RE: Soil Vapor Investigation Report  
Bentley Mall, Fairbanks, Alaska

Dear Mr. Fish,

On behalf of The Krausz Companies Inc. (Client) and pursuant to the May 2015 *Soil Vapor Investigation Work Plan* and the August 17, 2015 *Work Plan Addendum*, Environmental Resource Group (ERG) has prepared this Soil Vapor Investigation Report (Report) for Bentley Mall East Satellite, ADEC File #102.38.122 (Site) (Figure 1). This Report discusses the soil vapor investigation performed to assess the potential risks of vapor intrusion to residences with basements in the Charles Slater subdivision.

### ***FIELD INVESTIGATION OF SOIL VAPOR QUALITY***

In July 2014, ADEC requested an investigation to assess the potential risk of vapor intrusion to residences with basements in the Charles Slater Subdivision that are within the ground water plume. The investigation consisted of collecting 11 soil vapor samples in accordance with ADEC's Vapor Intrusion Guidance for Contaminated Sites (October 2012) at the locations shown on Figure 2. The investigation was designed to assess whether there is a potentially significant risk to human health and whether a further investigation involving indoor air samples may be warranted. As described below, investigation activities included drilling and collecting soil vapor samples at the Site. Alaska Digline (811) was notified and the boring locations were adjusted and cleared for underground utilities.

#### **Soil Vapor Point Installation**

The temporary soil vapor points were advanced by direct push by an Alaska licensed drilling contractor in the public right-of-way at locations shown on Figure 2. Each temporary vapor point was installed to 8 feet below ground surface (bgs) in a 1.25-inch diameter boring using a  $\frac{1}{4}$ " vapor sampling implant with an expendable implant anchor in the bottom of the boring. The anchor ensured that the implant was not in direct contact with native soil. The implant was installed with attached tubing and a 12 inch filter pack and 6 inches to 12 inches of dry granular bentonite to prevent moisture from entering the filter pack. Hydrated bentonite was used to fill the rest of the boring to ground surface. Construction details for the soil vapor points are provided in Appendix A. To allow for the subsurface to equilibrate back to representative conditions, the sampling of soil vapor was conducted at least two hours after installation.

#### **Soil Vapor Sampling and Analysis**

Depth to water from nearby monitor wells measured at approximately 11 feet bgs and a typical basement was assumed to be approximately 8 feet bgs. Therefore, the samples were collected from approximately

8 feet bgs, coincident with the depth of a typical basement floor. A leak test using helium with a shroud was conducted at every sampling point to evaluate whether ambient air was introduced into the soil vapor sample during the collection process. Field sheets from the investigation are provided in Appendix B.

A photoionization detector (PID) was used to measure the initial soil vapor prior to purging or sampling. Once the shut-in test confirmed a tight connection, an appropriate volume was purged in to a 6L summa canister. Purge volume was calculated based on the internal volume of the tubing, the void space of the filter pack, and the void space of the dry bentonite. The volume of air purged was calculated based on the change in pressure observed in the summa canister.

The soil vapor sample was collected into a 1.4L summa canister within a sealed shroud inflated with helium. Following collection, all samples were appropriately labeled with the sample ID, date and time of collection, and sampler's initials and shipped to the laboratory under standard chain-of-custody procedures.

The soil vapor samples were analyzed for volatile organic compounds (VOCs) by EPA Method TO-15 and for fixed gases including helium by ASTM D1946.

### ***Soil Vapor Analytical Results***

The analytical results are provided in Table 1 and are compared with target levels for shallow soil vapor samples in a residential setting established by ADEC's October 2012 Vapor Intrusion Guidance to evaluate potential vapor intrusion risks. The laboratory analytical report is provided in Appendix C.

Tetrachloroethene (PCE), trichloroethene (TCE), trans-1,2 dichloroethene (trans-1,2 DCE), cis-1,2 DCE, chloroform, and Freon-11 were detected above their respective target levels in one or more soil vapor points. SV-4 and SV-5 were the only vapor points that did not have concentrations of any analytes above their respective target levels.

