requested?
   Yes ☒ No ☐ N/A ☐
   Analyses requested: DRO by AK102, VOCs by EPA Method 8260D, PAHs by EPA Method 8270E SIM, and Natural Attenuation Parameters: Methane/Ethane/Ethene by EPA Method RSKSOP 147/175, Nitrate and Sulfate by EPA Method 300.0, and Total and Dissolved Iron and Manganese by EPA Method 6020B.

Comments:

3. Laboratory Sample Receipt Documentation

a. Is the sample/cooler temperature documented and within range at receipt (0° to 6° C)?
Yes ☒ No ☐ N/A ☐
Cooler temperature(s): 2.1° C and 3.2° C

Sample temperature(s): Click or tap here to enter text.
Comments:

b. Is the sample preservation acceptable – acidified waters, methanol preserved soil (GRO, BTEX, VOCs, etc.)?
Yes ☒ No ☐ N/A ☐
Comments: Click or tap here to enter text.

c. Is the sample condition documented – broken, leaking, zero headspace (VOA vials); canister vacuum/pressure checked and no open valves, etc.?
Yes ☒ No ☐ N/A ☐
Comments: The samples were received in good condition.

d. If there were any discrepancies, were they documented? For example, incorrect sample containers/preservation, sample temperature outside of acceptable range, insufficient or missing samples, canister not holding a vacuum, etc.?
Yes ☐ No ☐ N/A ☒
Comments: There were no discrepancies.

e. Is the data quality or usability affected?
Yes ☐ No ☐ N/A ☒
Comments: Data quality and usability are not affected.

4. Case Narrative

a. Is the case narrative present and understandable?
Yes ☒ No ☐ N/A ☐
Comments:

b. Are there discrepancies, errors, or QC failures identified by the lab?
Yes ☒ No ☐ N/A ☐
Comments:
1241124004(1757750MS) (1757754) MS
300.0 - Anions - MS recovery for sulfate is outside of QC criteria. Refer to LCS for accuracy requirements.

1241124002(1757749MSD) (1757756) MSD
300.0 - Anions - MSD recovery for sulfate is outside of QC criteria. Refer to LCS for accuracy

requirements.

c. Were all the corrective actions documented?
Yes ☐ No ☐ N/A ☒
Comments: No corrective actions were necessary.

d. What is the effect on data quality/usability according to the case narrative?
Comments: There is no effect on data quality or usability according to the case narrative.

5. Sample Results

a. Are the correct analyses performed/reported as requested on CoC?
Yes ☒ No ☐ N/A ☐
Comments:

b. Are all applicable holding times met?
Yes ☒ No ☐ N/A ☐
Comments:

c. Are all soils reported on a dry weight basis?
Yes ☐ No ☐ N/A ☒
Comments: There were no soil samples submitted with this work order.

d. Are the reported limits of quantitation (LoQ) or limits of detections (LOD), or reporting limits (RL) less than the Cleanup Level or the action level for the project?
Yes ☒ No ☐ N/A ☐
Comments:

e. Is the data quality or usability affected?
Yes ☐ No ☐ N/A ☒
Comments: Data quality and usability are not affected.

6. QC Samples

a. Method Blank

i. Was one method blank reported per matrix, analysis, and 20 samples?
Yes ☒ No ☐ N/A ☐
Comments:

ii. Are all method blank results less than LOQ (or RL)?
Yes ☒ No ☐
Comments:

iii. If above LoQ or RL, what samples are affected?
Comments: No samples are affected. Method blank results are below LOQs.

iv. Do the affected sample(s) have data flags? If so, are the data flags clearly defined?
Yes ☐ No ☐ N/A ☒
Comments: No samples are affected. No data flags are necessary.

v. Data quality or usability affected?
Yes ☐ No ☐ N/A ☒
Comments: Data quality and usability are not affected.

b. Laboratory Control Sample/Duplicate (LCS/LCSD)

i. Organics – Are one LCS/LCSD reported per matrix, analysis and 20 samples? (LCS/LCSD required per AK methods, LCS required per SW846)
Yes ☒ No ☐ N/A ☐
Comments: Click or tap here to enter text.

ii. Metals/Inorganics – Are one LCS and one sample duplicate reported per matrix, analysis and 20 samples?
Yes ☒ No ☐ N/A ☐
Comments: Click or tap here to enter text.

iii. Accuracy – Are all percent recoveries (%R) reported and within method or laboratory limits and project specified objectives, if applicable? (AK Petroleum methods: AK101 60%-120%, AK102 75%-125%, AK103 60%-120%; all other analyses see the laboratory QC pages)
Yes ☒ No ☐ N/A ☐
Comments:

iv. Precision – Are all relative percent differences (RPD) reported and less than method or laboratory limits and project specified objectives, if applicable? Was the RPD reported from LCS/LCSD, and or sample/sample duplicate? (AK Petroleum methods 20%; all other analyses see the laboratory QC pages)
Yes ☒ No ☐ N/A ☒
Comments: Click or tap here to enter text.

v. If %R or RPD is outside of acceptable limits, what samples are affected?
Comments: No samples are affected.

vi. Do the affected sample(s) have data flags? If so, are the data flags clearly defined?

