

Craig Small Vessel Raw Sewage/Bilge Cleanout
City of Craig, \$9,220

This project will help Alaska meet a priority stewardship action to develop harbor best management practices and a model ordinance that addresses harbor and marina operation & maintenance best management practices (BMPs). By putting portable pumps/short term storage tanks and disposal facilities in place, Craig will reduce nonpoint source pollution from sewage and contaminated bilge materials. This will result in protection of essential fish habitat (i.e. eelgrass), and protection of local commercial, charter, sport and subsistence fisheries in the waters around the City of Craig. Contact Michael Kampnich, (907)826-3404.
