USEPA	United States Environmental Protection Agency
VOC	volatile organic compound

1 Introduction

On behalf of Chevron Environmental Management Company (CEMC), Arcadis U.S., Inc. (Arcadis) has prepared this *Well Installation Report - 2022* (report) for former Chevron Facility 309152, located at Block 3, Lot 12 of the Fairbanks International Airport (FIA) with an address of 6223 Old Airport Road, Fairbanks, Alaska (herein referred to as "the Site"; **Figures 1** and **2**). This report summarizes the soil and groundwater assessment activities performed at the adjacent property northwest of the Site (TL-2400 Section 24 T1S-R2W) to further evaluate the extent of downgradient petroleum hydrocarbon impacts. The work was completed in general accordance with the July 22, 2021 *Work Plan for Additional Assessment* (Work Plan; Arcadis 2021a) and November 23, 2021 *Addendum to Work Plan for Additional Assessment* (Work Plan Addendum; Arcadis 2021b). The Work Plan Addendum was prepared to address and provide responses to comments provided by Alaska Department of Environmental Conservation (ADEC) in a letter dated August 10, 2021, and was approved by ADEC in a letter dated February 16, 2022. Copies of the ADEC correspondence and the response to comments table are presented in **Appendix A**. A conceptual site model worksheet was prepared for the Site and is included in **Appendix B**.

2 Site Description and History

The Site is located at 6223 Old Airport Road in Fairbanks, Alaska (**Figure 1**). The latitude and longitude are 64.822711º north and 147.859278º west. The property is approximately 0.21 acres and is occupied by a warehouse building in the central portion along the road. The lot is unpaved with wooded area in the northwest portion of the property. The Site is bounded by Old Airport Road to the southeast, a warehouse company to the southwest, wooded area and a pond/marsh area to the northwest, and a wooded area owned by National Rent-a-Car to the northeast.

According to available information, Standard Oil Company of California (Chevron's predecessor), leased the Site from 1962 until 1985 for operation of a bulk fuel terminal. Eight aboveground storage tanks (ASTs), a fueling island, and a warehouse/office building were located onsite, for the storage and distribution of petroleum products supplying the airport. The tank farm was dismantled in approximately 1973, with the exception of the building. The Site is currently vacant, except for the warehouse building. The State of Alaska, Department of Transportation and Public Facilities, Fairbanks International Airport currently owns the property and CEMC has leased that portion of the property surrounding the warehouse since April 2020. The warehouse is currently leased by The Toy Company for car parts storage. We are aware of no current plans to redevelop the Site.

A limited site assessment was conducted on behalf of FIA in the fall of 2006. Field screening of soil and groundwater samples collected indicated the presence of petroleum impacts at the Site.

In July 2007, five monitoring wells (MW-1 through MW-5) were installed in identified potential source areas to further evaluate impacts and to adequately characterize groundwater flow direction. To further characterize the source area and delineate the area of impact, an additional six monitoring wells (MW-6 through MW-11) and one well used for light non-aqueous phase liquid (LNAPL) recovery (RW-1) were installed in July 2008.

In July 2009, two piezometer wells (PZ-1 and PZ-2) were installed at the shoreline of the off-site drainage basin pond to assess potential impacts to the pond.

In August 2010, additional assessment activities were conducted including advancing four soil borings (SB-1, SB-2, HA-1, and HA-2), installing two monitoring wells (MW-12 and MW 13), and performing an ecological evaluation.

In August 2011, additional assessment activities were conducted including advancing 14 soil borings (HA-3 through HA-16) to further characterize shallow soil petroleum hydrocarbon impacts onsite.

In August 2012, two multi-level soil vapor probes (SV-1 and SV-2), two sub-slab soil vapor probes (SSV-2 and SSV-3), and one groundwater monitoring well (MW-14) were installed and sampled at the Site. Three indoor air samples (IA-1, IA-2, and IA-3) and two outdoor ambient air samples (OA-1 and OA-2) were also collected in and around the onsite building.

In July and August 2013, two assessments were completed to delineate petroleum hydrocarbons northeast of the Site, on the former Hotfoot Property. A total of 11 borings (GP-1 through GP-11) were drilled to depths ranging between 18 and 25 feet (ft) below ground surface (bgs), monitoring wells MW-15 through MW-17 were installed in borings GP-9 through GP-11, respectively, and three hand auger borings (HA-17 through HA-19) were drilled during the assessment. In May 2014, another assessment was completed to further delineate offsite petroleum hydrocarbon impacts and LNAPL cross-gradient, east and northeast of the Site. During the May 2014 assessment, one soil boring (SB-10) and four monitoring wells (MW-18 through MW-21) were drilled/installed to approximately 21 to 22 ft bgs.

In May 2015, an additional assessment was completed to delineate surface soil (0 to 2 ft bgs) petroleum impacts at the Site. The soil data collected during the 2015 assessment was used to define the horizontal extent of contamination in surface soil and further evaluate possible remediation alternatives proposed in the 2015 Cleanup Plan (Arcadis 2015).

As proposed in the 2018 *Air Sparge (AS) and Soil Vapor Extraction Well Installation Work Plan* (Arcadis 2018), five existing monitoring wells (MW-2, MW-3, MW-4, MW-6, MW-9) and recovery well RW-1 were over-drilled and reconstructed as 4-inch-diameter soil vapor extraction (SVE) wells in preparation for future vapor extraction from locations with historically elevated COC concentrations.

In October 2019, shallow soil excavation activities were conducted at the Site that removed approximately 196 tons of petroleum hydrocarbon-impacted soil. Excavation activities were conducted in accordance with the 2019 *Shallow Soil Excavation and System Installation Work Plan* (Arcadis 2019). Also in October 2019, AS wells AS-01 through AS-15 were installed at the Site.

In September and October 2020, a concrete pad was installed at the Site in preparation for the installation of the SVE system. Following receipt of the applicable permits, the remediation system was installed at the Site in August 2022. Startup of the system is planned for spring 2023 and a system installation and startup report will be submitted to ADEC.

3 Objective

The objective of this investigation was to further delineate downgradient petroleum hydrocarbon impacts to the northwest of the Site. Discussion of the additional assessment activities and results is presented in Sections 4 and 5. In summary, based on the initial results, the extent of downgradient impacts has not been adequately delineated, and thus further investigation is recommended.

3.1 Constituents of Concern

Constituents of concern (COCs) for this Site and the associated ADEC cleanup levels for soil and groundwater are presented in **Table 3-1**, below, as well as the applicable laboratory analysis method and laboratory method detection limits.

Table 3-1. Soil and Groundwater Cleanup Levels for Site COCs

COC	Soil Cleanup Level (mg/kg)	Groundwater Cleanup Level (µg/L)	Laboratory Method	Method Detection Limit: Soil (mg/kg) / Groundwater (µg/L)
GRO	300	2,200	Alaska Method AK 101	0.5/10.0
DRO	250	1,500	Alaska Method AK 102	6.92/229.0
RRO	10,000	1,100	Alaska Method AK 103	13.8/403.0
Benzene	0.022	4.6	USEPA Method 8260D	0.000467/ 0.0941
Ethylbenzene	0.13	15	USEPA Method 8260D	0.000737/0.137
Toluene	6.7	1,100	USEPA Method 8260D	0.0013/0.278
Total Xylenes	1.5	190	USEPA Method 8260D	0.00088/0.174
Naphthalene	0.038	1.7	USEPA Method 8260D/8270E SIM	0.00488/1.0
EDB	0.00024	0.075	USEPA Method 8260/8011	0.000648/0.00536
EDC	0.0055	1.7	USEPA Method 8260D	0.000649/0.0819
Arsenic	0.20	0.52	USEPA Method 6020/6020	0.1/0.18
Chromium	0.089	0.35	USEPA Method 6020/6020	0.2965/1.24
Lead	NA	15	USEPA Method 6020/6020	0.099/0.849

Notes:
Cleanup Levels are from: 18 AAC 75 Oil and Other Hazardous Substances Pollution Control, rev. November 2021 (ADEC 2021); Table B1. Method Two – Soil Cleanup Levels (Migration to Groundwater), Table B2. Method Two – Petroleum Hydrocarbons Soil Cleanup Levels (Under 40 Inch Zone – Migration to Groundwater), and Table C. Groundwater Cleanup Levels.
µg/L = microgram per liter
AAC = Alaska Administrative Code
DRO = diesel-range organics
EDB = 1,2-dibromoethane
EDC = 1,2-dichloroethane
GRO = gasoline-range organics
mg/kg = milligram per kilogram
NA = not applicable
RRO = residual-range organics
USEPA = United States Environmental Protection Agency

4 Monitoring Well Installation and Sampling

The scope of work for this investigation included the installation of three permanent groundwater monitoring wells (MW-22 through MW-24) conducted from August 3 to 5, 2022; collection of soil samples during the installation; and development and baseline groundwater sampling of the newly installed monitoring wells on August 6, 2022. The approximate well locations are shown on **Figure 3**.

4.1 Pre-Field Activities

As required by the Occupational Safety and Health Administration (OSHA) 29, Code of Federal Regulations 1910.120 (Hazardous Waste Operations and Emergency Response), Arcadis prepared a Health and Safety Plan (HASP) to address the proposed well installation activities at the Site. Field staff reviewed the HASP prior to initiating field operations and work was conducted under the direction of a “Qualified Environmental Professional” and “Qualified Sampler” as defined in 18 Alaska Administrative Code (AAC) 75.333.

As required by the FIA, a building permit application was submitted and approved on May 18, 2022 for the installation of monitoring wells MW-22 through MW-24.

Prior to installation activities, Arcadis marked out the proposed monitoring well locations and contacted Alaska Digline, Inc. to identify public underground utilities in the work areas on July 26, 2022. In addition, GPRS, Inc. conducted a private utility locate on August 1, 2022 to further identify and confirm subsurface utilities or obstructions near the proposed well locations.

4.2 Monitoring Well Installation

From August 3 to 5, 2022, GeoTek Drilling installed three groundwater monitoring wells (MW-22 through MW-24) under Arcadis supervision. Details are discussed in the following sections.

4.2.1 Drilling and Soil Sampling Activities

Each well boring was initially advanced using a hand auger to soft-clear for any potential subsurface utilities. Although the Work Plan stated soft-clearing would be completed to 8 ft bgs, no evidence of utilities deeper than 5 ft bgs were identified during private utility locating, therefore soft-clearing using a hand auger was performed either to refusal or 5 ft bgs. After hitting refusal or clearing to 5 ft bgs with the hand auger, a Geoprobe direct push drilling rig was used to advance each boring to an approximate depth of 20 ft bgs. During advancement, subsurface materials were logged continuously for stratigraphic characteristics using the Unified Soil Classification System. Soil boring logs for MW-22 through MW-24 can be found in **Appendix C**.

Soil samples were field screened for volatile organic compounds (VOCs) using a photoionization detector (PID) and visually inspected for the presence of impacts. Soil samples were collected for chemical analysis from each of the three well borings (MW-22 through MW-24). Each soil core was inspected by Arcadis field staff, and analytical samples were collected at the following:

- One surface/near surface soil sample from 0 to 2 ft bgs
- One vadose zone soil sample above observed groundwater elevation seasonal high fluctuation
- One soil sample at the groundwater interface (within the observed seasonal fluctuation zone)

Sample depths are provided in **Table 4-1**, below. Note that soil samples were inadvertently not collected at the bottom of each well boring due to a field oversight; thus, this represents a work plan deviation. A field duplicate sample was collected from MW-3 at 4.5 ft bgs for quality assurance purposes.

Table 4-1. Well Boring Total Depths and Laboratory Analytical Sample Intervals

Location	Boring Type	Total Depth (ft bgs)	First Encountered Groundwater (ft bgs)	Laboratory Analytical Sample Intervals (ft bgs)
MW-22	Groundwater Monitoring Well	20	6	0.5-1, 4.5-5, and 5-5.5
MW-23	Groundwater Monitoring Well	20	10	0.5-1, 4.5-5, and 9.5-10
MW-24	Groundwater Monitoring Well	20	10	0.5-1, 4.5-5, and 9.5-10

Notes:
bgs = below ground surface
ft = foot or feet

Soil samples retained for laboratory analysis were collected using laboratory provided containers. After collection, all samples were immediately placed in an ice-chilled cooler for transport to Pace Analytical Laboratory (Pace) of Mt. Juliet, Tennessee via FedEx under chain-of-custody documentation. Soil samples were submitted for analysis of the following:

- Gasoline range organics (GRO) by Alaska Method AK 101
- Diesel range organics (DRO) by Alaska Method AK 102
- VOCs by United States Environmental Protection Agency (USEPA) Method 8260D
- Polycyclic aromatic hydrocarbons (PAHs) by USEPA Method 8270E-SIM

4.2.2 Monitoring Well Construction

After reaching total depth at each well boring location, monitoring wells were installed in accordance with ADEC's monitoring well guidance (ADEC 2013). Note that approximately the bottom foot of each borehole collapsed and thus the wells were set slightly above 20 ft bgs. The monitoring wells were constructed of 2-inch-diameter schedule 40 polyvinyl chloride with 0.01-inch factory-slotted screen and 2-inch solid schedule 40 polyvinyl chloride riser. The wells were set between approximately 18.2 ft bgs (MW-23) and 19.2 ft bgs (MW-24) with a 15-ft screen interval. The depth to water onsite is historically approximately 5 to 8 ft bgs. The wells were constructed with pre-pack sand pack (#10/20 silica sand) and additional sand pack was placed from the bottom of the borehole to approximately 1-2 ft above the screened interval. An interstitial hydrated bentonite seal above the well screen sand pack was installed up to approximately 1 ft bgs followed by pea gravel. Due to a lack of standpipe (stickup) material, each monitoring well was completed with a traffic-rated well box and concrete apron, thus representing a deviation from the Work Plan. Well construction logs are provided in **Appendix C** and well construction details are provided in **Table 1**.

4.2.3 Monitoring Well Development

Well development occurred a minimum of 24 hours after monitoring well installation on August 6, 2022. Per the ADEC monitoring well guidance (ADEC 2013), monitoring wells can be developed 24 hours after the well installation occurs to allow for the annular seal to set. However, the Work Plan stated development would not be performed until at least 48 hours following installation; thus, this represents a deviation. Well development was performed by surging the wells over the length of the screen interval using a surge block, bailing out sediment that accumulated in the bottom of the wells, and then purging the well until the water was relatively free of suspended sediments and/or until approximately 10 well volumes were removed. Purging was completed using down-hole pumps and purge water was containerized in U.S. Department of Transportation-approved 55-gallon steel drums and sampled for disposal.

4.2.4 Site Survey

Existing monitoring and remediation wells, including the new monitoring wells, were surveyed by a licensed surveyor from McLane Surveying on September 15, 2022. The locations were surveyed relative to site features and local datum. Survey data provided by McLane Surveying is provided in **Appendix D**.

4.3 Groundwater Sampling

Groundwater samples were collected from the new wells and preserved in accordance with Section 6 of the ADEC's Field Sampling Guidance (FSG, ADEC 2022). Low-flow sampling was conducted shortly after development using a submersible pump, polyethylene tubing, and flow-through cell. The depth to groundwater was not measured during the low-flow purging as the water level meter was unable to fit down the well casing with the submersible pump downhole. Flow rates and groundwater parameters (i.e., temperature, pH, conductivity, redox potential, dissolved oxygen, and turbidity) were monitored during purging. Measurements were recorded every 5 minutes during the purging process, and groundwater sampling was not initiated until the ADEC FSG (ADEC 2022) recommended stabilization parameters were observed.

Groundwater data and samples for analysis (in the appropriate laboratory-provided containers) were collected in the following sequence:

- In-field water quality measurements
- VOCs by USEPA Method 8260D
- GRO by Alaska Method AK 101
- DRO by Alaska Method AK 102
- Lead (dissolved) by USEPA Method 6010

Low-flow sample notes were integrated into the well development logs and completed during the sampling of each well. Well development and groundwater sampling logs are attached in **Appendix E**.