Figure 2 presents the concentrations of PCE, TCE, and trans-1,2 DCE detected in the soil vapor points. Elevated concentrations were detected mainly around MW-10, along Noyes Street, and along Charles Street.

### ***Quality Assurance/Quality Control***

#### **Field QA/QC Standard Measures**

In addition to the shut-in test and the leak check with helium, the following was implemented in the field as a quality control to improve confidence in the measured concentrations:

- One field duplicate and one field blank was collected.
- A down hole gauge was present on the manifold during sampling to ensure that soil vapor was not collected under high vacuum conditions.
- The sampling and purge rates were maintained between 75mL to 200mL per minute.

### Leak Check with Helium Shroud

Soil vapor samples were collected into 1.4L summa canisters within a sealed shroud inflated with helium to evaluate sample integrity. Helium concentrations were not detected above the laboratory reporting limit in any of the soil vapor samples (Table 1). This reveals that ambient air was not introduced into the samples and the quality is of a high integrity.

### Field Duplicate

A duplicate from SV-11 was collected in order to evaluate the precision of the overall sample collection and analysis process through the calculation of the relative percent difference (RPD) for duplicate pairs.

Based on results expressed in micrograms per cubic meter ( $\mu\text{g}/\text{m}^3$ ), the RPDs for PCE and TCE were calculated as follows:

$$\text{PCE: } (1000 - 900) / \{(1000 + 900/2)\} \times 100\% = 10.52\%$$

$$\text{TCE: } (84 - 71) / \{(84 + 71/2)\} \times 100\% = 16.77\%$$

The RPD was less than 25% for the duplicate pair, which met QA/QC limits for the RPD. This reveals that samples are of acceptable quality were collected in the field and that subsurface conditions were represented in the samples.

### Field Blank

A field blank was collected from a laboratory certified source of nitrogen gas in a manner similar to that employed to collect the soil vapor samples. The purpose of the field blank was to check that the field sampling methodology was properly implemented and that the samples acquired were of a high quality.

No helium was detected above the reporting limit in the field blank, which means there were no significant leaks within the sampling equipment, the field sampling methodology was properly implemented, and the samples collected were of high quality.

However, the field blank had measureable concentrations of ethanol above the reporting limit and concentrations of Freon-11, PCE, toluene, acetone, and 2-propanol below the reporting limit. Reviewing the Lab Blank data shows detections of Freon-11, PCE, and acetone among several other chemicals, suggesting the potential for carryover within the laboratory equipment from previously analyzed samples containing high concentrations. It is also noted that acetone, ethanol, toluene, and 2-propanol are common laboratory contaminants (Morrison 1999).

### Laboratory QA/QC Standard Measures

The laboratory implemented its own internal QA/QC measures including but not limited to method blanks, calibration checks, reporting limit verifications, instrument blanks, and laboratory control samples.

A DEC Laboratory Data Review Checklist was completed to QA/QC the laboratory analytical results and is provided in Appendix C. No discrepancies or errors that would affect data usability was noted.

### ***Conclusions and Recommendations***

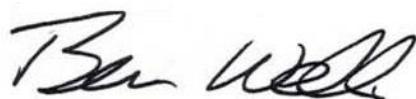

The following conclusions and recommendations are based on the recent soil vapor investigation:

- All soil vapor samples analyzed are of a high quality and are representative of the subsurface conditions.
- PCE, TCE, trans-1,2 DCE, cis-1,2 DCE, chloroform, and Freon-11 were detected above their respective target levels in one or more soil vapor points.
- SV-4 and SV-5 were the only vapor points that did not have concentrations of any analytes above their respective target levels.
- Elevated concentrations were detected mainly around MW-10, along Noyes Street, and along Charles Street.
- It's recommended that an indoor air survey is performed at the residences with a potential risk to vapor intrusion
- In addition, it's also recommended that an investigation of the operational histories of commercial and industrial operations in the area to identify other potential sources of PCE, TCE, and/or trans-1,2 DCE is performed. Figure 3 presents sites listed on ADEC's database of contaminated sites that should be furthered investigated. A site conceptual model should be prepared that identifies potential contributors, presents seasonal ground water gradient, and surveys the underground utilities to identify any preferential pathways.