Yes ☐ No ☐ N/A ☒
Comments: No samples are affected. No data flags are necessary.

vii. Is the data quality or usability affected?
Yes ☐ No ☐ N/A ☒
Comments: Data quality and usability are not affected.

c. Matrix Spike/Matrix Spike Duplicate (MS/MSD)

i. Organics – Are one MS/MSD reported per matrix, analysis and 20 samples?
Yes ☐ No ☒ N/A ☐
Comments: MS/MSD samples were not required for this project, and the lab did not run a MS/MSD for DRO, VOCs, and PAHs with the batch. According to the lab, when there is not sufficient volume for MS/MSD analyses an LCS/LCSD is run.

ii. Metals/Inorganics – Are one MS/MSD reported per matrix, analysis and 20 samples?
Yes ☒ No ☐ N/A ☐
Comments: Click or tap here to enter text.

iii. Accuracy – Are all percent recoveries (%R) reported and within method or laboratory limits and project specified objectives, if applicable?
Yes ☒ No ☐ N/A ☐
Comments:

iv. Precision – Are all relative percent differences (RPD) reported and less than method or laboratory limits and project specified objectives, if applicable? RPD reported from MS/MSD, and or sample/sample duplicate.
Yes ☒ No ☐ N/A ☐
Comments: Click or tap here to enter text.

v. If %R or RPD is outside of acceptable limits, what samples are affected?
Comments: No samples are affected.

vi. Do the affected sample(s) have data flags? If so, are the data flags clearly defined?
Yes ☐ No ☐ N/A ☒
Comments: No samples are affected. No data flags are necessary.

vii. Is the data quality or usability affected?
Yes ☐ No ☐ N/A ☒
Comments: Data quality and usability are not affected.

d. Surrogates – Organics Only or Isotope Dilution Analytes (IDA) – Isotope Dilution Methods Only

   i. Are surrogate/IDA recoveries reported for organic analyses – field, QC, and laboratory samples?
   Yes ☒ No ☐ N/A ☐
   Comments: Click or tap here to enter text.

   ii. Accuracy – Are all percent recoveries (%R) reported and within method or laboratory limits and project specified objectives, if applicable? (AK Petroleum methods 50-150 %R for field samples and 60-120 %R for QC samples; all other analyses see the laboratory report pages)
   Yes ☒ No ☐ N/A ☐
   Comments: Click or tap here to enter text.

   iii. Do the sample results with failed surrogate/IDA recoveries have data flags? If so, are the data flags clearly defined?
   Yes ☐ No ☐ N/A ☒
   Comments: Click or tap here to enter text.

   iv. Is the data quality or usability affected?
   Yes ☐ No ☐ N/A ☒
   Comments: Data quality and usability are not affected.

e. Trip Blanks

   i. Is one trip blank reported per matrix, analysis, and for each cooler containing volatile samples? Yes ☒ No ☐ N/A ☐
   Comments: Click or tap here to enter text.

   ii. Are all results less than LoQ or RL?
   Yes ☒ No ☐ N/A ☐
   Comments: Click or tap here to enter text.

   iii. If above LoQ or RL, what samples are affected?
   Comments: No samples are affected.

   iv. Is the data quality or usability affected?
   Yes ☐ No ☐ N/A ☒
   Comments: Data quality and usability are not affected.

f. Field Duplicate

   i. Are one field duplicate submitted per matrix, analysis, and 10 project samples?
   Yes ☒ No ☐ N/A ☐

Comments: Field duplicate pair MW-3/MW-300 was submitted with this laboratory work order.

ii. Was the duplicate submitted blind to lab?
Yes ☒ No ☐ N/A ☐
Comments: Click or tap here to enter text.

iii. Precision – All relative percent differences (RPD) less than specified project objectives? (Recommended: 30% water or air, 50% soil)

$$RPD\ (\%) = \left| \frac{R_1 - R_2}{\left(\frac{R_1 + R_2}{2}\right)} \right| X\ 100$$

Where R_1 = Sample Concentration

R_2 = Field Duplicate Concentration

Is the data quality or usability affected? (Explain)

Yes ☐ No ☒ N/A ☐
Comments: Thirteen analytes were detected in the duplicate pair. Five analytes had RPDs greater than the 30% recommended for water ranging from 31.9% to 85.6%. The associated well was pumped dry, was slow to recharge, and purge water from the well exhibited petroleum odor. The RPD exceedances are attributed to non-homogenous sample matrix.

iv. Is the data quality or usability affected? (Explain)
Yes ☒ No ☐ N/A ☐
Comments: Data quality and usability are not adversely affected. The higher value of each detected analyte in the duplicate pair was consistent with previous sampling events and was used for decision purposes.

g. Decontamination or Equipment Blanks

i. Were decontamination or equipment blanks collected?
Yes ☒ No ☐ N/A ☐
Comments: Click or tap here to enter text.

ii. Are all results less than LoQ or RL?
Yes ☒ No ☐ N/A ☐
Comments: Click or tap here to enter text.

iii. If above LoQ or RL, specify what samples are affected.
Comments: No samples are affected.

iv. Are data quality or usability affected?
Yes ☐ No ☐ N/A ☒

Comments: Data quality and usability are not affected.

7. Other Data Flags/Qualifiers (ACOE, AFCEE, Lab Specific, etc.)

a. Are they defined and appropriate?

Yes ☒ No ☐ N/A ☐

Comments: No additional flags or qualifiers are necessary for this work order.
