**2020 Annual Network Plan**

## EXECUTIVE SUMMARY

This 2020 Annual Monitoring Plan describes the Alaska air quality monitoring network under the Alaska Department of Environmental Conservation's (DEC) oversight and spells out anticipated changes to the network for the calendar year 2021.

Most of the air monitoring activities are focused on population centers and areas that have shown in the past to have air quality problems. Due to budget cuts over the past several years DEC continues to reduce the ambient monitoring network to include only regulatory required sites. Looking ahead, DEC does not expect to expand the network during the next several years due to fiscal constraints.

The most significant changes to the network during 2019 were:

- The downtown Fairbanks State Office Building site was shut down on July 12<sup>th</sup>, 2019.
- Regulatory monitoring at the new A Street PM<sub>2.5</sub> SLAMS site, with a Thermo Scientific Partisol 2025 sequential FRM sampler began on July 15<sup>th</sup>, 2019.
- DEC started speciation sampling at the Hurst Road monitoring site on August 1<sup>st</sup>, 2019. EPA OAQPS provided DEC with a Met One SuperSASS and URG 3000N for the site.
- A second Thermo Scientific Sequential Partisol 2025i PM<sub>2.5</sub> sampler was set-up at the Hurst Road site and began sampling on July 18<sup>th</sup>, 2019. The Hurst Road site has replaced the State Office Building site as the collocation site for the 2025 Sequential sampler Federal Reference Method.
- DEC discontinued NO<sub>x</sub> sampling at NCore on October 1<sup>st</sup>, 2019. DEC conducted the sampling to better understand wintertime nitrogen chemistry. The required NO<sub>y</sub> sampling continues.
- DEC received state funding in SFY20 to replace aging gaseous analyzers at the NCore site. DEC has ordered replacement analyzers and started to place them into service.

### Planned Network Modifications for 2020/21

DEC will work with EPA on a saturation study for the winter 2020/21 to determine potential alternate monitoring site locations in Butte, AK. Once a new location has been agreed upon, DEC will establish a new SPM site and collect FEM data for at least one calendar year to establish a correlation to the Harrison Court Butte site. If the data are deemed acceptable by EPA, DEC will then discontinue the Butte SLAMS site and move it to the new location replacing the SPM station.

**2020 Annual Network Plan**

# 1 INTRODUCTION

The Code of Federal Regulations (CFR) Title 40 §58.10 requires each state agency to adopt and submit to the U.S. Environmental Protection Agency (EPA) Regional Administrator an annual monitoring network plan which shall provide for the establishment and maintenance of an air quality surveillance system that consists of a network made up of the following types of monitoring stations:

- State and local air monitoring stations (SLAMS) including monitors that are designated as:
  - Federal Reference Method (FRM), or
  - Federal Equivalent Method (FEM)
- National Core Multi-Pollutant Monitoring Stations (NCore)
- PM<sub>2.5</sub> Chemical Speciation Network (CSN), and
- Special Purpose Monitoring (SPM) stations.

The plan shall include a statement of purpose for each monitor and evidence that siting and operation of each monitor meets the requirements of appendices A, C, D, and E of 40 CFR 58 where applicable.

The annual monitoring network plan must be made available for public inspection for at least 30 days prior to submission to EPA. Any annual monitoring network plan that proposes SLAMS network modifications, including new monitoring sites, is subject to the approval of the EPA Regional Administrator, who shall provide opportunity for public comment and shall approve or disapprove the plan and schedule within 120 days. If the State or local agency has already provided a public comment opportunity on its plan and has made no changes subsequent to that comment opportunity and has submitted the received comments together with the plan, then the Regional Administrator is not required to provide a separate opportunity for comment.

This 2020 Annual Monitoring Plan describes the Alaska air quality monitoring network under the State's oversight and spells out anticipated changes to the network for the calendar year 2020. This plan shall include all required stations to be operational by January 1, 2021. Specific locations for the required monitors shall be included in the annual network plan which is due to be submitted to the EPA Regional Administrator by July 1, 2020.

The annual monitoring network plan must contain the following information for each existing and proposed site:

1. The AQS site identification number;
2. The location, including street address and geographical coordinates;
3. The sampling and analysis method(s) for each measured parameter;
4. The operating schedules for each monitor;
5. Any proposals to remove or move a monitoring station within a period of 18 months following plan submittal;

## 2020 Annual Network Plan

6. The minimum monitoring requirements for spatial scale of representativeness for each monitor as defined in 40 CFR 58, Appendix D;
7. The minimum monitoring requirements for probe and monitoring path siting criteria as defined in 40 CFR 58, Appendix E;
8. The identification of any sites that are suitable and sites that are not suitable for comparison against the annual PM<sub>2.5</sub> NAAQS as described in 40 CFR 58.30;
9. The Metropolitan Statistical Area, Core-Based Statistical Area, Combined Statistical Area or other area represented by the monitor;
10. The designation of any lead monitors as either source-oriented or non-source-oriented according to 40 CFR 58, Appendix D;
11. Any source-oriented monitors for which a waiver has been requested or granted by the EPA Regional Administrator as allowed for under paragraph 4.5(a)(ii) of 40 CFR 58, Appendix D; and
12. Any source-oriented or non-source-oriented site for which a waiver has been requested or granted by the EPA Regional Administrator for the use of Pb-PM<sub>10</sub> monitoring in lieu of lead total suspended particulate (Pb-TSP) monitoring as allowed for under paragraph 2.10 of 40 CFR 58, Appendix C.

## 2 AIR QUALITY MONITORING PRIORITIES

In 1970 the Congress of the United States created the U.S. Environmental Protection Agency (EPA) and promulgated the Clean Air Act (CAA). Title I of the CAA established National Ambient Air Quality Standards (NAAQS) to protect public health. NAAQS were developed for six *criteria pollutants*: particulate matter (PM), sulfur dioxide (SO<sub>2</sub>), nitrogen dioxide (NO<sub>2</sub>), carbon monoxide (CO), ozone (O<sub>3</sub>), and lead (Pb). Particulate matter has two associated NAAQS: one for fine particulate matter less than 2.5 micrometers in aerodynamic diameter (PM<sub>2.5</sub>) and one for coarse particulate matter less than 10 micrometers in aerodynamic diameter (PM<sub>10</sub>). Threshold limits established under the NAAQS to protect human health are known as primary standards. The primary health standards are to protect the most sensitive of the human population, including those people with existing respiratory or other chronic health conditions, children, and the elderly. Secondary standards established under the NAAQS are to protect the public welfare and the environment. Since promulgation of the original CAA, the EPA has continued to revise the NAAQS based on its assessment of national air quality trends and on current (and ongoing) health studies.

