|---------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Location and Climate</b>                 | Eagle River is located within the Municipality of Anchorage, between Fort Richardson and the Chugach State Park. The area north of Fort Richardson to the municipal boundary includes Eagle River, Chugiak, Birchwood, Peters Creek, Thunderbird Falls, and Eklutna (Latitude 61.3222 Longitude -149.5667). Eagle River falls within the transitional climate zone, characterized by a semi-arid atmosphere, long, cold winters, and mild summers.<br><i>* Eagle River relies on Anchorage for many supplies and services. Please refer to the Anchorage community profile for facilities and services.</i> |
| <b>History, Culture, &amp; Demographics</b> | The name Eagle River was first reported in 1939 by the U.S. Geological Survey. The Eagle River/Chugiak area was settled by homesteaders and                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

|                           |                                                                                                                                                                                                                                                                                                                                                                                |
|---------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                           | prospered on agricultural activities. The Eagle River Post Office was established in 1961. In spite of local opposition, Chugiak and Eagle River became annexed to the Municipality of Anchorage, when the City of Anchorage and the Greater Anchorage Area Borough were unified in 1975.<br><br>Many residents participate in nearby recreational and subsistence activities. |
| <b>Economy</b>            | Eagle River is the shopping hub between Anchorage, Palmer, and Wasilla. Major stores are Wal-Mart, Fred Meyer and Carrs Safeway. Many residents commute to Anchorage or Joint Base Elmendorf Richardson.                                                                                                                                                                       |
| <b>Subsistence</b>        | Hunting and fishing are important local activities and food sources, although most of these activities in the vicinity of Eagle River, occur in Chugach State Park or on Joint Base Elmendorf Richardson.                                                                                                                                                                      |
| <b>Population</b>         | 6,062 (Alaska Population Estimates by Census Tract, July 2013 Estimate)                                                                                                                                                                                                                                                                                                        |

| <b>Location and Climate</b>                          | <p>Eklutna is located at the head of the Knik Arm of Cook Inlet, at the mouth of the Eklutna River, 25 miles northeast of Anchorage. It is within the boundaries of the Municipality of Anchorage.</p> <p>In addition to the Native Village of Eklutna, west of the Glenn Highway, there are residential areas up Eklutna Lake Road and near Thunderbird Falls (Latitude 61.4545/Longitude -149.3545).</p> <p>Eklutna falls within the transitional climate zone, characterized by a semi-arid atmosphere, long, cold winters, and mild summers.</p> <p><i>* Eklutna relies on Anchorage for many supplies and services. Please refer to the Anchorage community profile for facilities and services.</i></p>                                                                                                                                                                                        |
| <b>History, Culture, &amp; Demographics</b>          | <p>The Eklutna area was the site of many Athabascan villages as little as 800 years ago. Today's residents are descendants of the Danaina tribe. Russian Orthodox missionaries arrived in the 1840s. A railroad station was built in 1918. The Eklutna Power House supplies hydroelectric power to Anchorage.</p> <p>Eklutna is 2 communities: an Athabascan village and a primarily non-native community located off of Thunderbird Falls and Eklutna Lake Road. Eklutna Village has approximately 65 residents. Village residents practice a subsistence lifestyle and the Russian Orthodox religion is prevalent. The indigenous language is Dena'ina, although English is the primary language of residents. A federally recognized tribe is located at Eklutna: Eklutna Native Village. Eklutna, Incorporated is the ANCSA village/urban Corporation, and is a major landowner in the area.</p> |
| <b>Economy</b>                                       | The Matanuska Electric Association Eklutna Power House (hydroelectric) and Eklutna Generation Station (natural gas) supplies hydroelectric power to Anchorage and the Mat-Su. Local residents are most likely to find employment in the urban area of nearby Eagle River or Anchorage.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| <b>Subsistence</b>                                   | Hunting and fishing are important local activities and food sources.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

|---------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Location and Climate</b>                 | Fox River is located on the north shore of Kachemak Bay, 24 miles northeast of Homer at the end of East End Road (Latitude 59.8616/Longitude -151.0197). Fox River falls within the gulf coast transitional climate zone, characterized by a semi-arid atmosphere, long, cold winters, and mild summers.<br><i>* Fox River relies on Homer for many supplies and services. Please refer to the Homer community profile for facilities and services.</i> |
| <b>History, Culture, &amp; Demographics</b> | Fox River was reported by Dall of the U.S. Geological Survey in 1895 and may have been named for Theodore Fox, Vice President of North Pacific Mining and Transportation Company, which operated in Kachemak Bay in 1894. The population of Fox River frequently commutes to Homer for supplies and services.                                                                                                                                           |
| <b>Economy</b>                              | The school provides employment, and many residents commute to Homer for jobs.                                                                                                                                                                                                                                                                                                                                                                           |
| <b>Subsistence</b>                          | Hunting and fishing are important local activities and food sources.                                                                                                                                                                                                                                                                                                                                                                                    |

| <b>FUNNY RIVER</b>                          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|---------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Location and Climate</b>                 | Funny River is located on the Kenai Peninsula, approximately 15 miles east of Soldotna along the Kenai River, from River mile 29 to 45, off of Funny River Road (Latitude 60.4827/Longitude -150.8463). Funny River falls within the gulf coast transitional climate zone, characterized by a semi-arid atmosphere, long, cold winters, and mild summers.<br><i>* Funny River relies on Soldotna for many supplies and services. Please refer to the Soldotna community profile for facilities and services.</i>     |
| <b>History, Culture, &amp; Demographics</b> | Funny River is the local name of a nearby stream, first published in 1904 by the U.S. Geological Survey. Homesteading and farming expanded to the Funny River area during the late 1950s and early 1960s. Funny River Road originated as a bulldozed trail from Soldotna to the homesteads. A paved road now connects Funny River with Soldotna. The community is primarily non-Native; however, a large portion of the land in this area is owned by Alaska Native corporations (primarily Cook Inlet Region, Inc.) |
| <b>Economy</b>                              | Most Funny River residents who are employed commute to Soldotna, Kenai and Nikiski, where they work in retail businesses or service operations associated with the oil or tourism industries. There are several farms in the area with cattle or pack horses, and one alpaca ranch. Sport fishing is the major attraction in this area of the peninsula.                                                                                                                                                             |
| <b>Subsistence</b>                          | Hunting and fishing are important local activities and food sources.                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

|---------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>Location and Climate</i>                 | Girdwood is located on Turnagain Arm in the Municipality of Anchorage, 35 miles southeast of downtown Anchorage off of the Seward Highway. The area is accessed by the Seward Highway. Girdwood is bordered on three sides by the Chugach State Park and Chugach National Forest ( Latitude 60.9417/Longitude -149.1667). Girdwood falls within the transitional climate zone, characterized by a semi-arid atmosphere, long, cold winters, and mild summers.<br><i>* Girdwood relies on Anchorage for many supplies and services. Please refer to the Anchorage community profile for facilities and services.</i> |
| <i>History, Culture, &amp; Demographics</i> | The community was named for James E. Girdwood, who staked a claim at Crow Creek in 1896. The Girdwood post office was established in 1907. In 1951, the Seward Highway was completed, linking Anchorage to the Kenai Peninsula. The City of Girdwood was formed during the 1960s, but the community was unified with the City of Anchorage and the Greater Anchorage Area Borough in 1975. Residents enjoy the rural lifestyle of Girdwood. Girdwood is home to the Alyeska Ski Resort. It is frequented by Anchorage and Kenai residents during winter months and tourists during summer months.                   |
| <i>Economy</i>                              | Local employment includes the school, business, and leisure and hospitality services, including the Alyeska Resort. It is Alaska's most                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

|---------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Location and Climate</b>                 | Halibut Cove is in the Kachemak Bay State Park on the Kenai Peninsula. It lies on the south shore of Kachemak Bay, 12 miles across the inlet from the Homer Pit (Latitude 59.5977/Longitude -151.2238). Halibut Cove is located in the Homer Recording District. Halibut Cove falls within the gulf coast maritime climate zone, characterized by a rainy atmosphere, long, cold winters, and mild summers.                                                                               |
| <b>History, Culture, &amp; Demographics</b> | <p>The Cove was named by W.H. Dall of the U.S. Coast &amp; Geodetic Survey in 1880. Between 1911 and 1928, Halibut Cove had 42 herring salteries and a population of over 1,000, according to one resident. From 1928 to 1975, the population stayed around 40, mostly fishermen.</p> <p>The contemporary community of Halibut Cove is primarily an artist colony. Several artists live and work in Halibut Cove, attracting visitors and apprentices to their galleries and studios.</p> |
| <b>Economy</b>                              | Seasonal, businesses rely heavily on tourism and many residents are self-employed. In 2010, 13 residents held commercial fishing permits                                                                                                                                                                                                                                                                                                                                                  |
| <b>Subsistence</b>                          | Hunting and fishing are important local activities and food sources.                                                                                                                                                                                                                                                                                                                                                                                                                      |
| <b>Population</b>                           | 76 (2010 U.S. Census)                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

|----------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b><i>Location and Climate</i></b>                 | Happy Valley lies on the west coast of the Kenai Peninsula on the Sterling Highway, 22 miles northwest of Homer (Latitude 59.9358/Longitude -151.7372). Happy Valley is located in the Homer Recording District. Happy Valley falls within the gulf coast transitional climate zone, characterized by a semi-arid atmosphere, long, cold winters, and mild summers. |
| <b><i>History, Culture, &amp; Demographics</i></b> | The local name was reported and published by the U.S. Geological Survey in 1950.                                                                                                                                                                                                                                                                                    |
| <b><i>Economy</i></b>                              | Happy Valley is characterized as a "roadhouse economy." Many of its residents work in larger southern Kenai Peninsula communities or commute to Alaska's oil regions, and seasonal construction jobs.                                                                                                                                                               |
| <b><i>Subsistence</i></b>                          | Hunting and fishing are important local activities and food sources.                                                                                                                                                                                                                                                                                                |
| <b><i>Population</i></b>                           | 566 (2014, Department of Labor Estimate)                                                                                                                                                                                                                                                                                                                            |

|----------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b><i>Location and Climate</i></b>                 | Homer is located on the north shore of Kachemak Bay on the southwestern Kenai Peninsula. The Homer Spit, a 4.5-mile long bar of gravel, extends from the Homer shoreline. It is 227 road miles south of Anchorage, at the southern-most point of the Sterling Highway (Latitude 59.6434/Longitude -151.5555). Homer falls within the gulf coast maritime climate zone, characterized by a rainy atmosphere, long, cold winters, and mild summers. This area lacks prolonged periods of freezing weather at low altitudes and is characterized by cloudiness and frequent fog. The combination of heavy precipitation and low temperatures at high altitudes in the coastal mountains of southern Alaska accounts for the numerous mountain glaciers.                                                                                                          |
| <b><i>History, Culture, &amp; Demographics</i></b> | The Homer area has been home to Kenaitze Indians for thousands of years. In 1895 the U.S. Geological Survey arrived to study coal and gold resources. Prospectors bound for Hope and Sunrise disembarked at the Homer Spit. The community was named for Homer Pennock, a gold mining company promoter, who arrived in 1896, built living quarters for his crew of 50 on the Spit and mined the beach sands along Cook Inlet, from Homer to Ninilchik. The Homer post office opened shortly thereafter. In 1899, Cook Inlet Coal Fields Company built a town and dock on the Spit, a coal mine at Homer's Bluff Point, and a 7-mile-long railroad which carried the coal to the end of Homer Spit. Various coal mining operations continued until World War I, and settlers continued to trickle into the area, some to homestead in the 1930s and 40s, others |

|                                  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|----------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                  | to work in the canneries built to process Cook Inlet fish. Coal provided fuel for homes, and there is still an estimated 400 million tons of coal deposits in the vicinity of Homer. The City government was incorporated in March 1964. After the Good Friday earthquake in 1964, the Homer Spit sunk approximately 4 to 6 feet, and several buildings had to be relocated. While commercial and sport fishing are the center of the economic activity, Homer has a large community of artists.                                                                                                                                                                                                                                                                                                                                                                                            |
| <b><i>Economy</i></b>            | Homer is primarily a fishing, fish processing, trade and service center, and enjoys a considerable seasonal tourist industry. Approximately 10 cruise ships dock in Homer each summer. Sport fishing for halibut and salmon contributes significantly to the economy. In 2014, 1266 area residents held commercial fishing permits. The fish dock is equipped with cold storage facilities, ice manufacturing, and a vacuum fish-loading system. The Alaska Islands and Ocean Visitor Center is popular for tourism and also serves as the headquarters for the Alaska Maritime National Wildlife Refuge and Kachemak Bay National Estuarine Research Reserve. The National Park Service maintains a regional office. Government and health care are major employers. During summer months, the population swells with tourists, as well as students and others seeking fishery employment. |
| <b><i>Subsistence</i></b>        | Hunting and fishing are important local activities and food sources.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

| <b>Accessibility</b>      | Homer is accessible by the Sterling Highway to Anchorage, Fairbanks, Canada and the lower 48 states. It is often referred to as "The End of the Road," because it lies at the terminus of the Sterling Highway.                                |
| <b>Airport Facilities</b> | The State owns and operates the Homer Airport, with a 6,700- foot asphalt runway and float plane basin, and a seaplane base at Beluga Lake. There are four additional private landing strips in the vicinity.                                  |
| <b>Airline Services</b>   | Numerous air services, including, but not limited to: Ravn Alaska; Kachemak Air Service; Bald Mountain Air; Beluga Lake Float Plane Service;; Maritime Helicopters; Stellar Air; Smokey Bay Air; Emerald Air Service                           |
| <b>Freight</b>            | Air, vessel, truck                                                                                                                                                                                                                             |
| <b>Vessel Support:</b>    | The deep-water dock can accommodate 30-foot drafts, and 340-foot vessels. There is a boat harbor with moorage for 750 vessels, and a 5-lane boat launch ramp. The Alaska Marine Highway and local ferry services provide water transportation. |

| <b><i>Water &amp; Sewage</i></b> | Over 90% of homes are fully plumbed. Water is supplied by a dam and 35-acre reservoir at Bridge Creek, is treated, stored in a five 100,000-gallon tank, and piped to the majority of homes in the City. The system provides 2 million gallons per day. Others residents use individual wells or have water delivered to home tanks. City sewage is piped to a deep shaft sewer treatment plant; capacity is 1.4 million gallons per day. |
| <b><i>Miscellaneous</i></b>      | <p>Refuse is collected by Alaska Waste, a private firm, and hauled to the Borough-operated Central Landfill, a class I landfill (ADEC # SW1A006-16). The borough also operates a Transfer Station in Homer, which accepts Hazardous wastes, and recycling.</p> <p>Eight schools are located in the community, attended by approximately 1,383 students.</p>                                                                               |

| <b>HOPE</b>                                        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|----------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b><i>Location and Climate</i></b>                 | Hope lies on the northern end of the Kenai Peninsula, on the south shore of the Turnagain Arm of Cook Inlet. The community lies on the 17-mile Hope Highway, northwest of the Sterling Highway, near the mouth of Resurrection Creek (Latitude 60.916/Longitude -149.633) Hope is located in the Seward Recording District. Hope falls within the gulf coast transitional climate zone, characterized by a semi-arid atmosphere, long, cold winters, and mild summers. |
| <b><i>History, Culture, &amp; Demographics</i></b> | "Hope City" was a mining camp for Resurrection Creek, established in 1896; the Hope post office began operating in 1897. Portions of the town were destroyed in the 1964 earthquake. There are two community associations. Many of the homes are vacation or weekend get-a-ways for Anchorage and Kenai residents. Tourism peaks in the summer.                                                                                                                        |
| <b><i>Economy</i></b>                              | The school and local retail businesses provide the only employment in Hope. Some mining activities continue today. A small sawmill is used by the community.                                                                                                                                                                                                                                                                                                           |
| <b><i>Subsistence</i></b>                          | Hunting and fishing are important local activities and food sources.                                                                                                                                                                                                                                                                                                                                                                                                   |
| <b><i>Population</i></b>                           | 196 (2014 Department of Labor Estimate)                                                                                                                                                                                                                                                                                                                                                                                                                                |

| <b>HOUSTON</b>                              |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|---------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Location and Climate</b>                 | Houston is located north of Wasilla in the Mat-Su Borough, 29 miles north of Anchorage. It lies on the George Parks Highway, at mile 174.9 of the Alaska Railroad (Latitude 61.633/Longitude -149.833). Houston is located in the Palmer Recording District. Houston falls within the transitional climate zone, characterized by a semi-arid atmosphere, long, cold winters, and mild summers. Winds are frequently lower than the Palmer/Wasilla area, with daily averages ranging from 0 to 6 mph. |
| <b>History, Culture, &amp; Demographics</b> | Herning Trail (now Willow Creek Sled Trail) was used for freighting supplies to the Willow Creek Mining District. "Houston Siding" was first listed on a blueprint map of the Alaska Railroad in 1917. A railroad spur was constructed to the Janios & Athens coal mine, which supplied coal                                                                                                                                                                                                          |

|                                  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|----------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                  | to Anchorage and the LaTouche Mining Co. in Prince William Sound. In the mid-1920s, the Heaven brothers operated a mink farm at mile 60. In 1953-54, gravels roads and power lines were extended west of Wasilla, and Houston was quickly settled. In 1966, Houston became an incorporated city. In June 1996, the "Miller's Reach" wildfire destroyed more than 37,500 acres in the Houston and Big Lake area, including 433 buildings and homes valued at \$8.9 million. Houston is home to a number of popular recreation sites, including Bonnie Lake, Finger Lake and Long Lake. There are several community organizations, such as Mid-Valley Seniors and the Homesteaders Community Center. |
| <b><i>Economy</i></b>            | Residents are employed in the nearby Wasilla/Palmer area, and some commute to Anchorage. In 2009, one resident held a commercial fishing permit. Houston is a popular fishing center for anglers on the Little Susitna River and area lakes, and there are businesses that perform hospitality services                                                                                                                                                                                                                                                                                                                                                                                            |
| <b><i>Subsistence</i></b>        | Hunting and fishing are important local activities and food sources.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

|---------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Location and Climate</b>                 | Jakolof Bay is on the Kenai Peninsula, in the Kachemak Bay State Park, 6.5 miles northeast of Seldovia (Latitude 59.4659/Longitude - 151.5378). Jakolof Bay is located in the Seldovia Recording District. Jakolof Bay falls within the gulf coast maritime climate zone, characterized by a rainy atmosphere, long, cold winters, and mild summers. |
| <b>History, Culture, &amp; Demographics</b> | The local name was first reported in 1915 by the U.S. Geological Survey. Jakolof Bay is connected by road with Seldovia but neither community is otherwise accessible by road to the outside world.                                                                                                                                                  |
| <b>Economy</b>                              | Local businesses and timber provide the majority of employment. Oyster farming occurs in the area. A university research center is located nearby as well.                                                                                                                                                                                           |
| <b>Subsistence</b>                          | Hunting and fishing are important local activities and food sources.                                                                                                                                                                                                                                                                                 |
| <b>Population</b>                           | 40 (2000 census)                                                                                                                                                                                                                                                                                                                                     |

| <b>Location and Climate</b>                 | Kachemak is on the East Road, adjacent to Homer, on the Kenai Peninsula. It is on the northern shore of Kachemak Bay (Latitude 59.6771/Longitude -151.4199). Kachemak is located in the Homer Recording District. Kachemak falls within the gulf coast maritime climate zone, characterized by a rainy atmosphere, long, cold winters, and mild summers. |
| <b>History, Culture, &amp; Demographics</b> | According to W.H. Dall of the U.S. Coast & Geodetic Survey, "Ka" means water, "chek" means cliff, and "mak" is a suffix meaning high, great or large. It is a Native name, first published in 1847 on a Russian Hydrological chart. The city was incorporated in 1961.                                                                                   |
| <b>Economy</b>                              | Nearby Homer offers a variety of employment opportunities. There are few businesses within the city boundaries; supplies and services are provided by Homer.                                                                                                                                                                                             |
| <b>Subsistence</b>                          | Hunting and fishing are important local activities and food sources.                                                                                                                                                                                                                                                                                     |