Groundwater samples from MW-22 through MW-24 were placed in laboratory-supplied bottles and labeled with the sample identification (ID); sealed in a resealable bag; and placed in a laboratory-provided, ice-chilled cooler. The samples were then transported under chain-of-custody protocol to Pace via FedEx. Samples were analyzed with a standard turnaround time of 10 business days.

After each use of the well development tools, sampling pump, and depth to water gauging tools, equipment decontamination was conducted in accordance with the quality control (QC) measures presented in Section 12.8 of the ADEC FSG (ADEC 2022).

5 Analytical Results

Analytical results for soil samples and groundwater samples collected during the investigation are summarized below.

5.1 Soil Sampling Results

Select petroleum hydrocarbon, VOC, and/or PAH constituents were detected in all the soil samples. The analytical results of the soil samples collected from well borings MW-22 through MW-24 were compared to ADEC Method Two Soil Cleanup Levels, Tables B1 and B2 commercial soil cleanup levels (SCLs) for migration to groundwater from 18 AAC 75.341 (ADEC 2021). Detected concentrations of COCs were above the SCLs for the locations listed in **Table 5-1**, below.

Table 5-1. Soil Sample Detections above ADEC Soil Cleanup Levels

Sample ID	Sample Type	Sample Depth (ft bgs)	Analyte	Sample Concentration	ADEC SCL Commercial	Units
MW-22	Soil	4.5-5	DRO	371	250	(mg/kg)
MW-23	Soil	4.5-5	DRO	672	250	(mg/kg)
MW-23 (DUP)	Soil	4.5-5	DRO	457	250	(mg/kg)
MW-23	Soil	9.5-10	Benzene	0.105	0.022	(mg/kg)
MW-23	Soil	9.5-10	Ethylbenzene	0.306	0.13	(mg/kg)
MW-23	Soil	9.5-10	Total Xylenes	4.35	1.5	(mg/kg)
MW-23	Soil	9.5-10	Naphthalene	1.07	0.038	(mg/kg)

Notes:
ADEC = Alaska Department of Environmental Conservation
bgs = below ground surface
DRO = diesel range organics
DUP = duplicate soil sample
ft = foot or feet
ID = identification
mg/kg = milligrams per kilogram
SCL = soil cleanup level for migration to groundwater

In addition to the detected COCs listed above, 1,2,4-trimethylbenzene (1,2,4-TMB) and 1,3,5-trimethylbenzene (1,3,5-TMB) were detected above the SCLs in soil sample MW-23 (9.5 to 10 ft bgs) at concentrations of 2.68 milligrams per kilogram (mg/kg) and 1.31 mg/kg, respectively. As mentioned above, there were additional petroleum hydrocarbon, VOC, and PAH constituents which were detected in the samples, but the concentrations did not exceed applicable SCLs. The duplicate sample results were similar to those of the primary sample.

A summary of soil analytical results for GRO; DRO; benzene, toluene, ethylbenzene, total xylenes (collectively BTEX); naphthalene; methyl tert-butyl ether (MTBE); 1,2-dichloroethane (EDC); and ethylene dibromide/1,2-dibromoethane (EDB) is provided in **Table 2** and on **Figure 4**. Results for additional VOCs and PAHs are provided in **Tables 3a** and **3b**. The full laboratory analytical reports and chain-of-custody documentation for the soil samples are provided in **Appendix F**.

5.2 Groundwater Sampling Results

Similar to the soil samples, petroleum hydrocarbon constituents and select petroleum-related VOCs were detected in all the wells. GRO, DRO, BTEX, and naphthalene were detected in all three wells (toluene was not detected in MW-24). MTBE and EDC were only detected in MW-23, and only at low concentrations. EDB and lead were not detected in any of the wells. The analytical results for the groundwater samples collected from MW-22 through MW-24 were compared to ADEC Method Groundwater Cleanup Levels, Tables C from 18 AAC 75.341 (ADEC 2021). Detected concentrations of COCs were above the groundwater cleanup levels for the locations listed in **Table 5-2**, below.

Table 5-2. Groundwater Detections above ADEC Groundwater Cleanup Levels

Sample ID	Sample Type	Analyte	Sample Concentration	ADEC Groundwater Cleanup Level	Units
MW-23	Groundwater	GRO	2,200	2,200	(µg/L)
MW-22	Groundwater	DRO	3,850	1,500	(µg/L)
MW-23	Groundwater	DRO	2,460	1,500	(µg/L)
MW-23 (DUP)	Groundwater	DRO	2,380	1,500	(µg/L)
MW-24	Groundwater	DRO	2,260	1,500	(µg/L)
MW-22	Groundwater	Benzene	53.3	4.6	(µg/L)
MW-23	Groundwater	Benzene	80.0	4.6	(µg/L)
MW-23 (DUP)	Groundwater	Benzene	75.8	4.6	(µg/L)
MW-24	Groundwater	Benzene	12.0	4.6	(µg/L)
MW-22	Groundwater	Ethylbenzene	17.1	15	(µg/L)
MW-22	Groundwater	Total Xylenes	595	190	(µg/L)
MW-23	Groundwater	Total Xylenes	1,070	190	(µg/L)
MW-23 (DUP)	Groundwater	Total Xylenes	1,050	190	(µg/L)
MW-24	Groundwater	Total Xylenes	268	190	(µg/L)
MW-22	Groundwater	Naphthalene	35.1 J	1.7	(µg/L)
MW-23	Groundwater	Naphthalene	4.68 J	1.7	(µg/L)
MW-23 (DUP)	Groundwater	Naphthalene	2.61 J	1.7	(µg/L)
MW-24	Groundwater	Naphthalene	18.9 J	1.7	(µg/L)

Notes:
µg/L = micrograms per liter
ADEC = Alaska Department of Environmental Conservation
bgs = below ground surface
DRO = diesel range organics
DUP = duplicate groundwater sample
GRO = gasoline range organics
ID = identification
J = The associated numerical value is an estimated concentration only

In addition to the detected COCs listed above, 1,2,4-TMB was detected above the ADEC Groundwater Cleanup Level (56 µg/L) in groundwater samples MW-22, MW-23, the associated duplicate for MW-23, and MW-24 at concentrations of 102 µg/L, 103 µg/L, 100 µg/L, and 63.4 µg/L, respectively. As mentioned above, there were additional petroleum hydrocarbon and VOC constituents which were detected in the samples, but the concentrations did not exceed applicable ADEC groundwater cleanup levels. The duplicate sample results were similar to those of the primary sample.

Groundwater analytical results for GRO, DRO, BTEX, naphthalene, MTBE, EDC, and EDB are provided in **Table 4** and on **Figure 5**. Results for additional VOCs and lead are provided in **Table 5**. The full laboratory analytical report and chain-of-custody documentation for the groundwater samples are provided in **Appendix F**.

6 Investigation-Derived Waste

Investigation-derived waste (IDW) generated during investigation activities included soil cuttings, decontamination water, and development and groundwater sampling purge water. All IDW derived from drilling and monitoring well installation was placed in new DOT-approved 55-gallon steel drums, appropriately labeled, and temporarily stored at the Site while characterization samples were collected and analyzed.

Soil cuttings were characterized by submitting waste samples to the Eurofins Laboratory (Eurofins) in West Sacramento, California and analyzing for the following:

- GRO (Alaska Method AK 101), DRO (Alaska Method AK 102), and RRO (Alaska Method AK 103)
- Toxicity characteristic leaching procedure (TCLP) Resource Conservation and Recovery Act (RCRA) eight metals (i.e., arsenic, barium, cadmium, chromium, lead, mercury, selenium, and silver; USEPA Method 1311/6010C, 7000 series)
- TCLP VOCs (USEPA Methods 1311 and 8260C) and TCLP semi-VOCs (USEPA Methods 1311 and 8270D)
- TCLP mercury (USEPA Method 7470A)
- Total solids
- Fluorinated alkyl substances (USEPA Method 537)

Additionally, decontamination and purge water samples were submitted to Eurofins for the following analysis:

- GRO (Alaska Method AK 101), DRO (Alaska Method AK 102), and RRO (Alaska Method AK 103)
- TCLP VOCs (USEPA Methods 1311 and 8260C)
- TLCP semi-VOCs (USEPA Methods 1311 and 8270D)
- TCLP RCRA eight metals (USEPA Methods 1311 and 6010C, 7000 series)
- TCLP mercury (USEPA Method 7470A)
- Ignitability
- pH (USEPA Method 9040 or USEPA Method 1110)
- Fluorinated alkyl substances (USEPA Method 537)

Due to technical issues by Eurofins, laboratory analytical results were lost for waste soil samples collected for GRO and VOCs along with wastewater samples collected for GRO. Waste soil was resampled for GRO and VOCs and wastewater for GRO to properly characterize the waste. The resamples arrived at the lab within 24 hours of shipping via FedEx submerged in ice; however, the samples were out of allowable temperature upon arrival. ADEC was contacted and the resamples were approved for use in characterizing waste for transport and/or disposal.

Following receipt of the laboratory analytical results, the ADEC Transport, Treatment, and Disposal Approval Form for Contaminated Media was submitted to ADEC and approved on October 7, 2022. All IDW was transported offsite by U.S. Ecology on October 12, 2022 for treatment and/or disposal. The IDW laboratory reports are provided in **Appendix F**. The approved ADEC Transport, Treatment, and Disposal Approval Forms for Contaminated Media and copies of the Non-Hazardous Waste Manifests are provided in **Appendix G**.

7 Quality Control

Field instruments were calibrated onsite on a daily basis per manufacturer's specifications. Field duplicate samples were collected for soil and groundwater per Section 12.6 of ADEC's 2022 FSG. Decontamination and equipment blank samples were collected for soil and groundwater sampling where equipment was decontaminated between sample collection. Equipment blank samples were collected in accordance with ADEC's 2022 FSG. Trip blanks were supplied by Pace but inadvertently not analyzed by the lab due to an oversight. The QC activities were documented in daily field notes included in **Appendix E**.

7.1 Laboratory Data Quality Assurance Summary

As required by ADEC's Technical Memorandum: Minimum Quality Assurance Requirements for Sample Handling, Reports and Laboratory Data (ADEC 2019), Arcadis completed a laboratory data review checklist for each of the laboratory reports generated for the soil and groundwater investigation. The full laboratory analytical reports and chain-of-custody documentation are provided in **Appendix F** and the ADEC data review checklists are included as **Appendix H**. The following quality assurance summary describes six parameters, related to the quality and usability of the data presented in this report.

7.1.1 Precision

Overall, the relative percent difference between the field duplicates and parent samples collected for soil and groundwater samples were within control limits, as documented in **Appendix H**. The precision of the data, as measured by laboratory QC indicators, suggest that the Data Quality Objectives were met with the exception of the following:

The laboratory control sample/duplicate were greater than the control limit for vinyl acetate. As a result, the analytical results for this compound in the groundwater samples collected from MW-22 and MW-23, duplicate sample DUP-1, and the equipment blank EB-1 were qualified as estimated.

7.1.2 Accuracy

The accuracy of the data, as measured by laboratory QC indicators, suggest that the Data Quality Objectives were met.

Continuing calibration for the compounds 1,2,3-trichlorobenzene, hexachloro-1,3-butadiene, naphthalene, vinyl acetate, and 1,2,4-trichlorobenzene exhibited a low bias recovery. As a result, the analytical results for these compounds in the groundwater samples collected from MW-22, MW-23, and MW-24, duplicate sample DUP-1, and the equipment blank EB-1 were qualified as estimated.

Continuing calibration for the compounds 1,2-dichloroethane, acrylonitrile, chloromethane and dichlorodifluoromethane exhibited a low bias recovery. As a result, the analytical results for these compounds in the soil samples collected from well borings MW-22 through MW-24 at sample depths 0.5 to 1 ft bgs, well borings MW-23 and MW-24 at sample depth 4.5 to 5 ft bgs, and well borings MW-23 and MW-24 at sample depths 9.5 to 10 ft bgs, and the duplicate sample DUP-1 were qualified as estimated.

Continuing calibration for the compounds 1,2,3-trichlorobenzene and naphthalene exhibited a low bias recovery. As a result, the analytical results for these compounds in the soil sample collected from well boring MW-22 at sample depth 4.5 to 5 ft bgs were qualified as estimated.

7.1.3 Representativeness

The data appear to be representative of site conditions and are generally consistent with historical groundwater monitoring and soil sampling results and expected impacts to groundwater and soil.

7.1.4 Comparability

The laboratory results are presented in the same units as previous reports to allow comparison. The target compounds were not detected in the equipment blank, or laboratory method blank with the below exceptions.

DRO was detected at an estimated concentration below the reporting limit (7.95 J mg/kg) in the method blank. Per the USEPA National Functional Guidelines for Organic Superfund Methods Data Review, EPA 540-R-20-005, (USEPA 2020), with reference to the historical USEPA Contract Laboratory Program National Functional Guidelines for Organic Data Review, OSWER 9240.1-05A-P (USEPA 1999), a blank action level was established at five times the reported blank concentration. As a result, samples that had detections of DRO within this established blank action level (five times the reported blank concentration or 39.75 mg/kg), were qualified as non-detect at or above the reporting limit. The established blank action level for DRO (39.75 mg/kg) is below the ADEC migration to groundwater SCL for DRO (250 mg/kg). Accordingly, the DRO analytical results in the soil samples collected from well borings MW-22 through MW-24 at sample depth 0.5 to 1 ft bgs, well boring MW-22 at sample depth 5 to 5.5 ft bgs, and well boring MW-24 at sample depths 4.5 to 5 ft bgs and 9.5 to 10 ft bgs were qualified as non-detect (UB in the data validation report) at or above the reporting limit. These results are identified with a “B” in **Table 2**.

7.1.5 Completeness

The results appear to be valid and usable, and thus, the laboratory results have 100 percent completeness.

7.1.6 Sensitivity

The laboratory reported detection limits (RDLs) for select compounds (EDB, 1,2-DCA, acetone, 1,1,2,2-tetrachoroethane, 1,1,2-trichloroethane, 1,2,3-trichloropropane, bromomethane, bromodichloromethane, dibromochloromethane, hexachlorobutadiene, and vinyl chloride) were greater than the ADEC SCLs; however, the laboratory method detection limits (MDLs) were below the ADEC SCLs. All samples were non-detect for the respective constituents as shown in **Tables 2, 3a,** and **3b**.

The laboratory RDLs for select compounds (naphthalene, 1,2-DCA, 1,2,3-trichloropropane, bromodichloromethane, bromomethane, carbon tetrachloride, chloroform, EDB, 1,4-dichlorobenzene, hexachloro-1,3-butadiene, 2-hexanone, 1,1,2,2-tetrachloroethane, 1,2,4-trichlorobenzene, 1,1,2-trichloroethane, trichloroethene, and vinyl chloride) were greater than the ADEC GCLs; however, the MDLs were below the ADEC GCLs. All samples were non-detect for the respective constituents as shown in **Tables 4** and **5**.

The sensitivity of the analyses was adequate for the samples as detection limits were less than the ADEC SCLs and GCLs with the exceptions noted above.

8 Conclusions and Recommendations

In August 2022, additional assessment activities were conducted to further evaluate the extent of offsite, downgradient petroleum hydrocarbon impacts on the adjacent property northwest of the Site. Three additional groundwater monitoring wells (MW-22 through MW-24) were installed and sampled during the investigation. Based on the analytical results, exceedances of ADEC cleanup levels for certain COCs were observed in select soil samples as well as all the groundwater samples and therefore, the extent of offsite impacts has not been adequately defined.