To protect public health and assess compliance with NAAQS, DEC established an air quality monitoring program. The State of Alaska has a large geographical area with a small population. Anchorage and the Matanuska-Susitna (Mat-Su) Valley have the bulk of the 746,582<sup>1</sup> residents in the state, about 55% of the overall population. The remainder of the population is distributed among the cities of Juneau and Fairbanks with populations of about 30,000-40,000 and many

<sup>1</sup> Population projection for July 1, 2020 obtained from the Alaska Population Projections: 2017-2045, Alaska Department of Labor and Workforce Development, <http://live.laborstats.alaska.gov/pop/projections.cfm>

**2020 Annual Network Plan**

scattered and isolated small villages, most of which are off the road system and have populations ranging from 16 to 10,000 people. The total area of the state is approximately 665,384 square miles (1.7 million square kilometers)<sup>2</sup>.

In accordance with the National Monitoring Strategy, DEC plans air monitoring activities using the following criteria:

- Monitor in larger communities to cover the largest possible population exposure;
- Monitor in designated smaller towns and villages that are representative of multiple communities in a region; and
- Monitor in response to air quality concerns, as funding and staffing levels allow.

The Air Monitoring & Quality Assurance (AMQA) program of the DEC Air Quality Division has a relatively small staff of professionals who conduct the State's air quality assessment efforts. To enhance the quality of work performed statewide, DEC's staff works closely with the Municipality of Anchorage (MOA), the Fairbanks North Star Borough (FNSB), the Matanuska-Susitna Borough, the City & Borough of Juneau (CBJ), and environmental staff in other, smaller communities to assess air quality levels statewide. To continue to protect public health and the environment, air quality monitoring is focused on seven primary issues by descending priority:

1. Fine particulate matter (PM<sub>2.5</sub>) monitoring;
2. Coarse particulate matter (PM<sub>10</sub>) monitoring;
3. Wildland fire monitoring (PM<sub>2.5</sub>);
4. Carbon monoxide (CO) monitoring;
5. Rural community and tribal village monitoring (primarily PM<sub>10</sub>);
6. Lead (Pb) monitoring; and
7. Ozone (O<sub>3</sub>) monitoring.

### **3 STATE OF ALASKA AMBIENT AIR MONITORING NETWORK**

#### ***3.1 MINIMUM MONITORING REQUIREMENTS***

Minimum monitoring requirements are based on several factors including pollutant levels and populations in statistically defined metropolitan areas. The definitions for the statistical based metropolitan areas are provided by the US Office of Management and Budget (OMB) and the Census Bureau (Census).

Alaska has four statistical areas as designated by OMB in 2009 with updated boundaries based on the 2013 Census data<sup>3</sup>. The four Core Based Statistical Areas (CBSA) include two

---

<sup>2</sup> <https://www.census.gov/geo/reference/state-area.html#n1>

<sup>3</sup> [https://www2.census.gov/geo/maps/metroarea/stcbsa\\_pg/Feb2013/cbsa2013\\_AK.pdf](https://www2.census.gov/geo/maps/metroarea/stcbsa_pg/Feb2013/cbsa2013_AK.pdf)

## 2020 Annual Network Plan

Metropolitan Statistical Areas (MSA) and two Micropolitan Areas ( $\mu$ SA), see Table 3-1 below. The two MSAs are the Anchorage MSA which includes the entire Municipality of Anchorage and the entire Matanuska-Susitna Borough and the Fairbanks MSA which is comprised of the Fairbanks North Star Borough. The two Micropolitan Areas are the Juneau  $\mu$ SA and the Ketchikan  $\mu$ SA, which encompass the City and Borough of Juneau and the Ketchikan Gateway Borough, respectively.

**Table 3-1: Alaska's Core Based Statistical Areas**

Core Based Statistical Areas	Population*	Includes:	
<b>Anchorage, MSA</b>	410,188	Municipality of Anchorage	299,970
		Matanuska-Susitna Borough	110,218
<b>Fairbanks, MSA</b>	98,555		
<b>Juneau, <math>\mu</math>SA</b>	32,242		
<b>Ketchikan, <math>\mu</math>SA</b>	13,620		

\*(based on population estimates for July 1, 2020 obtained from the Alaska Population Projections: 2017-2045, Alaska Department of Labor and Workforce Development, <http://live.laborstats.alaska.gov/pop/projections.cfm>)

The minimum number of sites required for the Alaskan CBSAs for the six criteria pollutants are summarized for the Alaska network in Table 3-2. No monitoring is required for lead anywhere in the Alaskan CBSAs. No air quality monitoring sites are currently required for the Ketchikan  $\mu$ SA.

Monitoring in the Juneau  $\mu$ SA focuses on particulate matter monitoring. One monitoring site is required for  $PM_{10}$  based on the  $PM_{10}$  Limited Maintenance Plan. The Mendenhall Valley had been designated as a  $PM_{10}$  non-attainment area and has met the standard since 1994. No  $PM_{2.5}$  monitoring site is required; however, a single continuous  $PM_{2.5}$  monitor is used to issue burn curtailments by the local government.

CO monitoring is required in the Anchorage and Fairbanks MSAs based on the Limited Maintenance Plans for the MSAs. Both areas had been previously designated as non-attainment and have been able to lower their concentrations. Neither MSA has had a violation of the CO standard since 2001.

The Anchorage MSA triggered the  $PM_{10}$  monitoring requirement of 3-4 monitors based on four exceedances elevated concentrations in 2016 and 2018 (see Table E-5 in **Appendix E**). The exceedances result from high wind events that pick up dust from frozen, but not snow-covered, braided river beds. These high wind events occur semi-regularly in fall and occasionally in early spring. DEC has flagged the events in AQS and has amassed relevant supporting evidence for exceptional event waiver requests (EEWR). As EPA and the state are currently focused on  $PM_{2.5}$ , DEC plans to prepare EEWRs for the events when EPA starts another  $PM_{10}$  designation process and/or if EPA requests that DEC submit them for approval.

## 2020 Annual Network Plan

Based on a 2017 DV of  $32 \mu\text{g}/\text{m}^3$ , the minimum requirement for Anchorage MSA  $\text{PM}_{2.5}$  monitoring was one site for the 2018 Annual Monitoring Plan. However, based on a 2019 DV of  $29 \mu\text{g}/\text{m}^3$ , no  $\text{PM}_{2.5}$  monitoring sites are required for this 2020 Annual Monitoring Plan. Currently, the Anchorage MSA  $\text{PM}_{2.5}$  monitoring network of two sites exceeds the minimum requirements specified. The minimum requirement for  $\text{PM}_{2.5}$  monitoring in the Fairbanks MSA is one monitoring site. The Fairbanks  $\text{PM}_{2.5}$  monitor requirement is based on the elevated concentrations measured in Fairbanks and North Pole. DEC's Fairbanks  $\text{PM}_{2.5}$  monitoring network exceeds this requirement because of its status as a serious nonattainment area.