| <b>Housing</b>                                | Several lodges and B&Bs (See Homer).                                                                                                                                                                                                                                                                                                                    |  |
| <b>Water &amp; Sewage</b>                     | Residents haul water, have water delivered to home storage tanks, or have individual wells and/or cisterns. The City of Homer provides some homes with piped sewer, and the remainder use individual septic tank systems or privies. Approximately 75% of households are fully plumbed. Some homes in this area are used only seasonally.               |  |
| <b>Miscellaneous</b>                          | <p>Refuse is collected by Alaska Waste, a private firm, and hauled to the Borough-operated Central Landfill, a class I landfill (ADEC # SW1A006-16) in Soldotna. The borough also operates a Transfer Station in Homer, which accepts Hazardous wastes, and recycling.</p> <p>Two schools in the community, attended by approximately 527 students.</p> |  |

| <b>KALIFORNISKY</b>                         |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|---------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Location and Climate</b>                 | <p>Kalifornsky is located on the Kenai Peninsula on the east shore of Cook Inlet. This area lies on Kalifornsky Beach Road, and is not locally considered a community. It lies off the Sterling Highway, 10 miles south of the City of Kenai (Latitude 60.4866/ Longitude -151.1426).</p> <p>Kalifornsky is located in the Kenai Recording District. Kalifornsky falls within the gulf coast transitional climate zone, characterized by a semi-arid atmosphere, long, cold winters, and mild summers.</p> |
| <b>History, Culture, &amp; Demographics</b> | <p>The village of Kalifornsky was first noted in 1916 by the U.S. Coast and Geodetic Survey. The family name "Kalifornsky" is attributed to a Dena'ina Indian who worked at the Fort Ross colony in California between 1812 and the 1820s; "Kali" means fishermen. Peter Kalifornsky, now deceased, was born in the village and was the last fluent speaker of the Lower Cook Inlet dialect of the Dena'ina language.</p>                                                                                  |

|                                  |                                                                                                                                                                                                                                                                                                                                           |
|----------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b><i>Economy</i></b>            | Nearby Kenai and Soldotna offer a variety of employment opportunities. Kalifornsky Beach Road is well-traveled by Kenai River sport fishing enthusiasts. The economy of the area is diverse: oil and gas processing, timber, commercial and sport fishing, government, retail businesses and tourism-related services provide employment. |
| <b><i>Subsistence</i></b>        | Hunting and fishing are important local activities and food sources.                                                                                                                                                                                                                                                                      |
| <b><i>Population</i></b>         | 8,534 (2015 Department of Labor Estimate)                                                                                                                                                                                                                                                                                                 |

|---------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Location and Climate</b>                 | Kasilof is located on the east shore of Cook Inlet on the Kenai Peninsula. It lies on the Sterling Highway, 12 miles south of the City of Kenai (Latitude 60.3249/Longitude -151.2568). Kasilof is located in the Kenai Recording District. Kasilof falls within the gulf coast transitional climate zone, characterized by a semi-arid atmosphere, long, cold winters, and mild summers. |
| <b>History, Culture, &amp; Demographics</b> | Kasilof was an agricultural settlement of Kenaitze Indians, which grew around a stockade built by the Russian Kolomin of the Lebedef-Lastochkin Company. A partial excavation of the area in 1937 found 31 well-preserved houses. Kasilof is a geographic location on the Kenai Peninsula, rather than a community. Most residents now are non-Native.                                    |
| <b>Economy</b>                              | The economy of the Kenai area is diverse: oil and gas processing, timber, commercial and sport fishing, government, retail businesses and tourism-related services provide employment. In 2009, 122 Kasilof residents held commercial fishing permits.                                                                                                                                    |
| <b>Subsistence</b>                          | Hunting and fishing are important local activities and food sources.                                                                                                                                                                                                                                                                                                                      |
| <b>Population</b>                           | 560 (2015 Department of Labor Estimate)                                                                                                                                                                                                                                                                                                                                                   |

| <b>Location and Climate</b>                 | <p>Kenai is located on the Kenai Spur Highway along the western coast of the Kenai Peninsula, fronting Cook Inlet, and on the western boundary of the Kenai National Wildlife Refuge. It is approximately 65 air miles and 155 highway miles southwest of Anchorage via the Sterling Highway (Latitude 60.5537/Longitude -151.2546).</p> <p>Kenai falls within the gulf coast transitional climate zone, characterized by a semi-arid atmosphere, long, cold winters, and mild summers.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| <b>History, Culture, &amp; Demographics</b> | <p>Prior to Russian settlement, Kenai was a Dena'ina Athabascan Indian village. Russian fur traders first arrived in 1741, at which time, about 1,000 Dena'ina lived in the village of Shk'ituk't, near the River, and the traders called the people "Kenaitze," or "Kenai people." In 1791, a fortified Russian trading post, Fort St. Nicholas, was constructed for fur and fish trading, the second permanent Russian settlement in Alaska. In 1849, the Holy Assumption Russian Orthodox Church was established. A post office was established in 1899. Through the 1920s, commercial fishing was the primary activity. In 1940, homesteading enabled the area to develop. The first dirt road from Anchorage was constructed in 1951. In 1957, oil was discovered at Swanson River, 20 miles northeast of Kenai - the first major Alaska oil strike. The city was incorporated in 1960. In 1965, offshore oil discoveries in Cook Inlet fueled a period of rapid growth. Kenai has been a growing center for oil exploration, production and services since that time. Alaska Natives represent 12% of the population; a federally recognized tribe is located in the community – the Kenaitze Indian Tribe.</p> |
| <b>Economy</b>                              | <p>In 1965, offshore oil discoveries in Cook Inlet fueled a period of rapid growth. Kenai has been a growing center for the oil and gas industry since that time, providing services and supplies for Cook Inlet's oil and natural gas drilling and exploration. Tesoro Alaska's oil refining operations and the now-closed Unocal urea plant are located in north Kenai. Both in-state and out-of-state visitors, especially for sport fishing along the Kenai River, provide a significant tourism industry. Other</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

|                                  | important economic sectors include sport, subsistence and commercial fishing, fish processing, timber and lumber harvesting, agriculture, transportation services, construction and retail trade. Approximately 222 area residents hold commercial fishing permits. The largest employers are the borough school district, Peak Oilfield Services, Tesoro Alaska, the borough, and Central Peninsula General Hospital. Logging of spruce bark beetle-killed timber is a growing industry in the area. |                           |
| <b><i>Subsistence</i></b>        | Hunting and fishing are important local activities and food sources.                                                                                                                                                                                                                                                                                                                                                                                                                                  |                           |

| Housing                                | Numerous hotels, Lodges, and B&Bs. Including, but not limited to: Katmai Hotel; Kenai King's Inn; Uptown Motel; Kenai Merit Inn; Harborside Cottages; Alicia's Eagle Rock Lodge; Daniels Lake Lodge; Tanglewood B&B; Summit Lake Lodge; Overland RV Park; Betty's RV Park; Beluga Lookout RV Park                                                                                                                                    |                |
| Water & Sewage                         | Water is supplied by three artesian wells, is treated and piped to 75% of households. A fourth well is under construction. Sewage is piped and receives secondary treatment. The remaining 25% of households use individual water wells and septic systems.                                                                                                                                                                          |                |
| Miscellaneous                          | Refuse is collected by Alaska Waste, a private firm, and hauled to the Borough-operated Central Landfill, a class I landfill (ADEC # SW1A006-16) in Soldotna. The borough also operates a Transfer Station, which accepts Hazardous wastes, and recycling.<br><br>There are 5 schools located in the community, attended by approximately 1,963 students.<br><br>Natural gas from Enstar is primarily used for home heating purposes |                |

| <b>KENAI PENINSULA BOROUGH</b>              |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|---------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Location and Climate</b>                 | <p>The Kenai Peninsula Borough is comprised of the Kenai Peninsula, Cook Inlet, and a large unpopulated area northeast of the Alaska Peninsula. The borough includes portions of the Chugach National Forest, Kenai National Wildlife Refuge, Kenai Fjords National Park, and portions of the Lake Clark and Katmai National Park. The twin cities of Kenai and Soldotna are the population centers of the borough, approximately 65 air miles south of Anchorage.</p> <p>The Kenai Peninsula Borough is split between the transitional and maritime climate zones. The region experiences cold winters and a drier, transitional climate toward the western end, and a strong maritime influence on its eastern end.</p> |
| <b>History, Culture, &amp; Demographics</b> | The Kenaitze Indians (Dena'ina) have occupied the Peninsula historically. The City of Kenai was founded in 1791 as a Russian fur trading post. In the early 1900s cannery operations and construction of the railroad spurred development. The Kenai Peninsula was the site of the first major Alaska oil strike, in 1957, and has been a center for exploration and production since that time. The borough was incorporated as a second-class borough in 1964. The Kenai River is a major sport fishing location for both state residents and tourists. The river is world renowned for trophy king and silver salmon, so the Peninsula is well-traveled by sportsmen during summer months.                             |
| <b>Economy</b>                              | The borough economy is diverse. Off-shore oil and gas production in Cook Inlet and downstream production primarily take place north of Kenai. In-state, out-of-state, and overseas travelers visit the Kenai Peninsula for sport fishing and other recreational activities. Other important economic sectors include commercial fishing and fish processing. In 2009, 1,407 borough residents held commercial fishing permits, which allow fishing for salmon, cod, halibut, and other species. Retail centers have developed in the Soldotna, Kenai, Homer, and Seward areas.                                                                                                                                            |
| <b>Subsistence</b>                          | Hunting and fishing are important local activities and food sources.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

| <b><i>Location and Climate</i></b>                                                                 | Knik-Fairview is on the northwest bank of the Knik Arm of Cook Inlet, 37 road miles northwest of Anchorage in the Mat-Su Borough. It lies south of Wasilla, Big Lake and Meadow Lakes, off of Knik-Goose Bay Road and Fairview Loop Road (Latitude 61.5169/Longitude -149.59373). Knik-Fairview falls within the transitional climate zone, characterized by a semi-arid atmosphere, long, cold winters, and mild summers.                                                                                                                                                                                                             |
| <b><i>History, Culture, &amp; Demographics</i></b>                                                 | Knik is a Dena'ina (Tanaina) Athabascan Indian name meaning "fire," which originally applied to several villages at the head of Cook Inlet. A Russian Orthodox mission was in Knik as early as 1835. The primary village was listed as "Kinik" in the 1880 U.S. Census. Gold found in Interior Alaska in 1908 brought prospectors and supplies to disembark at Knik. Construction of the Iditarod Trail brought mail from Knik to Nome and shipments of gold by dog team to meet the boat at Knik. At its peak between 1913 and 1915, the town was home to 500 people during the summer and 1,000 during the winter. For a while, more |

|                           | Dena'ina lived in Knik than did white settlers and miners. When the Alaska Railroad bypassed Knik in 1915, most residents relocated to Anchorage and Wasilla. Camp 13 of the Matanuska Colony, with 6 farms, was established along Fairview Road in 1935. Land was also homesteaded by veterans after World War II and the Korean War. Most of the historic docks and commercial district were destroyed in the 1960s when Knik-Goose Bay Road was constructed. This community is relatively large, with 6,146 total housing units as of July 1, 2015. Knik, a check-point for the Iditarod Sled Dog Race, is called the "Dog Mushing Center of the World." High-school students are bused to Wasilla. Low housing costs, the semi-rural lifestyle, and a tolerable commute to Anchorage have supported new growth in this portion of the Mat-Su Valley. |      |
| <b>Economy</b>            | 59% of residents (6,683) employed in 2014. 84% employed in private sector, 9% local government.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |      |
| <b>Subsistence</b>        | Hunting and fishing are important local activities and food sources.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |      |

| <b>Accessibility</b> | The George Parks Highway, Glenn Highway, and other local roads connect the area to Anchorage, the remainder of the state, and Canada. The Alaska Railroad serves the Fairbanks to Seward route. The Wasilla and Palmer airports provide scheduled commuter and air taxi services. Float planes land at Wasilla Lake, Jacobsen Lake, and Lake Lucille. There are ten additional private airstrips in the vicinity. Commercial jet flights are operated out of Anchorage International Airport. |

| <b><i>Location and Climate</i></b>                 | <p>The community lies at the base of 3,720-foot Lazy Mountain, 3 miles east of Palmer in the Mat-Su Borough. It lies east of the Matanuska River, off the Old Glenn Highway. It is approximately 45 miles from Anchorage (Latitude 61.6283/Longitude -149.0460). Lazy Mountain is located in the Palmer Recording District.</p> <p>Lazy Mountain falls within the transitional climate zone, characterized by a semi-arid atmosphere, long, cold winters, and mild summers.</p>                                                                                                                                                                                                                                                                                                                                                                 |      |
| <b><i>History, Culture, &amp; Demographics</i></b> | <p>Around 1900, "Palmer's Upper House," a boat-accessible trading post, was located on the east side of the Matanuska River, just upriver from today's Matanuska River Bridge on the Old Glenn Highway. George Palmer's store catered to Dena'ina Athabascans who traded with the Ahtna from Copper River. The area was homesteaded as early as 1915, when the railroad brought employment. Lazy Mountain Children's Home operated from 1947 until the early 1960s. At one time, the Mat-Su Borough established a ski lift and warm-up hut at the Lazy Mountain recreation area. It has since been dismantled.</p> <p>Lazy Mountain is a large developed area outside of Palmer. Most residents are non-Native. Students are bused to schools in Butte or Palmer. As of July 1, 2015 there were 677 total housing units (Alaska Gazetteer).</p> |      |
| <b><i>Economy</i></b>                              | 51% of population (582) employed in 2014. 75% employed in private sector, 14% local government, 10% state government (2014)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |      |
| <b><i>Subsistence</i></b>                          | Hunting and fishing are important local activities and food sources.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |      |

|----------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                    | 24681.50 sq. miles of land and 578.30 sq. miles of water. Matanuska-Susitna Borough falls within the transitional climate zone, characterized by a semi-arid atmosphere, long, cold winters, and mild summers.                                                                                                                                                                                                                                                                                                                                                                           |
| <b><i>History, Culture, &amp; Demographics</i></b> | By 1920, gold, coal mining, and construction of the Alaska railroad sustained the local population. The Matanuska Valley was settled by homesteaders who led an agricultural lifestyle in the 1930s. Construction of the statewide road system and the rich farmlands fueled population growth. Today, Borough residents enjoy a more rural lifestyle close to metropolitan Anchorage. Low housing costs, the rural lifestyle, and a reasonable commute to Anchorage for employment and services has made the Mat-Su Borough one of the fastest growing areas of Alaska in recent years. |
| <b><i>Economy</i></b>                              | The economy is diverse, and residents are employed in a variety of retail, professional, and government occupations. Top employers are Mat-Su schools, Valley Hospital, Wal-Mart, Carrs/Safeway, and Fred Meyer. About one-third of the borough's labor force commutes to Anchorage for employment.                                                                                                                                                                                                                                                                                      |
| <b><i>Subsistence</i></b>                          | Hunting and fishing are important local activities and food sources.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

|                           | connecting to Anchorage. Ocean access is provided through Port MacKenzie, at the head of Cook Inlet along the Knik Arm. The port includes a 1250' trestle dock with -60 feet of water at low tide, and a 500 foot bulkhead barge dock with -20 feet of water at low tide. The docks are configured to handle bulk commodities. A 32-mile rail extension is being completed to connect the port to the Alaska Railroad mainline. The Alaska Railroad bisects the Matanuska-Susitna Borough on its way from Anchorage to Fairbanks. There are over 180-miles of rail within the borough along which passengers can board or disembark at "whistle stops".                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| <b>Airport Facilities</b> | The borough has the highest concentration of public and private airports in the nation. With 10 public airports and over 200 private airports, over 1,000 aircraft, more pilots per capita than most of the rest of Alaska and the nation, and millions of dollars of economic impacts to the region's economy, aviation is vitally important to the economy of the region and lifestyle of its residents. The borough contains over 200 airports concentrated primarily along the road system. The largest concentration of airports occurs between the Cities of Wasilla and Palmer, but the Willow and Talkeetna areas also have a significant number of airports. Most of the airports are privately owned and operated and used for travel, sightseeing, and recreation. There are also public airports at Palmer, Wasilla, and Talkeetna. The borough has many active floatplane lake and some of these lakes have been registered with the Federal Aviation Administration (FAA). Virtually all lakes large enough are used for floatplane operations at some time during the year. There are over 2,000 miles of hiking, snowshoeing, skiing, snowmobiling, and ATV trails throughout the borough. |

|---------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Location and Climate</b>                 | Meadow Lakes lies between the Little Susitna River and the Alaska Railroad, off of the George Parks Highway. It is west of Wasilla, continuing east and northeast of Houston. It is accessed by Pittman Road, Church Road, and Schrock Road. It is approximately 45 miles from Anchorage (Latitude 61.6243/Longitude -149.6036). Meadow Lakes falls within the transitional climate zone, characterized by a semi-arid atmosphere, long, cold winters, and mild summers.                                                                                                                                                                                                         |
| <b>History, Culture, &amp; Demographics</b> | The area has served as a transportation corridor since around 1906, when the first of the trails leading out of Knik to the Gold Mines in the Willow Creek Mining District, the Carle Wagon Road, was constructed. This is now the Wasilla-Fishhook Road. In 1917, Pittman was established on the Alaska Railroad at Mile 166.5, and a water station was added in 1920. Homesteaders settled the area after World War II, and the area continued to develop after a Department of Natural Resources land disposal during the mid-1960s. Low housing costs, the semi-rural lifestyle, and employment in Palmer, Wasilla and Anchorage have supported growth in the Mat-Su Valley. |
| <b>Economy</b>                              | The Wasilla/Palmer area and Anchorage employ individuals in a wide variety of federal, state, local and private sector jobs.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

| <b>Location and Climate</b>                 | Moose Pass is located 26 miles north of Seward on the Kenai Peninsula. It is on the southwest shore of Upper Trail Lake, off the Seward Highway, at mile 29.3 of the Alaska Railroad (Latitude 61.4864/Longitude -149.3683). Moose Pass falls within the gulf coast maritime climate zone, characterized by a rainy atmosphere, long, cold winters, and mild summers. This zone lacks prolonged periods of freezing weather at low altitudes and is characterized by cloudiness and frequent fog. The combination of heavy precipitation and low temperatures at high altitudes in the coastal mountains of southern Alaska accounts for the numerous mountain glaciers. There is little to no freezing weather, moderate precipitation, occasional high winds, and frequent cloud cover and fog. Severe storms are common from December through February. |
| <b>History, Culture, &amp; Demographics</b> | The community was first named in 1912 as a station on the Alaska Railroad. The name is reportedly derived from a mail carrier's team of dogs that in 1903 had considerable trouble gaining the right-of-way from a moose. A post office was established in 1928.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| <b>Economy</b>                              | The State Division of Forestry and local businesses provide most employment. The community is not within an easy commute of either Seward or Kenai. In 2009, two residents held commercial fishing permits.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

| <b>Water &amp; Sewage</b>                     | The majority of homes use individual water wells and septic tank systems; over 50% of households are fully plumbed. The school operates its own water system. The remainder of residences haul or have water delivered, and use privies. Many homes in this area are used only seasonally. |                |
| <b>Miscellaneous</b>                          | There is one school located at 31810 Eepot Rd Moose Pass, AK attended by 11 students.                                                                                                                                                                                                      |                |

