STATE OF ALASKA
ALASKA CLEAN/DRINKING WATER FUND
GREEN PROJECT ASSESSMENT FORM

As applicable under the EPA annual capitalization grants provided to the Alaska Clean Water Fund (ACWF) and Alaska Drinking Water Fund (ADWF) loan programs, a portion of funds appropriated shall be for projects to address green infrastructure, water or energy efficiency improvements or other environmentally innovative activities.” To meet this condition under the federal grant for administering these funds, this assessment form is provided to document this eligibility or what is termed a “Categorical” or “Business Case” justification, which will be reviewed by DEC for provisional compliance. For more information on green infrastructure development, please review the following EPA web site:

http://cfpub.epa.gov/npdes/home.cfm?program_id=298

For those projects requiring a “Business Case,” Part 2 will require completion to qualify a “traditional project” as green; justification is broken down into two parts, technical and financial. The technical part should use information from a variety of sources such as maintenance or operation records, engineering studies, project plans or other applicable documentation to identify problems (including any data on water and/or energy inefficiencies) in the existing facility, and that clarifies the technical benefits from the project in water and/or energy efficiency terms. Financial justification needs to show estimated savings to a project based on the technical benefits, and demonstrate that the green component of the project provides a substantial savings and environmental benefit.

For more information and assistance in completing this assessment form, please contact the Municipal Matching Grants & Loans program in Anchorage at 907-269-7673, or in Juneau at 907-465-5300.

GENERAL INFORMATION

Name of Community  Anchorage

PROJECT INFORMATION

Project Name  SCWTF Roof Upgrade  Location  Section 7, T13N, R2W, Lot 9 - SCWTF

Project Type:  ______ New Construction  ______ Upgrades
              ______ Stormwater Infrastructure  ______ Energy Efficiency Project
              ______ Water Efficiency Project  ______ Innovative Environmental Project
Green Project Description: This project will replace the roof at the Ship Creek Water Treatment Facility to prevent damage to equipment and processes in the area of the sedimentation basins.

PART 1 – GREEN PROJECT CATEGORY & COSTS

Identify the most appropriate “Green” Clean Water or Drinking Water category project type. Note, any selection with (BC) at the end will require a Business Case demonstration.

ENERGY EFFICIENCY – the use of improved technologies and practices to reduce the energy consumption of water quality projects.

_______ Wastewater/water utility energy audits _______ Clean power for public owned facilities

_______ Leak detection equipment _______ Retrofits/upgrades to pumps & treatment processes (BC)

_______ Replace/rehabilitation of distribution (BC) _______ Other: Building Envelope Improvements (BC)

WATER EFFICIENCY – the use of improved technologies and practices to deliver equal or better services with less water.

_______ Water meters _______ Fixture Retrofit _______ Landscape/Irrigation

_______ Graywater or other water recycling _______ Replace/rehabilitation of distribution (BC)

_______ Leak detection equipment _______ OTHER: ________________ (BC)

GREEN INFRASTRUCTURE – Practices that manage and treat stormwater and that maintain and restore natural hydrology by infiltrating, evapotranspiring and capturing and using stormwater.

_______ Green Streets _______ Water harvesting and reuse

_______ Porous pavement, bioretention, trees, green roofs, water gardens, constructed wetlands

_______ Hydromodification for riparian buffers, floodplains, and wetlands

_______ Downspout disconnection to remove stormwater from combined sewers and storm sewers

_______ OTHER: ________________ (BC)

ENVIRONMENTALLY INNOVATIVE PROJECTS – Demonstrate new/innovative approaches to managing water resources in a more sustainable way. This may include projects that achieve pollution prevention or pollutant removal with reduced costs and projects that foster adaptation of water protection programs and practices to climate change.

_______ Wetland restoration _______ Decentralized wastewater treatment solutions

_______ Water reuse _______ Green stormwater infrastructure _______ Water balance approaches

_______ Adaptation to climate change _______ Integrated water resource management

_______ OTHER: ________________ (BC)

Only includes insulation and vapor barrier work.

PART 2 – PROJECT “BUSINESS CASE” TECHNICAL/FINANCIAL ASSESSMENT

TECHNICAL ANALYSIS OF BENEFITS*

In addition to this form, a supporting technical and financial analysis is required to verify energy and water saving efficiencies for any green component of the project. For green infrastructure and innovative environmental type projects, the analysis should include any applicable efficiency and environmental benefits. For assisting MGL in evaluating “Business Case” assessments of water main, meter, and pump facility replacement type projects, the attached form titled “ADWF - Water/Energy Efficiency Determination - Water Main Replacement/Meter/Pump Facility” is required to be completed. Once the form is complete along with any supporting documentation, please submit documentation to the MGL program for review and concurrence. Note, only water/energy efficiencies that achieve a 20% or greater increase in efficiency will categorically qualify as a Green project.

CERTIFICATION STATEMENT:

I certify the above information is current and accurate.