Table 3-2: Minimum Monitoring Requirements for Alaskan CBSAs

Criteria Pollutant		SLAMS site requirement			
	Comments	Anchorage MSA	Fairbanks MSA	Juneau $\mu\text{SA}$	Ketchikan $\mu\text{SA}$
<b><math>\text{PM}_{2.5}</math></b>	Most recent 3 year design value $\geq 85\%$ of NAAQS	0	1	0	0
	Most recent 3 year design value $< 85\%$ of NAAQS	0	0	0	0

<b><math>\text{SO}_2</math></b>	NCore site requirement	0	0	0	0
<b><math>\text{NO}_2</math></b>	Requirement based on population numbers. Alaska does not meet the threshold requirement	0	0	0	0

<sup>1</sup> EPA 5-Year Ozone NAAQS Monitoring Requirement Waiver: Section 3.5.3 or <http://dec.alaska.gov/media/10956/2017-air-monitoring-network-plan-ozone-waiver.pdf>

**2020 Annual Network Plan****3.1.1 LEAD**

Alaska does not meet the population thresholds for lead monitoring in any of the communities. DEC currently does not monitor for lead. DEC received a waiver from EPA for source oriented monitoring as pre 40 CFR 58 App. D. See section 3.5.1.

**3.1.2 APPENDIX D & E SITING FORMS**

In 2014 EPA Region 10 provided network evaluation forms to determine compliance with design and minimum monitoring requirements for each of the criteria pollutants under 40 CFR 58 Appendix D. These evaluation forms were reviewed and updated, when necessary, in 2020 by DEC and are presented in **Appendix A**. In 2014, EPA Region 10 provided siting evaluation forms to determine compliance with siting requirements for each of the criteria pollutants under 40 CFR 58 Appendix E. These site evaluation forms were reviewed and updated, when necessary, in 2020 by DEC and are summarized by MSA in **Appendix B**.

## 2020 Annual Network Plan

### 3.2 CURRENT MONITORING SITES

DEC operates and maintains a number of ambient air monitoring networks throughout Alaska. Table 3-3 provides the site name, address, geographic coordinates, and identification number for all the air monitoring sites for which data are submitted to the EPA Air Quality System (AQS) database as of May 2020. NCore parameters measured are PM<sub>10</sub>, PM<sub>2.5</sub>, PM<sub>10-2.5</sub>, CO, O<sub>3</sub>, SO<sub>2</sub>, NO<sub>y</sub>, NO, CSN, and meteorological parameters.

**Table 3-3: AQS Monitoring Sites as of May 2020**

Site Name	Address	Latitude/Longitude <sup>1</sup>	AQS ID	Agency
Garden	3000 East 16 <sup>th</sup> Ave. Anchorage, AK	61.205861 N 149.824602 W	02-020-0018	DEC
Laurel	4335 Laurel St. Anchorage, AK	61.181117 N 149.834003 W	02-020-0045	DEC
Parkgate	11723 Old Glenn Hwy. Eagle River, AK	61.326700 N 149.569707 W	02-020-1004	DEC
NCore	809 Pioneer Road Fairbanks, AK	64.845307 N 147.72552 W	02-090-0034	DEC
Hurst Road <sup>2</sup>	3288 Hurst Rd. North Pole, AK	64.762973 N 147.310297 W	02-090-0035	DEC
A Street	397 Hamilton Ave Fairbanks, AK	64.84593 N 147.69327 W	02-090-0040	DEC
Butte <sup>3</sup>	Harrison Court Butte, AK	61.534100 N 149.0351855 W	02-170-0008	DEC
Bethel	370A 4 <sup>th</sup> Ave Bethel, AK	60.79583 N 161.767 W	02-050-0001	DEC
Floyd Dryden Middle School	3800 Mendenhall Loop Road Juneau, AK	58.388889 N 134.565556 W	02-110-0004	DEC

<sup>1</sup> Coordinates for latitude and longitude are consistent with the World Geodetic System (WGS 84).

<sup>2</sup> Hurst Road is the new name for the North Pole Fire Station #3 site. It was changed in 2018 at Fairbanks North Star Borough's request.

<sup>3</sup> EPA has granted a siting requirement waiver for Butte: Section 3.5.2 or <https://dec.alaska.gov/media/16991/butte-site-siting-requirement-waiver-letter-epa-06032019.pdf>

### 3.3 SITING CRITERIA

In 2014, EPA Region 10 provided site evaluation forms to determine compliance with 40 CFR 58 Appendix E requirements for monitoring path and siting criteria. These forms were

## 2020 Annual Network Plan

distributed to the individual site operators for completion. Summaries of the site evaluation forms are presented in three tables – PM, CO and all other gaseous pollutants – in **Appendix B** of this report. Monitoring site photos and location maps can be found at: <http://dec.alaska.gov/air/air-monitoring/monitoring-site-information/>.

### 3.3.1 CARBON MONOXIDE SITES

Carbon monoxide (CO) inlet probes should be at least 1 meter away, both vertically and horizontally, from any supporting structure or wall. For micro-scale sites the probe height must be between 2.5 and 3.5 meters, whereas for other scale sites the probe must be between 3 and 15 meters high.

A probe must have unrestricted airflow for at least 270 degrees, or 180 degrees if it is located on the side of a building. Obstructions must be a minimum distance away equal to twice the distance by which the height of the obstruction exceeds the height of the probe. Trees should not be present between the dominant CO source or roadway and the inlet probe.

The following table (Table 3-4) lists the CO monitoring sites in Anchorage and Fairbanks.

**Table 3-4: CO Monitoring Sites in Anchorage and Fairbanks May 2020**

Site Name	Monitoring Scale	Probe Distance from Wall (meters)	Height (meters)	Unrestricted Air Flow	Spacing from Roadway (meters)	Trees
Garden 02-020-0018	Neighborhood	1	3	180 degrees unobstructed except for a tree 2.3 m from probe	7.6	Yes <sup>1</sup>
NCore 02-090-0034	Neighborhood	Not applicable	3	360 degrees unobstructed	70	>20 m

<sup>1</sup>One spruce tree 7.3m tall, 2.3 m to drip line

### 3.3.2 PARTICULATE MATTER (PM<sub>10</sub> AND PM<sub>2.5</sub>) SITES

For micro-scale sites, particulate matter inlets must be between 2 and 7 meters from ground level. For other siting scales the probe must be between 2 and 15 meters high.

A sampler must have at least 2 meters separation from walls, parapets, penthouses, etc. A sampler must have unrestricted airflow for at least 270 degrees, or 180 degrees for street canyon sites. Obstructions must be a minimum distance away from the sampler with the separation equal to twice the distance by which the height of the obstruction exceeds the height of the sampler inlet.

## 2020 Annual Network Plan

Micro-scale sampler inlets must be located between 5 and 15 meters from the nearest traffic lane for traffic corridor sites, and between 2 and 10 meters for street canyon sites. The minimum separation distance between the probe and nearest traffic lane for middle, neighborhood, or urban scale sites depends upon the number of vehicles per day (VPD) that use the roadway according to a table in Appendix E of 40 CFR 58. Table 3-5 lists all PM monitoring sites in Alaska and how they fit the siting criteria from Appendix E of 40 CFR 58 (also see Appendix B).