| <b>NANWALEK</b><br><i>(nan-WAH-leck); formerly English Bay</i> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|----------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Location and Climate</b>                                    | Nanwalek is located at the southern tip of the Kenai Peninsula, southwest of Seldovia and east of Port Graham (Latitude 59.3544/Longitude -151.9202). Nanwalek falls within the gulf coast maritime climate zone, characterized by a rainy atmosphere, long, cold winters, and mild summers.                                                                                                                                                                                                                                                                                                                                  |
| <b>History, Culture, &amp; Demographics</b>                    | Originally the site of a Russian Trading Post called Alexandrovsk, the village was later called "Odinochka," meaning "a person living in solitude." A Russian Orthodox Church was built in the community in 1870. In 1930, a replacement Church was constructed, and it is a designated national historic site. In 1991, locals changed the community name of English Bay to Nanwalek, meaning "place by lagoon." Many of the current residents are of mixed Russian and Sugpiaq (Alutiiq) lineage. Villagers speak Sugtestun, a dialect of Eskimo similar to Yup'ik. Subsistence activities are a large part of the culture. |
| <b>Economy</b>                                                 | The school, subsistence activities, and summer employment at the Port Graham cannery provide income. Six residents hold commercial fishing permits. The community is working on a project to reestablish the local sockeye run, which has been very low in recent years.                                                                                                                                                                                                                                                                                                                                                      |
| <b>Subsistence</b>                                             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

|                                             | the gulf coast transitional climate zone, characterized by a semi-arid atmosphere, long, cold winters, and mild summers.                                                                                                                                                                                                                                                                                                                                                                   |                                                    |
| <b>History, Culture, &amp; Demographics</b> | Traditionally a Kenaitze Indian territory, the area was homesteaded in the 1940s, and grew with the discovery of oil on the Kenai Peninsula in 1957. By 1964, oil-related industries located here included Unocal, Phillips 66, Chevron and Tesoro.                                                                                                                                                                                                                                        |                                                    |
| <b>Economy</b>                              | Nikiski is the site of a Tesoro Alaska oil refinery, where Cook Inlet and some North Slope crude oil is processed into mainly jet fuel, gasoline, and diesel. Agrium, Inc. ceased operations several years ago after once employing approximately 500 residents at its fertilizer plant, producing 1 million tons of urea and 600,000 tons of ammonia annually. Timber, commercial and sport fishing, government, retail businesses, and tourism-related services also provide employment. |                                                    |
| <b>Subsistence</b>                          | Hunting and fishing are important local activities and food sources.                                                                                                                                                                                                                                                                                                                                                                                                                       |                                                    |

| <b>Location and Climate</b>                 | Nikolaevsk is located on the Kenai Peninsula, inland near Anchor Point. It lies on a road leading from North Fork Road and the Sterling Highway. It was named to honor St. Nicholas, the patron saint of the town's church (Latitude 59.8119/Longitude -151.6106). Nikolaevsk falls within the gulf coast maritime climate zone, characterized by a rainy atmosphere, long, cold winters, and mild summers.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| <b>History, Culture, &amp; Demographics</b> | Nikolaevsk is the location of a settlement of "Russian Old Believers," whose ancestors settled in Woodburn, Oregon after the Bolshevik Revolution of 1917 forced them out of Russia. The first Old Believer settlers on the Kenai Peninsula received a grant from the Tolstoy Foundation in New York and purchased land there in 1967. The community includes Russian Orthodox, Russian Old Believers (Old Right Believers) and some non-Russian people, living in three distinct settlements. The Old Believers in this area lead a family-oriented, self-sufficient, separatist lifestyle. They use modern utilities, and food sources are from gardening, fishing, hunting, and cattle. The first school opened in 1972 and until 1980, students attended classes through the ninth grade, then began their adult lives; many students now go on to complete their education. Families are typically very large (8 to 12 children.) Traditional clothing is worn, Russian is the first language, and the church dictates that males do not shave. Boys typically marry at age 15 or 16, while girls are married at 13 or 14. As growth occurred during the 1980s and 1990s, additional settlements have developed in the area. |
| <b>Economy</b>                              | Many residents are employed in the Anchor Point and Homer areas , primarily in fishing and construction. The Fefelov Mercantile, a general store and post office, is the only year-round business and provides groceries, fabric, and other items.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| <b>Subsistence</b>                          | None                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

| <b>Water &amp; Sewage</b>                     | A new water treatment building, water mains and household water service lines were installed in 1997. The majority of homes are fully plumbed - 49 residents, the school and community-wide fire hydrants are connected to the water system. 80% of households use septic tanks for sewage disposal. Two subdivisions (Nahodka and Kluchevaya) are located outside of the main hub of Nikolaevsk. They have an independent water system that taps two local springs; they do not want to be connected to the new water system. The community has asked for funding to remedy failing individual septic tanks. |                |
| <b>Miscellaneous</b>                          | There is one school located in the community, attended by 64 students.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                |

| <b>Location and Climate</b>                 | Ninilchik lies on the west coast of the Kenai Peninsula on the Sterling Highway, 38 miles southwest of the City of Kenai and 188 road miles from Anchorage. The community lies between mileposts 119 and 144 of the Sterling Highway; a business center has developed between Ninilchik River and Deep Creek (Latitude 60.0432/Longitude -151.6758). Ninilchik falls within the gulf coast transitional climate zone, characterized by a semi-arid atmosphere, long, cold winters, and mild summers.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |                                             |
| <b>History, Culture, &amp; Demographics</b> | <p>The Kenai Peninsula was historically used by Dena'ina Indians for fur-farming and fishing. The Dena'ina word "Niqnilchint" means "lodge by the river." In the 1820s, the Russian American Fur Company, burdened by a number of elderly, disabled and sick employees who could not safely return to Russia, established self-sustaining retirement settlements in Alaska. The Transfiguration of Our Lord Russian Orthodox Church was constructed in 1846. In 1896, a Russian village school was built, and a post office established in 1925. The 1940s brought homesteaders to the area and in 1949 the Berman Packing Company began fish canning operations. The Sterling Highway reached Ninilchik a year later, and the current Ninilchik school built the next year.</p> <p>Alaska Natives represent 17% of the population; the Village Ninilchik, a federally recognized tribe, is a traditional Athabascan Native village, although the majority of the population is non-Native. The village association is actively involved in local issues.</p> |                                             |
| <b>Economy</b>                              | Fishing, retail businesses, tourism, timber, and oil and gas comprise the majority of private sector activities in Ninilchik. Declining fish prices, fish processing, and timber harvesting have affected income opportunities. King Salmon fishing on Deep Creek and Ninilchik River lure thousands of sport fishermen to Ninilchik between late May and late June. Both saltwater and freshwater sport fishing occur seasonally in the area.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |                                             |
| <b>Subsistence</b>                          | Residents of Ninilchik hunt, fish and gather for the following food sources in and around Ninilchik: salmon, halibut, waterfowl, bear, clams and berries.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |                                             |

| <b>Vessel Support:</b>    | Boat launching from this location occurs during the summer months. Launching from this location is not possible without assistance by tractor and is weather and surf dependent. Nearby Homer also offers harbor/docking facilities and State Ferry access. Boats are launched from Deep Creek beach. |

| <b><i>Housing</i></b>            | Multiple hotels and other accommodations in Soldotna and Homer. Many small businesses offer rental cabins and B&Bs in Ninilchik.                                                                                                                                                                                                                                                                                                                                                 |
| <b><i>Water &amp; Sewage</i></b> | The majority of homes use individual water wells or have water delivered. Two-thirds of all residences have individual septic systems and full plumbing; others use outhouses. The school operates its own well and water treatment facility. Many homes in this area are used only seasonally. The village has requested funding to construct a piped sewer system for homes in the Old Ninilchik Subdivision. Lots are too small for both individual wells and septic systems. |
| <b><i>Miscellaneous</i></b>      | There is one school located in the community, attended by 164 students. A borough refuse transfer site is located in Ninilchik, at mile 138.5 Sterling Highway. Soldotna Kenai Peninsula Borough Central Landfill is nearest landfill                                                                                                                                                                                                                                            |

| <b><i>Location and Climate</i></b>                 | Palmer is located in the center of the lush farmlands of the Matanuska Valley, 42 miles northeast of Anchorage on the Glenn Highway (Latitude 61.5934/Longitude -149.1093). Palmer falls within the transitional climate zone, characterized by a semi-arid atmosphere, long, cold winters, and mild summers.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| <b><i>History, Culture, &amp; Demographics</i></b> | Two groups of Athabascans -- the Ahtna and Dena'ina -- have lived in this region for centuries. George Palmer, a trader who came to Knik in 1875, established a trading post on the Matanuska River around 1890. A railway siding was constructed in Palmer in 1916. In 1935, Palmer became the site of one of the most unusual experiments in US history: the Matanuska Valley Colony. A New Deal relief agency planned an agricultural colony in Alaska and 203 families, mostly from the upper MiddleWest, were invited to join the Colony, arriving in Palmer in the early summer of 1935. Although the failure rate was high, many descendants still live in the Mat-Su Valley today. The City of Palmer was formed in 1951. Construction of the statewide road system, and rapid development of Anchorage, has fueled growth in the Mat-Su valley. |
| <b><i>Economy</i></b>                              | Many residents commute to Anchorage for employment. Palmer's economy is based on a diversity of retail and other services and city, borough, state, and federal government. Some light manufacturing occurs. In 2009, 74 residents held commercial fishing permits. Palmer is                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

| TRANSPORTATION                   |                                                                                                                                                                                                                                |
|----------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b><i>Accessibility</i></b>      | Palmer lies on the Glenn Highway.                                                                                                                                                                                              |
| <b><i>Airport Facilities</i></b> | Two paved airstrips, one at 6,009' long by 100' wide and the other at 3,617' long by 75' wide. There are seven additional privately-owned airstrips in the vicinity. Float planes may land at nearby Finger Lake or Wolf Lake. |
| <b><i>Airline Services</i></b>   | Commercial airlines serve the Anchorage International Airport, but the Palmer Municipal Airport supports private and chartered services and air cargo.                                                                         |
| <b><i>Freight</i></b>            | The Alaska Railroad connects Palmer to Whittier, Seward or Anchorage for ocean freight delivery.                                                                                                                               |

|                                                    | of Seldovia, and 28 air miles from Homer (Latitude 59.3515/Longitude - 151.8322). Port Graham falls within the gulf coast maritime climate zone, characterized by a rainy atmosphere, long, cold winters, and mild summers.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| <b><i>History, Culture, &amp; Demographics</i></b> | The earliest known settlers were Russians from the nearby trading post at Nanwalek. In 1850, the Russian-American Co. established a coal mine at Port Graham, but it was not economical and lasted only a few years. Port Graham became the site of a cannery and wharf and, in 1911, Aleuts from Nanwalek moved to the community many to work at the cannery. A post office operated between 1938 and 1961. The cannery burned in 1960, but rebuilt in 1968 and later sold to the village corporation in 1983. A pink salmon hatchery began operations in 1991, but in 1998, the hatchery and salmon processing plant were destroyed by fire. The hatchery and processing plant were rebuilt and re-opened in June 1999. The cannery continues to be the main economic activity in the community, employing residents of Nanwalek as well. A federally recognized tribe is located in the community -- the Native Village of Port Graham. Alaska Natives represent 88% of the population. Port Graham is a traditional Sugpiaq village with a fishing and subsistence lifestyle. |
| <b><i>Economy</i></b>                              | A \$4.5 million fish cannery opened on June 19, 1999; the former plant and salmon hatchery were destroyed by fire in January 1998. Locals organized funding to rebuild the facilities; insurance covered only part of the loss. The cannery provides seasonal employment for 70 Port Graham and Nanwalek residents. Red salmon fry are raised for area lakes, and pink salmon are raised for the cannery. Approximately 13 residents hold commercial fishing permits.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

| <b>Water &amp; Sewage</b>                     | Water is derived from a surface source, is treated and stored in a 50,000-gal. redwood tank. Port Graham has a piped water system and sewage disposal in a community septic tank. A sludge lagoon was recently completed. 66 homes and facilities are served by the system; almost 90% of households are fully plumbed. Port Graham Corporation operates the washeteria. |                |
| <b>Miscellaneous</b>                          | There is one school located in the community, attended by 15 students.                                                                                                                                                                                                                                                                                                   |                |

#### 9770.3.42 - Ridgeway

| <b>RIDGEWAY</b>                             |                                                                                                                                                                                                                                                                                                                     |
|---------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Location and Climate</b>                 | Ridgeway is located on the Sterling Highway on the Kenai Peninsula, between the cities of Kenai, Soldotna, and Sterling (Latitude 60.5313/Longitude -151.0811). Ridgeway falls within the gulf coast transitional climate zone, characterized by a semi-arid atmosphere, long, cold winters, and mild summers.      |
| <b>History, Culture, &amp; Demographics</b> | The area has historically been the home of Kenaitze Indians, although it was developed by non-Natives for the rich resources of the Kenai Peninsula. Alaska Natives represent 8% of the population. Ridgeway is a geographic area between two very large cities on the peninsula and most residents are non-Native. |
| <b>Economy</b>                              | The economy of the Kenai area is diverse: oil and gas processing, timber, commercial and sport fishing, government, retail businesses and tourism-related services provide employment.                                                                                                                              |
| <b>Subsistence</b>                          |                                                                                                                                                                                                                                                                                                                     |

|---------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Location and Climate</b>                 | Seldovia is on the Kenai Peninsula on the south shore of Kachemak Bay, a 15-minute flight across from Homer. Flight time to Anchorage is 45 minutes (Latitude 59.4387/Longitude -151.7150). Seldovia falls within the gulf coast maritime climate zone, characterized by a rainy atmosphere, long, cold winters, and mild summers.                                                                                                                                                                                                                                                                                                        |
| <b>History, Culture, &amp; Demographics</b> | <p>Native residents are mixed Dena'ina Indian, Aleut and Sugpiaq Eskimo (also known as Alutiiq). The name Seldovia is derived from "Seldevoy," a Russian word meaning "herring bay." Between 1869 and 1882, a trading post was located here, and a post office established in 1898. The village developed around commercial fishing and fish processing. The City of Seldovia incorporated in 1945.</p> <p>Seldovia is an Alutiiq village. Alaska Natives represent 23% of the population and a federally recognized tribe is located in the community. Commercial fishing and subsistence are an integral part of the local culture.</p> |
| <b>Economy</b>                              | Seldovia is a commercial fishing center; shellfish farming also occurs. In 2015, 40 residents held commercial fishing permits. Tourism is increasing.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

|---------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Location and Climate</b>                 | Seward is situated on Resurrection Bay on the east coast of the Kenai Peninsula, 125 highway miles south of Anchorage. It lies at the foot of Mount Marathon and is the gateway to the Kenai Fjords National Park. Bear Creek and Lowell Point are adjacent to Seward (Latitude 60.1300/Longitude -149.4433). Seward falls within the gulf coast maritime climate zone, characterized by a rainy atmosphere, long, cold winters, and mild summers. This zone lacks prolonged periods of freezing weather at low altitudes and is characterized by cloudiness and frequent fog. The combination of heavy precipitation and low temperatures at high altitudes in the coastal mountains of southern Alaska accounts for the numerous mountain glaciers. |
| <b>History, Culture, &amp; Demographics</b> | While sailing from Kodiak to Yakutat, Russian fur trader and explorer Alexander Baranof found unexpected shelter from a storm in Resurrection Bay and named it for the Russian feast day. The first settlers came in the 1890's, and in 1903 work began on construction of a railroad. Seward became an incorporated city in 1912. By 1960, Seward was the largest community on the Peninsula. Tsunamis from the 1964 earthquake destroyed the railroad terminal and killed several residents. Alaska Natives represent 21% of the population; Seward is primarily a non-Native community, although the Qutekcak Tribe is very active within the community.                                                                                           |
| <b>Economy</b>                              | As an ice-free harbor and as the southern terminus for the Alaska Railroad and road link to Anchorage and the Interior, Seward has long been a transportation center. The economy has diversified with tourism, commercial fishing, ship services and repairs, oil and gas development, a coal export facility for Usibelli Mine, a State Prison, and the University of                                                                                                                                                                                                                                                                                                                                                                               |

| <b>Location and Climate</b>                 | Skwentna lies on the south bank of the Skwentna River at its junction with Eight Mile Creek, 70 air miles northwest of Anchorage in the Mat-Su Borough. It lies in the Yentna River Valley (Latitude 61.9662/Longitude -151.1957). Skwentna falls within the transitional climate zone, characterized by a semi-arid atmosphere, long, cold winters, and mild summers.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| <b>History, Culture, &amp; Demographics</b> | <p>Dena'ina Athabascans have fished and hunted along the Skwentna and Yentna Rivers for centuries. In 1908, an Alaska Road Commission crew blazed a trail from Seward to Nome, going through Old Skwentna from the Susitna River to Rainy Pass. Many roadhouses were later constructed along the trail to the Innoko Mining District, including the Old Skwentna Roadhouse. Prospectors, trappers and Indians often used sled dogs to transport goods over the trail. A post office opened in 1937, an airstrip built after World War II, and in 1950, the U.S. Army established a radar station at Skwentna and a recreation camp at Shell Lake, 15 air miles from Skwentna. In the 1960s, State land disposals increased settlement.</p> <p>Alaska Natives represent 7% of the population. Skwentna residents are scattered over a large area of land. It has a number of seasonal-use homes owned by Anchorage residents. There is a small local store, and residents use snowmachines or aircraft to travel to the post office.</p> |
| <b>Economy</b>                              | Employment is provided through local lodges, the post office, and the airstrip                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| <b>Population</b>                           | 36 (2015 Department of Labor Estimate)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

| Housing                                | Northwoods Lodge; Barony Lodge (345-7291); Shell Lake Lodge (733-2817); Skwentna Roadhouse (733-2722)                                                                                                                                                                                                                                                                                |                |
| Water & Sewage                         | A number of homes have individual water wells, but very few are fully plumbed. Outhouses are the primary means of sewage disposal. Nearly 90% of the homes in Skwentna are used only seasonally.                                                                                                                                                                                     |                |
| Miscellaneous                          | There is one school located in the community, attended by 11 students. There is no central electric system. Funds have been provided to purchase a community refuse incinerator, however, the community is undecided on a refuse solution. An unpermitted dump site near the airport is currently being used by several families, but most residents burn and bury their own refuse. |                |

| <b>Location and Climate</b>                 | Soldotna is on the Kenai Peninsula, 150 highway miles south of Anchorage, at the junction of the Sterling and Kenai Spur Highways. It lies 10 miles inland from Cook Inlet and borders the Kenai River (Latitude 60.4918/Longitude -151.0691). Soldotna falls within the gulf coast transitional climate zone, characterized by a semi-arid atmosphere, long, cold winters, and mild summers.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| <b>History, Culture, &amp; Demographics</b> | The Peninsula has historically been the home to Kenaitze Indians, and was developed by non-Natives for its rich resources, including fish, timber and oil. Soldotna was named for a nearby stream: either from a Russian word meaning "soldier" or an Indian word meaning "stream fork." The first homesteaders were World War II veterans in 1947. That same year, the Sterling Highway right-of-way was constructed from Cooper Landing to Kenai and Soldotna was the site for the bridge crossing the Kenai River. A post office opened in 1949, with stores and a community center shortly thereafter, as development continued because of Soldotna's strategic location at the Sterling-Kenai Spur Highway junction. In 1957, oil was discovered in the Swanson River region, bringing new growth and development. Soldotna was incorporated as a city in 1960. Alaska Natives represent 7% of the population.                            |
| <b>Economy</b>                              | The area economy is highly diverse. Many Soldotna residents are employed in oil industry services for Cook Inlet oil drilling and exploration.. Oil refining operations occur north of Kenai in Nikiski. Tourism is estimated at a \$95 million per year industry on the Peninsula. The Kenai Convention and Visitors Bureau receives about 800 visitors a day during July. Other important economic sectors include sport, subsistence and commercial fishing, fish processing, government, timber and lumber, agriculture, transportation services, construction and retail trade. The Kenai River offers top trophy king salmon fishing during June and July. In 2009, 143 area residents held commercial fishing permits. Soldotna hosts the Central Peninsula General Hospital, the Kenai Peninsula Community College, the State Troopers' Headquarters, the Kenai National Wildlife Refuge, and the borough and school district offices. |
| <b>Population</b>                           | 4,319 (2015 DCCED Commissioner Certified Population)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