Soil analytical results from the well borings indicated petroleum-impacted soil exceeding ADEC SCLs for migration to groundwater in well borings MW-22 and MW-23 at 4.5 to 5 ft bgs for DRO and MW-23 at 9.5 to 10 ft bgs for benzene, ethylbenzene, total xylenes, naphthalene, 1,2,4-TMB, and 1,3,5-TMB. Groundwater in nearby monitoring wells MW-7 and MW-8 has fluctuated between approximately 4 ft bgs at MW-8 to 12.5 ft bgs at MW-7. No exceedances were observed in the surface samples collected at 0.5 to 1 ft bgs from the current well borings; therefore, the exceedances at 4.5 and 9.5 ft bgs appear due to the presence of impacted groundwater that has migrated downgradient. No SCL exceedances were observed in the soil samples collected from boring MW-24.

The initial groundwater sample analytical results from newly installed monitoring wells MW-22 through MW-24 indicated petroleum impacts exceeding ADEC cleanup levels for GRO at MW-23, DRO, benzene, xylenes, naphthalene, and 1,2,4-TMB at all three wells, and ethylbenzene at MW-22. Continued monitoring of these wells will provide further data on groundwater quality and concentration trends.

Based on the results of the investigation, Arcadis recommends the following:

- Preparation and submittal of a Additional Investigation Work Plan to ADEC. The plan will propose additional monitoring well locations within accessible areas of the adjacent property northwest of the Site in an attempt to adequately delineate the extent of downgradient groundwater impacts.

8.1 Groundwater Sampling Program

Arcadis incorporated the newly installed monitoring wells (MW-22 through MW-24) into the existing groundwater monitoring program during the second semi-annual monitoring event in 2022. Wells will continue to be gauged and sampled on a semi-annual basis. Groundwater samples will be analyzed for the following:

- VOCs by USEPA Method 8260B
- GRO by Alaska Method AK101
- DRO and RRO by Alaska Methods AK102 and AK103
- DRO with silica gel cleanup by Alaska Method AK102

Bold and Shaded = Value exceeds Maximum Allowable Concentration over Human Health

Bold and Shaded = Value exceeds Maximum Allowable Concentration Over Migration to Groundwater

Bold and *Italicized* = Constituent considered non-detect, however Laboratory RDL is greater than the ADEC Groundwater Cleanup Level

[1] = Screening level is based on a soil saturation concentration (Csat) using the equations set out in Procedures for Calculating Cleanup Levels, adopted by reference in 18 AAC 75.340 revised January 2022. The Csat value is listed first, followed by the human health risk-based cleanup level in parentheses (ADEC, 18 AAC 75.341) revised January 2022

<0.00290 = Not detected at or above the reported detection limit (RDL)

-- = Not analyzed/ Not measured/ Not Available

[ ] = Duplicate Result

ADEC = Alaska Department of Environmental Conservation

J = The identification of the analyte is acceptable; the reported value is an estimate.

MW = Groundwater monitoring well

Notes:
All results are reported in milligrams per kilogram (mg/kg).
Screening Level for Ingestion, Under 40-Inch Zone, Table B2 Under 40-Inch Zone, (ADEC, 18 AAC 75.341) revised January 2022
Polycycic Aromatic Hydrocardons (PAHs) analzyed by USEPA Method 8270D
Bold = Detected above laboratory method detection limit (MDL)
Bold and Shaded = Value exceeds ADEC Groundwater Cleanup Level
Bold and Shaded = Value exceeds Maximum Allowable Concentration over Human Health
Bold and Shaded = Value exceeds Maximum Allowable Concentration Over Migration to Groundwater
Bold and *Italicized* = Constituent considered non-detect, however Laboratory RDL is greater than the ADEC Groundwater Cleanup Level
[1] = Screening level is based on a soil saturation concentration (Csat) using the equations set out in Procedures for Calculating Cleanup Levels, adopted by reference in 18 AAC 75.340 revised January 2022. The Csat value is listed first, followed by the human health risk-based cleanup level in parentheses (ADEC, 18 AAC 75.341) revised January 2022
<0.00290 = Not detected at or above the reported detection limit (RDL)
-- = Not analyzed/ Not measured/ Not Available
[ ] = Duplicate Result
ADEC = Alaska Department of Environmental Conservation
J = The identification of the analyte is acceptable; the reported value is an estimate.
MW = Groundwater monitoring well

Notes:
All results are reported in Micrograms per liter (µg/L).
Samples analyzed by USEPA Method 8260D:
Benzene, Toluene, Ethylbenzene and Total xylenes (collectively BTEX)
MTBE = Methyl tert-butyl ether
EDC = 1,2-Dichloroethane
If LNAPL is present, GW Elevation is corrected according to the following formula (TOC elevation - DTW) + (0.8 x LNAPL thickness)
Screening Level for Ingestion, Table C. Groundwater Cleanup Levels, (ADEC, 18 AAC 75.341) revised January 2022
Bold = Detected above laboratory method detection limit (MDL),
Bold and Shaded = Value exceeds ADEC Groundwater Cleanup Level
Bold and *Italicized* = Constituent considered non-detect, however
Laboratory RDL is greater than the ADEC Groundwater Cleanup Level
<1.00 = Not detected at or above the reported detection limit (RDL)
-- = Not analyzed/ Not measured/ Not Available
[ ] = Duplicate Result
µg/L = Micrograms per liter
ADEC = Alaska Department of Environmental Conservation
DRO = Total petroleum hydrocarbons, diesel range by LUFT GC/MS according to State of Alaska Method AK102.
DTW = Depth to groundwater
EDB = Ethylene Dibromide by USEPA Method 8011.
ft = Feet relative to NAVD88
ft bTOC = Feet below top of casing
GC/MS = Gas chromatography/Mass Spectrometry
GRO = Total petroleum hydrocarbons, gasoline range by LUFT GC/MS according to United States Environmental Protection Agency (USEPA) Method AK101
GW Elev = Groundwater elevation
ID = Identification
J = The associated numerical value is an estimated concentration only
LNAPL = Light Non-Aqueous Phase Liquid
LUFT = Leaking Underground Fuel Tank
MW = Groundwater monitoring well
NAVD88 = North American Vertical Datum of 1988
TOC = Top of casing

RE: FIA - Block 3 Lot 12 - Saupe Enterprises

Dear Mr. Kiernan:

The Alaska Department of Environmental Conservation (ADEC) has reviewed the *Work Plan for Additional Assessment* at FIA – Block 3 Lot 12 – Saupe Enterprises dated July 22, 2021. This work plan proposes to advance three groundwater monitoring wells to further define the extent of contamination downgradient of the site. Please review the enclosed table commenting on the work plan.

Please do not hesitate to contact me at (907) 451-2144 or rebekah.reams@alaska.gov if you have any questions or concerns regarding the contents of this letter.

Sincerely,

Rebekah Reams
Environmental Program Specialist

DEC Comments to the *Work Plan for Additional Assessment* for FIA - Block 3 Lot 12 - Saupe Enterprises

Reviewer: Rebekah Reams, Alaska Department of Environmental Conservation, Contaminated Sites Program

Comment No.	Pg. #	Section	Comment / Recommendations	Response
1.	1-1	Introduction	Please update the QEP reference in the introduction of the report to 18 AAC 75.333, the current reference is no longer accurate.	This reference has been updated in the work plan addendum.
2.	3-2	Constituents of Potential Concern	Please note that Contaminants of Potential Concern (COPCs) are not equivalent to Contaminants of Concern (COCs). COPCs are contaminants likely to be present at a site due to the source(s) identified at the site. Site COCs are all analytes that have been detected above current DEC cleanup levels at any point in the site's history. After site COPCs have been determined, samples are collected and analyzed to identify the site COCs. Please update the title and/or contents of this section of the work plan to accurately represent site COCs, COPCs, or indicate that the table reports the proposed analyses to be completed under the sampling plan, as applicable.	This section has been updated in the work plan addendum to reflect that the analytes listed are Contaminants of Concern (COCs) and not Contaminants of Potential Concern (COPCs).
3.	4-1	Proposed Site Assessment Activities	Please provide more information regarding where additional wells will be installed if evidence of contamination is identified in MW-22 through MW-24 (i.e. approximate distance and direction of step out wells).	If necessary, an additional well will be installed approximately 100 feet northeast of MW-24.

4.	4-1	Proposed Site Assessment Activities	The DEC recommends moving one of the proposed monitoring well locations or adding an additional monitoring well to the north-northwest of MW-16 in order to define the extent of the plume in this direction. Recent sampling events have indicated that contaminant concentrations in MW-16 continue to exceed groundwater cleanup levels.	The location of proposed monitoring well MW-24 has been moved to a new proposed location north-northwest of MW-16. The new proposed location of MW-24 is shown on Figure 10.
5.	5-1	Soil Sample Collection Methods	Please include analysis for the full suite of VOCs in place of individual VOC analytes for soil samples. Additional VOCs, including 1,2,4-trimethybenzene and 1,3,5-trimethylbenzene, have exceeded current cleanup levels and have not been fully evaluated at the site.	This section has been edited in the work plan addendum to include the analyzation of full suite VOCs for soil samples.
6.	5-1	Soil Sample Collection Methods	The work plan indicates that the bottom soil sample collected from each boring will be held by the laboratory pending the results of the upper samples. What results in the upper sample depths will indicate the need for the bottom sample to be analyzed? (i.e. contaminant concentrations detected, contaminant concentrations exceeded migration to groundwater cleanup levels, etc.).	This section has been edited in the work plan addendum to indicate that the bottom soil sample will be analyzed only if soil contaminant concentrations detected exceed ADEC Method 2 Petroleum Hydrocarbon Soil Cleanup Levels for Migration to Groundwater in the upper sample depths.
7.	6-1	Groundwater Sampling Procedures	Please include analysis for full suite VOCs and lead in groundwater samples. Several VOCs have been detected above groundwater cleanup levels and lead is considered a COPC at the site due to the historic presence of aviation gasoline and has not been analyzed during previous groundwater sampling events.	This section has been edited in the work plan addendum to include the analyzation of full suite VOCs and lead for groundwater samples.
8.	7-1	IDW	In order to characterize waste, DEC requests that containerized waste be analyzed for site COCs and PFAS under standard analytical methods. Please plan to analyze waste characterization samples for VOCs and PAHs under standard analytical methods (i.e. 8260, 8270) in addition to the GRO, DRO, RRO, and PFAS analysis proposed in the work plan. Please ensure that PFAS analysis is completed at an ADEC approved laboratory under method 537.1.	Containerized waste be analyzed for site COCs and PFAS under standard analytical methods. PFAS analysis will be completed at an ADEC approved laboratory under method 537.1.

9.		Table 1	Please ensure analytical results are highlighted appropriately based on the key provided for Table 1. There are several detections and elevated detection limits that exceed groundwater cleanup levels, but are not currently highlighted.	Table 1 has been edited and included in the work plan addendum to correct these errors.
0.		Table 2	The following data is available for soil samples collected at the site; however, the data summary table indicates that this information is not applicable/not available. Please include the following results in the data summary table: • Lead results from the July 2007 monitoring well installation. • EDB and EDC results from the August 2011 soil sampling event. • EDB and EDC results from the August 2012 monitoring well installation.	These analytical results have been added to the data summary tables.
11.		Table 3	Please include the results for PAH soil samples collected during the July 2007 sampling event in Table 3.	These analytical results have been added to the data summary tables.
12.		Table 2, Table 3	Please correct the typos in the "Location" column on *Table 2, Page 1 of 14* and on *Table 3, Page 9 of 14*.	The typos in the "Location" column on *Table 2, Page 1 of 14* and on *Table 3, Page 9 of 14* have been corrected.
13.		General	While the DEC is not requesting PAH analysis be completed at this time, please note that several PAHs are considered to be site COCs and must be delineated in soil and groundwater prior to site closure.	The work plan addendum has been edited to include the analyzation of PAHs for soil samples.
14.		General	Please include a Conceptual Site Model (CSM) that summarized current site conditions and exposure pathways.	A Conceptual Site Model has been included as Attachment 4.
15.		General	Please note whether wells installed under this work plan will be added to the long term groundwater sampling schedule.	Wells installed under this work plan will be added to the long-term groundwater sampling schedule.

RE: FIA - Block 3 Lot 12 - Saupe Enterprises

Dear Mr. Kiernan:

The Alaska Department of Environmental Conservation (ADEC) has reviewed the Addendum to the Work Plan for Additional Assessment submitted by Arcadis on December 8, 2021. This work plan proposes to advance additional groundwater monitoring wells to further define the extent of contamination downgradient of the site.

This work plan is approved; however, please note the following response to comments:

Comment #2: Note there are additional Contaminants of Concern present at this site. Contaminants of concern include all analytes that have been detected above cleanup levels at a site.

Comment #9: Note that *Table 1: Historical Groundwater Gauging and Analytical Results* still includes many entries that are not consistent with the key provided at the end of the table, please ensure these are corrected in future deliverables.

Comment #11: Thank you for updating Table 3 to include PAH sample results. Note that naphthalene results exceeded cleanup levels at several sample locations, but are not highlighted in the data summary table. Please review this table and verify exceedances are accurately highlighted in future deliverables.

Comment #14: Please note that in addition to the media and receptors identified in the Conceptual Site Model, ADEC considers surface soil and air to be potentially impacted media and site visitors and trespassers to be potential receptors at this site. Additionally, ingestion of groundwater must be considered a potentially complete pathway for future receptors since no determination under 18 AAC 75.350 has been made that groundwater in the area is not a currently or reasonably expected future source of drinking water.

Do not hesitate to contact me at (907) 451-2144 or rebekah.reams@alaska.gov if you have any questions or concerns regarding the contents of this letter.

Sincerely,

Rebekah Reams
Environmental Program Specialist

Appendix B

ADEC Human Health Conceptual Site Model Worksheet

Print Form

Appendix A - Human Health Conceptual Site Model Scoping Form and Standardized Graphic

Site Name: Former Chevron Facility 309152 - FIA Block 3, Lot 12

File Number: 100.38.206

Completed by: Arcadis U.S., Inc.

Introduction

The form should be used to reach agreement with the Alaska Department of Environmental Conservation (DEC) about which exposure pathways should be further investigated during site characterization. From this information, summary text about the CSM and a graphic depicting exposure pathways should be submitted with the site characterization work plan and updated as needed in later reports.

General Instructions: Follow the italicized instructions in each section below.