Table 3-5: PM Monitoring Sites in Alaska as of May 2020

Site Name AQS Codes	Monitoring Scale PM <sub>10</sub>	Monitoring Scale PM <sub>2.5</sub>	Height (meters)	Spacing from Obstruction s (meters)	Spacing from Roadway (meters)	Traffic (VPD)	Trees within 10 meters?
Garden 02-020-0018	Neighborhood	Neighborhood	11	no obstructions	14	1,233 Sunrise Dr 1,947 Airport Heights Dr.	no
Laurel 02-020-0045	Microscale	-	6.4	no obstructions	11	37,436 Tudor Rd	no
Parkgate 02-020-1004	Neighborhood	Neighborhood	10.4	no obstructions	44	12,132 Old Glenn Hwy	no
Butte <sup>3</sup> 02-170-0008	Neighborhood	Neighborhood	4.7	no obstructions	150	Old Glenn Hwy, 3,225 <sup>2</sup>	yes 5.5 m
A Street 02-090-0040	-	Neighborhood	4	no obstructions	5.8 <sup>4</sup>	2,017 Hamilton Ave 4,553 Farewell Ave	no
NCore 02-090-0034	Neighborhood	Neighborhood	4.5	no obstructions	70	4,930 Philips Field Rd 1,020 Driveway St	no
Hurst Road 02-090-0035	-	Neighborhood	4.3	no obstructions	27 to Hurst Rd	4,923 Hurst Rd	no
Floyd Dryden 02-110-0004	Neighborhood	Neighborhood	8	no obstructions	100	13,014 Mendenhall Loop Road	no
Bethel 02-050-0001	Neighborhood	Neighborhood	5	no obstructions	>30 to Fifth Ave	6,604 Ridgecrest Dr	no

<sup>1</sup> Average annual traffic count 2018 traffic data accessed at:

[http://dot.alaska.gov/stwdplng/transdata/traffic\\_AADT\\_map.shtml](http://dot.alaska.gov/stwdplng/transdata/traffic_AADT_map.shtml)

<sup>2</sup> McKechnie Loop has only local neighborhood traffic and the site is at the end of a gravel cul-de-sac on Harrison Court (with three houses).

## 2020 Annual Network Plan

<sup>3</sup> Site is next to a gravel pad/road so EPA has granted a siting requirement waiver: Section 3.5.2 or <https://dec.alaska.gov/media/16991/butte-site-siting-requirement-waiver-letter-epa-06032019.pdf>

<sup>4</sup> Site is <10m from adjacent A-Street, a paved, low traffic neighborhood street, remainder of site grass covered.

## 3.3.3 NCORE SITE

The NCore site pollutant monitors listed in Table 3-6 are representative at a neighborhood scale. Meteorological monitoring is representative at a microscale. Table 3-6 also lists additional relevant siting information.

**Table 3-6: NCore Gaseous<sup>1</sup> Monitoring and Meteorological Monitoring as of May 2020 in Alaska**

Parameter Name	Monitoring Scale	Height (meters)	Spacing from Obstructions (meters)	Spacing from Roadway (meters)	Traffic (VPD)	Trees < 10 m?
NO <sub>y</sub> , NO & DIF	Neighborhood	3 <sup>2</sup>	no obstructions	70	4930 <sup>3</sup>	None
O <sub>3</sub>	Neighborhood	3	75 m to 12 m building	70	4930	None
SO <sub>2</sub> (1 hr & 5 min)	Neighborhood	3	no obstructions	70	4930	None
T <sub>amb</sub> , WS & WD (3 m)	Microscale	2	no obstructions	70	4930	None
T <sub>amb</sub> , WS & WD (10 m)	Microscale	10	no obstructions	70	4930	None
Relative Humidity <sup>4</sup>	Neighborhood	4	no obstructions	70	4930	None
Barometric Pressure	Neighborhood	4	no obstructions	70	4930	None

<sup>1</sup> Excluding CO. For CO see Table 3-4.

<sup>2</sup> Probe height is 3 meters rather than the 10 meters recommended in order to remain below the unusually low winter inversion layer.

<sup>3</sup> 2018 Philips Field Road traffic data accessed at: [http://dot.alaska.gov/stwdplng/transdata/traffic\\_AADT\\_map.shtml](http://dot.alaska.gov/stwdplng/transdata/traffic_AADT_map.shtml)

<sup>4</sup> Will be installed and operational in June 2020

### 3.4 MONITORING METHODS, DESIGNATION, AND SAMPLING FREQUENCY

Tables 3-7 to 3-17 present information for current sites (and monitors) used in coding the data submitted by DEC to the AQS database. The information provided in Tables 3-7 to 3-17 for each monitoring site includes pollutant parameter name, monitor designation, the AQS parameter

**2020 Annual Network Plan**

codes and parameter occurrence codes (POC), the AQS method code, the frequency of sampling, and the instrumentation used. DEC has purchased new analyzers for the NCore gaseous pollutants, but due to the current restrictions because of COVID 19 is not able to install them. The new equipment will be in operation for the next calendar year though, and therefore was entered in the table for completeness. The monitor designation states the purpose for which the data are to be used, such as: for State & Local Air Monitoring Stations (SLAMS) to demonstrate NAAQS compliance, Special Purpose Monitoring sites (SPM) for general air quality assessments, and the Chemical Speciation Network (CSN) for atmospheric chemistry assessments. AQS parameter, method and units codes are specific to the pollutant, instrumentation, and sampling equipment used, and how the concentration units are expressed in either local conditions or corrected to standard conditions for temperature and pressure. The 5-digit parameter code identifies the parameter being measured e.g. PM<sub>10</sub>, SO<sub>2</sub>, or wind speed. The 1-digit POC code is the parameter occurrence code. As suggested by Region 10 EPA, DEC uses the POC to indicate whether the sampler or instrument is (1) a primary data source, or (2) a secondary data source such as a collocated sampler, or (3) that an instrument is measuring on a continuous basis. The AQS method code provides information specific to the analytical technique used for the pollutant determination such as instrumental analysis using chemiluminescence for nitric oxide or gravimetric analysis for particulate. The notation presented in the sample frequency indicates how often the pollutant concentration is determined. For example, 1/6 indicates that one sample is collected every sixth day according to the national EPA air monitoring schedule. Continuous indicates that an instrument is continuously analyzing a sample stream providing a pollutant concentration on a real-time basis (e.g. 1-min SO<sub>2</sub> reading) or a near-real time basis (e.g. 1-hour PM<sub>2.5</sub> reading from a beta attenuation monitor, a BAM). The equipment information column identifies on-site equipment (either a sampler or instrument) specific to the AQS parameter code.