|                           | Electric Generation & Transmission Cooperative, which operates a gas turbine plant in Soldotna. It also purchases electricity from Chugach Electric.                                                                                                                                                                                                                                                                                                            |
| <b>Housing</b>            | Best Western King Salmon Motel & RV Park; Soldotna Inn; Riverside House; Kenai River Lodge/Motor Inn; Soldotna B&B; Posey's Kenai River Hideaway; Orca Lodge; Kenai River Retreat; Across the River RV Park; River Quest RV Park; Big Eddy Campground                                                                                                                                                                                                           |
| <b>Water &amp; Sewage</b> | All homes are completely plumbed. Water is derived from four wells, is treated, stored, and piped throughout the community. A new million-gallon steel tank and a second 500,000-gal. tank, built in the 1970s, now provide sufficient capacity. Piped sewage receives secondary treatment with an activated sludge process; effluent discharges into the Kenai River. Individual wells and septic tanks are used by a few households outside of the core area. |
| <b>Miscellaneous</b>      | There are 10 schools located in the community, attended by 3,542 students. The borough has a Class-1 regional landfill and baling facility at mile 98.5 Sterling Highway in Soldotna. Recycling and hazardous waste disposal are available. Natural gas from Enstar is primarily used by residents for home heating.                                                                                                                                            |

| <b>STERLING</b>                             |                                                                                                                                                                                                                                                                                                                      |
|---------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Location and Climate</b>                 | Sterling is located on the Sterling Highway at the junction of the Moose and Kenai Rivers, 18 miles east of the City of Kenai (Latitude 60.5370/Longitude -150.7970). Sterling falls within the gulf coast transitional climate zone, characterized by a semi-arid atmosphere, long, cold winters, and mild summers. |
| <b>History, Culture, &amp; Demographics</b> | The Kenai Peninsula has been the home of the Kenaitze Indians for hundreds of years. Sterling is a community that apparently had its name formalized in 1954 when a post office was established. An archaeological site, containing prehistoric house pits, has been discovered at the Isaac Walton Campground.      |
| <b>Economy</b>                              | The community caters to the sport fishing industry and summer influx of recreational enthusiasts. The economy of the Kenai area is diverse: oil and gas processing, timber, fishing, government, retail and tourism-related services provide employment. 20 residents hold commercial fishing permits.               |
| <b>Population</b>                           | 5,992 (2015 Department of Labor Estimate)                                                                                                                                                                                                                                                                            |

| <b>Location and Climate</b>                 | Sutton-Alpine is between miles 52 and 72 of the Glenn Highway, 11 miles northeast of Palmer in the Mat-Su Borough. The area is accessed by Chickaloon Way and Jonesville Road (Latitude 61.7159/Longitude - 148.8784). Sutton-Alpine falls within the transitional climate zone, characterized by a semi-arid atmosphere, long, cold winters, and mild summers.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| <b>History, Culture, &amp; Demographics</b> | Ahtna and Dena'ina Athabascan Indians have occupied this territory for centuries. Ahtna and Dena'ina Athabascan Indians have occupied this territory for centuries. During the Russian fur trading era, Ahtna transported pelts from the Dena'ina along the Matanuska River to Copper Fort in the east. Sutton was founded around 1918 as a station on the Matanuska Branch of the Alaska Railroad, for coal export purposes. The railroad went through Sutton to the Chickaloon Mine. The Sutton Coal Washery operated from 1920 to 1922. Sutton was the base camp for construction of the Glenn Highway from 1941 to 1945. The post office was established in 1948. Coal from the privately-owned Evan Jones mine, Jonesville and Eska mines fueled the Sutton and Palmer economies until 1968, when the military bases in Anchorage converted their power systems to oil and coal mining ceased. During the 1980s, several large tracts of land were subdivided, fueling growth. Approximately 26% of the population are Alaska Native or part Native. Middle and high school students are bused to Palmer. |
| <b>Economy</b>                              | Alpine Historical Park, an open-air museum, features relics and historic buildings from the coal washery. The local stores, lodges, restaurant, library, post office, and school provide income. The Palmer/Wasilla area and Anchorage offer a variety of employment opportunities. In 2009, three residents held commercial fishing permits. The Palmer Correctional Center is located nearby.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| <b>Population</b>                           | 1,419 (2015 Department of Labor Estimate)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

| <b>Location and Climate</b>                 | Located at the junction of the Talkeetna and Susitna Rivers, it lies 115 miles north of Anchorage at mile 226.7 of the Alaska Railroad. The paved Talkeetna Spur Road runs 14 miles east off the George Parks Highway at milepost 98.7 (Latitude 62.3176/Longitude -150.1081). Talkeetna falls within the transitional climate zone, characterized by a semi-arid atmosphere, long, cold winters, and mild summers.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |                             |
| <b>History, Culture, &amp; Demographics</b> | The Talkeetna and Chulitna Rivers join the Susitna River at Talkeetna, a Dena'ina (Tanaina) Indian word meaning "river of plenty." Talkeetna was settled as a mining town with an Alaska Commercial Co. trading post in 1896. A gold rush to the Susitna River brought prospectors to the area, and by 1910, Talkeetna was a riverboat steamer station, supplying miners and trappers in the Cache Creek, Iron Creek, and Broad Creek districts. In 1915, Talkeetna was chosen as the headquarters for the Alaska Engineering Commission building the Alaska Railroad, and the community population peaked near 1,000. World War I and completion of the railroad in 1919 dramatically decreased the population. Talkeetna has since developed as an aviation and supply base for Mount McKinley expeditions. Talkeetna is popular for its recreational fishing, hunting, boating, flightseeing, skiing and dog mushing. Local businesses provide services to Mount McKinley climbers. Several of its old log buildings are now historical landmarks, and Talkeetna was placed on the National Register of Historic Places in April 1993. State land disposals and homestead programs helped the community grow. |                             |
| <b>Economy</b>                              | As the take-off point for fishing and flightseeing trips, and a staging area for Mount McKinley climbing expeditions, Talkeetna provides air taxi, helicopter, outfitters, and related services. In 2009, nine area residents held commercial fishing permits.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                             |
| <b>Population</b>                           | 859 (2015 Department of Labor Estimate)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |                             |

#### 9970.3.51 – Trapper Creek

| <b>TRAPPER CREEK</b>                        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|---------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Location and Climate</b>                 | Trapper Creek lies between mile 107 and 133 of the George Parks Highway, in the Mat-Su Borough. It lies about 17 miles north of the Talkeetna Spur Road and west of the junction of the Chulitna, Susitna, and Talkeetna Rivers (Latitude 62.3163/Longitude -150.2339). Trapper Creek falls within the transitional climate zone, characterized by a semi-arid atmosphere, long, cold winters, and mild summers.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| <b>History, Culture, &amp; Demographics</b> | <p>The area is Dena'ina Athabascan Indian territory. Once gold was discovered on Cache Creek in 1906, prospectors traveled up the Susitna River to Susitna Station, and overland past Trapper Creek to Cache Creek. In 1920, the Alaska Road Commission started construction of a wagon road to Cache Creek from Talkeetna. Federal homesteading began here in 1948. In 1959, the "Fifty-Niners," a group of settlers from Detroit, Michigan, moved to Talkeetna and then on to Trapper Creek to find homesteads. They lived in trailers and tents before building log cabins. The Parks Highway opened as far as Trapper Creek in 1967, and was completed in 1971.</p> <p>Alaska Natives represent 11% of the population. Trapper Creek developed from homesteading through the 1960s, as well as some recent new subdivisions. Recreation, hunting, snow machining, and dog mushing are popular activities.</p> |
| <b>Economy</b>                              | Subsistence and sporting activities are an integral part of the lifestyle. Some residents are retired. Those who are employed work in a variety of industries, such as education, transportation, and construction. In 2009, five residents held commercial fishing permits. A variety of transportation means are available in Wasilla, Palmer, and Anchorage. ERA Aviation operates a private heliport in Trapper Creek.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

| <i><b>Location and Climate</b></i>                 | Tyonek lies on a bluff on the northwest shore of Cook Inlet, 43 miles southwest of Anchorage. Tyonek is not located directly on the Kenai Peninsula (Latitude 61.0681/Longitude -151.1434). Tyonek falls within the gulf coast transitional climate zone, characterized by a semi-arid atmosphere, long, cold winters, and mild summers.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| <i><b>History, Culture, &amp; Demographics</b></i> | Tyonek is a Dena'ina (Tanaina) Athabaskan Indian village. In 1778 Captain Cook observed that the Upper Cook Inlet Athabascans possessed iron knives and glass beads, likely from indirect trade with the Russians. Between 1836 and 1840, half of the region's Indians died from a smallpox epidemic. The Alaska Commercial Company had a major outpost in Tyonek by 1875 and by 1880, a total of 117 residents, including 109 Athabascans, 6 "creoles" and 2 whites. After gold was discovered at Resurrection Creek in the 1880s, Tyonek became a major disembarkment point for goods and people. A saltery was established in 1896 at the mouth of the Chuitna River north of Tyonek. In 1915, the Tyonek Reservation (also known as Moquawkie Indian Reservation) was established. The devastating influenza epidemic of 1918-19 left few survivors among the Athabascans. The village was moved to its present location atop a bluff when the old site near Tyonek Timber flooded in the early 1930s. The population declined when Anchorage was founded. In 1965, the federal court ruled that the Bureau of Indian Affairs (BIA) had no right to lease Tyonek Indian land for oil development without permission of the Indians themselves. The tribe subsequently sold rights to drill for oil and gas beneath the reservation to a group of oil companies for \$12.9 million. The reservation status was revoked with the passage of the Alaska Native Claims Settlement Act in 1971. Beluga, a site near Tyonek, is owned by Chugach Electric Association and provides some electricity for Anchorage. Alaska Natives represent 95% of the population; a federally recognized tribe is located in the community. Tyonek is a Dena'ina Indian village practicing a subsistence lifestyle. |
| <i><b>Economy</b></i>                              | Subsistence activities provide salmon, moose, beluga whale, and waterfowl. In 2009, 16 residents held commercial fishing permits. Tyonek offers recreational fishing and hunting guide services. Some residents trap during winter. The North Foreland Port Facility at Tyonek is the preferred site for export of Beluga coal.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

| <b>Location and Climate</b>                 | Wasilla is located midway between the Matanuska and Susitna Valleys, on the George Parks Highway. It lies between Wasilla and Lucille Lakes, 43 miles north of Anchorage (Latitude 61.5845/Longitude -149.4339). Wasilla falls within the transitional climate zone, characterized by a semi-arid atmosphere, long, cold winters, and mild summers.                                                                                                                                                                                                                                                                                                                                                                                                              |
| <b>History, Culture, &amp; Demographics</b> | Wasilla was named after a respected local Dena'ina Indian chief. In the Dena'ina Athabascan Indian dialect, "Wasilla" is said to mean "breath of air." The townsite was established in 1917 at the intersection of the Carle Wagon Road (now Wasilla-Fishhook Road) and the newly-constructed Alaska Railroad. It was a supply base for gold and coal mining in the region through World War II. The Matanuska-Susitna valley was settled by many Colony homesteaders in the 1930s. Construction of the George Parks Highway through Wasilla in the early 1970s provided direct access to Anchorage, enabling families to live in Wasilla and commute to Anchorage for employment. The city incorporated in 1974. Alaska Natives represent 9% of the population. |
| <b>Economy</b>                              | Approximately 30% of the Wasilla workforce commutes to Anchorage. The local economy is diverse, and residents are employed in a variety of city, borough, state, federal government, retail, and professional service positions. Tourism, agriculture, wood products, steel and concrete products are part of the economy. In 2009, 164 area residents held commercial fishing permits. Wasilla is home to the Iditarod Trail Committee and Iron Dog (snowmachine) Race                                                                                                                                                                                                                                                                                          |
| <b>Population</b>                           | 8,468 (2015 DCCED Commissioner Certified Population)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

| <b>Location and Climate</b>                                                                                                                                                                                                                                                                     | Whittier is on the northeast shore of the Kenai Peninsula, at the head of Passage Canal. It is on the west side of Prince William Sound, 60 miles southeast of Anchorage (Latitude 60.7744/Longitude -148.6883). Whittier falls within the gulf coast maritime climate zone, characterized by a rainy atmosphere, long, cold winters, and mild summers.                                                                                                                                                                                                                              |
| <b>History, Culture, &amp; Demographics</b>                                                                                                                                                                                                                                                     | Passage Canal was once the quickest route from Prince William Sound to Cook Inlet. Chugach Indians would portage to Turnagain Arm in search of fish. Nearby Whittier Glacier was named for the American poet John Greenleaf Whittier, and was first published in 1915 by the U.S. Coast & Geodetic Survey. A port and railroad terminus were constructed by the U.S. Army for transport of fuel and other supplies into Alaska during World War II. The railroad spur and two tunnels were completed in 1943, and the Whittier Port became the entrance for troops and dependents of |

|                           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

|                           | <p>the Alaska Command. The huge buildings that dominate Whittier began construction in 1948. The 14-story Hodge Building (now Begich Towers) was built for Army bachelors quarters and family housing, with 198 apartments. The Buckner Building, completed in 1953, had 1,000 apartments and was once the largest building in Alaska. It was called the "city under one roof," with a hospital, bowling alley, theater, gym, swimming pool and shops for Army personnel. Whittier Manor was built in the early 1950s by private developers as rental units for civilian employees. The Port remained an active Army facility until 1960; at that time, the population was 1,200. Whittier Manor was converted to condominiums in 1964; Begich Towers now houses the majority of residents, as the Buckner Building is no longer occupied. The City was incorporated in 1969. Residents enjoy sport-fishing, commercial fishing and subsistence activities.</p> <p>The 2010 U.S. Census data showed 5.45% of the population are Alaska Native or part Native. The 2010 U.S. Census data also showed there were 280 total housing units, and 166 were vacant, of which 104 of these units are used only seasonally. The median household income was \$46,250, per capita income was \$31,624 and 13.96% of residents were living below the poverty level.</p> |
| <b>Economy</b>            | The city, school, local services and summer tourism support Whittier. Tours, charters and sport fishing in Prince William Sound attract seasonal visitors. Ten residents hold commercial fishing permits.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| <b>Subsistence</b>        | A small portion of Whittier residents practice the subsistence lifestyle.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

| <i>Accessibility</i>      | Whittier is an ice-free port and is accessible by road, rail, ferry, boat and aircraft. To enter Whittier by vehicle, you must pass through the state maintained tunnel and pay a \$12.00 roundtrip toll to enter (1-877-611-2586 / <a href="http://dot.alaska.gov/creg/whittiertunnel/schedule.shtml">http://dot.alaska.gov/creg/whittiertunnel/schedule.shtml</a> ). Whittier has a 1480' by 58' gravel airstrip that accommodates charter aircraft and a city-owned seaplane dock available for passenger transfer. |
| <i>Airport Facilities</i> | The State-owned 1,480-foot gravel airstrip accommodates charter aircraft, and a City-owned seaplane dock is available for passenger transfer.                                                                                                                                                                                                                                                                                                                                                                          |

| <b>Water &amp; Sewage</b> | Water is derived from wells and a reservoir. Water storage capacity is 1.2 million gallons. The entire community is served by a piped water and sewer system, and over 95% of homes are fully plumbed. The older portions of the City sewer system need replacement. |
| <b>Miscellaneous</b>      | Refuse is hauled out by a private contractor to Anchorage - the landfill has been closed. An oil and hazardous waste recycling center was completed in 1998.                                                                                                         |

| <b>SPILL RESPONSE SUPPORT</b><br>(Contact local officials to determine possibility of using community facilities.) |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

| <b>Location and Climate</b>                 | Willow is located in the Mat-Su Borough, between mile 60 and 80.7 of the George Parks Highway, north of Houston. Its western boundary is the Susitna River (Latitude 61.7381/Longitude -150.0441). Willow falls within the transitional climate zone, characterized by a semi-arid atmosphere, long, cold winters, and mild summers.                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| <b>History, Culture, &amp; Demographics</b> | Dena'ina Athabascan Indians have occupied this area historically, living in semi-permanent villages. The permanent community got its start when gold was discovered on Willow Creek in 1897. Supplies and equipment were brought in by boat to Knik. From there, a 26-mile summer trail went northwest, up Cottonwood Creek, and across Bald Mountain to Willow Creek. The winter sled trail went north, crossing the present line of the Alaska Railroad at Houston, and up the west end of Bald Mountain for 30 miles. This trail, dubbed the "Double Ender Sled Trail," is still being used by skiers, hunters, backpackers and snowmobile enthusiasts. The sleds then followed a trail along Willow Creek in an easterly direction, now Hatcher Pass Road. The Talkeetna Trail also passed through Willow |

|                           | and was used by dog teams and pack horses. Cabins to accommodate freighters and mail carriers were located at Nancy Lake, Willow and other points north. This route was the forerunner of the Parks Highway. During construction of the Alaska Railroad, surveyors, construction crews, homesteaders and other settlers came to Willow. A Railroad station house was constructed in 1920. During World War II, a radar warning station and airfield were built. The Trail's End Lodge, built in 1947, subsequently became a post office in 1948. By 1954, Willow Creek was Alaska's largest gold mining district, with a total production approaching 18 million dollars. Land disposals, homestead subdivisions, and completion of the George Parks Highway in 1972 fueled growth in the area. In 1976, Alaskans selected Willow for their new State capital site. However, funding to enable the capital move was defeated in the November 1982 election. |
| <b>Economy</b>            | Many Willow residents are self-employed in a variety of businesses, including lodging, guiding and charter services, and retail stores. There are two saw mills and one prefabricated wood-building manufacturer. Some residents are employed in Palmer, Wasilla, or Anchorage. In 2009, 19 residents held commercial fishing permits. Capitol Speedway attracts stockcar racing enthusiasts from the entire state.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