Please call if you have any questions or comments, or if we can be of further assistance.

Sincerely,  
Environmental Resource Group, Inc.

Benjamin Wells  
President

# **LABORATORY ANALYTICAL REPORTS**

## Laboratory Data Review Checklist for Air Samples

Completed by:	Yola Bayram		
Title:	Geologist	Date:	Oct 23, 2015
CS Report Name:	Soil Vapor Investigation Report	Report Date:	Nov 12, 2015
Consultant Firm:	Environmental Resource Group		
Laboratory Name:	Eurofins US	Laboratory Report Number:	1509319
ADEC File Number:	102.38.122	ADEC Haz ID:	

### 1. Laboratory

a. Did a NELAP certified laboratory receive and perform all of the submitted sample analyses?

Yes       No       NA (Please explain.)

Comments:

b. If the samples were transferred to another "network" laboratory or sub-contracted to an alternate laboratory, was the laboratory performing the analyses NELAP approved?

Yes       No       NA (Please explain.)

Comments:

Samples were not subcontracted

### 2. Chain of Custody (COC)

a. COC information completed, signed, and dated (including released/received by)?

Yes       No       NA (Please explain.)

Comments:

b. Correct analyses requested?

Yes       No       NA (Please explain)

Comments:

### 3. Laboratory Sample Receipt Documentation

a. Sample condition documented -Samples collected in gas tight, opaque/dark Summa canisters or other ADEC approved container? Canister vacuum/pressure checked, recorded upon receipt and contained no open valves?

Yes       No       NA (Please explain)

Comments:

b. If there were any discrepancies, were they documented? For example, incorrect sample containers/preservation, sample temperature outside of acceptable range, insufficient or missing samples, canister not holding a vacuum etc.?

Yes       No       NA (Please explain)

Comments:

No Discrepancies Noted

c. Data quality or usability affected? (Please explain.)

Yes       No       NA (Please explain)

Comments:

No Discrepancies Noted

#### 4. Case Narrative

a. Present and understandable?

Yes       No       NA (Please explain)

Comments:

b. Discrepancies, errors or QC failures identified by the lab?

Yes       No       NA (Please explain)

Comments:

c. Were all corrective actions documented?

Yes       No       NA (Please explain)

Comments:

No corrective actions needed

d. What is the effect on data quality/usability according to the case narrative?

Comments:

No effect noted on data quality or usability.

#### 5. Samples Results

a. Correct analyses performed/reported as requested on COC?

Yes       No       NA (Please explain)

Comments:

b. Samples analyzed within 30 days of collection or within the time required by the method?

Yes       No       NA (Please explain)

Comments:

c. Are the reported PQLs less than the Target Screening Level or the minimum required detection level for the project?

Yes       No       NA (Please explain)

Comments:

MDL was used for analyses but some results are still above target levels.

d. Data quality or usability affected?

Comments:

SV-1, SV-3, SV-7 MDLs for one or more analyses are above target level.

## 6. QC Samples

### a. Method Blank

i. One method blank reported per analysis and 20 samples?

Yes     No     NA (Please explain)

Comments:

ii. All method blank results less than PQL?

Yes     No     NA (Please explain)

Comments:

Some analytes are below the RL but above the MDL

iii. If above PQL, what samples are affected?

Comments:

FLD-Blank

iv. Do the affected sample(s) have data flags and if so, are the data flags clearly defined?

Yes     No     NA (Please explain)

Comments:

v. Data quality or usability affected? (Please explain.)

Comments:

No. FLD-Blank verifies that the Helium Shroud was effective

### b. Laboratory Control Sample/Duplicate (LCS/LCSD)

i. One LCS/LCSD or one LCS and a sample/sample duplicate pair reported per analysis and 20 samples?

