The air quality in FNSB is negative affected by the use of #2 heating oil. We should be burning natural gas and we would not have a problem. The FNSB has stopped natural gas by firing a local FNG Co. and taking over natural gas by the FNSB government. It won't work! If Fairbanks Natural Gas was still in charge it would be done. Oil is the problem, not coal or natural gas! Stop burning oil on bad air days and the problem will be solved.