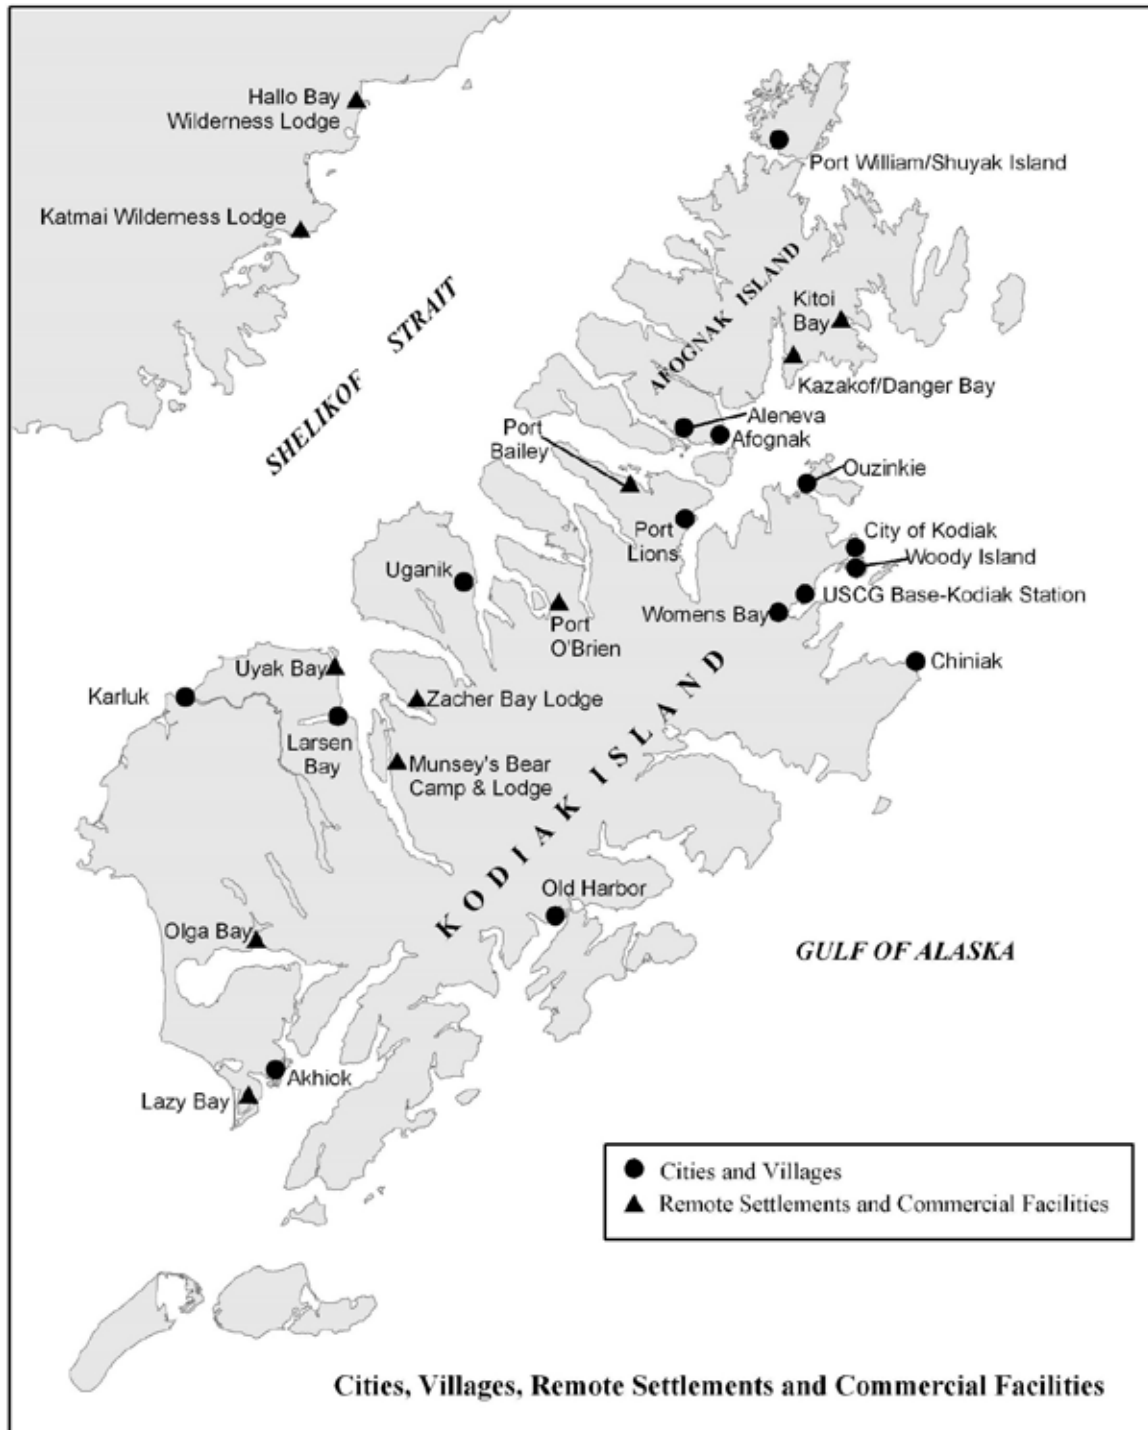

Figure 1 - Kodiak Subarea Communities

## Remote Settlements and Commercial Facilities

The following locations have seasonal populations that may fluctuate widely, but should still be considered in the event of a spill incident:

- Ben Thomas Logging Camp (Kazakof/Danger Bay)
- Big Sandy Logging Camp
- Hallo Bay Wilderness Lodge
- Katmai Wilderness Lodge
- Kitoi Bay Hatchery
- Lazy Bay/Alitak Cannery
- Munsey's Bear Camp & Lodge
- Olga Bay Cannery
- Port Bailey Cannery
- Uyak Bay (Parks) Cannery
- Zacher Bay Lodge (Cannery) - Uyak Bay

The following presents regional organizational information for the Kodiak Subarea:

**Location and Climate**

The Kodiak Island Borough encompasses Kodiak Island in the Gulf of Alaska, its nearby islands, and a portion of the mainland on the Alaskan Peninsula along Shelikof Straits. Kodiak Island, the "Emerald Isle," is the largest island in Alaska, second only to Hawaii in the U.S. The Kodiak National Wildlife Refuge encompasses nearly 1.9 million acres on Kodiak and Afognak Islands. The climate is dominated by a strong marine influence, with minimal freezing weather, moderate precipitation, and frequent cloud cover and fog. Severe storms are common from December through February.

## **Transportation**

**Accessibility:** Kodiak is accessible by air and sea.

**Airport Facilities:** The State-owned Kodiak Airport provides three asphalt runways. These runways measure: 7,562' long by 150' wide; 5,398' long by 150' wide; and, 5,011' long by 150' wide. Kodiak Municipal Airport offers a 2,475' long by 40' wide paved runway.

**Airline Services:** Three scheduled airlines serve Kodiak with several daily flights, and a number of air taxi services provide flights to other communities on the island. City-owned seaplane bases at Trident Basin and Lilly Lake serve floatplane traffic.

**Freight:** The Alaska Marine Highway System operates a ferry service to and from Seward and Homer to Kodiak. Travel time to Homer by ferry is approximately 12 hours.

**Vessel Support:** The Port of Kodiak includes two boat harbors with 600 boat slips and three commercial piers – the ferry dock, city dock and container terminal. Boat launch ramps and vessel haul-outs are also available. A \$20 million breakwater on Near Island provides another 60 acres of mooring space at St. Herman Harbor. The replacement of the 32-year-old float system at the St. Paul Inner Harbor downtown was completed in 2000.

## **Facilities & Utilities**

### **Communications:**

*In-State Phone:* ACS of the Northland

*TV Stations:* ARCS, KMXT-LPTV;

*Long-Distance Phone and Internet Service Providers:* AT&T Alascom; GCI ([www.gci.net](http://www.gci.net)); ACS of the Northland; ACS Internet ([www.acsalaska.net](http://www.acsalaska.net)); AT&T WorldNet, ([www.worldnet.att.net](http://www.worldnet.att.net))

*Radio Stations:* KMXT-FM; KVOK-AM/KRXX-FM; KWVV; KPEN

*Cable Provider:* GCI Cable, Inc.; Communications Unlimited, Inc., Kodiak-Kenai Cable Co. (in conjunction with expansion of cellphone service, company is bringing broadband connections to all Native villages).

*Teleconferencing:* Alaska Telecon. Network; Legislative Information Office; GCI Cable, Inc; AT&T Alascom

**Electricity:** Kodiak Electric Association, hydro-, diesel- and wind-power generation.

### **Fuel Storage - Tank Owners (Capacity):**

- Kodiak Electric (40,000 gals.)
- Western Alaska Fisheries (80,000)
- US Coast Guard Support Center (1,598,000)
- U.S. DOT/FAA/Woody Island (54,000)
- Kodiak Oil Sales Inc. (1,719,000)
- Petro Marine Services (1,932,000)

### **Housing:**

- Shelikof Lodge, 486-4141
- Best Western 888-563-4254
- Inlet Guest Rooms 486-4004
- Multiple bed and breakfast inns

**Services:** Several restaurants, Safeway and Wal-Mart Stores, sporting goods and hardware stores.

**Water & Sewage:** The majority of households (>99%) are on public water and sewer systems.

## **Spill Response Support**

*Contact local officials at the applicable town or village to determine what may be available and practicable for use.*

### **Economy**

Fishing, fish processing, retail, services and the health care industries are the key employers. The Coast Guard, city, borough, State and federal agencies also provide employment. Over 700 borough residents hold commercial fishing permits. Subsistence activities and sport fishing are prevalent. The Kodiak Chamber of Commerce provides economic development services to the area ([www.kodiak.org](http://www.kodiak.org)). The Kodiak Launch Complex, a \$38 million low-Earth orbit launch facility on 27 acres near Chiniak, 45 miles from the City of Kodiak, is the only commercial launch range in the U.S. that is not co-located with a federal facility. The KLC launched its first payload in November 1998, and various agencies/businesses continue to contract the facility for a variety of launches.

### **History, Culture & Demographics**

Kodiak Island has been inhabited since 8,000 B.C. Russian fur trappers first settled there in 1792, and sea otter pelts became the primary incentive for Russian exploration. Kodiak was the first capital of Russian Alaska, but the capital was later moved to Sitka when Alaska was purchased by the U.S. in 1867. Since the Aleutian Campaign of World War II, several branches of the military have maintained a presence in Kodiak. The 1960s brought growth in commercial fisheries and fish processing. The borough was incorporated in 1963. The population of the community consists of 18% Alaska Native or part Native. The Island culture is grounded in commercial and subsistence fishing activities and is primarily non-Native. A Russian Orthodox Church seminary is based in Kodiak, one of the two existing seminaries of this kind in the U.S. U.S. Coast Guard facilities and land occupy a significant portion of the borough.

9770.4.02 - Afognak

### **AFOGNAK**

**Population:** 0, abandoned village site

**Incorporation Type:** Unincorporated

**Borough Located In:** Kodiak Island Borough

**Regional Native Corp:** Koniag, Inc.

### **Emergency Services**

*No local services are available.*

**State Troopers:** Kodiak Post, 486-4121

**Nearest Hospital:** Providence Kodiak Island Medical Center, 486-3281

### **Organizations with Local Offices**

*(These organizations represent the former residents of Afognak and Afognak's tribal members)*

**Village Council:** Native Village of Afognak

204 E. Rezanof Drive, Suite 100, Kodiak, AK 99615

Phone: 486-6357

Fax: 486-6529

Email: [tribe@afognak.net](mailto:tribe@afognak.net)

**Village Corporation:** Afognak Native Corporation  
215 Mission Road, Suite 212, Kodiak, Alaska 99615  
Toll Free: 800-770-6014  
Phone: 486-6014  
Fax 486-2514.

### **Location and Climate**

This traditional Alutiiq (Russian-Aleut) village was located on Afognak Bay, on the southwest coast of Afognak Island, north of Kodiak Island. It lies at approximately 58.008° North Latitude and 152.767° West Longitude. (Sec. 13, T025S, R022W, Seward Meridian.) Afognak is located in the Kodiak Recording District. The Kodiak Archipelago is warmed by the Japanese current. The climate is similar to Southeast Alaska, with less precipitation. January temperatures range from 14 to 46 degrees Fahrenheit; July temperatures vary from 39 to 76 degrees Fahrenheit. Average annual rainfall is 74 inches.

### **Transportation**

Accessibility: Transportation is provided by float plane from Kodiak. Float Plane access is found in various areas around the island.

### **Facilities & Utilities:**

*There are no local facilities, except for a few lodges.*

**Housing:** Afognak Native Corp. operates a few wilderness hunting and fishing lodges, contact the corporation for possible housing options (see above & Afognak Wilderness Lodge, 486-6442). The Afognak Island State park has two restored US Forest Service cabins: one at Pillar Lake, the other at Laura Lake (486-6339).

### **Spill Response Support**

*Contact tribal officials to determine potential facilities for use in spill response.*

### **Economy**

The economy is based on minor tourism, subsistence and logging activities.

### **History, Culture & Demographics**

Afognak was one of ten permanent settlements founded by the Russian-American Co. between 1770 and 1799. The village name was derived from Afognak Island, and was first reported in 1839 by Sub-Lt. Mikhail Murashev. The Census of 1890 noted a series of settlements along the beach, including Rutkovsky village, a group of retired employees of the Russian American Company. A post office was maintained intermittently from 1888 to 1958. The Good Friday earthquake of 1964 generated a tsunami, which destroyed the village. A new village was constructed on the northeast coast of Kodiak Island, called Port Lions, and the residents of Afognak moved there permanently in December 1964. The abandoned village of Afognak does not have a resident population. Many of the former residents and their descendants are members of the Native Village of Afognak. There are a few small logging camps and fishing lodges on Afognak Island. Aleneva, a Russian Old Believers community has been established elsewhere on Afognak Island.

9770.4.03 – Akhiok

**AKHIOK** - (Pronunciation: AH-key-ock)

**Population:** 35 (2007 State Demographer est.)

**Incorporation Type:** 2<sup>nd</sup> Class City

**Borough Located In:** Kodiak Island Borough

**Regional Native Corp:** Koniag, Incorporated.

**Emergency Services**

**Police/VPSO:** 836-2213/2205

**State Troopers:** Kodiak Post, 486-4121

**Fire:** Akhiok VFD, 836-2213

**Medical:** Akhiok Health Clinic, 836-2230

**Nearest Hospital:** Providence Kodiak Island Medical Center, 486-3281

**Organizations with Local Offices**

**City Offices:** City of Akhiok

P.O. Box 5050, Akhiok, AK 99615

Phone: 836-2229

**Village Council:** Native Village of Akhiok

P.O. Box 5030, Akhiok, AK 99615-5030

Phone: 836-2312/2313

Email: [akhiok\\_tribal@yahoo.com](mailto:akhiok_tribal@yahoo.com)

**Village Corporation:** Akhiok/Kaguyak Inc.

1400 W. Benson Blvd., #425, Anchorage, AK 99503

Phone: 258-0604

OR Ayakulik Inc.

3741 Richmond #5, Anchorage, AK 99514

Phone: 279-7911

**Native Housing Authority:** [Insert Name, Address, Phone, Fax, Email, Web – as available]

**Location and Climate**

Akhiok is located at the southern end of Kodiak Island at Alitak Bay, 80 miles southwest of the City of Kodiak, and 340 miles southwest of Anchorage. It lies at approximately 56.946° North Latitude and 154.170° West Longitude. (Sec. 28, T037S, R031W, Seward Meridian.) The climate of the Kodiak Islands is dominated by a strong marine influence. There is little freezing weather, moderate precipitation, and frequent cloud cover and fog. Severe storms are common from December through February. Annual precipitation is 35 inches. Temperatures generally remain within a narrow range of 25 to 54 degrees F.

**Transportation**

**Accessibility:** Air service from Kodiak, or boat.

**Airport Facilities:** State-owned gravel runway 3,320' in long by 60' wide, and a private seaplane base at Moser Bay

**Airline Services:** Scheduled or charter air service from Kodiak; Island Air Service offers regular passenger service.

**Freight:** Barge (sporadic service) or airplane.

**Vessel Support:** Barge services are sporadic. A breakwater and boat launch are available, but the existing dock is a temporary structure.

### **Facilities & Utilities**

#### **Communications:**

*In-State Phone:* ACS of the Northland

*Long-Distance Phone:* AT&T Alascom

*Internet Service Provider:* None

*Cable Provider:* None

*TV Stations:* ARCS

*Radio Stations:* KMXT-FM

*Teleconferencing:* Alaska Teleconferencing Network

**Electricity:** City of Akhiok; diesel power

**Fuel Availability:** Marine gas, diesel, gasoline.

**Fuel Storage - Tank Owners (Capacity):**

- City (108,000 gals.)
- Ward Cove Packing/Alitak

**Housing:** Arrange for accommodations at Community Building by contacting City of Akhiok, 836-2323. No other facilities or services here.

**Services:** Nearest store at Alitak cannery site, 7 miles by boat. No restaurants.

**Water & Sewage:** Water is derived from a dam and reservoir on a small stream, is treated and stored. Akhiok provides a piped gravity water and sewer system that serves all 25 homes in the community. The community is currently boiling its drinking water -- a new water source is needed.

**Miscellaneous:** There is one school in the community attended by 16 students. A new landfill site is under development.

### **Spill Response Support**

*Contact local officials to determine possibility of using community facilities.*

#### **Potential Command Posts:**

- Akhiok School; 836-2203
- City Office Building; 836-2229
- Community Building; 836-2323

#### **Potential Staging Areas:**

- Akhiok School; 836-2203
- Airport
- Equipment storage warehouse; contact city: 836-2229

**Local Spill Response Equipment:** One conex; check with local officials for location and access.

### **Economy**

Public sector employment and seasonal work provide cash flow in the community. Five residents hold commercial fishing permits. Almost all of Akhiok's residents depend heavily on subsistence fishing and hunting, including salmon, crab, shrimp, clams, ducks, seal, deer, bear, rabbit, berries and plants. The community is interested in developing a fish smokery and cold storage facility. Since January 2003, each Akhiok shareholder received \$200,000 from sales of a \$36 million trust fund provided in the Exxon Valdez oil spill settlement.

### **History, Culture & Demographics**

The original village of Kashukugniut was occupied by Russians in the early 19th century. The community was originally a sea otter hunting settlement, located at Humpy Cove. The name Akhiok was reported in the 1880 Census. In 1881, residents relocated to the present site at Alitak Bay. The community's Russian Orthodox church, Protection of the Theotokos Chapel, built around 1900 at the site of an earlier structure, is now on the National Register of Historic places. A post office was established in 1933; the city incorporated in 1972. Residents of nearby Kaguyak relocated to Akhiok after the 1964 earthquake and tsunami destroyed their village. A federally-recognized tribe is located in the community -- the Native Village of Akhiok; Kodiak Island Inter-Tribal Council. The population of the community consists of 94% Alaska Native or part Native. Akhiok is an Alutiiq village dependent upon fishing and subsistence activities.

9770.4.04 - Aleneva

### **ALENEVA**

**Population:** 48 (2007 DOL Estimated Population)

**Incorporation Type:** Unincorporated

**Borough Located In:** Kodiak Island Borough

**Regional Native Corp:** N/A

### **Emergency Services**

**No local emergency services in community or on island.**

**State Troopers:** Kodiak Post, 486-4121

**Nearest Hospital:** Providence Kodiak Island Medical Center, 486-3281

### **Organizations with Local Offices**

No local organizations listed in community database.

### **Location and Climate**

Aleneva is located on the southern coast of Afognak Island, north of Kodiak Island, along the shore of Raspberry Strait, across from Little Raspberry Island. It lies at approximately 58.014° North Latitude and 152.909° West Longitude (Sec. 18, T025S, R022W, Seward Meridian.). The Kodiak Archipelago is warmed by the Japanese current. The climate is similar to Southeast Alaska, with less precipitation. January temperatures range from 14 to 46 degrees Fahrenheit. July temperatures range from 39 to 76 degrees Fahrenheit. Average annual rainfall is 74 inches.

### **Transportation**

**Accessibility:** Transportation is provided by float plane from Kodiak. There are no public facilities.

**Airline Services:** Charter aircraft from Kodiak.

**Freight:** Via float plane.

**Vessel Support:** There are no public facilities.

### **Facilities & Utilities**

*No public services available. Electricity is provided by Individual Generators. There are no state operated schools located in the community.*

### **Spill Response Support**

*Contact local officials to determine possibility of using community facilities.*

**Potential Command Posts:** None identified.

**Potential Staging Areas:** None identified.

**Local Spill Response Equipment:** None identified.

### **Economy**

There are a few small logging camps on Afognak Island, but no other source of employment. The economy is based on subsistence activities and some commercial fishing.