1. General Information:

Sources *(check potential sources at the site)*

- ☐ USTs
- ☒ ASTs
- ☒ Dispensers/fuel loading racks
- ☐ Drums
- ☐ Vehicles
- ☐ Landfills
- ☐ Transformers
- ☒ Other: Associated Piping

Release Mechanisms *(check potential release mechanisms at the site)*

- ☒ Spills
- ☒ Leaks
- ☐ Direct discharge
- ☐ Burning
- ☐ Other:

Impacted Media *(check potentially-impacted media at the site)*

- ☒ Surface soil (0-2 feet bgs*)
- ☒ Subsurface soil (>2 feet bgs)
- ☒ Air
- ☐ Sediment
- ☒ Groundwater
- ☐ Surface water
- ☐ Biota
- ☐ Other:

Receptors *(check receptors that could be affected by contamination at the site)*

- ☐ Residents (adult or child)
- ☒ Commercial or industrial worker
- ☒ Construction worker
- ☐ Subsistence harvester (i.e. gathers wild foods)
- ☐ Subsistence consumer (i.e. eats wild foods)
- ☒ Site visitor
- ☒ Trespasser
- ☒ Recreational user
- ☐ Farmer
- ☐ Other:

* bgs - below ground surface

2. Exposure Pathways: *(The answers to the following questions will identify complete exposure pathways at the site. Check each box where the answer to the question is "yes".)*

a) Direct Contact -

1. Incidental Soil Ingestion

Are contaminants present or potentially present in surface soil between 0 and 15 feet below the ground surface? (Contamination at deeper depths may require evaluation on a site-specific basis.) ☒

If the box is checked, label this pathway complete: Complete

Comments:

2. Dermal Absorption of Contaminants from Soil

Are contaminants present or potentially present in surface soil between 0 and 15 feet below the ground surface? (Contamination at deeper depths may require evaluation on a site specific basis.) ☒

Can the soil contaminants permeate the skin (see Appendix B in the guidance document)? ☒

If both boxes are checked, label this pathway complete: Complete

Comments:

b) Ingestion -

1. Ingestion of Groundwater

Have contaminants been detected or are they expected to be detected in the groundwater, or are contaminants expected to migrate to groundwater in the future? ☒

Could the potentially affected groundwater be used as a current or future drinking water source? Please note, only leave the box unchecked if DEC has determined the ground-water is not a currently or reasonably expected future source of drinking water according to 18 AAC 75.350. ☒

If both boxes are checked, label this pathway complete: Complete

Comments:

2. Ingestion of Surface Water

Have contaminants been detected or are they expected to be detected in surface water, or are contaminants expected to migrate to surface water in the future? ☐

Could potentially affected surface water bodies be used, currently or in the future, as a drinking water source? Consider both public water systems and private use (i.e., during residential, recreational or subsistence activities). ☐

If both boxes are checked, label this pathway complete: Incomplete

Comments:

3. Ingestion of Wild and Farmed Foods

Is the site in an area that is used or reasonably could be used for hunting, fishing, or harvesting of wild or farmed foods? ☐

Do the site contaminants have the potential to bioaccumulate (see Appendix C in the guidance document)? ☐

Are site contaminants located where they would have the potential to be taken up into biota? (i.e. soil within the root zone for plants or burrowing depth for animals, in groundwater that could be connected to surface water, etc.) ☐

If all of the boxes are checked, label this pathway complete: Incomplete

Comments:

c) Inhalation-

1. Inhalation of Outdoor Air

Are contaminants present or potentially present in surface soil between 0 and 15 feet below the ground surface? (Contamination at deeper depths may require evaluation on a site specific basis.) ☒

Are the contaminants in soil volatile (see Appendix D in the guidance document)? ☒

If both boxes are checked, label this pathway complete: Complete

Comments:

2. Inhalation of Indoor Air

Are occupied buildings on the site or reasonably expected to be occupied or placed on the site in an area that could be affected by contaminant vapors? (within 30 horizontal or vertical feet of petroleum contaminated soil or groundwater; within 100 feet of non-petroleum contaminted soil or groundwater; or subject to "preferential pathways," which promote easy airflow like utility conduits or rock fractures) ☒

Are volatile compounds present in soil or groundwater (see Appendix D in the guidance document)? ☒

If both boxes are checked, label this pathway complete: Complete

Comments:

3. **Additional Exposure Pathways:** *(Although there are no definitive questions provided in this section, these exposure pathways should also be considered at each site. Use the guidelines provided below to determine if further evaluation of each pathway is warranted.)*

Dermal Exposure to Contaminants in Groundwater and Surface Water

Dermal exposure to contaminants in groundwater and surface water may be a complete pathway if:

- Climate permits recreational use of waters for swimming.
- Climate permits exposure to groundwater during activities, such as construction.
- Groundwater or surface water is used for household purposes, such as bathing or cleaning.

Generally, DEC groundwater cleanup levels in 18 AAC 75, Table C, are deemed protective of this pathway because dermal absorption is incorporated into the groundwater exposure equation for residential uses.

Check the box if further evaluation of this pathway is needed: ☐

Comments:

This pathway is considered complete for future construction workers in the event they would become exposed to groundwater at the Site during de-watering of an excavation or a similar event. However, further evaluation, outside of what has already been proposed, is not needed.

Inhalation of Volatile Compounds in Tap Water

Inhalation of volatile compounds in tap water may be a complete pathway if:

- The contaminated water is used for indoor household purposes such as showering, laundering, and dish washing.
- The contaminants of concern are volatile (common volatile contaminants are listed in Appendix D in the guidance document.)

DEC groundwater cleanup levels in 18 AAC 75, Table C are protective of this pathway because the inhalation of vapors during normal household activities is incorporated into the groundwater exposure equation.

Check the box if further evaluation of this pathway is needed: ☐

Comments:

Inhalation of Fugitive Dust

Inhalation of fugitive dust may be a complete pathway if:

- Nonvolatile compounds are found in the top 2 centimeters of soil. The top 2 centimeters of soil are likely to be dispersed in the wind as dust particles.
- Dust particles are less than 10 micrometers (Particulate Matter - PM_{10}). Particles of this size are called respirable particles and can reach the pulmonary parts of the lungs when inhaled.

DEC human health soil cleanup levels in Table B1 of 18 AAC 75 are protective of this pathway because the inhalation of particulates is incorporated into the soil exposure equation.

Check the box if further evaluation of this pathway is needed: ☐

Comments:

Direct Contact with Sediment

This pathway involves people's hands being exposed to sediment, such as during some recreational, subsistence, or industrial activity. People then incidentally ingest sediment from normal hand-to-mouth activities. In addition, dermal absorption of contaminants may be of concern if the the contaminants are able to permeate the skin (see Appendix B in the guidance document). This type of exposure should be investigated if:

- Climate permits recreational activities around sediment.
- The community has identified subsistence or recreational activities that would result in exposure to the sediment, such as clam digging.

Generally, DEC direct contact soil cleanup levels in 18 AAC 75, Table B1, are assumed to be protective of direct contact with sediment.

Check the box if further evaluation of this pathway is needed: ☒

Comments:

Contaminated groundwater can potentially migrate into the marsh/pond as gradient flow direction has been observed to move towards the retention pond.

4. Other Comments *(Provide other comments as necessary to support the information provided in this form.)*

HUMAN HEALTH CONCEPTUAL SITE MODEL GRAPHIC FORM

Site: Former Chevron Facility 309152 - FIA Block 3, Lot 12

Completed By: Arcadis U.S., Inc.
Date Completed: 02/03/2023

***Instructions*: Follow the numbered directions below. Do not consider contaminant concentrations or engineering/land use controls when describing pathways.**

(1) *Check the media that could be directly affected by the release.*

(2) *For each medium identified in (1), follow the top arrow and check possible transport mechanisms. Check additional media under (1) if the media acts as a secondary source.*

Media	Transport Mechanisms
☑ Surface Soil (0-2 ft bgs)	☑ Direct release to surface soil — check soil ☑ Migration to subsurface — check soil ☑ Migration to groundwater — check groundwater ☐ Volatilization — check air ☐ Runoff or erosion — check surface water ☐ Uptake by plants or animals — check biota ☐ Other (list):
☑ Subsurface Soil (2-15 ft bgs)	☑ Direct release to subsurface soil — check soil ☑ Migration to groundwater — check groundwater ☑ Volatilization — check air ☐ Uptake by plants or animals — check biota ☐ Other (list):
☑ Ground-water	☑ Direct release to groundwater — check groundwater ☑ Volatilization — check air ☑ Flow to surface water body — check surface water ☑ Flow to sediment — check sediment ☐ Uptake by plants or animals — check biota ☐ Other (list):
☐ Surface Water	☐ Direct release to surface water — check surface water ☐ Volatilization — check air ☐ Sedimentation — check sediment ☐ Uptake by plants or animals — check biota ☐ Other (list):
☐ Sediment	☐ Direct release to sediment — check sediment ☐ Resuspension, runoff, or erosion — check surface water ☐ Uptake by plants or animals — check biota ☐ Other (list):

(3) *Check all exposure media identified in (2).*

(4) *Check all pathways that could be complete. The pathways identified in this column **must** agree with Sections 2 and 3 of the Human Health CSM Scoping Form.*

(5) *Identify the receptors potentially affected by each exposure pathway: Enter "C" for current receptors, "F" for future receptors, "C/F" for both current and future receptors, or "I" for insignificant exposure.*

Current & Future Receptors

Exposure Media	Exposure Pathway/Route	Residents (adults or children)	Commercial or industrial workers	Site visitors, trespassers, or recreational users	Construction workers	Farmers or subsistence harvesters	Subsistence consumers	Other
☑ soil	☑ Incidental Soil Ingestion	I	C/F	C/F	C/F	I	I	
	☑ Dermal Absorption of Contaminants from Soil	I	C/F	C/F	C/F	I	I	
	☐ Inhalation of Fugitive Dust							
☑ groundwater	☑ Ingestion of Groundwater	I	C/F	I	C/F	I	I	
	☑ Dermal Absorption of Contaminants in Groundwater	I	C/F	I	C/F	I	I	
	☐ Inhalation of Volatile Compounds in Tap Water							
☑ air	☑ Inhalation of Outdoor Air	I	C/F	C/F	C/F	I	I	
	☑ Inhalation of Indoor Air	I	C/F	C/F	C/F	I	I	
	☐ Inhalation of Fugitive Dust							
☑ surface water	☑ Ingestion of Surface Water	I	C/F	C/F	C/F	I	I	
	☑ Dermal Absorption of Contaminants in Surface Water	I	C/F	C/F	C/F	I	I	
	☐ Inhalation of Volatile Compounds in Tap Water							
☑ sediment	☑ Direct Contact with Sediment	I	I	C/F	C/F	I	I	
☐ biota	☐ Ingestion of Wild or Farmed Foods

Soil Boring and Construction Log

Boring No.: MW-22

Sheet: 1 of 1

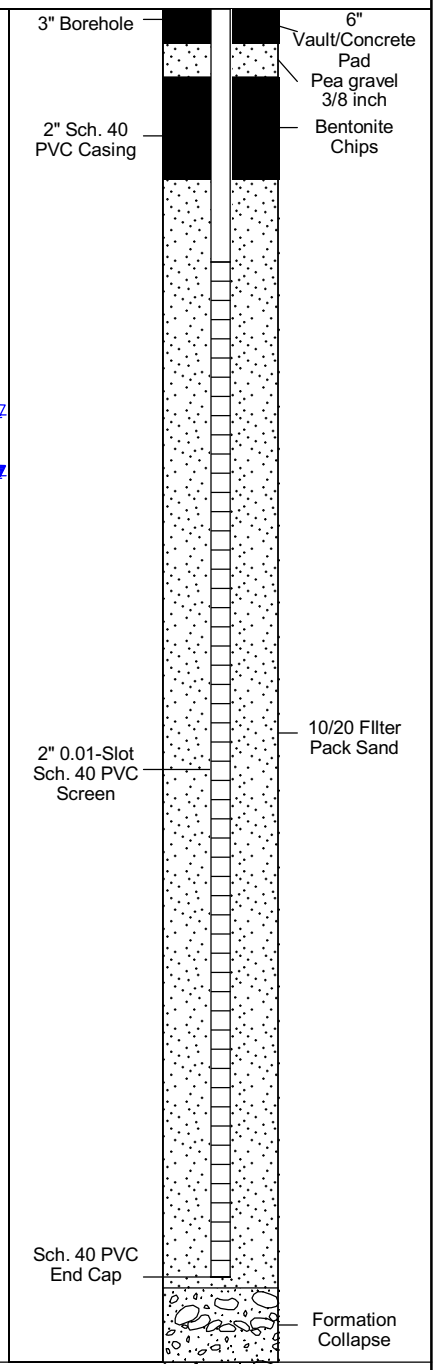
Client Name: Chevron Environmental Management Company
Project Number: 30064227
Project Name: COP5 West 309152 AK Fairbanks

Date Started: 08-03-2022
Date Completed: 08-04-2022
Total Depth: 20.0 ft bgs

Logger: Evan Wujcik
Reviewer: Gantt Jeffers

Depth (feet)	Sample ID	Rec. (ft)	PID (ppm)	Blow Counts	Graphic	Description	Drilling Fluid and Notes
1	MW-22-S-0.5-1	3	0.0			(0-3 ft) Well Graded Sand with Gravel (SW), very fine to very coarse, subangular to subround; little small to very large pebbles, subround to round; trace granules, subangular to subround; trace silt; well sorted; dry; 10YR 4/3 - brown.	(0-3 ft) Hand augered for utility clearance.
2			0.0				
3			0.5				
4		2	7.6			(3-5.5 ft) Change in angularity of sand, subround to round.	(3 ft) Encountered hand auger refusal. Switch to direct push drilling.
5	MW-22-S-4.5-5 MW-22-S-5-5.5		0.0				
6		5	0.0			(5.5-14 ft) Silt (ML), medium plasticity, rapid dilatancy; little very fine to fine sand, subangular to subround; trace granules, subround to round; trace small to medium pebbles, subround to round; poorly sorted; wet; very soft; 10YR 4/2 - dark grayish brown.	
7							
8			0.3				
9							
10			17.4				
11							
12		5	4.3				
13							
14			12.5			(14-18 ft) Well Graded Sand (SW), very fine to very coarse, subangular to subround; trace silt; poorly sorted; wet; 10YR 4/2 - dark grayish brown.	
15							
16			5.4				
17		5					
18			8.7			(18-20 ft) Well Graded Gravel with Sand (GW), granules to large pebbles, subangular to round; some very fine to coarse sand, subangular to subround; well sorted; wet; 10YR 4/2 - dark grayish brown.	
19							
20						20 ft. bgs End of Boring	
21							

Construction Details



Drilling Co.: GeoTek
Driller: Tom Belli
Drilling Method: Direct-Push
Drill Rig: Geoprobe
Remarks: Additional Field Personnel: Gantt Jeffers. ft. bgs = feet below ground surface; "/in. = inches; ppm = parts per million; PVC = Polyvinyl chloride; NA = not available / applicable.