Other monitoring sites operated by DEC to gather data related to rural road dust and wildland fires, but that are not submitted to the AQS database are discussed in **Appendix C**. The IMPROVE monitoring sites operated in Alaska under the federal program to characterize and protect scenic visibility around National Parks and designated wilderness areas are described in **Appendix D**.

A summary of pollutant concentration data calculated as NAAQS design values, maxima, or as averages are presented in **Appendix E**.

**2020 Annual Network Plan****3.5 MONITORING WAIVERS****3.5.1 LEAD SOURCE ORIENTED MONITORING**

To meet source-oriented lead monitoring requirements and after consultation with EPA, DEC decided to pursue a modeling demonstration to show that lead concentrations at the ambient boundary of the Red Dog Mine meet the new lead standard. On August 11, 2016, EPA approved the State of Alaska's waiver request for lead monitoring at the Red Dog Mine based on the results of dispersion modeling. The results of the modeling showed that the maximum ambient air 3-month rolling average lead concentration at the mine boundary did not exceed 50 percent of the lead NAAQS. Pursuant to 40 CFR Part 58 Appendix D, section 4.5(a)(ii), this waiver must be renewed every 5 years as part of the Alaska 5-year Air Monitoring Network Assessment. A copy of the EPA approval letter can be found at <https://dec.alaska.gov/media/10608/red-dog-mine-lead-monitoring-waiver-letter-epa-081116.pdf>. DEC is currently working with Teck Alaska Inc., the operator of the Red Dog Mine, on an updated modeling analysis, which will be used for an update waiver request. The intent is to be able to request the waiver prior to July 1, 2020.

**3.5.2 HARRISON CT (BUTTE) SITING**

DEC requested EPA waive requirements under 40 CFR 58 Appendix E, mainly in regards to several spruce trees that have grown up on the adjacent private property. EPA granted the waiver on June 4<sup>th</sup>, 2019. See link below.

<https://dec.alaska.gov/media/16991/butte-site-siting-requirement-waiver-letter-epa-06032019.pdf>

**3.5.3 ANCHORAGE MSA OZONE MONITORING**

On October 15<sup>th</sup>, 2018 EPA waived the ozone monitoring requirements for the Anchorage MSA. The population of the MSA triggered a monitoring requirement, but previous ozone measurements in several areas of the MSA showed ozone concentrations well below 80% of the NAAQS. The waiver approval can be found at the link below.

<http://dec.alaska.gov/media/10956/2017-air-monitoring-network-plan-ozone-waiver.pdf>

## **4. NETWORK MODIFICATIONS COMPLETED IN 2019 AND 2020**

### ***4.1 FAIRBANKS STATE OFFICE BUILDING SITE SHUTDOWN***

On July 12<sup>th</sup>, 2019, DEC shut down the SOB site in Fairbanks. The two Thermo Scientific Partisol 2025 sequential FRM samplers were distributed to different sites. One was used to establish the new A Street SLAMS site and the second one was set up as the new collocated monitor at the Hurst Road site in North Pole. The EPA approval of the site shutdown can be found at the bottom of the DEC Air Monitoring website: <http://dec.alaska.gov/air/air-monitoring/monitoring-plans/>.

### ***4.2 NEW SLAMS SITE AT A-STREET***

DEC established a new maximum impact PM<sub>2.5</sub> monitoring site in the Fairbanks Air Quality Zone at the Nordale Elementary School. The new A Street site is equipped with a Thermo Scientific Partisol 2025 sequential FRM sampler and a Met One BAM 1020 with a Sharp Cut Cyclone to provide AQI information. The site went into operation on November 29<sup>th</sup>, 2018 and began regulatory monitoring July 15<sup>th</sup>, 2019.

### ***4.3 SPECIATION AND PM<sub>2.5</sub> COLLOCATION AT HURST ROAD***

DEC started speciation sampling at the Hurst Road on August 1, 2019. EPA OAQPS provided DEC with a Met One SuperSASS and URG 3000N for the site. A Thermo Scientific Sequential Partisol 2025i PM<sub>2.5</sub> sampler was set-up at the Hurst Road site on July 18<sup>th</sup>, 2019, after the Fairbanks State Office site was discontinued.

### ***4.4 DISCONTINUATION OF NCORE NO<sub>x</sub> MONITORING***

DEC discontinued NO<sub>x</sub> sampling at NCore on October 1<sup>st</sup>, 2019. DEC conducted the sampling to better understand winter time nitrogen chemistry. The required NO<sub>y</sub> sampling continues.

### ***4.5 NCORE INSTRUMENTATION SWAP OUT***

DEC received state funding in SFY20 to replace aging equipment. Most of the original NCore gaseous analyzers still in operation were purchased in 2011 and are being replaced. DEC has ordered replacement analyzers and will place them into service as staffing and social distancing requirements due to COVID 19 allow.

**2020 Annual Network Plan****5. PLANNED NETWORK MODIFICATIONS FOR 2020/21**

While DEC received a waiver from EPA regarding the siting issues at the Butte site, DEC is committed to finding a new location for the maximum PM site for the Anchorage MSA. DEC will develop a saturation study for the winter 2020/21 to determine potential alternate site locations. After EPA approval of a new location, DEC will establish a new SPM site and collect FEM data for at least one calendar year to establish a correlation to the Harrison Ct Butte site. If the data are deemed acceptable by EPA, DEC will then discontinue the Butte SLAMS site and move it to the new location replacing the SPM station.

**2020 Annual Network Plan**

## Appendix A Network Evaluation Forms

## 2020 Annual Network Plan

Table A-1 PM<sub>2.5</sub> Network Evaluation Form

PART 58 APPENDIX D NETWORK EVALUATION FORM FOR PM <sub>2.5</sub>				
STATE: <u>ALASKA</u> AGENCY: <u>DEPARTMENT OF ENVIRONMENTAL CONSERVATION</u> AQS AGENCY CODE: <u>02</u>				
EVALUATION DATE: <u>4/10/2020</u> EVALUATOR: <u>D. WARNER</u>				
APPLICABLE SECTION	REQUIREMENT	CRITERIA MET?		
		YES	NO	N/A
4.7.1(a)	States, and where applicable local agencies must operate the minimum number of required PM <sub>2.5</sub> SLAMS sites listed in Table D-5 of this appendix. Use the form below and Table D-5 to verify if each of your MSAs have the appropriate number of SLAMS FRM/FEM/ARM samplers.	✓		
4.7.1(b)	Each required SLAMS FRM/FEM/ARM monitoring stations or sites must be sited to represent area-wide air quality in the given MSA (typically neighborhood or urban spatial scale, though micro-or middle-scale okay if it represent many such locations throughout the MSA).	✓		
4.7.1(b)(1)	At least one SLAMS FRM/FEM/ARM monitoring station is to be sited at neighborhood or larger scale in an area of expected maximum concentration for each MSA where monitoring is required by 4.7.1(a).	✓		
4.7.1(b)(2)	For CBSAs with a population of 1,000,000 or more persons, at least one FRM/FEM/ARM PM <sub>2.5</sub> monitor is to be collocated at a near-road NO <sub>2</sub> station.			✓
4.7.1(b)(3)	For MSAs with additional required SLAMS sites, a FRM/FEM/ARM monitoring station is to be sited in an area of poor air quality.	✓		
4.7.2	Each State must operate continuous PM <sub>2.5</sub> analyzers equal to at least one-half (round up) the minimum required sites listed in Table D-5 of this appendix. At least one required continuous analyzer in each MSA must be collocated with one of the required FRM/FEM/ARM monitors, unless at least one of the required FRM/FEM/ARM monitors is itself a continuous FEM or ARM monitor, in which case no collocation requirement applies.	✓		
4.7.3	Each State shall install and operate at least one PM <sub>2.5</sub> site to monitor for regional background and at least one PM <sub>2.5</sub> site to monitor regional transport (note locations in comment field). Non-reference PM <sub>2.5</sub> monitors such as IMPROVE can be used to meet this requirement.	✓		
4.7.4	Each State shall continue to conduct chemical speciation monitoring and analyses at sites designated to be part of the PM <sub>2.5</sub> Speciation Trends Network (STN).	✓		
Comments:				

