CHANGES FROM PREVIOUS SITREPS ARE DENOTED IN RED

2020 VMT Sump Oily Water Spill

SITREP #: 4

SPILL #: 20229910301

TIME/DATE OF DISTRIBUTION: 4:30 PM April 21, 2020

POTENTIAL RESPONSIBLE PARTY (PRP): Alyeska Pipeline Service Co.

INCIDENT LOCATION: 58-SU-3 Admin Sump, Valdez Marine Terminal

TIME/DATE OF SPILL: 7:55 PM April 12, 2020

HOW/WHEN SPILL WAS DISCOVERED AND REPORTED: The spill was discovered by APSC personnel that observed sheen, near the VMT small boat harbor. The spill was reported to ADEC at 8:16 PM on April 12.

TYPE/AMOUNT OF PRODUCT SPILLED: The type of product spilled is primarily a mixture of Alaska North Slope crude with water. The amount released is unknown at this time and will be estimated based on recovery numbers.

CAUSE OF SPILL: The cause is under investigation, but early indicators suggest that the crude/water mixture was leaking from a sump that overflowed. **Additional tests have been performed to verify the integrity of other piping in the area and all tests passed indicating the 58-SU-3 sump continues to be the only source.**

SOURCE CONTROL: Source is secured. The sump was emptied, a vac truck has been on site, and the sump continues to be monitored. The Ballast Water header which enters this sump was isolated at 10:00 PM on April 13. Engineers and surveyors are focused on targeting the flow path from the sump to the small boat harbor.

Surveying activities continue to determine the flow path of the spill. Tactical excavations are underway to verify the flow path with additional excavations planned. An outflow location has been identified on the shoreline where oily water was entering into Port Valdez. The outflow location is from a culvert that ends at the shoreline within the primary containment boom. The outflow is currently discharging high volumes of snow melt and rain water with a minor sheen.

RESPONSE ACTION: The oil traveled beneath the snow covered surface and came out near the head of Berth 4 into Port Valdez. A tanker was loading at Berth 5 at the time of the incident, but was not affected by the spill. Sheen has been seen east of Berth 4 to the VMT small boat harbor. Most of the sheen is contained behind the Berth 4 area with sorbent boom and sweeps, and two layers of hard yellow boom. An additional layer of bigger boom was deployed outside of the hard yellow boom to enhance the containment of sheen. Oily water is being skimmed from a corralled 30ft by 30ft area inside the boom. Two Current Buster boom systems **are** deployed outside of the boomed area, with trained fishing vessels to catch any escapement. Overflights and vessel

surveillance of the area are ongoing. Crews are working to determine the amount of contamination in and around the sump. The USCG and ADEC have been on scene to observe Alyeska's response actions.

APSC, USCG, and ADEC are responding as a unified command and more than 240 personnel are working to support the response efforts. There are 15 vessels of opportunity which are contracted fishing vessels, working to support on-water containment and recovery operations.

Boom has been deployed to protect the Solomon Gulch Hatchery, the Valdez Duck Flats, Saw Island, and Seal Island. Oil skimming operations have continued and as of 6:00 AM today 852 bbls (35,784 gallons) of oil water mixture has been collected, and of that 12 bbls (511 gallons) of oil recovered. The primary containment boom has been adjusted to contain the spill closer to the spill outflow area. The bigger boom still maintains the outer perimeter of the boomed areas and is monitored to ensure adequacy of containment. Response crews are continuing oil skimming operations and the use of sorbents for passive recovery.

Additional plans are being prepared to address the spill outflow location. Boom cleaning operations are planned to begin today for some yellow boom that is no longer needed in the response. The shoreline cleanup plan has been approved for the next stage of nearshore cleanup operations.

Boom already deployed around sensitive areas continues to be monitored. Wildlife hazing and capture is ongoing with the stabilization unit ready to receive wildlife.

Spill delineation near the sump (spill source) has shown heavy snow contamination, and delineation activities and snow removal are still under way. Steps have been taken to make sure that Berth 5 remains clear of sheen to ensure that tankers can be loaded safely. After close evaluation that Berth 4 was not impacted by the spill, Berth 4 received a tanker for loading today.

RESOURCES AT RISK OR AFFECTED: The spill is contained behind Berth 4 near the shore. Sensitive area protection task forces are on standby in case the sheen changes location or expands.

Oil has not been seen outside of the VMT berth area. Wildlife have been observed near the spill area; one oiled Kittiwake, one deceased gull, and three deceased kittiwakes have been reported.

FUTURE PLANS AND RECOMMENDATIONS: Future plans are to clean up the existing spill site and continue monitoring the situation to evaluate the need to deploy additional response equipment and personnel. The TAPS system remains operational, and there have been no impacts to the operation of the TAPS pipeline itself.

WEATHER: Today: Light rain, Winds calm, Seas calm, Temperature high of 44 °F. Tomorrow: Rain and snow showers mixed in the afternoon, Winds light and variable, Temperature high of 40 °F, 40% chance of precipitation.

UNIFIED COMMAND AND PERSONNEL:

IMT designees:

Incident Commander: Mike Day, Alyeska Pipeline Service Co.

SOSC: Crystal Smith, ADEC

FOSC: CMDR Michael Franklin, USCG

Field SOSC: Anna Carey, ADEC

TIME/DATE OF THE NEXT REPORT DISTRIBUTION: As situation requires.

FOR ADDITIONAL INFORMATION CONTACT: Crystal Smith, Central Region Manager, ADEC (907) 269-7682