Sampling Method: Hand Auger/Acetate Sleeve
Sampling Dimensions: Continuous
First Encountered Water (ft bgs): 6
Static Water Level (ft bgs): 6.90
Top of Casing Elev: 429.50
Surface Elev: 429.70
North Coor: 3959536.54
East Coor: 1350611.96

ARCADIS | Design & Consultancy for natural and built assets

Daily Log

Project Name Saupe 309152 Project Number 30064227 Page 1 of ___

Site Location 6223 Old Airport Rd Fairbanks, AK Date 8.3.22

Field Personnel E. Wojcik (EW), G. Teffers (GF), Geotek Drilling (GD)

Time	Description of Activities
0800	GF on site when EW arrives on site
	Call w/ GD that work will begin around noon due to needed
	to pick up supplies,
	Call w/ APM to discuss the delay and options
0845	EW mobilize to get hand auger
0900	EW back on site to begin hand augering
	Permits approved
0945	GD arrive onsite to stage equipment
	Complete HASP review and H+S tailgate meeting
1020	GD offsite to resume setting equipment
	Drilling helper (Warren) stayed to resume HA
1030	Sample MW-24 0.5-1'
1120	Refusal on MW-24 @ 3ft 9in
	Discussion w/ APM and PM that HA is going to 5'
	instead of 8'
1130	Transition to MW-23 to begin HA until GD returns w/
	more tools
1150	Sample MW-23 0.5-1'
1210	GD arrive on site
	MW 23 HA to 5', ready to drill
	GD set up on MW-23
1250	Sample MW 23 4.5-5
1315	Sample MW 23 9.5-10
1320	GD Finish drilling MW-23 to 20' bgs

ARCADIS | Design & Consultancy for natural and built assets

Daily Log

Project Name_____ Project Number_____ Page ____ of ____

Site Location_____ Date_____

Field Personnel_____

Time	Description of Activities
1330	Discussion w/ team about using a Ligger auger to set wells in, decided another HA boring needs dug next to well boring
1400	GD moved to mw-24 to try to finish HA boring
1420	GD also HA MW-22 (start time)
1430	Sample mw-22 0.5-1
1440	Call w/ APM, mw 24 refusal at 4' 9". Cleared to use drill rig
1510	Sample mw-24 4.5-5
1520	Sample mw-24 9.5-10
1520	Sample EB-1 from shoe
1540	Call w/ APM about timeline and well development
1550	GD move to mw-22 to finish HA
1630	Refusal reached at 3.5 ft bgs at mw-22
	Dug another boring
	↳ Refusal reached at 2.9 ft bgs at mw-22
	Call w/ APM to get variance
1730	
1730	Variance approved drilling continued
1745	Sample mw-22 4.5-5
1750	Sample mw-22 5-5.5 (water interface)
1805	Geotek mobilize offsite
1830	Arcadis offsite
	All wells drilled to 20 ft bgs. All soil samples
	collected, Dup 1 collected, EB 1 collected

Daily Log

Project Name Saupe 309152 Project Number 30064227 Page 1 of ___

Site Location 6223 Old Airport Rd Fairbanks, AK Date 8/4/22

Field Personnel E. Wojcik (EW), Cook Drilling (GD)

Time	Description of Activities
0820	EW arrive on site
	Open permit to work
0850	GD on site
0910	Complete HASP review and tailgate meeting
0915	Start installing MW-23
1030	Issues w/ 3 1/4 in casings and PVC screen.
	Could not set well w/out pulling casing w/ PVC well.
1100	Work paused to get clarification on how to proceed.
	GD want to use auger to set wells Calls w/ project
	team to approve scope changes.
1200	GD mobilize offsite to get supplies
1245	GD arrive back on site. Going to try the DT one more time
	w/ surging the well w/ water
1450	MW 23 installed
	~~Tot~~ TD 18.3
	See Fulcrum for well construction details
1520	Mobilize / start installing MW-22
1740	Installed MW-22
	TD 19.3
1800	MW-23 finished w/ concrete
1820	MW-22 finish w/ Concrete
1840	Site cleaned up and work wrapped up
1850	EW and GD offsite

ARCADIS | Design & Consultancy for natural and built assets

Daily Log

Project Name Saupe 309150 Project Number 30064227 Page 1 of 1

Site Location 6223 Old Airport Rd Fairbanks, AK Date 8/5/22

Field Personnel E. Wojcik (EW), Geotek Drilling (GD)

Time	Description of Activities
0730	EW and GD arrive on site
~~0740~~	Review HASP and tailgate meeting
0800	Begin installing MW-24
	~~TD 19.4~~
0850	Installed MW-24
	TD 19.4
1010	Finish MW-24 w/ concrete
1020	Begin site clean up and equipment loading
1120	GD offsite to clear trailer to load drill rig when they return
1230	GD arrive on site
	Resume site pick up
1300	Waste drum w/ soil cuttings stored on south side of
	on site building where other waste is currently on site
	Previos waste on site includes 5 supersacks w/ soil
	and 1 55 gal. drum in overpack (contents purge water)
	Waste generated during this event: 1 55 gal drum
	(contents soil cuttings) 75% full
1400	GD offsite, EW offsite
	site cleaned and equipment picked up

Project Name 30952 - Saupe Project Number 36064227 Page 1 of 1

Site Location 6223 Old Airport Rd, Fairbanks AK Date 8/6/2022

Field Personnel Minda Moe

Time	Description of Activities
0643	ANA onsite to prepare for work
0701	Called Thomas, found out I am staged on main site and he's in the field by the wells, heading back there.
0711	Calibrated (zero gas) PID; GTA helper is on a supply run
0731	GTA helper onsite, will tailgate
0751	Completed review of HASP/hazards/JSAs, texted PTW to Gantt (PTW approver)
0757	PTW approval
0800	Called Evan to find out well names
0813	Starting on MW-23, see well dev log
0840	Thomas going to store for supplies, need a connector for pump.
1117	Sampling MW-23 + DUP-1
1202	Starting on MW-22, see well dev log
1430	Sampling MW-22
1455	Starting on MW-24, see well dev log
1800	Sampling MW-24
1830	GTA + ANA offsite, secured drums, texted Gantt to close PTW.
817 1312	ANA onsite to collect waste samples
1323	IDW-S-082022
1354	IDW-W-082022
1427	ANA offsite

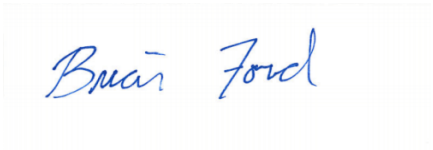
Unless qualified or notated within the narrative below, all sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times. Where applicable, all MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.



Brian Ford
Project Manager

Volatile Organic Compounds (GC/MS) by Method 8260D

The reported concentration is an estimate. The continuing calibration standard associated with this data responded low. Method sensitivity check is acceptable.

Batch	Lab Sample ID	Analytes
WG1907699	L1522335-01	1,2-Dichloroethane, Acrylonitrile, Chloromethane and Dichlorodifluoromethane
WG1907699	L1522335-02	1,2-Dichloroethane, Acrylonitrile, Chloromethane and Dichlorodifluoromethane
WG1907699	L1522335-03	1,2-Dichloroethane, Acrylonitrile, Chloromethane and Dichlorodifluoromethane
WG1907699	L1522335-04	1,2-Dichloroethane, Acrylonitrile, Chloromethane and Dichlorodifluoromethane
WG1907699	L1522335-05	1,2-Dichloroethane, Acrylonitrile, Chloromethane and Dichlorodifluoromethane
WG1907699	L1522335-06	1,2-Dichloroethane, Acrylonitrile, Chloromethane and Dichlorodifluoromethane
WG1907699	L1522335-07	1,2-Dichloroethane, Acrylonitrile, Chloromethane and Dichlorodifluoromethane
WG1907699	L1522335-08	1,2-Dichloroethane, Acrylonitrile, Chloromethane and Dichlorodifluoromethane
WG1907703	L1522335-09	1,2,3-Trichlorobenzene
WG1907703	L1522335-10	1,2,3-Trichlorobenzene and Naphthalene

The associated batch QC was above the established quality control range for accuracy.

Batch	Lab Sample ID	Analytes
WG1907703	(LCS) R3826068-1, L1522335-09, 10	1,2,3-Trichloropropane and 1,2-Dichloroethane

Semi-Volatile Organic Compounds (GC) by Method AK102

Surrogate recovery limits have been exceeded; values are outside lower control limits.

Batch	Analyte	Lab Sample ID
WG1909501	o-Terphenyl	(MS) R3825514-4, (MSD) R3825514-5

The sample matrix interfered with the ability to make any accurate determination; spike value is low.

Batch	Lab Sample ID	Analytes
WG1909501	(MS) R3825514-4, (MSD) R3825514-5	AK102 DRO C10-C25

The associated batch QC was outside the established quality control range for precision.

Batch	Lab Sample ID	Analytes
WG1909501	(MSD) R3825514-5	AK102 DRO C10-C25

Semi Volatile Organic Compounds (GC/MS) by Method 8270E-SIM

The sample matrix interfered with the ability to make any accurate determination; spike value is high.

Batch	Lab Sample ID	Analytes
WG1909236	(MS) R3825747-3, (MSD) R3825747-4	Acenaphthene, Anthracene, Benzo(g,h,i)perylene, Benzo(k)fluoranthene, Chrysene, Dibenz(a,h)anthracene, Fluorene, Indeno(1,2,3-cd)pyrene and Phenanthrene

The sample concentration is too high to evaluate accurate spike recoveries.

Batch	Lab Sample ID	Analytes
WG1909236	(MS) R3825747-3, (MSD) R3825747-4	Benzo(a)anthracene, Benzo(a)pyrene, Benzo(b)fluoranthene, Fluoranthene and Pyrene

The associated batch QC was outside the established quality control range for precision.

Batch	Lab Sample ID	Analytes
WG1909236	(MSD) R3825747-4	Benzo(a)anthracene and Benzo(k)fluoranthene

GLOSSARY OF TERMS

Guide to Reading and Understanding Your Laboratory Report

The information below is designed to better explain the various terms used in your report of analytical results from the Laboratory. This is not intended as a comprehensive explanation, and if you have additional questions please contact your project representative.

Results Disclaimer - Information that may be provided by the customer, and contained within this report, include Permit Limits, Project Name, Sample ID, Sample Matrix, Sample Preservation, Field Blanks, Field Spikes, Field Duplicates, On-Site Data, Sampling Collection Dates/Times, and Sampling Location. Results relate to the accuracy of this information provided, and as the samples are received.

Abbreviations and Definitions

(dry)	Results are reported based on the dry weight of the sample. [this will only be present on a dry report basis for soils].
MDL	Method Detection Limit.
MDL (dry)	Method Detection Limit.
RDL	Reported Detection Limit.
RDL (dry)	Reported Detection Limit.
Rec.	Recovery.
RPD	Relative Percent Difference.
SDG	Sample Delivery Group.
(S)	Surrogate (Surrogate Standard) - Analytes added to every blank, sample, Laboratory Control Sample/Duplicate and Matrix Spike/Duplicate; used to evaluate analytical efficiency by measuring recovery. Surrogates are not expected to be detected in all environmental media.
U	Not detected at the Reporting Limit (or MDL where applicable).
Analyte	The name of the particular compound or analysis performed. Some Analyses and Methods will have multiple analytes reported.
Dilution	If the sample matrix contains an interfering material, the sample preparation volume or weight values differ from the standard, or if concentrations of analytes in the sample are higher than the highest limit of concentration that the laboratory can accurately report, the sample may be diluted for analysis. If a value different than 1 is used in this field, the result reported has already been corrected for this factor.
Limits	These are the target % recovery ranges or % difference value that the laboratory has historically determined as normal for the method and analyte being reported. Successful QC Sample analysis will target all analytes recovered or duplicated within these ranges.
Original Sample	The non-spiked sample in the prep batch used to determine the Relative Percent Difference (RPD) from a quality control sample. The Original Sample may not be included within the reported SDG.
Qualifier	This column provides a letter and/or number designation that corresponds to additional information concerning the result reported. If a Qualifier is present, a definition per Qualifier is provided within the Glossary and Definitions page and potentially a discussion of possible implications of the Qualifier in the Case Narrative if applicable.
Result	The actual analytical final result (corrected for any sample specific characteristics) reported for your sample. If there was no measurable result returned for a specific analyte, the result in this column may state “ND” (Not Detected) or “BDL” (Below Detectable Levels). The information in the results column should always be accompanied by either an MDL (Method Detection Limit) or RDL (Reporting Detection Limit) that defines the lowest value that the laboratory could detect or report for this analyte.
Uncertainty (Radiochemistry)	Confidence level of 2 sigma.
Case Narrative (Cn)	A brief discussion about the included sample results, including a discussion of any non-conformances to protocol observed either at sample receipt by the laboratory from the field or during the analytical process. If present, there will be a section in the Case Narrative to discuss the meaning of any data qualifiers used in the report.
Quality Control Summary (Qc)	This section of the report includes the results of the laboratory quality control analyses required by procedure or analytical methods to assist in evaluating the validity of the results reported for your samples. These analyses are not being performed on your samples typically, but on laboratory generated material.
Sample Chain of Custody (Sc)	This is the document created in the field when your samples were initially collected. This is used to verify the time and date of collection, the person collecting the samples, and the analyses that the laboratory is requested to perform. This chain of custody also documents all persons (excluding commercial shippers) that have had control or possession of the samples from the time of collection until delivery to the laboratory for analysis.
Sample Results (Sr)	This section of your report will provide the results of all testing performed on your samples. These results are provided by sample ID and are separated by the analyses performed on each sample. The header line of each analysis section for each sample will provide the name and method number for the analysis reported.
Sample Summary (Ss)	This section of the Analytical Report defines the specific analyses performed for each sample ID, including the dates and times of preparation and/or analysis.

Qualifier	Description
C3	The reported concentration is an estimate. The continuing calibration standard associated with this data responded low. Method sensitivity check is acceptable.
J	The identification of the analyte is acceptable; the reported value is an estimate.
J2	Surrogate recovery limits have been exceeded; values are outside lower control limits.
J3	The associated batch QC was outside the established quality control range for precision.
J4	The associated batch QC was outside the established quality control range for accuracy.
J5	The sample matrix interfered with the ability to make any accurate determination; spike value is high.
J6	The sample matrix interfered with the ability to make any accurate determination; spike value is low.
V	The sample concentration is too high to evaluate accurate spike recoveries.

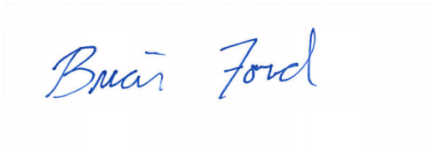
Unless qualified or notated within the narrative below, all sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times. Where applicable, all MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.



Brian Ford
Project Manager

Volatile Organic Compounds (GC/MS) by Method 8260D

The reported concentration is an estimate. The continuing calibration standard associated with this data responded low. Data is likely to show a low bias concerning the result.

Batch	Lab Sample ID	Analytes
WG1910764	L1523339-01	1,2,3-Trichlorobenzene and 1,2,4-Trichlorobenzene
WG1910764	L1523339-02	1,2,3-Trichlorobenzene and 1,2,4-Trichlorobenzene
WG1910764	L1523339-03	1,2,3-Trichlorobenzene and 1,2,4-Trichlorobenzene
WG1910764	L1523339-04	1,2,3-Trichlorobenzene and 1,2,4-Trichlorobenzene
WG1910764	L1523339-06	1,2,3-Trichlorobenzene and 1,2,4-Trichlorobenzene

The reported concentration is an estimate. The continuing calibration standard associated with this data responded low. Method sensitivity check is acceptable.

Batch	Lab Sample ID	Analytes
WG1910764	L1523339-01	Hexachloro-1,3-butadiene, Naphthalene and Vinyl acetate
WG1910764	L1523339-02	Hexachloro-1,3-butadiene, Naphthalene and Vinyl acetate
WG1910764	L1523339-03	Hexachloro-1,3-butadiene, Naphthalene and Vinyl acetate
WG1910764	L1523339-04	Hexachloro-1,3-butadiene, Naphthalene and Vinyl acetate
WG1910764	L1523339-06	Hexachloro-1,3-butadiene, Naphthalene and Vinyl acetate

The associated batch QC was outside the established quality control range for precision.

Batch	Lab Sample ID	Analytes
WG1910764	(LCSD) R3826595-2, L1523339-01, 02, 03, 04, 06	Vinyl acetate

EDB / DBCP by Method 8011

The associated batch QC was above the established quality control range for accuracy.

Batch	Lab Sample ID	Analytes
WG1911861	(LCSD) R3826997-5, L1523339-02, 03	Ethylene Dibromide

Semi-Volatile Organic Compounds (GC) by Method AK102

Surrogate recovery limits have been exceeded; values are outside upper control limits.

Batch	Analyte	Lab Sample ID
WG1908113	o-Terphenyl	(LCS) R3824911-2, (LCSD) R3824911-3

GLOSSARY OF TERMS

Guide to Reading and Understanding Your Laboratory Report

The information below is designed to better explain the various terms used in your report of analytical results from the Laboratory. This is not intended as a comprehensive explanation, and if you have additional questions please contact your project representative.

Results Disclaimer - Information that may be provided by the customer, and contained within this report, include Permit Limits, Project Name, Sample ID, Sample Matrix, Sample Preservation, Field Blanks, Field Spikes, Field Duplicates, On-Site Data, Sampling Collection Dates/Times, and Sampling Location. Results relate to the accuracy of this information provided, and as the samples are received.