## 2020 Annual Network Plan

MSA Description <sup>1</sup>	MSA population <sup>2,3</sup>	Design Value for years 2017-2019 24-hr/Annual Avg. $\mu\text{g}/\text{m}^3$	Minimum required number of PM2.5 SLAMS FRM/FEM/ARM sites (from Table D-5)	Present number of PM2.5 SLAMS FRM/FEM/ARM sites in MSA	Present number of continuous PM2.5 FEM/ARM analyzers in MSA	Present number of continuous PM2.5 STN analyzers in MSA

Table D-5 of Appendix D to Part 58 – PM2.5 Minimum Monitoring Requirements		
MSA population <sup>1, 2</sup>	Most recent 3-year design value $\geq 85\%$ of any PM2.5 NAAQS <sup>3</sup>	Most recent 3-year design value $< 85\%$ of any PM2.5 NAAQS <sup>3, 4</sup>
>1 million	3	2
500K to 1 million	2	1
50K to <500K <sup>5</sup>	1	0

<sup>1</sup>Minimum monitoring requirements apply to the Metropolitan statistical area (MSA).

<sup>2</sup>Population based on latest available census figures. <https://www.census.gov/>

<sup>3</sup>The PM<sub>2.5</sub> National Ambient Air Quality Standards (NAAQS) levels and forms are defined in 40 CFR part 50.

<sup>4</sup>These minimum monitoring requirements apply in the absence of a design value.

<sup>5</sup>Metropolitan statistical areas (MSA) must contain an urbanized area of 50,000 or more population.

## 2020 Annual Network Plan

Table A-2 PM<sub>10</sub> Network Evaluation Form

PART 58 APPENDIX D NETWORK EVALUATION FORM FOR PM <sub>10</sub>				
STATE: <u>ALASKA</u> AGENCY: <u>DEPARTMENT OF ENVIRONMENTAL CONSERVATION</u> AQS AGENCY CODE: <u>02</u>				
EVALUATION DATE: <u>4/10/2020</u> EVALUATOR: <u>D. WARNER</u>				
APPLICABLE SECTION	REQUIREMENT	CRITERIA MET?		
		YES	NO	N/A
4.6(a)	Table D-4 indicates the approximate number of permanent stations required in MSAs to characterize national and regional PM <sub>10</sub> air quality trends and geographical patterns. Use the form below and Table D-4 to verify if your PM <sub>10</sub> network has the appropriate number of samplers.	✓		

Comments: All of the site locations are based on historical agreements among the EPA, ADEC and (where applicable) local agencies.

Two exceedances on April 9, 2016 and November 16, 2018 at Palmer, and two exceedances at Butte on April 24, 2018 and May 10, 2018 cause the entire Anchorage MSA to be categorized as high concentration. DEC qualified the exceedance day data as RJ (high winds). These four days could be the basis for a 2016 EEWR and a 2018 EEWR should EPA request DEC or EPA start another PM<sub>10</sub> designation process. Thus DEC assumes that medium concentration is applicable when these exceptional events are excluded from the compliance calculations (Table E-5 with assumed EEWRs).

MSA Description <sup>1</sup>	MSA population <sup>2, 3</sup>	Minimum required number of PM <sub>10</sub> stations (from Table D-4)	Present number of PM <sub>10</sub> stations in MSA
Anchorage MSA (includes Mat-Su Borough)	410,188	3-4 (high conc)/1-2 (med conc; high winds EE exceedances removed)	4 (SLAMS [1 collocated], 1 SPM)
Fairbanks North Star Borough MSA	98,555	0 (low conc)	1 (NCore, collocated)
City and Borough of Juneau MSA	32,242	0 (low conc)	1 (SLAMS/LMP)

<sup>1</sup>see [http://www2.census.gov/econ/susb/data/msa\\_codes\\_2007\\_to\\_2011.txt](http://www2.census.gov/econ/susb/data/msa_codes_2007_to_2011.txt)

<sup>2</sup>Minimum monitoring requirements apply to the Metropolitan statistical area (MSA). CBSA includes both MSAs and micropolitan statistical areas.

<sup>3</sup>Population based on population estimates for July 1, 2020 obtained from the Alaska Population Projections: 2017-2045, Alaska Department of Labor and Workforce Development, <http://live.laborstats.alaska.gov/pop/projections.cfm>.

Table D-4 of Appendix D to Part 58 – PM <sub>10</sub> Minimum Monitoring Requirements			
MSA population <sup>1, 2</sup>	High concentration <sup>2</sup>	Medium concentration <sup>3</sup>	Low concentration <sup>4 5</sup>
>1 million	6-10	4-8	2-4
500K to 1 million	4-8	2-4	1-2
250K to 500K	3-4	1-2	0-1
100K to 250K	1-2	0-1	0

## 2020 Annual Network Plan

- <sup>1</sup>Selection of urban areas and actual numbers of stations per area will be jointly determined by EPA and the State agency.
- <sup>2</sup>High concentration areas are those for which ambient PM10 data show ambient concentrations exceeding the PM10 NAAQS by 20 percent or more.
- <sup>3</sup>Medium concentration areas are those for which ambient PM10 data show ambient concentrations exceeding 80 percent of the PM10 NAAQS.
- <sup>4</sup>Low concentration areas are those for which ambient PM10 data show ambient concentrations less than 80 percent of the PM10 NAAQS.
- <sup>5</sup>These minimum monitoring requirements apply in the absence of a design value.