### **History, Culture & Demographics**

The Census of 1890 noted a series of settlements along the beach, including Rutkovsky village, a group of retired employees of the Russian American Company. A post office was maintained intermittently from 1888 to 1958. The Good Friday earthquake of 1964 generated a tsunami, which destroyed the village. Aleneva is currently a settlement of "Russian Old Believers," whose ancestors settled in Woodburn, Oregon after the Bolshevik Revolution of 1917 forced them out of Russia. The first Old Believer settlers in Alaska received a grant from the Tolstoy Foundation in New York and purchased land on the Kenai Peninsula in 1967. Russian Old Believers have established various settlements in Alaska, including Aleneva.

The population of the community consists of 2% Alaska Native or part Native. The Old Believers in this area lead a family-oriented, self-sufficient lifestyle. They use modern utilities, and food sources are from gardening, small livestock, fishing and hunting. Families are typically very large (8 to 12 children.) Traditional clothing is worn, Russian is the first language, and the church dictates that males do not shave. Boys typically marry at age 15 or 16, while girls are married at 13 or 14.

9770.4.05 - Chiniak

**CHINIAK** - (Pronunciation: CHEE-nee-uk)

**Population:** 42 (2007 State Demographer est.)

**Incorporation Type:** Unincorporated

**Borough Located In:** Kodiak Island Borough

**Regional Native Corp:** N/A

### **Emergency Services**

**Police/VPSO:** None

**State Troopers:** Kodiak Post, 486-4121

**Fire:** Chiniak EMS, 486-9800/9827

**Medical:**

**Nearest Hospital:** Providence Kodiak Island Medical Center, 486-3281

### **Organizations with Local Offices**

None

### **Location and Climate**

The community, located 45 miles southeast of the City of Kodiak, on the easternmost point of Kodiak Island, lies at approximately 57.617° North Latitude and 152.164° West Longitude. (Sec. 33, T029S, R018W, Seward Meridian.) The climate of the Kodiak Islands is dominated by a strong marine influence, with little freezing weather, moderate precipitation, and frequent cloud cover and fog. Severe storms are common from December through February, with annual precipitation of 60 inches. January temperatures range from 14 to 46 degrees Fahrenheit, July from 39 to 76 degrees Fahrenheit.

### **Transportation**

**Accessibility:** Via road or boat. Chiniak can be reached by road from Kodiak, 45 miles away. Kodiak offers jet service, float plane services, ferry service and boat rentals.

**Airport Facilities:** An old airstrip may be used for emergency landings.

**Airline Services:** Float plane charter service from Kodiak.

**Freight:** Via road from Kodiak or float plane

**Vessel Support:** Anchorage and dock at Thumb's Up Bay

### **Facilities & Utilities**

#### **Communications:**

*In-State Phone:* ACS of the Northland

*Long-Distance Phone:* AT&T Alascom

*Internet Service Provider:* ACS Internet ([www.acsalaska.net](http://www.acsalaska.net))

*TV Stations:* ARCS

*Radio Stations:* KMXT-FM; KVOK-AM/KRXX-FM

*Cable Provider:* Starband Satellite

*Teleconferencing:* None

**Electricity:** Kodiak Electric Association, hydro and diesel power

**Fuel Availability:** None.

**Fuel Storage - Tank Owners:** N/A

**Housing:** None available.

**Services:** None available.

**Water & Sewage:** Approximately 60% of homes in Chiniak have individual wells, septic systems, and plumbing; the remainder hauls treated water from the Chiniak School.

**Miscellaneous:** One school is located in the community, attended by 17 students. Refuse is hauled to the borough landfill in Kodiak.

### **Spill Response Support**

*Contact local officials to determine possibility of using community facilities.*

**Potential Command Posts:** School (486-8323) or library

**Potential Staging Areas:** School or the former landing strip

**Local Spill Response Equipment:** None identified.

### Economy

The school, post office and local roadhouses are the primary year-round employers. There are no stores or gas stations in Chiniak. Several residents commute to Kodiak for employment. Many work in construction, fishing, or other seasonal industries outside of the community. Four residents hold commercial fishing permits. The Kodiak Launch Complex, a 27-acre low-Earth orbit launch complex operated by the Alaska Aerospace Dev. Corp., lies nearby at Cape Narrow; the complex is the only commercial launch range in the U.S. that is not co-located with a federal facility; the \$38-million KLC launched its first payload in November 1998.

### History, Culture & Demographics

Named "Cape Greville" in 1778 by Capt. Cook, Chiniak is an Alutiiq (Russian-Aleut) name first reported in 1888 by Lt. Comdr. Tanner, USN, of the steamer Albatross. During the mid-1950s, an Air Force White Alice Radar Tracking Station was constructed in Chiniak. The population of the community consists of 4% Alaska Native or part Native. This community is active in local issues and planning through the Chiniak Community Forum. There is a library and school.

9770.4.06 - Karluk

**KARLUK** - (Pronunciation: KAR-luck)

**Population:** 27 (2007 State Demographer est.)

**Incorporation Type:** Unincorporated

**Borough Located In:** Kodiak Island Borough

**Regional Native Corp:** Koniag, Incorporated

### Emergency Services

**VPSO:** 241-2209

**State Troopers:** Kodiak Post, 486-4121

**Fire:** Karluk Village Response Team, 241-2222

**Medical:** Karluk Health Clinic, 241-2212

**Nearest Hospital:** Providence Kodiak Island Medical Center, 486-3281

### Organizations with Local Offices

**Village Council:** Native Village of Karluk

P.O. Box 22, Karluk, AK 99608

Phone: 241-2218

Fax: 241-2208

Tribal council: 241-2224

Village Council President e-mail: [A96lynn@aol.com](mailto:A96lynn@aol.com)

### Location and Climate

Karluk is located on the west coast of Kodiak Island, on the Karluk River, 88 air miles southwest of Kodiak and 301 miles southwest of Anchorage. It lies at approximately 57.570° North Latitude

and 154.454° West Longitude. (Sec. 17, T030S, R032W, Seward Meridian.) The climate of the Kodiak Islands is dominated by a strong marine influence. There is little freezing weather, moderate precipitation, and frequent cloud cover and fog. Severe storms and winds are common from December through February. Annual precipitation is 23 inches. Temperatures generally range from 25 to 56 Fahrenheit.

### **Transportation**

**Accessibility:** Karluk is accessible by air and water.

**Airline Services:** Kodiak Island Air Service – scheduled & chartered flights from Kodiak

**Airport Facilities:** State-owned gravel airstrip (2,000' long by 50' wide) or a seaplane base at Karluk Lake.

**Freight:** Aircraft or barge

**Vessel Support:** Barge service is available twice a month from Kodiak, and goods are lightered to shore by skiff.

### **Facilities & Utilities**

#### **Communications:**

*In-State Phone:* ACS of the Northland

*Long-Distance Phone:* AT&T Alascom

*Internet Service Provider:* None

*TV Stations:* ARCS

*Radio Stations:* KMXT-FM

*Cable Provider:* Starband Satellite

*Teleconferencing:* Alaska Teleconferencing Network

**Electricity:** Alutiq Power Company, operated by Village Council; diesel powered

**Fuel Availability:** None

**Fuel Storage - Tank Owners (Capacity):** Village Council (50,000 gals.)

**Housing:** No year-round overnight accommodations or restaurant available at the village.

Accommodations in summer at Karluk Lodge, located across Karluk Lagoon from the village.

**Services:** Limited groceries, first-aid supplies and hardware available at small store operated by tribal council; most supplies obtained from Kodiak. No banking services, Laundromat, rental transportation, major repair services, moorage facilities nor fuel available.

**Water & Sewage:** A piped water and community septic system was constructed in 1978. Water is supplied by a creek, treated and stored in a 50,000-gallon tank. All occupied homes are fully plumbed. A feasibility study is needed to examine alternatives for water treatment, sewage disposal and solid waste.

**Miscellaneous:** The one school in the community is often closed for the year. There is no refuse collection service, and the landfill is a temporary, unpermitted site.

### **Spill Response Support**

*Contact local officials to determine possibility of using community facilities.*

#### **Potential Command Posts:**

- Karluk School (241-2220)
- tribal offices
- community hall (241-2217)

#### **Potential Staging Areas:**

- Karluk School (241-2220)

**Local Spill Response Equipment:** None identified.

### **Economy**

While fish processing was the primary source of livelihood at one point and most still depend upon the fishing industry for livelihood, today many residents participate in other types of work, as well as subsistence hunting and fishing activities. Salmon, trout, ducks, seals, deer, berries and plants are harvested.

### **History, Culture & Demographics**

The mouth of the Karluk River is thought to have been populated by Natives for more than 7,000 years; 36 archaeological sites exist in the area. Russian hunters established a trading post here in 1786; at that time, the village was located on both sides of the Karluk River, in the area of Karluk Lagoon. Between 1790 and 1850, many tanneries, salteries and canneries were established in the area. By 1900, Karluk was known for having the largest cannery and the greatest salmon stream in the world. A post office was established in 1892. In the early 1900s, more canneries were constructed by the Alaska Packers Association, but over-fishing of the area forced the canneries to close in the late 1930s. After a severe storm in January 1978, the village council decided to relocate the community to the present site, upstream on the south side of the lagoon. HUD constructed 23 houses at the new community location. The Ascension of Our Lord Russian Orthodox Chapel, built in 1888, is a national historic site. A few high school students attend Mount Edgecumbe in Sitka. A federally-recognized tribe is located in the community -- the Native Village of Karluk; Kodiak Island Inter-Tribal Council. The population of the community consists of 96% Alaska Native or part Native. Karluk is an Alutiiq village with a fishing and subsistence lifestyle. The school was closed during the 1999/2000 year and again for the 2002/2003 year due to low enrollment.

9770.4.07 - Kodiak

### **KODIAK**

### **Location and Climate**

The City of Kodiak is located near the northeastern tip of Kodiak Island in the Gulf of Alaska, 252 air miles south of Anchorage, a 45-minute flight and a 4-hour flight from Seattle. It lies at approximately 57.789° North Latitude and 152.402° West Longitude. (Sec. 32, T027S, R019W, Seward Meridian.) Kodiak Island, "the Emerald Isle," is the largest island in Alaska, second only to Hawaii in the U.S. Kodiak National Wildlife Refuge encompasses nearly 1.9 million acres on Kodiak and Afognak Islands. The climate of the Kodiak Islands has a strong marine influence, little freezing weather, moderate precipitation, occasional high winds, and frequent cloud cover and fog. Severe storms are common from December through February. Annual rainfall is 67 inches, and snowfall averages 78 inches. January temperatures range from 14 to 46; July temperatures vary from 39 to 76.

### **Transportation**

**Accessibility:** Kodiak is accessible by air and water.

**Airport Facilities:** The State-owned Kodiak Airport provides three asphalt runways. These runways measure: 7,562' long by 150' wide; 5,398' long by 150' wide; and, 5,011' long by 150' wide. Kodiak Municipal Airport offers a 2,475' long by 40' wide paved runway. City-owned seaplane bases at Trident Basin and Lilly Lake serve floatplane traffic.

**Airline Services:** Alaska Air, Era Aviation, Island Air Service provide daily scheduled flights between Anchorage and Kodiak, as well as several other major towns. Charter service may also be available from these airlines. Multiple air charter companies provide service between Kodiak and other island communities on both a scheduled and charter basis.

**Freight:** The Alaska Marine Highway System operates a ferry service to and from Seward and Homer. Travel time to Homer by ferry is 12 hours.

**Vessel Support:** The Port of Kodiak includes two boat harbors with 600 boat slips and three commercial piers – the ferry dock, city dock and container terminal. Boat launch ramps and vessel haul-outs are also available. A breakwater on Near Island provides another 60 acres of mooring space at St. Herman Harbor.

*Radio Stations:* KMXT-FM; KVOK-AM/KRXX-FM; KWVV; KPEN

*Teleconferencing:* Alaska Teleconferencing Network; Legislative Information Office

**Electricity:** Kodiak Electric Association; hydro and diesel

**Fuel Availability:** Several fueling stations are located in Kodiak, providing gasoline, diesel and jet fuel. Additional fuels (heating oil, propane) are available from Petro Marine or Kodiak Oil Sales.

**Fuel Storage - Tank Owners (Capacity):**

- Kodiak Electric (40,000 gals.)
- Western Alaska Fisheries (80,000)
- Other (150,000)
- US Coast Guard Support Center (1,598,000)
- U.S. DOT/FAA/Woody Island (54,000)
- Kodiak Oil Sales Inc. (1,719,000)
- Petro Marine Services (1,932,000)

**Housing:**

- Shelikof Lodge, 486-4141
- Best Western, 888-563-4254
- Inlet Guest Rooms, 486-4004
- There are approximately 30 “bed and breakfast” establishments.

**Services:** A Safeway grocery store, Wal-Mart, several hardware and general merchandise stores, car and boat repair services, and a variety of restaurants serve the community. There are three rental car agencies; taxi services are available. Tourism-based van & bus sight-seeing and tour companies operate out of Kodiak.

**Water & Sewage:** Pillar Creek and Monashka Creek Reservoirs provide water, which is stored and distributed by pipe throughout the area. All homes are fully plumbed. The piped system has been expanded to Miller Point and Spruce Cape, to replace individual wells and septic tanks in those areas. Piped sewage is processed in a treatment plant.

**Miscellaneous:** The community has 7 schools, attended by 2,252 students. Refuse collection services are provided by the borough; the landfill is located 6 miles north of the city at Monashka Bay.

**Spill Response Support**

*Contact local officials to determine possibility of using community facilities.*

**Potential Command Posts:** city hall, borough offices, community centers, schools.

- KIB Assembly Chambers, Kodiak Island Borough Building, 710 Mill Bay Rd;  
Contact KIB Clerk: 486-9311
- Kodiak City Manager’s Office, KIB Bldg., 710 Mill Bay Rd.; 486-8640

- National Guard Armory; 125 Powell Avenue; 486-3433
- Kodiak Airport; 486-8060
- St. Paul’s Harbor (City of Kodiak), 403 Marine Way; 486-8080
- SeaLand Terminal; 486-5795

**Port Facilities:** Sea-Land Service, Inc. 486-5795; Harbormaster: 486-8080

- Pier 1/Ferry Dock - 204 feet long. 28 foot draft (MLLW). Water & bulk fuel services. (486-3800)
- Pier 2/City Dock - 360 feet long by 64 feet wide. 38 foot draft (MLLW). Used for loading & unloading of commercial freight vessels and mooring of fishing vessels. Bulk fuel, water, covered warehouse, 20 & 90 ton cranes and forklifts. (486-5795)
- Pier 3/Container Terminal - 490 feet long by 64 feet wide. 38 foot draft (MLLW). Water and 30-ton Gantry crane available. (486-5795)
- Small boat harbors - Slips for 600 commercial and recreational vessels. Maximum vessel length: 120 feet. (486-8080)

**Local Spill Response Equipment:** ADEC and Kodiak Island Borough response equipment conexes; contact KIB: 486-9310.

### Economy

The Kodiak economy is based on fishing, seafood processing, retail services and government. Adaptability and diversification in a variety of fisheries has enabled the Kodiak economy to develop and stabilize. Approximately 665 area residents hold commercial fishing permits, and numerous fish processing companies operate here year-round. The largest processors include Trident, Ocean Beauty, North Pacific, and Western Processors. The hospital and the city also rank among the top employers. The largest U.S. Coast Guard station sits ten miles south of the city. The Kodiak Launch Complex, a \$38 million low-Earth orbit launch facility on 27 acres, lies at Cape Narrow near Chiniak; operated by the Alaska Aerospace Dev. Corp., it is the only commercial launch range in the U.S. that is not co-located with a federal facility. The KLC launched its first payload in November 1998, and launches planned over the next five years could be worth up to \$40 million. The Kodiak Chamber of Commerce provides economic development services to the area ([www.kodiak.org](http://www.kodiak.org)).

### History, Culture & Demographics

The island has been inhabited for the past 8,000 years. The first non-Native contacts were in 1763, by the Russian Stephen Glotov, and in 1792 by Alexander Baranov, a Russian fur trapper. Sea otter pelts (which could be sold in China for the equivalent of \$45,000 each in today's dollars) were the primary incentive for Russian exploration, and a settlement was established at Chiniak Bay, the site of present-day Kodiak. At that time, there were over 6,500 Sugpiaqs (Koniags) in the area and the island was called "Kikhtak," but later was known as "Kadiak," the Inuit word for island. Kodiak became the first capital of Russian Alaska, and Russian colonization had a devastating effect on the local Native population. By the time Alaska became a U.S. Territory in 1867, the Koniag region Eskimos had almost disappeared as a viable culture. Alutiiq (Russian-Aleut) is the present-day Native language. The intensive sea otter fur harvesting eventually led to the near extinction of the species.

In 1882, a fish cannery opened at the Karluk spit, sparking development of commercial fishing in the area. The "Town of Kodiak" was incorporated in 1940. Fort Abercrombie was constructed in 1939, and later became the first secret radar installation in Alaska. During the Aleutian Campaign of World War II, the Navy and the Army built and expanded bases on the island. After the war, commercial and residential development continued, and the 1960s brought growth in commercial fisheries and fish processing. The 1964 earthquake and subsequent tidal wave virtually leveled downtown Kodiak; the fishing fleet, processing plant, canneries, and 158 homes

were destroyed – \$30 million in damage. The infrastructure was rebuilt, and by 1968 Kodiak had become the largest fishing port in the U.S. in terms of dollar value. The Magnusson Act in 1976 extended the U.S. jurisdiction of marine resources to 200 miles offshore, which reduced competition from the foreign fleet, and over time, allowed Kodiak to develop a groundfish processing industry.

A federally-recognized tribe is located in the community -- the Shoonaq' Tribe of Kodiak; Kodiak Island Inter-Tribal Council (tribal contractor). Kodiak is primarily non-Native; the population of the community consists of 13% Alaska Native or part Native, and the majority of the Native population is Alutiiq. Filipinos are a large subculture in Kodiak due to their work in the canneries. The local cultures surround commercial and subsistence fishing activities. The Coast Guard comprises a significant portion of the community, and there is a large seasonal population change. A Russian Orthodox Church seminary, one of two existing seminaries in the U.S., is based in Kodiak. A branch of the University of Alaska Anchorage, Kodiak College is located in the City of Kodiak.

9770.4.08 – Kodiak Station

### **KODIAK STATION**

**Population:** 1,817 (2007 State Demographer est.)

**Incorporation Type:** Unincorporated

**Borough Located In:** Kodiak Island Borough

**Regional Native Corp:** N/A

### **Emergency Services**

**Police:** Military Police

**State Troopers:** Kodiak Post, 486-4121

**VPSO:**

**Village Police Officer (contract):**

**Fire:** USCG Kodiak Fire & Rescue, 487-5808

**Medical:** U.S. Coast Guard Rockmore-King Medical Clinic, 487-5757

**Nearest Hospital:** Providence Kodiak Island Medical Center, 486-3281

**Organizations with Local Offices:** No city or borough offices.

### **Location and Climate**

Kodiak Station, located on the western shore of Kodiak Island, south and adjacent to the City of Kodiak, lies at approximately 57.738130° North Latitude and -152.503680° West Longitude. (Sec. 21, T028S, R020W, Seward Meridian. The climate is dominated by a strong marine influence – little freezing weather, moderate precipitation, and frequent cloud cover and fog. Severe storms are common from December through February. Annual precipitation is 60 inches. January temperatures average 14 to 46; July temperatures vary from 39 to 76.

### **Transportation**

**Accessibility:** Kodiak Station is adjacent to the city of Kodiak and regular access to the city exists via air or water. See the Kodiak Community Profile, above, for transportation options.

**Airport Facilities:** The Coast Guard uses the State-operated Kodiak Airport for transportation of personnel and materials.

**Vessel Support:** The Station has private docking facilities for large cutters and fishing vessels.

### **Facilities & Utilities**

**Fuel Availability:** *(See Kodiak Community Profile)*

**Fuel Storage - Tank Owners** (Capacity): N/A

**Housing:** *(See Kodiak Community Profile)*

**Services:** *(See Kodiak Community Profile)*

**Water & Sewage:** The USCG operates its own piped water and sewer system. Water is derived from a surface source and treated. All homes and facilities are fully plumbed.