Abbreviations and Definitions

MDL	Method Detection Limit.
RDL	Reported Detection Limit.
Rec.	Recovery.
RPD	Relative Percent Difference.
SDG	Sample Delivery Group.
(S)	Surrogate (Surrogate Standard) - Analytes added to every blank, sample, Laboratory Control Sample/Duplicate and Matrix Spike/Duplicate; used to evaluate analytical efficiency by measuring recovery. Surrogates are not expected to be detected in all environmental media.
U	Not detected at the Reporting Limit (or MDL where applicable).
Analyte	The name of the particular compound or analysis performed. Some Analyses and Methods will have multiple analytes reported.
Dilution	If the sample matrix contains an interfering material, the sample preparation volume or weight values differ from the standard, or if concentrations of analytes in the sample are higher than the highest limit of concentration that the laboratory can accurately report, the sample may be diluted for analysis. If a value different than 1 is used in this field, the result reported has already been corrected for this factor.
Limits	These are the target % recovery ranges or % difference value that the laboratory has historically determined as normal for the method and analyte being reported. Successful QC Sample analysis will target all analytes recovered or duplicated within these ranges.
Original Sample	The non-spiked sample in the prep batch used to determine the Relative Percent Difference (RPD) from a quality control sample. The Original Sample may not be included within the reported SDG.
Qualifier	This column provides a letter and/or number designation that corresponds to additional information concerning the result reported. If a Qualifier is present, a definition per Qualifier is provided within the Glossary and Definitions page and potentially a discussion of possible implications of the Qualifier in the Case Narrative if applicable.
Result	The actual analytical final result (corrected for any sample specific characteristics) reported for your sample. If there was no measurable result returned for a specific analyte, the result in this column may state “ND” (Not Detected) or “BDL” (Below Detectable Levels). The information in the results column should always be accompanied by either an MDL (Method Detection Limit) or RDL (Reporting Detection Limit) that defines the lowest value that the laboratory could detect or report for this analyte.
Uncertainty (Radiochemistry)	Confidence level of 2 sigma.
Case Narrative (Cn)	A brief discussion about the included sample results, including a discussion of any non-conformances to protocol observed either at sample receipt by the laboratory from the field or during the analytical process. If present, there will be a section in the Case Narrative to discuss the meaning of any data qualifiers used in the report.
Quality Control Summary (Qc)	This section of the report includes the results of the laboratory quality control analyses required by procedure or analytical methods to assist in evaluating the validity of the results reported for your samples. These analyses are not being performed on your samples typically, but on laboratory generated material.
Sample Chain of Custody (Sc)	This is the document created in the field when your samples were initially collected. This is used to verify the time and date of collection, the person collecting the samples, and the analyses that the laboratory is requested to perform. This chain of custody also documents all persons (excluding commercial shippers) that have had control or possession of the samples from the time of collection until delivery to the laboratory for analysis.
Sample Results (Sr)	This section of your report will provide the results of all testing performed on your samples. These results are provided by sample ID and are separated by the analyses performed on each sample. The header line of each analysis section for each sample will provide the name and method number for the analysis reported.
Sample Summary (Ss)	This section of the Analytical Report defines the specific analyses performed for each sample ID, including the dates and times of preparation and/or analysis.

Qualifier	Description
C3	The reported concentration is an estimate. The continuing calibration standard associated with this data responded low. Method sensitivity check is acceptable.
C4	The reported concentration is an estimate. The continuing calibration standard associated with this data responded low. Data is likely to show a low bias concerning the result.
J	The identification of the analyte is acceptable; the reported value is an estimate.
J1	Surrogate recovery limits have been exceeded; values are outside upper control limits.
J3	The associated batch QC was outside the established quality control range for precision.
J4	The associated batch QC was outside the established quality control range for accuracy.

Table of Contents

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

GC/MS Semi VOA

Qualifier	Qualifier Description
*1	LCS/LCSD RPD exceeds control limits.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
S1-	Surrogate recovery exceeds control limits, low biased.

GC Semi VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

LCMS

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Metals

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

General Chemistry

Qualifier	Qualifier Description
*+	LCS and/or LCSD is outside acceptance limits, high biased.
H3	Sample was received and analyzed past holding time.
HF	Field parameter with a holding time of 15 minutes. Test performed by laboratory at client's request.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)

Glossary (Continued)

Abbreviation	These commonly used abbreviations may or may not be present in this report.
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job ID: 320-90869-1

Laboratory: Eurofins Sacramento

Narrative

Receipt
The sample was received on 8/10/2022 9:30 AM. Unless otherwise noted below, the sample arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 2.0º C.

Receipt Exceptions

Client requested for method AK102, 103, however no container AGB with HCL was submitted to the lab.IDW-W-082022 (320-90869-1). Following discussion with client, lab will use one 250ml unpreserved amber glass container and preserve for method AK102/103 analysis.

Limited Vials were received for method AK101, and 8260D. The lab received 3 vials.IDW-W-082022 (320-90869-1). As such, the sample was analyzed for method 8260D only.

GC/MS VOA
Methods 8260D: The continuing calibration verification (CCV) associated with batch 280-584171 recovered above the upper control limit for Vinyl Acetate (21.5 Limit 20). The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method 8260D: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with analytical batch 280-584171.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC/MS Semi VOA
Method 8270D: Surrogate recovery for the following sample was outside control limits: IDW-W-082022 (320-90869-1). Evidence of matrix interference is present; therefore, re-extraction and/or re-analysis was not performed.

Method 8270D: The RPD of the laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) for preparation batch 320-609049 and analytical batch 320-611138 recovered outside control limits for the following analytes: Benzoic acid.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

LCMS
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

General Chemistry
Method 9040C: This analysis is normally performed in the field and has a method-defined holding time of 15 minutes. The following samples in analytical batch 320-608896 have been qualified with the "HF" flag to indicate analysis was performed in the laboratory outside the 15 minute timeframe: IDW-W-082022 (320-90869-1), (320-90763-J-1) and (320-90763-J-1 DU).

Methods 1010B: The laboratory control sample (LCS) and / or laboratory control sample duplicate (LCSD) for analytical batch 280-584417 recovered outside control limits for the following analytes: flashpoint. This analyte was biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

Methods 1010B: The following sample was not associated with a duplicate as none of these samples had a detectable flashpoint. IDW-W-082022 (320-90869-1)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Organic Prep
Method 3510C: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with

Job ID: 320-90869-1 (Continued)

Laboratory: Eurofins Sacramento (Continued)

method 8270D SIM aqueous in preparation batch 320-608789.

Method 3510C: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with method 8270D aqueous in preparation batch 320-609049.

Method 3510C: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with method AK102/103 aqueous in preparation batch 320-610616.

Method 3535: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with method 537 Mod aqueous in preparation batch 320-610673.

Method 3535: During the solid phase extraction process, the following samples contained non-settable particulates which clogged the solid phase extraction column: IDW-W-082022 (320-90869-1).
Preparation batch 320-610673

Method 3535: The following samples in preparation batch 320-610673 were observed to have a thin layer of sediment present in the bottom of the bottle prior to extraction. IDW-W-082022 (320-90869-1)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Qualifiers

GC/MS Semi VOA

Qualifier	Qualifier Description
*-	LCS and/or LCSD is outside acceptance limits, low biased.
F1	MS and/or MSD recovery exceeds control limits.
H	Sample was prepped or analyzed beyond the specified holding time
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
S1+	Surrogate recovery exceeds control limits, high biased.

GC Semi VOA

Qualifier	Qualifier Description
F1	MS and/or MSD recovery exceeds control limits.
F2	MS/MSD RPD exceeds control limits
S1-	Surrogate recovery exceeds control limits, low biased.

LCMS

Qualifier	Qualifier Description
I	Value is EMPC (estimated maximum possible concentration).
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Metals

Qualifier	Qualifier Description
B	Compound was found in the blank and sample.
H	Sample was prepped or analyzed beyond the specified holding time
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)

Glossary (Continued)

Abbreviation	These commonly used abbreviations may or may not be present in this report.
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job ID: 320-90872-1

Laboratory: Eurofins Sacramento

Narrative

Receipt
The sample was received on 8/10/2022 9:30 AM. Unless otherwise noted below, the sample arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 2.0º C.

Receipt Exceptions

The COC did not indicate to run method 8260, however client was contacted and has confirmed to run method for 8260.IDW-S-082022 (320-90872-1)

The client had submitted soil sample for AK101 without properly preserving the soil with MeOH. The PM will provide instruction for the lab to properly preserve the sample.IDW-S-082022 (320-90872-1)

GC/MS VOA
Methods 8260D: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate/sample duplicate (MS/MSD/DUP) associated with preparation batch 280-584275 and analytical batch 280-584539.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC/MS Semi VOA
Method 8270D: Surrogate recovery for the following laboratory control sample and laboratory control sample duplicate were outside the upper control limit: (LCS 320-612033/2-A) and (LCSD 320-612033/3-A). The samples associated to these LCS and LCSD did not contain any target analytes; therefore, re-extraction and/or re-analysis was not performed

Method 8270D SIM: The laboratory control sample/laboratory control sample duplicate (LCS/LCSD) and matrix spike duplicate (MSD) for preparation batch 320-610232 and analytical batch 320-613668 recovered outside control limits for multiple analytes. The associated samples were re-prepared outside holding time. Both sets of data have been reported.

Method 8270D SIM: The matrix spike (MS) recoveries for preparation batch 320-618253 and analytical batch 320-618843 were outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC Semi VOA
Method AK102 & 103: Surrogate recovery was outside acceptance limits for the following matrix spike(MS) sample: (320-90872-D-1-E MS). The parent sample's surrogate recovery was within limits. The MS/MSD sample has been qualified and reported.

Method AK102 & 103: The matrix spike / matrix spike duplicate (MS/MSD) recoveries and precision for preparation batch 320-609716 and 320-609716 and analytical batch 320-609995 were outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample / laboratory sample control duplicate (LCS/LCSD) precision was within acceptance limits.

Method AK102 & 103: The following sample contained a hydrocarbon pattern in the diesel range; however, the elution pattern was later than the typical diesel fuel pattern used by the laboratory for quantitative purposes: IDW-S-082022 (320-90872-1).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals
Method 7470A: The following sample was analyzed outside of analytical holding time due to instrumentation issues. The sample could not be analyzed within the holding time. IDW-S-082022 (320-90872-1).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Job ID: 320-90872-1 (Continued)

Laboratory: Eurofins Sacramento (Continued)

LCMS

Method EPA 537(Mod): The Isotope Dilution Analyte (IDA) recovery associated with the following sample is below the method recommended limit: (LCS 320-610866/2-A). Generally, data quality is not considered affected if the IDA signal-to-noise ratio is greater than 10:1, which is achieved for all IDA in the sample(s).

Method EPA 537(Mod): The "I" qualifier means the transition mass ratio for the indicated analyte was below the established ratio limits. The qualitative identification of the analyte has some degree of uncertainty. However, analyst judgment was used to positively identify the analyte. IDW-S-082022 (320-90872-1)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Geotechnical

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep

Method 3510C: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with method 8270C/8270D aqueous in preparation batch 320-610196 and 320-612033.

Method 3550B: The following samples were re-prepared outside of preparation holding time due to low recovery of the laboratory control sample: IDW-S-082022 (320-90872-1), (320-90872-D-1 MS) and (320-90872-D-1 MSD).
Samples are associated with method 3550B 8270DSIM solids in preparation batch 320-618253.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Qualifiers

GC VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job ID: 320-91899-1

Laboratory: Eurofins Sacramento

Narrative

Receipt
The samples were received on 9/10/2022 9:15 AM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 7.5º C.

Receipt Exceptions

The following samples were received at the laboratory outside the required temperature criteria: IDW-S-092022 (320-91899-1) and IDW-W-092022 (320-91899-2). Samples were received out of temp at 7.5C. There was two ziploc bags of ice but samples were heavily bubbled wrapped and no temp blank was provided.

GC/MS VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

GC VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Accreditation/Certification Summary

Client: ARCADIS U.S. Inc
Job ID: 320-91899-1
Project/Site: 30064227.0742, 309152 Saupe

Laboratory: Eurofins Denver

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	Identification Number	Expiration Date
Alaska (UST)	State	18-001	02-08-23

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
8260D		Water	1,1-Dichloropropene
8260D		Water	1,2-Dibromo-3-Chloropropane
8260D		Water	1,3-Dichloropropane
8260D		Water	2,2-Dichloropropane
8260D		Water	2-Chlorotoluene
8260D		Water	4-Chlorotoluene
8260D		Water	Bromochloromethane
8260D		Water	p-Isopropyltoluene
8260D	5035	Solid	1,1-Dichloropropene

Jill,

Good news! Both the regulator and the landfill said they were fine with the temp issue. Let's run them.

Thanks,

Sean

Hi Sean,

The samples have a 14 day holding time and they were collected 9/8. I still need to ship them to Denver for the analysis. I'd like to give them a week to be able to analyze.

Thank you

Jill Kellmann

Jill,

I talked with US Ecology and they said they don't care about being out of temp which is great. However, we still need ADEC to approve.

How much longer can we keep these on hold before we need to make a decision?

Best,

Sean

Jill,

This is unfortunate news. Looks like it got to the lab in under 24 hours too. Was a temperature blank not sent with the kit? You mentioned heavy bubble wrap; did the kits get sent out with unusual bubble wrap or something?

Let's put the samples on hold. I will contact ADEC and waste facility so see if we can get around this issue. I will get back to you as soon as I hear from those two.

Best,

Sean

Subject: Eurofins Environment Testing Northern California, LLC sample confirmation files from 320-91899-1 30064227.0742, 309152 Saupe

Hello,

Attached please find the sample confirmation files for job 320-91899-1; 30064227.0742, 309152 Saupe.

Receipt
The samples were received on 9/10/2022 9:15 AM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 7.5º C.

Receipt Exceptions

The following samples were received at the laboratory outside the required temperature criteria: IDW-S-092022 (320-91899-1) and IDW-W-092022 (320-91899-2). Samples were received out of temp at 7.5C. There was two ziploc bags of ice but samples were heavily bubbled wrapped and no temp blank was provided.

The laboratory will proceed unless otherwise notified.

Please feel free to contact me if you have any questions.

Thank you.

COMMENTS OR OTHER IMPORTANT INFORMATION
Soil cuttings generated during field activities contained in DOT-approved new 1x 55-gallon steel drum and 5x super sacks (approx. 180 gallons). The investigation derived waste (IDW) was appropriately labeled and stored on site pending characterizations. The site deviated from the site's work plan and gathered composite samples for characterization. Following receipt of laboratory analytical data and ADEC approval, the IDW will be transported off site.

Instructions to Complete
Contaminated Media Transport and Treatment or Disposal Approval Form

The Alaska Department of Environmental Conservation (DEC) must approve the movement or disposal of contaminated soil and water from a site in accordance with 18 Alaska Administrative Code (AAC) 75.325(i), 18 AAC 75.370(b), and 18 AAC 78.274(b). The *Contaminated Media Transport and Treatment or Disposal Approval Form* should be used to document this approval. Soil treatment facilities regulated under 18 AAC 75.365 are required by their Operations Plans to only accept contaminated soil for which an approval form has been signed by a DEC project manager.

Site information can be found on the Contaminated Site Database (www.alaska.gov/Applications/SPAR/PublicMVC/CSP/Search/) or the Spills Database (http://dec.alaska.gov/Applications/SPAR/PublicMVC/PERP/SpillSearch).

Instructions to Complete:

1. **Hazard ID or Spill ID #:** For a contaminated site, the Hazard ID can be found on the Contaminated Sites Database. For a spill, the Spill ID can be found in the subject line of letters from DEC or the Spills Database. If the waste originates from multiple sites, all Hazard IDs or Spill IDs must be listed.

2. **Name of Contaminated Site or Spill:** For a contaminated site, the official site name can be found on the Contaminated Sites Database. For a spill, the official name of the spill is found in the subject line of letters from DEC or the Spills Database.

3. **Contaminated Site or Spill Location – Address or Other Appropriate Description:** This address or description captures the origin of the contaminated media or the location of the spill. For a contaminated site, the address or other appropriate description can be found on the Contaminated Sites Database. For a spill, this can be found on the Spill Report or the Spills Database.

4. **Current Physical Location of the Media:** Provide the physical location where the contaminated media (soil, water, etc.) is currently stored. This location may be the same as location provided in the "Contaminated Site or Spill Location", or it could be a hazardous waste facility or other location/staging area agreed upon in the DEC-approved work plan.

