---

I agree with Dr. Owen Hanley, education/warnings and then fines(or other consequences) are needed for enforcement of the ADEC plan for air quality improvement. The immediate and long term health consequences of poor air quality are well documented in the medical literature and more education is needed on these topics. It's not just heart and lung complications but dementia, kidney disease, strokes and hospitalizations increase in areas of poor air quality.

Thank you,  
Barbara J. Creighton, MD, FACP