**Miscellaneous:** The borough operates the local landfill.

### **Spill Response Support**

*Contact USCG, City of Kodiak, and Kodiak Island Borough officials to determine possibility of using community and/or Station facilities.*

#### **Potential Command Posts:**

- \* USCG MSD Kodiak, Building #10, ISC Kodiak; 487-5750
- \* USCG ISC Kodiak, various locations; 487-5760

#### **Potential Staging Areas:** LASH Terminal; Koniag Corp. uplands

- \* USCG MSD Kodiak, Building #10, ISC Kodiak; 487-5750
- \* Lash Corp. dock and warehouse space; 487-3215
- \* Warehouse, hangar, or tarmac space at USCG base; 487-5760

**Local Spill Response Equipment:** USCG ISC Kodiak; 487-5500. USCG Seventeenth District Response Advisory Team, Juneau; 463-2807.

### **Economy**

Kodiak Station residents are Coast Guard members or civilian support personnel and their families. The Kodiak Chamber of Commerce provides economic development services to the area ([www.kodiak.org](http://www.kodiak.org)).

### **History, Culture & Demographics**

This large tract of military property on Kodiak Island has been occupied since the World War II Aleutian Campaign. Originally an Army Base, it has also served as a Naval Base, but Kodiak Station is presently a U.S. Coast Guard Base. (The Air Force has also been active on Kodiak – they built a tracking station at Chiniak after the war.) The population of the community consists

of 3% Alaska Native or part Native. Kodiak Station houses around 2,000 military and their families. The base is self-contained, providing its own water and sewer systems. However, many Coast Guard families live off-base in the surrounding area.

9770.4.09 – Larsen Bay

## **LARSEN BAY**

**Population:** 83 (2007 DCCED Certified Population)

**Incorporation Type:** 2<sup>nd</sup> Class City

**Borough Located In:** Kodiak Island Borough

**Regional Native Corp:** Koniaq, Inc.

### **Emergency Services**

**VPSO:** State VPSO, 847-2262

**State Troopers:** Kodiak Post, 486-4121

**Fire:** Volunteer Fire Department, 847-2262

**Medical:** Larsen Bay Health Clinic & Larsen Bay Village Response Team , 847-2208

**Nearest Hospital:** Providence Kodiak Island Medical Center, 486-3281

### **Organizations with Local Offices**

**City Offices:** City of Larsen Bay

Phone: 847-221

Fax: 847-2239

Email: [cityoflarsenbay@aol.com](mailto:cityoflarsenbay@aol.com)

**Village Council:** Larsen Bay Tribal Council

Phone: 847-2207

Fax: 847-2307

Email: [nativeoflarsenbay@starband.net](mailto:nativeoflarsenbay@starband.net)

### **Location and Climate**

Larsen Bay is located on Larsen Bay, on the northwest coast of Kodiak Island, 60 miles southwest of the City of Kodiak and 283 miles southwest of Anchorage. It lies at approximately 57.539° North Latitude and 153.978° West Longitude. (Sec. 32, T030S, R029W, Seward Meridian.) The climate of the Kodiak Islands is dominated by a strong marine influence – little freezing weather, moderate precipitation, and frequent cloud cover and fog. Severe storms are common from December through February. Annual precipitation is 23 inches of rain, 23 inches of snow. Temperatures generally remain within a narrow range, from 30 to 62 Fahrenheit.

### **Transportation**

**Accessibility:** Larsen Bay is accessible only by air and by water. Regular and charter flights are available from Kodiak.

**Airport Facilities:** There is a State-owned lighted 2,700' long by 75' wide gravel airstrip and a seaplane base.

**Airline Services:** Island Air Service

**Freight:** A cargo barge arrives every six weeks from Seattle.

**Vessel Support:** Docking facilities are available. The Corps of Engineers began construction of a breakwater and boat harbor in the summer of 1997 and completed it in the fall of 2002.

### **Facilities & Utilities**

#### **Communications:**

*In-State Phone:* ACS of the Northland

*Long-Distance Phone:* AT&T Alascom

*Internet Service Provider:* STARBAND

*Cable Provider:* None

*TV Stations:* ARCS

*Radio Stations:* KMXT-FM

*Teleconferencing:* Alaska Teleconferencing Network

**Electricity:** Larsen Bay Utility Company; hydro; diesel backup

**Fuel Availability:** Marine gas, gasoline, diesel, and propane.

**Fuel Storage - Tank Owners (Capacity):**

- Icicle Seafoods (128,900 gals.)
- City (75,400)

**Housing:** Advanced reservations may provide accommodations at:

- Larsen Bay Lodge, 847-2238
- Uyak Bay Lodge, 847-2350
- Wick's Adventure Lodge
- Panamaroff Lodge
- Kodiak Lodge
- Bayview B&B

**Services:** During the summer months, the Larsen Bay Mercantile (847-2233) provides limited groceries, clothing, first-aid supplies and hardware. No hotels, restaurants, Laundromats, banking services, or major repair facilities. No vehicles, but private boats may be rented and aircraft chartered locally.

**Water & Sewage:** Water is supplied by two groundwater sources – a gravity feed from the hydro plant and a backup well, and stored in a 200,000-gallon steel tank. A water supply line is connected to the penstock of the hydroelectric plant and used a majority of the time to reduce utility expenses to both the service plant and the customers. All 40 homes are connected to the piped water system. A community septic tank with outfall line serves approximately half of these homes and the rest are on individual septic systems.

**Miscellaneous:** Weekly refuse collection services are provided. The community has one school, attended by 25 students.

### **Spill Response Support**

*Contact local officials to determine possibility of using community facilities.*

#### **Potential Command Posts:**

- School building (10,000 sq. feet); 847-2252
- Larsen Bay Community Hall (designated tsunami shelter); 847-2211
- City library or city hall
- Tribal offices

**Potential Staging Areas:**

- School building (10,000 sq. feet); 847-2252
- Airport
- Icicle Seafoods (several warehouses, some heated; large dock; tank farm); 847-2250

**Local Spill Response Equipment:** One conex; check with local officials for location and access.

**Economy**

The economy of Larsen Bay is primarily based on fishing. Seventeen residents hold commercial fishing permits. There are very few year-round employment positions. Seasonal lodging and charter hunting and fishing services provide employment for months at a time. A large majority of the population depends on subsistence activities, which include salmon, halibut, seal, sea lion, clams, crab, deer, berries and plants.

**History, Culture & Demographics**

The area is thought to have been inhabited for at least 2,000 years; hundreds of artifacts have been uncovered in the area. Russian fur traders frequented the island in the mid-1700s. The bay was named for Peter Larsen, an Unga Island furrier, hunter and guide. In the early 1800s, there was a tannery in Uyak Bay. The present-day Natives are Alutiiq (Russian-Aleuts). Alaska Packers Association built a cannery in the village in 1911. The city incorporated in 1974.

A federally-recognized tribe is located in the community -- the Native Village of Larsen Bay; Kodiak Island Inter-Tribal Council. The population of the community consists of 79% Alaska Native or part Native. Larsen Bay is a traditional Alutiiq settlement practicing a commercial fishing and subsistence lifestyle.

9770.4.10 – Old Harbor

**OLD HARBOR**

**Population:** 188 (2007 DCCED Certified Population)

**Incorporation Type:** 2<sup>nd</sup> Class City

**Borough Located In:** Kodiak Island Borough

**Regional Native Corp:** Koniag, Inc.

**Emergency Services**

**Medical:** Old Harbor Health Clinic, 286-2205

**Nearest Hospital:** Providence Kodiak Island Medical Center, 486-3281

**Organizations with Local Offices**

**City Offices:** City of Old Harbor

Phone: 286-2204

Fax: 286-2278

**Village Council:** Old Harbor Tribal Council  
Phone: 286-2215  
Fax: 286-2277  
E-mail [ohtribal@hotmail.com](mailto:ohtribal@hotmail.com)

**Village Corporation:** Old Harbor Native Corporation  
Phone: 286-2286  
Fax: 286-2287;  
Email: [OHNCorp@starband.net](mailto:OHNCorp@starband.net)

### **Location and Climate**

Old Harbor, located on the southeast coast of Kodiak Island, 65 miles southwest of the City of Kodiak and 320 miles southwest of Anchorage, lies at approximately 57.203° North Latitude and 153.304° West Longitude. (Sec. 29, T034S, R025W, Seward Meridian.) The climate of the Kodiak Islands is dominated by a strong marine influence – little freezing weather, moderate precipitation, and frequent cloud cover and fog. Severe storms are common from December through February. Annual precipitation is 60 inches. Temperatures remain within a narrow range, from 24 to 60 Fahrenheit.

### **Transportation**

**Accessibility:** Old Harbor is accessible only by air and water.

**Airport Facilities:** A new State-owned 2,750' long by 60' wide gravel runway and a seaplane base serve air traffic.

**Airline Services:** Regular and charter flights are available from Kodiak.

**Freight:** Barge services are no longer available.

**Vessel Support:** There is a harbor and docking facilities for 55 boats.

### **Facilities & Utilities**

#### **Communications:**

*In-State Phone:* ACS of the Northland

*Long-Distance Phone:* AT&T Alascom

*Internet Service Provider:* GCI

*Cable Provider:* Community

*TV Stations:* ARCS

*Radio Stations:* KMXT-FM; KVOK-AM

*Teleconferencing:* Alaska Teleconferencing Network

**Electricity:** Alaska Village Electric Cooperative; diesel-powered

**Fuel Availability:** Diesel and gasoline

**Fuel Storage - Tank Owners (Capacity):**

- Old Harbor Fuel Co. (76,400 gals.)
- AVEC (41,200)

**Housing:** Accommodations and meals at...

- Sitkalidak Lodge, 286-9246
- Oceanview Lodge
- Bay View B&B.

**Services:** The stores Tidal Wave and Gwendolook's offer some groceries, clothing, first-aid supplies, and hardware. No banking services, Laundromat, nor major repair services or boat haulout. Transportation available from Older Harbor Shuttle Service and Larionoffs Car Rental

**Water & Sewage:** Water is supplied by a dammed creek and an infiltration gallery, treated and stored in a tank, then distributed via pipes. A community septic tank treats piped sewage. All residences are connected to the public water and sewer system and have complete plumbing.

**Miscellaneous:** Refuse collection services are not available, although the city has requested funding for dumpsters and garbage collection vehicles; the landfill was recently relocated. The city is interested in developing hydroelectricity. The community has one school, attended by 62 students.

### **Spill Response Support**

*Contact local officials to determine possibility of using community facilities.*

#### **Potential Command Posts:**

- Old Harbor School; 286-2213
- Community hall; (286-2203
- Old Harbor Native Corp. offices (above fire garage); 286-2286

#### **Potential Staging Areas:**

- Old Harbor School (7500 sq. feet); 286-2213
- Old Harbor Volunteer Fire Dept. building (warehouse/garage space); 286-2217
- Airport hangar
- City shop (40' x 70': 3000 sq. ft.)
- Dock space at boat harbor

**Local Spill Response Equipment:** One conex; check with local officials for location and access.

### **Economy**

Many residents are commercial fishermen or crew; thirty-two residents hold commercial fishing permits. Most depend to some extent on subsistence activities for food sources, such as salmon, halibut, crab, deer, seal, rabbit, bear, berries and plants. A sports fish charter boat industry has become popular.

### **History, Culture & Demographics**

The region around Old Harbor is thought to have been inhabited for nearly 2,000 years. The area was visited by the Russian Grigori Shelikov and his "Three Saints" flagship in 1784. Three Saints Bay became the first Russian colony in Alaska, but in 1788 a tsunami destroyed the settlement. Two more earthquakes struck before 1792, and in 1793 the town relocated on the northeast coast to "Saint Paul's," now known as Kodiak. A settlement was reestablished at Three Saints Harbor in 1884; the town was recorded as "Staruigavan," meaning "old harbor" in Russian. The present-day Natives are Alutiiq (Russian-Aleuts.) The Old Harbor post office was opened in 1931. In 1964, the Good Friday earthquake and resulting tsunami destroyed the community; only two homes and the church remained standing. The community was rebuilt in the same location. The City government was incorporated in 1966.

A federally-recognized tribe is located in the community -- the Village of Old Harbor; Kodiak Island Inter-Tribal Council. The population of the community consists of 86% Alaska Native or part Native. Old Harbor practices its traditional Alutiiq culture and subsistence lifestyle. Fishing provides income to the community. Residents of Kaguyak, a summer fish camp, also live in Old Harbor.

9770.4.11 – Ouzinkie

**OUZINKIE** - (Pronunciation: ooh-ZINK-ee)

**Population:** 155 (2007 DCCED Certified Population)

**Incorporation Type:** 2<sup>nd</sup> Class City

**Borough Located In:** Kodiak Island Borough

**Regional Native Corp:** Koniag, Incorporated

#### **Emergency Services**

**VPSO:** State VPSO, 680-2365

**State Troopers:** Kodiak Post, 486-4121

**Fire:** City Volunteer Fire Department; USCG

**Medical:**

**Nearest Hospital:** Providence Kodiak Island Medical Center, 486-3281

#### **Organizations with Local Offices**

**City Offices:** City of Ouzinkie

Phone: 680-2209

Fax: 680-2223

Email: [cityofouzinkie@starband.net](mailto:cityofouzinkie@starband.net)

**Village Council:** Native Village of Ouzinkie

Phone: 680-2259

Fax: 680-2214

Email: [ouzclerk@starband.net](mailto:ouzclerk@starband.net)

**Village Corporation:** Ouzinkie Native Corporation

Phone: 680-2208

Fax: 680-2268

#### **Location and Climate**

Ouzinkie, located on the west coast of Spruce Island, adjacent to Kodiak Island, lies 10 miles northwest of the City of Kodiak at approximately 57.924° North Latitude and 152.502° West Longitude. (Sec. 15, T026S, R020W, Seward Meridian.) The climate of the Kodiak Islands is dominated by a strong marine influence – little freezing weather, moderate precipitation, and frequent cloud cover and fog. Severe storms are common from December through February. Annual precipitation is 60 inches, with 87 inches of snowfall. Temperatures generally remain within a narrow range, from 24 to 62° F.

#### **Transportation**

**Accessibility:** Ouzinkie is accessible by air and water.

**Airport Facilities:** There is a State-owned 2,085' long by 80' wide gravel airstrip and a float plane landing area at Ouzinkie Harbor. No fuel available; visual inspection recommended before landing. The State is constructing a new airport with a longer airstrip farther north of the townsite.

**Airline Services:** Island Air Services; Paklook Air Services

**Freight:** Barges provide cargo delivery from Seattle or Anchorage and Kodiak.

**Vessel Support:** Ouzinkie Harbor facilities include a breakwater, small boat harbor and dock. A new breakwater and small boat harbor is currently under design by the Corps of Engineers.

### **Facilities & Utilities**

#### **Communications:**

*In-State Phone:* ACS of the Northland

*Long-Distance Phone:* AT&T Alascom

*Internet Service Provider:* Starband Satellite

*Cable Provider:* Starband Satellite

*TV Stations:* ARCS

*Radio Stations:* KMXT-FM; KVOK-AM

*Teleconferencing:* Alaska Teleconferencing Network

**Electricity:** City of Ouzinkie; hydro, diesel backup

**Fuel Availability:** Diesel

**Fuel Storage - Tank Owners** (Capacity):

- Ouzinkie Native Corp. Fuel Facility (71,600 gals.)
- Kodiak Island Schools (5,200)
- City (1,400)

**Housing:** Make arrangements for accommodations with Ouzinkie Native Corporation (680-2208) or the City of Ouzinkie.

**Services:** No stores, restaurants, banking services, Laundromat, major repair services, rental transportation or public moorage facilities available.

**Water & Sewage:** Water is supplied by a dam on Mahoona Lake and Katmai Creek, is treated and piped throughout the city, but a 400,000-gallon water tank for adequate treatment and storage is needed. The system serves 80 homes and commercial facilities. A piped sewage system, central septic treatment system and sludge disposal site are used for waste. Over 90% of all homes are completely plumbed.

**Miscellaneous:** The community has one school, attended by 40 students. Refuse is collected by the city, and a new landfill site was recently completed. The community participates in a hazardous waste collection program, but would like a facility to recycle scrap metal.

### **Spill Response Support**

*Contact local officials to determine possibility of using community facilities.*

#### **Potential Command Posts:**

- Community building, 680-2202
- Ouzinkie School, 680-2204
- Ouzinkie Native Corp., 680-2208
- Ouzinkie City Offices, 680-2209

**Potential Staging Areas:**

- National Guard Armory
- Airport

**Local Spill Response Equipment:** One conex; check with local officials for location and access.

**Economy**

Ouzinkie's economic base is primarily commercial salmon fishing; twenty-six residents hold commercial fishing permits. Almost all of the population depends to some extent on subsistence activities for various food sources, including salmon, crab, halibut, shrimp, clams, ducks, deer, rabbit, berries and plants.

**History, Culture & Demographics**

Nestled in a small cove among spruce and hemlock, Ouzinkie became a retirement community for the Russian American Company; the Russians referred to the settlement in 1849 as "Uzenkiy," meaning "village of Russians and Creoles." In 1889, the Royal Packing Company constructed a cannery at Ouzinkie, and shortly afterward, the American Packing Company built another. In 1890, the community built a Russian Orthodox Church, and next to it in 1906 the Nativity of Our Lord Chapel, which is now a national historic site. Cattle ranching was popular in the early 1900s. In 1927, a post office was established. The Good Friday Earthquake of 1964 and the resulting tsunami destroyed the Ouzinkie Packing Company cannery; following the disaster, Columbia Ward bought the remains and rebuilt the store and dock, but not the cannery. Later in the 1960s, the Ouzinkie Seafoods cannery was constructed, later sold to Glacier Bay and burned down in 1976 shortly after the sale; no canneries have operated since. The city incorporated in 1967.

A federally-recognized tribe is located in the community -- the Native Village of Ouzinkie; Kodiak Island Inter-Tribal Council. The population of the community consists of 88% Alaska Native or part Native Ouzinkie is an Alutiiq village. Commercial fishing and subsistence activities support the community.

9770.4.12 – Port Lions

#### **Village Corporation:** Afognak Native Corporation (Merged corporations of Afognak and Port Lions)

3201 C Street, Suite 305, Anchorage, AK 99615

Phone: 486-6014

Fax: 486-2514

### **Location and Climate**

Port Lions, located in Settler Cove on the north coast of Kodiak Island, 19 miles from the City of Kodiak and 247 air miles southwest of Anchorage, lies at approximately 57.868° North Latitude and 152.882° West Longitude. (Sec. 05, T027S, R022W, Seward Meridian.) The climate of the Kodiak Islands is dominated by a strong marine influence – little freezing weather, moderate precipitation, and frequent cloud cover and fog. Severe storms are common from December through February. Annual precipitation is 54 inches, with 75 inches of snowfall. Temperatures remain within a narrow range, from 20 to 60° F.

### **Transportation**

**Accessibility:** Port Lions is accessible by air and water.

**Airport Facilities:** There is a State-owned 2,200' long by 75' wide gravel airstrip; the city dock may be used by seaplanes.

**Airline Services:** Regular and charter flights are available from Kodiak; Island Air Service.

**Freight:** The State Ferry operates bi-monthly from Kodiak between May and October. Barge service is available from Seattle.