5. **Source of Contamination (Day Tank, Fire Training Pit, LUST, etc.):** List all sources which contributed to the contamination in the media being transported. Sources can include previous releases that have comingled. If the source is unknown, state "Unknown".

6. **Contaminants of Concern (CoCs):** List all contaminants detected above the most stringent Method 2 Tables B1 and B2 soil cleanup levels in 18 AAC 75.341(c) and (d), the Table C groundwater cleanup levels in 18 AAC 75.345, and other applicable action levels (e.g., TCLP results). Attach the laboratory data package for the contaminated media that is being disposed of and, if applicable, a data summary table or narrative to this form. Data gathered during site characterization activities may be sufficient to determine the CoCs. There are situations in which generator knowledge of the contaminant source may be accepted by a treatment or disposal facility in lieu of analytical sample results, such as, diesel-impacted media from a heating oil tank. If you are using generator knowledge in lieu of analytical sample results, include a statement which documents this knowledge in the Comments section.

7. **Estimated Volume:** Include the total volume of contaminated media to be transported; for instance, "Nine 55-gallon drums" or ""25 cubic yards of soil."

8. **Date(s) Generated:** Provide the date the media was generated (e.g., excavated, pumped out of the ground, etc.). If the media was generated over multiple days, list the range of dates.

9. **Post Treatment Analysis Required (such as GRO, DRO, RRO, VOCs, PAHs, metals, PFAS, chlorinated solvents, etc.):** Provide the list of all contaminants that exceed the most stringent Method 2 cleanup levels. For DEC-approved soil treatment facilities in Alaska, specific post treatment analyses will be determined by the facility based upon the contaminants and requirements of their Operations Plan. If the media are being transported to a landfill or permitted liquid waste facility without off-site treatment, include "Not Applicable".

10. **Comments or Other Important Information:** Provide any other information which needs to be conveyed.
    a. If generator knowledge of the CoCs is being used in lieu of sample analytical results, an explanation needs to be provided in this field.
    b. If the material is going to be placed in a landfill in Alaska, include a statement that the landfill has agreed to accept the material and provide the contact information for the landfill point of contact. If the material is going to be placed in a Class 2 or 3 landfill, attach the DEC Solid Waste Program's approval letter to this form.
    c. If the media is going to an intermediate location or facility prior to its final destination, describe the complete transportation route with intermediate locations in this field.

11. **Treatment Facility, Landfill, and/or Final Destination of Media:** Include the name of the facility, landfill, or the final destination of the media. A list of DEC-approved Alaskan soil treatment facilities is available at www.dec.alaska.gov/spar/csp/offsite-remediation/. If multiple treatment facilities will be used, use separate forms to document what media will go to which facility. For material that will go to a waste transfer facility prior to disposal at another facility, the final destination should be listed.
    a. **Physical Address/Phone Number:** Provide the physical location and telephone number of the facility, landfill, or the final destination of the media.

12. **Responsible Party:** Provide the name of the party responsible for the contaminated site or spill.
    a. **Address/Phone Number:** Provide the mailing address and telephone number of the responsible party.

13. **Waste Management Co./Organizer:** Provide the name of company or person shipping and/or organizing the shipment of the media.
    a. **Address/Phone Number:** Provide the mailing address and telephone number of the waste management company or organizer.

Submit this completed form along with all necessary attachments to the assigned DEC project manager for approval, or contact the Contaminated Sites Program at (907) 269-7558 or the Prevention, Preparedness and Response Program at (907) 269-7557.

COMMENTS OR OTHER IMPORTANT INFORMATION
Purge and decontaminating water generated during the field activities were contained in 2x DOT-approved new steel 55 gallon drums. The investigation derived wastes (IDW) will be appropriately labeled and stored on site pending characterization. The site deviated from the work plan and took composite samples. Following receipt of laboratory analytical data and ADEC approval, the IDW will be transported off site.

----------DEC USE ONLY----------

Based on the information provided, ADEC approves transport of the above mentioned material. The Responsible Party or their consultant must submit to the DEC Project Manager a copy of weight receipts of the loads transported and a post treatment analytical report, if disposed of at an approved treatment facility. The contaminated soil shall be transported as a covered load in compliance with 18 AAC 60.015.

Instructions to Complete
Contaminated Media Transport and Treatment or Disposal Approval Form

The Alaska Department of Environmental Conservation (DEC) must approve the movement or disposal of contaminated soil and water from a site in accordance with 18 Alaska Administrative Code (AAC) 75.325(i), 18 AAC 75.370(b), and 18 AAC 78.274(b). The *Contaminated Media Transport and Treatment or Disposal Approval Form* should be used to document this approval. Soil treatment facilities regulated under 18 AAC 75.365 are required by their Operations Plans to only accept contaminated soil for which an approval form has been signed by a DEC project manager.

Site information can be found on the Contaminated Site Database (www.alaska.gov/Applications/SPAR/PublicMVC/CSP/Search/) or the Spills Database (http://dec.alaska.gov/Applications/SPAR/PublicMVC/PERP/SpillSearch).

Instructions to Complete:

1. **Hazard ID or Spill ID #:** For a contaminated site, the Hazard ID can be found on the Contaminated Sites Database. For a spill, the Spill ID can be found in the subject line of letters from DEC or the Spills Database. If the waste originates from multiple sites, all Hazard IDs or Spill IDs must be listed.

2. **Name of Contaminated Site or Spill:** For a contaminated site, the official site name can be found on the Contaminated Sites Database. For a spill, the official name of the spill is found in the subject line of letters from DEC or the Spills Database.

3. **Contaminated Site or Spill Location – Address or Other Appropriate Description:** This address or description captures the origin of the contaminated media or the location of the spill. For a contaminated site, the address or other appropriate description can be found on the Contaminated Sites Database. For a spill, this can be found on the Spill Report or the Spills Database.

4. **Current Physical Location of the Media:** Provide the physical location where the contaminated media (soil, water, etc.) is currently stored. This location may be the same as location provided in the "Contaminated Site or Spill Location", or it could be a hazardous waste facility or other location/staging area agreed upon in the DEC-approved work plan.

5. **Source of Contamination (Day Tank, Fire Training Pit, LUST, etc.):** List all sources which contributed to the contamination in the media being transported. Sources can include previous releases that have comingled. If the source is unknown, state "Unknown".

6. **Contaminants of Concern (CoCs):** List all contaminants detected above the most stringent Method 2 Tables B1 and B2 soil cleanup levels in 18 AAC 75.341(c) and (d), the Table C groundwater cleanup levels in 18 AAC 75.345, and other applicable action levels (e.g., TCLP results). Attach the laboratory data package for the contaminated media that is being disposed of and, if applicable, a data summary table or narrative to this form. Data gathered during site characterization activities may be sufficient to determine the CoCs. There are situations in which generator knowledge of the contaminant source may be accepted by a treatment or disposal facility in lieu of analytical sample results, such as, diesel-impacted media from a heating oil tank. If you are using generator knowledge in lieu of analytical sample results, include a statement which documents this knowledge in the Comments section.

7. **Estimated Volume:** Include the total volume of contaminated media to be transported; for instance, "Nine 55-gallon drums" or ""25 cubic yards of soil."

8. **Date(s) Generated:** Provide the date the media was generated (e.g., excavated, pumped out of the ground, etc.). If the media was generated over multiple days, list the range of dates.

9. **Post Treatment Analysis Required (such as GRO, DRO, RRO, VOCs, PAHs, metals, PFAS, chlorinated solvents, etc.):** Provide the list of all contaminants that exceed the most stringent Method 2 cleanup levels. For DEC-approved soil treatment facilities in Alaska, specific post treatment analyses will be determined by the facility based upon the contaminants and requirements of their Operations Plan. If the media are being transported to a landfill or permitted liquid waste facility without off-site treatment, include "Not Applicable".

10. **Comments or Other Important Information:** Provide any other information which needs to be conveyed.
    a. If generator knowledge of the CoCs is being used in lieu of sample analytical results, an explanation needs to be provided in this field.
    b. If the material is going to be placed in a landfill in Alaska, include a statement that the landfill has agreed to accept the material and provide the contact information for the landfill point of contact. If the material is going to be placed in a Class 2 or 3 landfill, attach the DEC Solid Waste Program's approval letter to this form.
    c. If the media is going to an intermediate location or facility prior to its final destination, describe the complete transportation route with intermediate locations in this field.

11. **Treatment Facility, Landfill, and/or Final Destination of Media:** Include the name of the facility, landfill, or the final destination of the media. A list of DEC-approved Alaskan soil treatment facilities is available at www.dec.alaska.gov/spar/csp/offsite-remediation/. If multiple treatment facilities will be used, use separate forms to document what media will go to which facility. For material that will go to a waste transfer facility prior to disposal at another facility, the final destination should be listed.
    a. **Physical Address/Phone Number:** Provide the physical location and telephone number of the facility, landfill, or the final destination of the media.

12. **Responsible Party:** Provide the name of the party responsible for the contaminated site or spill.
    a. **Address/Phone Number:** Provide the mailing address and telephone number of the responsible party.

13. **Waste Management Co./Organizer:** Provide the name of company or person shipping and/or organizing the shipment of the media.
    a. **Address/Phone Number:** Provide the mailing address and telephone number of the waste management company or organizer.

Submit this completed form along with all necessary attachments to the assigned DEC project manager for approval, or contact the Contaminated Sites Program at (907) 269-7558 or the Prevention, Preparedness and Response Program at (907) 269-7557.

Laboratory Data Review Checklist

Completed By:

Bhagyashree A Fulzele

Title:

Project Chemist

Date:

September 30, 2022

Consultant Firm:

ARCADIS U.S., Inc

Laboratory Name:

Pace Analytical

Laboratory Report Number:

L1522335

Laboratory Report Date:

08/19/2022

CS Site Name:

Third Quarter 2022 Groundwater Monitoring Report

ADEC File Number:

100.38.206

Hazard Identification Number:

4314

Note: Any N/A or No box checked must have an explanation in the comments box.

1. Laboratory

   a. Did an ADEC CS approved laboratory receive and perform all of the submitted sample analyses?

   Yes☒ No☐ N/A☐ Comments:

Yes.

   b. If the samples were transferred to another "network" laboratory or sub-contracted to an alternate laboratory, was the laboratory performing the analyses ADEC CS approved?

   Yes☐ No☐ N/A☒ Comments:

Not applicable.

2. Chain of Custody (CoC)

   a. CoC information completed, signed, and dated (including released/received by)?

   Yes☒ No☐ N/A☐ Comments:

Yes.

   b. Correct analyses requested?

   Yes☒ No☐ N/A☐ Comments:

Yes.

3. Laboratory Sample Receipt Documentation

   a. Sample/cooler temperature documented and within range at receipt (0° to 6° C)?

   Yes☒ No☐ N/A☐ Comments:

Yes.

   b. Sample preservation acceptable – acidified waters, Methanol preserved VOC soil (GRO, BTEX, Volatile Chlorinated Solvents, etc.)?

   Yes☒ No☐ N/A☐ Comments:

Yes.

   c. Sample condition documented – broken, leaking (Methanol), zero headspace (VOC vials)?

   Yes☒ No☐ N/A☐ Comments:

Yes.

   d. If there were any discrepancies, were they documented? For example, incorrect sample containers/preservation, sample temperature outside of acceptable range, insufficient or missing samples, etc.?

   Yes☒ No☐ N/A☐ Comments:

Yes, no discrepancies.

e. Data quality or usability affected?

Comments:

Data quality/usability was not affected.

4. Case Narrative

a. Present and understandable?

Yes☒ No☐ N/A☐ Comments:

Yes.

b. Discrepancies, errors, or QC failures identified by the lab?

Yes☒ No☐ N/A☐ Comments:

Yes.

c. Were all corrective actions documented?

Yes☒ No☐ N/A☐ Comments:

Yes.

d. What is the effect on data quality/usability according to the case narrative?

Comments:

Data quality/usability was not affected.

5. Samples Results

a. Correct analyses performed/reported as requested on COC?

Yes☒ No☐ N/A☐ Comments:

Yes.

b. All applicable holding times met?

Yes☒ No☐ N/A☐ Comments:

Yes.

c. All soils reported on a dry weight basis?

Yes☒ No☐ N/A☐ Comments:

Yes.

d. Are the reported LOQs less than the Cleanup Level or the minimum required detection level for the project?

Yes☒ No☐ N/A☐ Comments:

Yes.

e. Data quality or usability affected?

Data quality/usability was not affected.

6. QC Samples

a. Method Blank

i. One method blank reported per matrix, analysis and 20 samples?

Yes☒ No☐ N/A☐ Comments:

Yes.

ii. All method blank results less than limit of quantitation (LOQ) or project specified objectives?

Yes☐ No☒ N/A☐ Comments:

No.

iii. If above LOQ or project specified objectives, what samples are affected?

Comments:

Method AK102: Compound AK102 DRO C10-C25 (7.95 J mg/kg) was detected below the reporting limit in method blank batch WG1907345. A blank action level was established at five times of the reported blank concentration. Compound result in sample IDs MW-24-S-0.5-1_220803, MW-23-S-0.5-1_220803, MW-23-S-4.5-5_220803, DUP-1_220803, MW-22-S-0.5-1_220803, MW-24-S-4.5-5_220803, MW-24-S-9.5-10_220803, MW-22-S-4.5-5_220803 and MW-22-S-5-5.5_220803 was qualified as non-detect (UB) at reporting limit.

iv. Do the affected sample(s) have data flags? If so, are the data flags clearly defined?

Yes☒ No☐ N/A☐ Comments:

Yes.

v. Data quality or usability affected?

Comments:

Method blank contamination considered as minor and would result in the non-detect of the associated data. The reported data should still consider as usable.

b. Laboratory Control Sample/Duplicate (LCS/LCSD)

i. Organics – One LCS/LCSD reported per matrix, analysis and 20 samples? (LCS/LCSD required per AK methods, LCS required per SW846)

Yes☒ No☐ N/A☐ Comments:

Yes.

ii. Metals/Inorganics – one LCS and one sample duplicate reported per matrix, analysis and 20 samples?

Yes☐ No☐ N/A☒ Comments:

Not applicable.

iii. Accuracy – All percent recoveries (%R) reported and within method or laboratory limits and project specified objectives, if applicable? (AK Petroleum methods: AK101 60%-120%, AK102 75%-125%, AK103 60%-120%; all other analyses see the laboratory QC pages)

Yes☐ No☒ N/A☐ Comments:

Method SW 846 8260D: LCS recovery for compounds 1,2-dichloroethane and 1,2,3-trichloropropane were greater than the control limit in preparation batch WG1907703. Compound were non-detected in any of the associated sample; hence no other qualification of the data was required.

iv. Precision – All relative percent differences (RPD) reported and less than method or laboratory limits and project specified objectives, if applicable? RPD reported from LCS/LCSD, and or sample/sample duplicate. (AK Petroleum methods 20%; all other analyses see the laboratory QC pages)

Yes☒ No☐ N/A☐ Comments:

Yes.

v. If %R or RPD is outside of acceptable limits, what samples are affected?

Comments:

None of the samples were affected.

vi. Do the affected sample(s) have data flags? If so, are the data flags clearly defined?

Yes☒ No☐ N/A☐ Comments:

Yes.

vii. Data quality or usability affected? (Use comment box to explain.)

Comments:

Data quality or usability was not affected.

c. Matrix Spike/Matrix Spike Duplicate (MS/MSD)

Note: Leave blank if not required for project

i. Organics – One MS/MSD reported per matrix, analysis and 20 samples?

Yes☐ No☒ N/A☐ Comments:

MS/MSD analysis was not performed on any of the samples from this SDG.

ii. Metals/Inorganics – one MS and one MSD reported per matrix, analysis and 20 samples?