Table A-3 CO Site Evaluation Form

PART 58 APPENDIX D SITE EVALUATION FORM FOR CARBON MONOXIDE (CO)					
STATE: <u>ALASKA</u> AGENCY: <u>DEPARTMENT OF ENVIRONMENTAL CONSERVATION</u> AQS AGENCY CODE: <u>02</u>					
EVALUATION DATE: <u>4/10/2020</u> EVALUATOR: <u>D. Warner</u>					
APPLICABLE SECTION	REQUIREMENT	OBSERVED	CRITERIA MET?		
			YES	NO	N/A
4.2.1(a)	One CO monitor is required to operate collocated with one required near-road NO <sub>2</sub> monitor in CBSAs having a population of 1,000,000 or more persons. If a CBSA has more than one required near-road NO <sub>2</sub> monitor, only one CO monitor is required to be collocated with a near-road NO <sub>2</sub> monitor within that CBSA.				✓
4.2.2(a)	Has the EPA Regional Administrator required additional CO monitoring stations above the minimum number of monitors required in 4.2.1? If so, note location in comment field.		✓		

Comments: The State of Alaska has no CBSA with a population of 1,000,000. Therefore, there are no near-road collocated sites for CO and NO<sub>2</sub>. The Garden Site (AQS ID 02-020-0018) is the single CO site currently operating in the Municipality of Anchorage for Limited Maintenance Plan compliance. A single CO SLAMS monitor operated for Limited Maintenance Plan compliance in the Fairbanks North Star Borough at the Old Post Office Building site (AQS 02-090-0002) until 4/30/2014. Since then the Fairbanks North Star Borough multi-pollutant NCore site (02-090-0034) currently is the single CO site for compliance with NCore requirements and for Limited Maintenance Plan compliance in Fairbanks.

MSA Description <sup>1</sup>	CBSA population <sup>2, 3</sup>	Minimum required number of SLAMS CO sites	Present number of SLAMS CO sites in MSA
Combined Municipality of Anchorage and Matanuska-Susitna Borough	410,188	0	1*
Fairbanks North Star Borough	98,555	0	1*

<sup>1</sup>see [http://www2.census.gov/econ/susb/data/msa\\_codes\\_2007\\_to\\_2011.txt](http://www2.census.gov/econ/susb/data/msa_codes_2007_to_2011.txt)

<sup>2</sup>Minimum monitoring requirements apply to the Metropolitan statistical area (MSA). CBSA includes both MSAs and micropolitan statistical areas.

<sup>3</sup>Population based on population estimates for July 1, 2020 obtained from the Alaska Population Projections: 2017-2045, Alaska Department of Labor and Workforce Development, <http://live.laborstats.alaska.gov/pop/projections.cfm>

\* Monitoring sites in both MSAs satisfy their respective CO Limited Maintenance Plans requirements

<sup>2</sup>Minimum monitoring requirements apply to the Metropolitan statistical area (MSA). CBSA includes both MSAs and micropolitan statistical areas.

<sup>3</sup>Population based on population estimates for July 1, 2020 obtained from the Alaska Population Projections: 2017-2045, Alaska Department of Labor and Workforce Development, <http://live.laborstats.alaska.gov/pop/projections.cfm>.

<sup>4</sup>see <https://www.epa.gov/air-emissions-inventories/2014-national-emissions-inventory-nei-data>

\*Satisfies NCore requirement

Table 2. Minimum SO <sub>2</sub> Monitoring Requirements (Section 4.4.2 of App D to Part 58)	
PWEI (Population weighted Emission Index) Value	Required number of SO <sub>2</sub> monitors
≥ 1,000,000	3
≥ 100,000 but < 1,000,000	2
≥ 5,000 but < 100,000	1

## 2020 Annual Network Plan

Table A-6 NO<sub>2</sub> Network Evaluation Form

PART 58 APPENDIX D NETWORK EVALUATION FORM FOR NITROGEN DIOXIDE (NO <sub>2</sub> )				
STATE: <u>ALASKA</u> AGENCY: <u>DEPARTMENT OF ENVIRONMENTAL CONSERVATION</u> AQS AGENCY CODE: <u>02</u>				
EVALUATION DATE: <u>4/10/2020</u> EVALUATOR: <u>D. WARNER</u>				
APPLICABLE SECTION	REQUIREMENT	CRITERIA MET?		
		YES	NO	N/A
4.3.2(a)	Near-road NO <sub>2</sub> Monitors: One microscale near-road NO <sub>2</sub> monitoring station in each CBSA with a population of 1,000,000 or more persons.			✓
4.3.2(a)	Near-road NO <sub>2</sub> Monitors: An additional near-road NO <sub>2</sub> monitoring station is required for any CBSA with a population of 2,500,000 persons, or in any CBSA with a population of 500,000 or more persons that has one or more roadway segments with 250,000 or greater AADT count.			✓
4.3.2(b)	Near-road NO <sub>2</sub> Monitors: Measurements at required near-road NO <sub>2</sub> monitor sites utilizing chemiluminescence FRMs must include at a minimum: NO, NO <sub>2</sub> , and NO <sub>x</sub>			✓
4.3.3(a)	Area-wide NO <sub>2</sub> Monitoring: One monitoring station in each CBSA with a population of 1,000,000 or more persons to monitor a location of expected highest NO <sub>2</sub> concentrations representing the neighborhood or larger spatial scales.			✓
Comments: The State of Alaska has no CBSA with a population of 1,000,000. The Fairbanks North Star Borough is currently analyzing for NO, NO <sub>y</sub> , and Difference, which satisfies the NCore requirement for NO <sub>2</sub> .

## 2020 Annual Network Plan

Table B-4 Blank Part 58 Appendix E Form for PM

PART 58 APPENDIX E SITE EVALUATION FORM FOR PM <sub>2.5</sub> , PM <sub>10</sub> , PM <sub>10-2.5</sub> , and Pb					
SITE NAME:		SITE ADDRESS:			
AQS ID:		EVALUATION DATE:		EVALUATOR:	
APPLICABLE SECTION	REQUIREMENT	OBSERVED	CRITERIA MET?		
			YES	NO	N/A
2. HORIZONTAL AND VERTICAL PLACEMENT	2-15 meters above ground level for neighborhood or larger spatial scale, 2-7 meters for microscale spatial scale sites and middle spatial scale PM <sub>10-2.5</sub> sites. 1 meter vertically or horizontally away from any supporting structure, walls, <i>etc.</i> , and away from dusty or dirty areas. If located near the side of a building or wall, then locate on the windward side relative to the prevailing wind direction during the season of highest concentration potential.	.			
3. SPACING FROM MINOR SOURCES	(a) For neighborhood or larger spatial scales avoid placing the monitor near local, minor sources. The source plume should not be allowed to inappropriately impact the air quality data collected at a site. Particulate matter sites should not be located in an unpaved area unless there is vegetative ground cover year round.				
4. SPACING FROM OBSTRUCTIONS	(a) To avoid scavenging, the inlet must have unrestricted airflow and be located away from obstacles. The separation distance must be at least twice the height that the obstacle protrudes above the probe inlet.				
	(b) The inlet must have unrestricted airflow in an arc of at least 180 degrees. This arc must include the predominant wind direction for the season of greatest pollutant concentration potential. For particle sampling, a minimum of 2 meters of separation from walls, parapets, and structures is required for rooftop site placement.				
5. SPACING FROM TREES	(a) To reduce possible interference the inlet must be at least 10 meters or further from the drip line of trees.				
	(c) No trees should be between source and probe inlet for microscale sites.				
6. SPACING FROM ROADWAYS	Spacing from roadways is dependent on the spatial scale and ADT count. See section 6.3(b) and figure E-1 for specific requirements.				
Are there any changes that might compromise original siting criteria?					
Other Comments:					