Yes     No     NA (Please explain)

Comments:

ii. Accuracy - All percent recoveries (%R) reported and within method or laboratory limits? And project specified DQOs, if applicable.

Yes     No     NA (Please explain)

Comments:

MTBE and 1,2,4- Trichlorobenzene exceeded QC Limits

iii. Precision - All relative percent differences (RPD) reported and less than method or laboratory limits? And project specified DQOs, if applicable.

Yes     No     NA (Please explain)

Comments:

iv. If %R or RPD is outside of acceptable limits, what samples are affected?

<input type="radio"/> Yes	<input type="radio"/> No	<input checked="" type="radio"/> NA (Please explain)	Comments:
NA			

v. Do the affected sample(s) have data flags? If so, are the data flags clearly defined?

<input type="radio"/> Yes	<input type="radio"/> No	<input checked="" type="radio"/> NA (Please explain)	Comments:
NA			

vi. Data quality or usability affected? (Please explain.)

Comments:
Not affected.

c. Surrogates

i. Are surrogate recoveries reported for field, QC and laboratory samples?

<input checked="" type="radio"/> Yes	<input type="radio"/> No	<input type="radio"/> NA (Please explain)	Comments:

ii. Accuracy - All percent recoveries (%R) reported and within method or laboratory limits? And project specified DQOs, if applicable.

<input checked="" type="radio"/> Yes	<input type="radio"/> No	<input type="radio"/> NA (Please explain)	Comments:

iii. Do the sample results with failed surrogate recoveries have data flags? If so, are the data flags clearly defined?

<input type="radio"/> Yes	<input type="radio"/> No	<input checked="" type="radio"/> NA (Please explain)	Comments:

iv. Data quality or usability affected? (Please explain.)

Comments:
Not affected

d. Field Duplicate

i. One field duplicate submitted per analysis and 10 type (soil gas, indoor air etc.) samples?

<input checked="" type="radio"/> Yes	<input type="radio"/> No	<input type="radio"/> NA (Please explain)	Comments:

ii. Submitted blind to lab?

<input checked="" type="radio"/> Yes	<input type="radio"/> No	<input type="radio"/> NA (Please explain)	Comments:

iii. Precision - All relative percent differences (RPD) less than specified DQOs? (Recommended: 25 %)

$$\text{RPD (\%)} = \frac{\text{Absolute Value of: } (R_1 - R_2)}{(R_1 + R_2)/2} \times 100$$

Where  $R_1$  = Sample Concentration

$R_2$  = Field Duplicate Concentration

Yes

No

NA (Please explain)

Comments:

10.5% to 16.7%

iv. Data quality or usability affected? (Please explain.)

Comments:

Not affected

e. Field Blank (If not used explain why).

Yes

No

NA (Please explain)

Comments:

i. All results less than PQL?

Yes

No

NA (Please explain)

Comments:

ethanol above PQL. Other laboratory contaminants above MDL or in Lab Blank

ii. If above PQL, what samples are affected?

Comments:

None

iii. Data quality or usability affected? (Please explain.)

Comments:

Not affected

## 7. Other Data Flags/Qualifiers

a. Defined and appropriate?

Yes

No

NA (Please explain)

Comments:

Mr. Donal Manning  
Environmental Resource Group  
1038 Redwood Highway  
Suite 1  
Mill Valley CA 94941

Project Name: Bentley Mall  
Project #:  
Workorder #: 1509319AR2

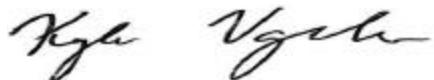

Dear Mr. Donal Manning

The following report includes the data for the above referenced project for sample(s) received on 9/21/2015 at Air Toxics Ltd.

The data and associated QC analyzed by TO-15 are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Eurofins Air Toxics Inc. for your air analysis needs. Eurofins Air Toxics Inc. is committed to providing accurate data of the highest quality. Please feel free to the Project Manager: Kyle Vagadori at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Kyle Vagadori

Project Manager

A Eurofins Lancaster Laboratories Company

**LABORATORY NARRATIVE  
EPA Method TO-15  
Environmental Resource Group  
Workorder# 1509319AR2**

Thirteen 1 Liter Summa Canister samples were received on September 21, 2015. The laboratory performed analysis via EPA Method TO-15 using GC/MS in the full scan mode.