Yes☐ No☐ N/A☒ Comments:

Not applicable.

iii. Accuracy – All percent recoveries (%R) reported and within method or laboratory limits and project specified objectives, if applicable? (AK Petroleum methods: AK101 60%-120%, AK102 75%-125%, AK103 60%-120%; all other analyses see the laboratory QC pages)

Yes☐ No☐ N/A☒ Comments:

Not applicable.

iv. Precision – All relative percent differences (RPD) reported and less than method or laboratory limits and project specified objectives, if applicable? RPD reported from MS/MSD, and or sample/sample duplicate. (AK Petroleum methods 20%; all other analyses see the laboratory QC pages)

Yes☐ No☐ N/A☒ Comments:

Not applicable.

v. If %R or RPD is outside of acceptable limits, what samples are affected?

Comments:

None of the samples were affected.

vi. Do the affected sample(s) have data flags? If so, are the data flags clearly defined?

Yes☐ No☐ N/A☒ Comments:

Not applicable.

vii. Data quality or usability affected? (Use comment box to explain.)

Comments:

Data quality or usability was not affected.

d. Surrogates – Organics Only or Isotope Dilution Analytes (IDA) – Isotope Dilution Methods Only

i. Are surrogate/IDA recoveries reported for organic analyses – field, QC and laboratory samples?

Yes☒ No☐ N/A☐ Comments:

Yes.

ii. Accuracy – All percent recoveries (%R) reported and within method or laboratory limits and project specified objectives, if applicable? (AK Petroleum methods 50-150 %R; all other analyses see the laboratory report pages)

Yes☒ No☐ N/A☐ Comments:

Yes.

iii. Do the sample results with failed surrogate/IDA recoveries have data flags? If so, are the data flags clearly defined?

Yes☐ No☐ N/A☒ Comments:

Not applicable.

iv. Data quality or usability affected?

Comments:

Data quality or usability was not affected.

e. Trip Blanks

i. One trip blank reported per matrix, analysis and for each cooler containing volatile samples? (If not, enter explanation below.)

Yes☒ No☐ N/A☐ Comments:

Trip blank sample was not collected from this SDG.

ii. Is the cooler used to transport the trip blank and VOA samples clearly indicated on the COC? (If not, a comment explaining why must be entered below)

Yes☐ No☐ N/A☒ Comments:

Not applicable.

iii. All results less than LOQ and project specified objectives?

Yes☐ No☐ N/A☒ Comments:

Not applicable.

iv. If above LOQ or project specified objectives, what samples are affected?

Comments:

None of the samples were affected.

v. Data quality or usability affected?

Comments:

Data quality or usability was not affected.

f. Field Duplicate

i. One field duplicate submitted per matrix, analysis and 10 project samples?

Yes☒ No☐ N/A☐ Comments:

Yes.

ii. Submitted blind to lab?

Yes☒ No☐ N/A☐ Comments:

Field duplicate DUP-1_220803 was collected from sample MW-23-S-4.5-5_220803.

iii. Precision – All relative percent differences (RPD) less than specified project objectives? (Recommended: 30% water, 50% soil)

$$\text{RPD (\%)} = \text{Absolute value of: } \frac{(R_1-R_2)}{((R_1+R_2)/2)} \times 100$$

Where R_1 = Sample Concentration
R_2 = Field Duplicate Concentration

Yes☒ No☐ N/A☐ Comments:

Yes.

iv. Data quality or usability affected? (Use the comment box to explain why or why not.)

Comments:

Data quality or usability was not affected.

g. Decontamination or Equipment Blank (If not applicable, a comment stating why must be entered below)?

Yes☒ No☐ N/A☐ Comments:

Equipment blank sample was not collected from this SDG.

i. All results less than LOQ and project specified objectives?

Yes☐ No☐ N/A☐ Comments:

Not applicable.

ii. If above LOQ or project specified objectives, what samples are affected?

Comments:

None of the samples were affected.

iii. Data quality or usability affected?

Comments:

Data quality or usability was not affected.

7. Other Data Flags/Qualifiers (ACOE, AFCEE, Lab Specific, etc.)

a. Defined and appropriate?

Yes☒ No☐ N/A☐ Comments:

Yes.

8. Additional Laboratory Data Qualification

Method SW846 8260D: Continuing calibration for compounds 1,2-dichloroethane, acrylonitrile, chloromethane and dichlorodifluoromethane exhibited a low bias recovery. Compounds result in sample IDs MW-24-S-0.5-1_220803, MW-23-S-0.5-1_220803, MW-23-S-4.5-5_220803, DUP-1_220803, MW-23-S-9.5-10_220803, MW-22-S-0.5-1_220803, MW-24-S-4.5-5_220803 and MW-24-S-9.5-10_220803 were qualified as estimated (UJ/J). Continuing calibration for compound 1,2,3-trichlorobenzene exhibited a low bias recovery. Compound result in sample ID MW-22-S-4.5-5_220803 was qualified as estimated (UJ). Continuing calibration for compounds 1,2,3-trichlorobenzene and naphthalene exhibited a low bias recovery. Compound result in sample ID MW-22-S-5-5.5_220803was qualified as estimated (UJ).

Laboratory Data Review Checklist

Completed By:

Bhagyashree A Fulzele

Title:

Project Chemist

Date:

September 25, 2022

Consultant Firm:

ARCADIS U.S., Inc

Laboratory Name:

Pace Analytical

Laboratory Report Number:

L1523339

Laboratory Report Date:

08/18/2022

CS Site Name:

Third Quarter 2022 Groundwater Monitoring Report

ADEC File Number:

100.38.206

Hazard Identification Number:

4314

Note: Any N/A or No box checked must have an explanation in the comments box.

1. Laboratory

   a. Did an ADEC CS approved laboratory receive and perform all of the submitted sample analyses?

   Yes☒ No☐ N/A☐ Comments:

Yes.

   b. If the samples were transferred to another "network" laboratory or sub-contracted to an alternate laboratory, was the laboratory performing the analyses ADEC CS approved?

   Yes☐ No☐ N/A☒ Comments:

Not applicable.

2. Chain of Custody (CoC)

   a. CoC information completed, signed, and dated (including released/received by)?

   Yes☒ No☐ N/A☐ Comments:

Yes.

   b. Correct analyses requested?

   Yes☒ No☐ N/A☐ Comments:

Yes.

3. Laboratory Sample Receipt Documentation

   a. Sample/cooler temperature documented and within range at receipt (0° to 6° C)?

   Yes☒ No☐ N/A☐ Comments:

Yes.

   b. Sample preservation acceptable – acidified waters, Methanol preserved VOC soil (GRO, BTEX, Volatile Chlorinated Solvents, etc.)?

   Yes☒ No☐ N/A☐ Comments:

Yes.

   c. Sample condition documented – broken, leaking (Methanol), zero headspace (VOC vials)?

   Yes☒ No☐ N/A☐ Comments:

Yes.

   d. If there were any discrepancies, were they documented? For example, incorrect sample containers/preservation, sample temperature outside of acceptable range, insufficient or missing samples, etc.?

   Yes☒ No☐ N/A☐ Comments:

Yes, no discrepancies.

e. Data quality or usability affected?

Comments:

Data quality/usability was not affected.

4. Case Narrative

a. Present and understandable?

Yes☒ No☐ N/A☐ Comments:

Yes.

b. Discrepancies, errors, or QC failures identified by the lab?

Yes☒ No☐ N/A☐ Comments:

Yes.

c. Were all corrective actions documented?

Yes☒ No☐ N/A☐ Comments:

Yes.

d. What is the effect on data quality/usability according to the case narrative?

Comments:

Data quality/usability was not affected.

5. Samples Results

a. Correct analyses performed/reported as requested on COC?

Yes☒ No☐ N/A☐ Comments:

Yes.

b. All applicable holding times met?

Yes☒ No☐ N/A☐ Comments:

Yes.

c. All soils reported on a dry weight basis?

Yes☐ No☒ N/A☐ Comments:

No soil samples were submitted for analysis.

d. Are the reported LOQs less than the Cleanup Level or the minimum required detection level for the project?

Yes☒ No☐ N/A☐ Comments:

Yes.

e. Data quality or usability affected?

Data quality/usability was not affected.

6. QC Samples

a. Method Blank

i. One method blank reported per matrix, analysis and 20 samples?

Yes☒ No☐ N/A☐ Comments:

Yes.

ii. All method blank results less than limit of quantitation (LOQ) or project specified objectives?

Yes☒ No☐ N/A☐ Comments:

Yes.

iii. If above LOQ or project specified objectives, what samples are affected?

Comments:

None of the samples were affected.

iv. Do the affected sample(s) have data flags? If so, are the data flags clearly defined?

Yes☐ No☐ N/A☒ Comments:

Not applicable.

v. Data quality or usability affected?

Comments:

Data quality or usability was not affected.

b. Laboratory Control Sample/Duplicate (LCS/LCSD)

i. Organics – One LCS/LCSD reported per matrix, analysis and 20 samples? (LCS/LCSD required per AK methods, LCS required per SW846)

Yes☒ No☐ N/A☐ Comments:

Yes.

ii. Metals/Inorganics – one LCS and one sample duplicate reported per matrix, analysis and 20 samples?

Yes☒ No☐ N/A☐ Comments:

Yes.

iii. Accuracy – All percent recoveries (%R) reported and within method or laboratory limits and project specified objectives, if applicable? (AK Petroleum methods: AK101 60%-120%, AK102 75%-125%, AK103 60%-120%; all other analyses see the laboratory QC pages)

Yes☐ No☒ N/A☐ Comments:

Method 8011: LCSD recovery for compound ethylene dibromide was greater than the control limit in preparation batch WG1911861. Compound was non-detected in any of the associated sample; hence no other qualification of the data was required.

iv. Precision – All relative percent differences (RPD) reported and less than method or laboratory limits and project specified objectives, if applicable? RPD reported from LCS/LCSD, and or sample/sample duplicate. (AK Petroleum methods 20%; all other analyses see the laboratory QC pages)

Yes☐ No☒ N/A☐ Comments:

Method SW 846 8260D: The LCS/LCSD RPD was greater than the control limit for compound vinyl acetate in preparation batch WG1910764.
Compound result in sample IDs EB-1_220803, MW-22_220806, MW-23_220806, DUP-1_220806 and MW-24_220806 was qualified as estimated (UJ/J).

v. If %R or RPD is outside of acceptable limits, what samples are affected?

Comments:

Precision
Compound vinyl acetate result in sample IDs EB-1_220803, MW-22_220806, MW-23_220806, DUP-1_220806 and MW-24_220806 was qualified as estimated.

vi. Do the affected sample(s) have data flags? If so, are the data flags clearly defined?

Yes☒ No☐ N/A☐ Comments:

Yes.

vii. Data quality or usability affected? (Use comment box to explain.)

Comments:

The LCS/LCSD recoveries and RPD exceedances are considered minor and would result in the estimation of the associated data. The reported data should still consider as usable.

c. Matrix Spike/Matrix Spike Duplicate (MS/MSD)

Note: Leave blank if not required for project

i. Organics – One MS/MSD reported per matrix, analysis and 20 samples?

Yes☐ No☒ N/A☐ Comments:

The MS/MSD analysis was not performed on any of the samples from this SDG.

ii. Metals/Inorganics – one MS and one MSD reported per matrix, analysis and 20 samples?

Yes☐ No☒ N/A☐ Comments:

The MS/MSD analysis was not performed on any of the samples from this SDG.

iii. Accuracy – All percent recoveries (%R) reported and within method or laboratory limits and project specified objectives, if applicable? (AK Petroleum methods: AK101 60%-120%, AK102 75%-125%, AK103 60%-120%; all other analyses see the laboratory QC pages)

Yes☐ No☐ N/A☒ Comments:

Not applicable.

iv. Precision – All relative percent differences (RPD) reported and less than method or laboratory limits and project specified objectives, if applicable? RPD reported from MS/MSD, and or sample/sample duplicate. (AK Petroleum methods 20%; all other analyses see the laboratory QC pages)

Yes☐ No☐ N/A☒ Comments:

Not applicable.

v. If %R or RPD is outside of acceptable limits, what samples are affected?

Comments:

None of the samples were affected.

vi. Do the affected sample(s) have data flags? If so, are the data flags clearly defined?

Yes☐ No☐ N/A☒ Comments:

Not applicable.

vii. Data quality or usability affected? (Use comment box to explain.)

Comments:

Data quality or usability was not affected.

d. Surrogates – Organics Only or Isotope Dilution Analytes (IDA) – Isotope Dilution Methods Only

i. Are surrogate/IDA recoveries reported for organic analyses – field, QC and laboratory samples?

Yes☒ No☐ N/A☐ Comments:

Yes.

ii. Accuracy – All percent recoveries (%R) reported and within method or laboratory limits and project specified objectives, if applicable? (AK Petroleum methods 50-150 %R; all other analyses see the laboratory report pages)

Yes☒ No☐ N/A☐ Comments:

Yes.

iii. Do the sample results with failed surrogate/IDA recoveries have data flags? If so, are the data flags clearly defined?

Yes☐ No☐ N/A☒ Comments:

Not applicable.

iv. Data quality or usability affected?

Comments:

Data quality or usability was not affected.

e. Trip Blanks

i. One trip blank reported per matrix, analysis and for each cooler containing volatile samples? (If not, enter explanation below.)

Yes☒ No☐ N/A☐ Comments:

Trip blank sample was not collected from this SDG.

ii. Is the cooler used to transport the trip blank and VOA samples clearly indicated on the COC? (If not, a comment explaining why must be entered below)

Yes☒ No☐ N/A☐ Comments:

Yes.

iii. All results less than LOQ and project specified objectives?

Yes☐ No☐ N/A☒ Comments:

Not applicable.

iv. If above LOQ or project specified objectives, what samples are affected?

Comments:

Not applicable.

v. Data quality or usability affected?

Comments:

Data quality or usability was not affected.

f. Field Duplicate

i. One field duplicate submitted per matrix, analysis and 10 project samples?

Yes☒ No☐ N/A☐ Comments:

Yes.

ii. Submitted blind to lab?

Yes☒ No☐ N/A☐ Comments:

Field duplicate DUP-1_220806 was collected from sample MW-23_220806.

iii. Precision – All relative percent differences (RPD) less than specified project objectives? (Recommended: 30% water, 50% soil)

RPD (%) = Absolute value of: $\frac{(R_1-R_2)}{((R_1+R_2)/2)} \times 100$

Where R_1 = Sample Concentration
R_2 = Field Duplicate Concentration

Yes☒ No☐ N/A☐ Comments:

Yes.

iv. Data quality or usability affected? (Use the comment box to explain why or why not.)

Comments:

Data quality or usability was not affected.

g. Decontamination or Equipment Blank (If not applicable, a comment stating why must be entered below)?

Yes☒ No☐ N/A☐ Comments:

Equipment blank sample was collected as EB-1_220803.

i. All results less than LOQ and project specified objectives?

Yes☒ No☐ N/A☐ Comments:

Yes.

ii. If above LOQ or project specified objectives, what samples are affected?

Comments:

None of the samples were affected.

iii. Data quality or usability affected?

Comments:

Data quality or usability was not affected.

7. Other Data Flags/Qualifiers (ACOE, AFCEE, Lab Specific, etc.)

a. Defined and appropriate?

Yes☒ No☐ N/A☐ Comments:

Yes.

8. Additional Laboratory Data Qualification

Method SW846 8260D: Continuing calibration for compounds 1,2,3-trichlorobenzene, hexachloro-1,3-butadiene, naphthalene, vinyl acetate and 1,2,4-trichlorobenzene exhibited a low bias recovery. Compounds result in sample IDs EB-1_220803, MW-22_220806, MW-23_220806, DUP-1_220806 and MW-24_220806 were qualified as estimated (UJ/J).