## 2020 Annual Network Plan

Table B-5 Blank Part 58 Appendix E Form for CO

PART 58 APPENDIX E SITE EVALUATION FORM FOR CO					
SITE NAME:		SITE ADDRESS:			
AQ5 ID:		EVALUATION DATE:		EVALUATOR:	
APPLICABLE SECTION	REQUIREMENT	OBSERVED	CRITERIA MET?		
			YES	NO	N/A
2. HORIZONTAL AND VERTICAL PLACEMENT	For neighborhood or larger spatial scale sites the probe must be located 2-15 meters above ground level and must be at least 1 meter vertically or horizontally away from any supporting structure, walls, <i>etc.</i> , and away from dusty or dirty areas. If located near the side of a building or wall, then locate on the windward side relative to the prevailing wind direction during the season of highest concentration potential.				
3. SPACING FROM MINOR SOURCES	(a) For neighborhood scale avoid placing the monitor probe inlet near local, minor sources. The source plume should not be allowed to inappropriately impact the air quality data collected at a site.				
4. SPACING FROM OBSTRUCTIONS	(a) To avoid scavenging, the probe inlet must have unrestricted airflow and be located away from obstacles. The separation distance must be at least twice the height that the obstacle protrudes above the probe inlet (exception is street canyon or source-oriented sites where buildings and other structures are unavoidable).				
	(b) The probe inlet must have unrestricted airflow in an arc of at least 180 degrees. This arc must include the predominant wind direction for the season of greatest pollutant concentration potential.				
5. SPACING FROM TREES	(a) To reduce possible interference the probe inlet must be at least 10 meters or further from the drip line of trees.				
	(c) No trees should be between source and probe inlet for microscale sites.				
6. SPACING FROM ROADWAYS	2. (b) Microscale CO monitor probes in downtown areas or urban street canyon locations shall be located a minimum distance of 2 meters and a maximum distance of 10 meters from the edge of the nearest traffic lane.				
	2. (c) Microscale CO monitor inlet probes in downtown areas or urban street canyon locations shall be located at least 10 meters from an intersection and preferably at a midblock location.				
9. PROBE MATERIAL & RESIDENCE TIME	(a) Sampling train material must be FEP Teflon or borosilicate glass (e.g., Pyrex) for reactive gases.				
	(c) Sampling probes for reactive gas monitors at NCore must have a sample residence time less than 20 seconds.				
Are there any changes that might compromise original siting criteria? If so, provide detail in comment section.					
Other Comments:					

<sup>1</sup> Distance from the edge of the nearest traffic lane. The distance for intermediate traffic counts should be interpolated from the table values based on the actual traffic count.

## 2020 Annual Network Plan

≥60,000	150

**2020 Annual Network Plan**

## Appendix C **Additional Monitoring Projects**

**2020 Annual Network Plan*****SMOKE MONITORING FOR AIR QUALITY ADVISORIES***

Smoke from wildland fires can affect large areas and impact air quality in regions both close to and far away from the burning fire. Almost every summer, large areas of the State are impacted by smoke from wildland fires, with air quality degrading into the very unhealthy to hazardous range. DEC assists the Alaska Fire Service in assessing air quality impacts in areas affected by wildland fires and provides information needed to protect public health. The DEC Air Quality Division uses two separate methods to assess air quality impacts and issue air quality advisories statewide: monitoring data if available and visibility information. Due to current budget and staffing levels, DEC will not explore the use of low cost sensors during the 2021 wildland fire season, and will attempt to support and leverage other agencies with sampling equipment to place monitors where needed. The DEC meteorologist or air quality staff with assistance from the National Weather Service (NWS) use meteorological and air monitoring data to forecast smoke movement and predict where air quality impacts might occur.

***VOLCANIC ASH MONITORING***

The Alaska Volcano Observatory and DEC will cooperate on volcanic ash monitoring should a volcano begin erupting. DEC uses a PM<sub>10</sub> Met One E-BAM with an AIRSIS communication system that allows the DEC meteorologist to review data in near real time and issue air quality advisories for affected areas during volcanic eruptions.

***RADIATION MONITORING***

The State has three radiation monitoring network sites (RadNet) located in Anchorage, Fairbanks, and Juneau. Various agencies and groups operate the equipment. The site in Anchorage is operated by the Alaska Department of Health and Social Services. The DEC Air Quality Division operates the sites in Fairbanks and Juneau.

***JUNEAU CRUISE SHIP AMBIENT AIR IMPACT SATURATION STUDY***

DEC conducted a study of air quality impacts from cruise ship activity in Juneau during the 2019 cruise ship season. The project was a result of increased public complaints regarding air emissions from cruise ships and changes to ship operations and numbers. DEC deployed a network of low cost particulate matter sensors in downtown Juneau. A draft summary report will be published on the DEC website.

While the PM sensors provided initial insight about severity and pollution patterns, the study indicated only short term impacts in the range of a few hours. Future monitoring therefore should include gaseous sensors for SO<sub>2</sub> and NO<sub>2</sub>, to better characterize potential impacts from diesel emissions from cruise ships. DEC purchased equipment for use during the 2020 season, but

**2020 Annual Network Plan**

delivery has been delayed. DEC will develop a monitoring plan once the equipment has been tested and integrated into the DEC data acquisition system. It is expected that monitoring with survey grade equipment will be established in several port communities in 2020 and 2021.

**2020 Annual Network Plan**

## Appendix D **Improve Network**

**2020 Annual Network Plan**

The Alaska Regional Haze SIP includes a monitoring plan for measuring, estimating, and characterizing air quality and visibility impairment at Alaska's four Class I areas. The haze species concentrations are measured as part of the IMPROVE monitoring network deployed throughout the United States. Alaska uses four IMPROVE monitoring stations representing three of the four Class I Areas. Three of these areas (Denali National Park and Preserve, Simeonof and Tuxedni National Wildlife Refuges) have monitors deployed specifically in response to Regional Haze Rule requirements. There is no air monitoring being conducted at the Bering Sea Wilderness Area due to its remote location.

Monitoring site information and additional Regional Haze information are available at DEC's Regional Haze website, <http://dec.alaska.gov/air/anpms/regional-haze>. Monitoring data and additional information for the Alaskan IMPROVE sites are available from the EPA website, <http://vista.cira.colostate.edu/improve>.