This workorder was independently validated prior to submittal using 'USEPA National Functional Guidelines' as generally applied to the analysis of volatile organic compounds in air. A rules-based, logic driven, independent validation engine was employed to assess completeness, evaluate pass/fail of relevant project quality control requirements and verification of all quantified amounts.

#### **Receiving Notes**

There were no receiving discrepancies.

#### **Analytical Notes**

Dilution was performed on samples SV-1, SV-3, SV-6, SV-7, and SV-10 due to the presence of high level target species.

Dilution was performed on sample SV-4 due to the presence of high level non-target species.

All Quality Control Limit exceedances and affected sample results are noted by flags. Each flag is defined at the bottom of this Case Narrative and on each Sample Result Summary page.

The workorder was reissued per client request on 10/28/15 to report estimated values for Trichloroethene hits that are below the reporting limit but greater than the method detection limit for samples SV-1, SV-2, SV-3 and SV-7 and cis-1,2-Dichloroethene for all samples. Concentrations that are below the level at which the canister was certified (0.2 ppbv for compounds reported at 0.5 ppbv and 0.8 ppbv for compounds reported at 2.0 ppbv) may be false positives.

The workorder was reissued on 11/06/15 to report estimated values for target compound hits that are below the reporting limit but greater than the method detection limit. Concentrations that are below the level at which the canister was certified (0.2 ppbv for compounds reported at 0.5 ppbv and 0.8 ppbv for compounds reported at 2.0 ppbv) may be false positives.

#### **Definition of Data Qualifying Flags**

Eight qualifiers may have been used on the data analysis sheets and indicates as follows:

B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).

J - Estimated value.

E - Exceeds instrument calibration range.

S - Saturated peak.

Q - Exceeds quality control limits.

U - Compound analyzed for but not detected above the reporting limit, LOD, or MDL value. See data

page for project specific U-flag definition.

UJ- Non-detected compound associated with low bias in the CCV

N - The identification is based on presumptive evidence.

File extensions may have been used on the data analysis sheets and indicates as follows:

a-File was requantified

b-File was quantified by a second column and detector

r1-File was requantified for the purpose of reissue

Air Toxics

## Summary of Detected Compounds EPA METHOD TO-15 GC/MS FULL SCAN

Air Toxics

Client Sample ID: LCSD

Lab ID#: 1509319AR2-16BB

EPA METHOD TO-15 GC/MS

File Name:	14092508	Date of Collection:	NA
Dil. Factor:	1.00	Date of Analysis:	9/25/15 06:17 PM

Compound	%Recovery	Method Limits
Dibromochloromethane	97	70-130
1,2-Dibromoethane (EDB)	101	70-130
Chlorobenzene	99	70-130
Ethyl Benzene	94	70-130
m,p-Xylene	98	70-130
o-Xylene	100	70-130
Styrene	102	70-130
Bromoform	97	70-130
Cumene	100	70-130
1,1,2,2-Tetrachloroethane	112	70-130
Propylbenzene	105	70-130
4-Ethyltoluene	103	70-130
1,3,5-Trimethylbenzene	106	70-130
1,2,4-Trimethylbenzene	106	70-130
1,3-Dichlorobenzene	103	70-130
1,4-Dichlorobenzene	104	70-130
alpha-Chlorotoluene	117	70-130
1,2-Dichlorobenzene	106	70-130
1,2,4-Trichlorobenzene	136 Q	70-130
Hexachlorobutadiene	129	70-130

Q = Exceeds Quality Control limits.

Container Type: NA - Not Applicable

Surrogates	%Recovery	Method Limits
1,2-Dichloroethane-d4	104	70-130
Toluene-d8	102	70-130
4-Bromofluorobenzene	99	70-130
