Subject: RE: SCRonF

It depends on the kind of dpf. 3 types; active, passive PMG and passive base metal.

We don't sell active but assume that one is more expensive than SCR. For the rest precious metal filters are approx. \$50/kW unless you want a CARB warranty in which case it goes up to \$80/kW. Base metal filters are roughly \$40/kW. On top of this you would also need to buy a pressure monitor system for a couple grand for every engine.