**Vessel Support:** The boat harbor with breakwater and dock provide 82 boat slips.

### **Facilities & Utilities**

#### **Communications:**

*In-State Phone:* Interior Telephone Co./TelAlaska

*Internet Service Provider:* None

*Long-Distance Phone:* AT&T Alascom; Interior Telephone

*TV Stations:* ARCS

*Radio Stations:* KMXT-FM

*Cable Provider:* Eyecom Cable, Inc./TelAlaska

*Teleconferencing:* Alaska Teleconferencing Network

**Electricity:** Kodiak Electric Association; diesel-operated.

**Fuel Availability:** Diesel and gasoline (Kizuyak Oil Sales, 454-2422).

**Fuel Storage - Tank Owners** (Capacity):

- Kizhuyak Oil Sales/Village Council (90,600 gals.)
- Kodiak Electric Assoc (1,100)

**Housing:** Accommodations & meals by reservation at...

- Port Lions Lodge, 454-2264
- Wilderness Beach condos, 454-2301
- Settlers Cove B&B, 454-2573
- Kodiak Wilderness Adventures, 454-2418
- Lions Den Lodge

**Services:** Settlers Cove Market carries groceries, clothing, and hardware. No banking services or Laundromat. Public moorage and marine engine repair available.

**Water & Sewage:** The community system was built by the Bureau of Indian Affairs and Indian Health Service in 1965. Over 100 residences are connected to the city's piped water and sewer systems, and 95% of these have complete plumbing. The Branchwater Creek Reservoir provides water, which is treated and stored in a 125,000-gallon tank. The existing dam is weakening and funding has been provided to make repairs; a local priority is to construct a new 500,000-gal dam on the creek.

**Miscellaneous:** The community has one school, attended by 48 students.

### **Spill Response Support**

*Contact local officials to determine possibility of using community facilities.*

**Potential Command Posts:**

- Community hall, 454-2275
- Port Lions School , 454-2237
- Port Lions Youth Center , 454-2454

**Potential Staging Areas:**

- KEA warehouse - Port Wakefield side (2000 sq. ft.)
- Harbor/dock (warehousing and storage space available)

**Local Spill Response Equipment:** One conex; check with local officials for location and access.

### **Economy**

The economy of Port Lions is based primarily on commercial fishing, fish processing and tourism. Twenty-four residents hold commercial fishing permits. All of the residents depend to some extent on subsistence food sources, such as salmon, crab, halibut, shrimp, clams, duck, seal, deer, rabbit, berries and plants.

### **History, Culture & Demographics**

The town was founded in 1964 by the displaced inhabitants of Afognak, which was destroyed by tsunami after the Good Friday Earthquake. The community was named in honor of the Lions Club, for their support in rebuilding and relocating the village; the city incorporated in 1966. For

many years, Port Lions was the site of the large Wakefield Cannery on Peregrebni Point; the cannery burned down in March, 1975. Soon thereafter, the village corporation purchased a 149-foot floating processor, the Smokwa; although sold in 1978, the Smokwa processed crab in the area intermittently between 1975 and 1980. A small sawmill, located south of town, operated until 1976. A federally-recognized tribe is located in the community -- the Port Lions Traditional Council; Native Village of Afognak; Kodiak Island Inter-Tribal Council. The population consists of 64% Alaska Native or part Native; the majority is Alutiiq. Most residents lead a fishing and subsistence lifestyle.

9770.4.13 – Port William/Shuyak Island

## **PORT WILLIAM/ SHUYAK ISLAND**

**Population:** 0 – Unpopulated  
**Incorporation Type:** Unincorporated  
**Borough Located In:** Kodiak Island Borough  
**Regional Native Corp:** N/A

### **Emergency Services**

*No local services available.*

**State Troopers:** Kodiak Post, 486-4121

**Nearest Hospital:** Providence Kodiak Island Medical Center, 486-3281

### **Organizations with Local Offices**

*No known local organizations.*

### **Location and Climate**

Port William is located on the southern tip of Shuyak Island, facing Afognak Island, about 45 air miles north of Kodiak. It lies at approximately 58.483° North Latitude and 152.583° West Longitude. (Sec. 33, T019S, R020W, Seward Meridian.) The Kodiak Archipelago is warmed by the Japanese current. The climate is similar to Southeast Alaska, with less precipitation. January temperatures average 14 to 46° F; July temperatures range from 39 to 76° F. Average annual rainfall is 74 inches.

### **Transportation**

**Accessibility:** Port William is accessible by floatplane and boat.

**Airport Facilities:** A private seaplane base is owned by Washington Fish & Oyster.

**Airline Services:** Scheduled flights and charters by floatplane available from Kodiak or Homer.

**Freight:** Mail plane delivers freight.

**Vessel Support:** Port William is the only deep-water port between Seldovia and Kodiak and is a popular stop-over for sea planes and marine vessels.

### **Facilities & Utilities**

**Communications:** Mail plane and single-sideband or marine radio.

*In-State Phone:*

*Long-Distance Phone:*

*Internet Service Provider:*

*Cable Provider:*

*TV Stations:*

*Radio Stations:*

*Teleconferencing:*

**Electricity:** Individual generators; diesel

**Fuel Availability:** Unknown

**Fuel Storage - Tank Owners (Capacity):** Unknown

**Housing:** Accommodations and meals available at Port William Lodge, 688-2253

**Services:** Laundry facilities, showers and saunas available at lodge.

**Water & Sewage:** Treated lake water provides community with water.

## Miscellaneous:

### Spill Response Support

*Contact lodge operators to determine possibility of using local facilities.*

**Potential Command Posts:** None identified.

**Potential Staging Areas:** None identified.

**Local Spill Response Equipment:** None identified.

### Economy

Port William is home to a sport fishing and wilderness lodge. Visitors are drawn from all over the world to travel Shuyak's protected interior waterways by kayak, to enjoy the spectacular wildlife, or for world-class sportfishing opportunities. Near neighbors are Big Bay Ranger Station, Redfox Bay, and Bluefox Bay.

### History, Culture & Demographics

Before 1930, Port William, a herring saltery, was owned by S. Sklaroff and Sons. In 1930 it was purchased by Peter Wold and began salmon operations as Port William Packing Company. After a poor season, the plant sat idle until 1934 when the president of Washington Fish and Oyster (est. 1909,) leased the cannery and installed his son as superintendent. After a successful 1935 season, Washington Fish & Oyster purchased Port William at a U.S. Marshall's sale. In 1940 a cold-storage plant with capacity of 300,000 lbs. was installed and coho were frozen there, the next year expanding to herring and halibut. Salmon labels used by Washington Fish and Oyster included Ocean Beauty, Silver Beauty, Bay Beauty, and Sound Beauty for red, coho, pink, and chum respectively. After the 1976 season, with the advent of the new fish processing ships, the cannery was sold to a Kodiak commercial fisherman. In 1986, it was sold to the owners of Y Knot Halibut Charter (est. 1979.); Port William operates today as Y Knot Charter's Port William Lodge Tourism, and sport fishing related to Y Knot Charters and the Port William Lodge sustain the seasonal community.

9770.4.14 – Uganik Bay

### UGANIK BAY - (Pronunciation: Yoo-GAN-ik)

**Population:** 10-15 (unofficial estimate)

**Incorporation Type:** Unincorporated

**Borough Located In:** Kodiak Island Borough

**Regional Native Corp:**

### Emergency Services

*No local services available.*

**State Troopers:** Kodiak Post, 486-4121

**Nearest Hospital:** Providence Kodiak Island Medical Center, 486-3281

### Organizations with Local Offices

*No local organizations.*

### Location and Climate

Uganik Bay is located within the Kodiak Island National Wildlife Refuge, on the northwest side of Kodiak Island, 40 miles west of Kodiak, 270 miles southwest of Anchorage. Mean daily maximum temperature in July is 64°F; mean daily maximum in January is 36°F. Average annual precipitation is 44 inches, with 51 inches of snow.

### Transportation

**Accessibility:** Accessible only by seaplane.

**Airport Facilities:** No known float plane docking facilities or other air craft support facilities.

**Airline Services:** Charter air service available from Kodiak.

**Freight:** Available by mail plane, barge or vessel.

**Vessel Support:** No known facilities.

### Facilities & Utilities

**Communications:** By mail plane and shortwave radio.

**Electricity:** Individual generators

**Water & Sewage:** Sewage systems vary from flush toilets to pit toilets.

***No known suppliers of fuel, food or other goods.***

Local accommodation may be available by reservation from Quartz Creek Lodge (Satellite phone:011-8816-3144-4939) [quartzcreek@starband.net](mailto:quartzcreek@starband.net)

### Spill Response Support

**Potential Command Posts:** None identified.

**Potential Staging Areas:** None identified.

**Local Spill Response Equipment:** None identified.

### Economy

Some commercial fishing and tourism, with visitors traveling to the area for deer and bear hunting and birding.

### History, Culture & Demographics

The Village Islands in Uganik Bay (Quartz Creek Lodge sits on the opposite side of the bay) were the location of an Alutiiq village first reported in the 1800s. One of the earliest Russian maps of Kodiak Island, drawn in 1805 by Iurii Lisianskii, shows a village at the head of Uganik Bay on the west side of Kodiak Island. In 1838, 81 survivors of the smallpox epidemic at Uganik village moved to Karluk, leaving their homes behind. In 1896, the Alaska Packers Association built a salmon cannery near the mouth of Uganik Bay, and families returned there from Karluk to build a new settlement. By 1901, Uganik had a Russian Orthodox church, an Alaska Commercial Company store, a U. S. government school, and 18 Alutiiq barabaras. The village closed down sometime between 1914 and 1920. There were three canneries operating in the bay in the 1920s and one operating in 2001. Several homes, most seasonally occupied, lie at West Point and in Mush Bay. Uganik Bay is located within the Kodiak Island National Wildlife Refuge.

9770.4.15 – Women’s Bay

### WOMENS BAY

**Population:** 830 (2007 State Demographer est.)

**Incorporation Type:** Unincorporated

- Kodiak Community Health Center, 486-9557
- U.S. Coast Guard Rockmore-King Medical Clinic, 487-5757

**Nearest Hospital:** Providence Kodiak Island Medical Center, 486-3281

#### **Organizations with Local Offices**

*No local organizations.*

#### **Location and Climate**

Womens Bay is on the west coast of Kodiak Island, approximately 8 miles south of Kodiak, at the foot of Old Womens Mountain, along a bay of the same name. It lies at approximately 57.694° North Latitude and 152.623° West Longitude. (Sec. 04, T028S, R019W, Seward Meridian.) The climate of the Kodiak Islands is dominated by a strong marine influence – little freezing weather, moderate precipitation, and frequent cloud cover and fog. Severe storms are common from December through February. Annual precipitation is 60 inches. January temperatures average 14 to 46° F; July temperatures vary from 39 to 76° F.

#### **Transportation:**

Accessible via road from Kodiak; see Kodiak Community Profile, above, for transportation options.

#### **Facilities & Utilities**

##### **Communications:**

*In-State Phone:* ACS of the Northland

*Long-Distance Phone:* AT&T Alascom

*Internet Service Provider:* ACS; GCI

*Cable Provider:* Island Cable TV; Starband Satellite

*TV Stations:* ARCS

*Teleconferencing:*

*Radio Stations:* KMXT-FM; KVOK-AM/KRXX-FM; KWVV; KPEN

**Electricity:** Kodiak Electric Association; hydro and diesel-powered.

**Fuel Storage - Tank Owners (Capacity):**

**Services:** The nearest lodging is at the Comfort Inn (487-2700), near the airport, approximately 3 miles to the north. Additional lodging and other services and supplies, including fuel, food and general merchandise, must be obtained in nearby Kodiak.

**Water & Sewage:** All homes use individual wells and septic tanks and are fully plumbed.

**Miscellaneous:** Refuse is transported to the borough landfill north of the City of Kodiak. The community has no school; students attend schools in Kodiak or the school adjacent to the USGC Support Center.

### **Spill Response Support**

*Contact Kodiak officials to determine possibility of using local facilities.*

#### **Potential Command Posts:**

- USCG MSD Kodiak, Building #10, ISC Kodiak; 487-5750
- USCG ISC Kodiak, various locations; 487-5760

#### **Potential Staging Areas:** LASH Terminal; Koniag Corp. uplands

- USCG MSD Kodiak, Building #10, ISC Kodiak; 487-5750
- Lash Corp. dock and warehouse space; 487-3215
- Warehouse, hangar, or tarmac space at USCG base; 487-5760

**Local Spill Response Equipment:** USCG ISC Kodiak; 487-5500

### **Economy**

Residents are employed in a variety of positions in Kodiak or at the Coast Guard Station.

### **History, Culture & Demographics**

Originally inhabited by homesteaders, the property in this area had been transferred to the State, then to the Kodiak Island Borough. The community was named for the bay it overlooks. The community population consists of 12% Alaska Native or part Native. Due to its close proximity to Kodiak Station, many residents are Coast Guard families. A community association advocates for local concerns.

9770.4.16 – Woody Island/Leisnoi Island

### **WOODY ISLAND (LEISNOI ISLAND)**

**Population:** No year-round residents

**Incorporation Type:** Unincorporated

**Borough Located In:** Kodiak Island Borough

**Regional Native Corp:** Koniag, Incorporated

### **Emergency Services**

**Village Corporation:** Leisnoi, Inc.  
711 H St., Suite 360, Anchorage, AK 99515-3925  
Phone: 562-1126  
Fax: 562-1128

#### **Location and Climate**

Woody Island (local name is Leisnoi Island), located in Chiniak Bay, 2.6 miles east of Kodiak, lies at approximately 57.780000° North Latitude and -152.355220° West Longitude. (Sec. 31, T028S, R020W, Seward Meridian.) The Kodiak Archipelago is warmed by the Japanese current. The climate is similar to Southeast Alaska, with less precipitation. January temperatures range from 14 to 46; July temperatures vary from 39 to 76. Average annual rainfall is 74 inches.

#### **Transportation**

**Accessibility:** Access is available by boat or float plane.

**Airport Facilities:** No airstrip; float plane or helicopter landings only.

**Airline Services:** Charter air service available.

**Freight:** Private boat.

**Vessel Support:**

#### **Facilities & Utilities**

*Village only occupied seasonally - No local services available.*

#### **Spill Response Support**

*Contact tribal officials to determine possibility of using any community facilities.*

**Potential Command Posts:** None identified.

**Potential Staging Areas:** None identified.

**Local Spill Response Equipment:** None identified.

#### **Economy**

The village is normally unoccupied.

#### **History, Culture & Demographics**

The island is occupied on a seasonal basis. Although Woody Island is a recognized Native village, it has been abandoned by the Alutiiq of Leisnoi Village who now mostly live in Kodiak and Anchorage.

It is believed that the Russians were using Woody Island as an agricultural colony as early as 1792. The Russian American Ice Company (known as Kodiak Ice Co. after 1867) imported horses to Woody Island and built a road around the island. Boat-building flourished both at Kodiak and Woody Island during the late 1800s. A post office was established in 1894, but discontinued in 1895. Woody Island was the site of a Civil Aviation Authority (later Federal Aviation Administration) Overseas Foreign Airways Communications Station from the late 1930s through the 1980s; it was a 24-hour air traffic control station for both military and general aviation. The American Baptists maintained 500 acres as an orphanage site until 1937, a ranch until the 1980s,

and a summer youth camp (Camp Woody), which has operated since 1956. Summer cabins are also scattered over the island.

9770.5.01 – Anaktuvuk Pass

### **ANAKTUVUK PASS**

**Pronunciation:** an-ack-TOO-vick

a.k.a. Naqsrarmiut Tribe

**Population:** 324 (2010 U.S. Census Population)

**Incorporation Type:** 2nd Class City

**Borough Located In:** North Slope Borough

#### **Location & Climate:**

Anaktuvuk Pass is located at 2,200 feet elevation on the divide between the Anaktuvuk and John Rivers in the central Brooks Range. The village lies about 250 miles northwest of Fairbanks and about the same distance southeast of Barrow. Anaktuvuk Pass is one of the most scenic villages on the North Slope, surrounded by tall mountains and near rivers and lakes. The community is located in the Gates of the Arctic National Parks and Preserve.

68.143 North Latitude and -151.735 West Longitude.

Sec. 18, T015S, R002E, Umiat Meridian

The climate of Anaktuvuk Pass is strongly continental. Due to its high elevation, summers are cool. The average temperature in January is -14 °F. The average summer temperature is 50 °F. Extremes ranging from a low of -56 to a high of 91 °F have been recorded. Precipitation averages 11 inches and snowfall averages 63 inches per year.

**Economy:**

Economic and employment opportunities are limited in Anaktuvuk Pass, due to its isolation. Hunting and trapping for the sale of skins, guiding hunters, or making traditional Caribou skin

masks or clothing provides income. Some residents have seasonal employment outside of the community. Anaktuvuk's economy is largely based on subsistence hunting of caribou.

**Culture & Demographics:**

Anaktuvuk Pass, a historic caribou migration route, is the last remaining settlement of the inland Iñupiat Eskimo, the Nunamiut. The Nunamiut make up 88 percent of the population. The community is dependent upon subsistence activities. Caribou is the primary source of meat; other subsistence foods include trout, grayling, moose, sheep, brown bear, ptarmigan, water fowl and berries. Caribou migrate through the area in spring and fall.

The original nomadic Nunamiut left the Brooks Range and scattered in the early 1900s, mostly due to the collapse of the caribou population. By the 1940s, several Nunamiut families returned to the area and settled at the broad, treeless Anaktuvuk Pass, "the place of caribou droppings." There is a year-round museum in Anaktuvuk Pass that celebrates the early natural, geological and cultural history of the area, including the migration of people across the Bering Land Bridge. The museum also displays Nunamiut clothing, household goods and hunting implements used around the time of the first contact with Westerners.

9770.5.02 – Atqasuk

**ATOQASUK - Pronunciation:** AT-kuh-suck a.k.a. Atkasook

**Population:** 233 (2010 U.S. Census Population)

**Incorporation Type:** 2nd Class City

**Borough Located In:** North Slope Borough

**Location & Climate:**

Atqasuk is located inland from the Arctic Ocean on the Meade River, about 60 miles southwest of Barrow.

70.469 North Latitude and -157.395 West Longitude.

Sec. 19, T013N, R021W, Umiat Meridian

The climate is arctic. The daily minimum temperature drops below freezing 300 days a year. Temperature extremes range from a low of -56 to a high of 78 °F. Precipitation is light, at 5 inches per year. Snowfall averages 22 inches per year.

| Local Roads and Trails:           |                                       | Air travel provides the only year-round access, while land transportation provides seasonal access. The North Slope Borough owns and operates the Edward Burnell Sr. Memorial Airport, which has a 4,370' long by 90' wide gravel runway. "Cat-trains" are sometimes used to transport freight overland from Barrow during winter months. Snowmachines, ATVs, and boats are used for local transportation. |

#### **Economy:**

Education and other government services provide the majority of full-time employment in Atkasuk. Some residents also produce arts and crafts for sale including masks, mittens, dolls, yo-yos, ulus and parkas. Residents trap and sell furs to supplement cash income. Subsistence activities provide food sources.

#### **Culture & Demographics:**

Inupiat Eskimos comprise 91% of the population. Atkasuk's economy is largely based on subsistence caribou hunting and fishing. Fish in the Meade River include grayling, burbot, salmon and whitefish. Local game includes, ptarmigan, ducks and geese. Residents also travel to the coast to participate in whaling and hunting other marine mammals - polar bear, seal, walrus, and whale are harvested and traded.

History: Atkasuk has long been established as a hunting and fishing ground. Abandoned sod houses, an old cellar and gravesite near the village provide evidence of an early settlement here. During World War II, coal was mined in the community and freighted to Barrow. During the next 10 years, the village existed under the name of Meade River. Although the population dwindled in the 1960s, former residents from Barrow moved to the community in the 1970s and re-established the village under the name of Atkasuk. The village was incorporated as a second-class city in 1982.

#### **Economy:**

Barrow is the economic center of the North Slope Borough, the city's primary employer, and numerous businesses provide support services to oil field operations. State and federal agencies also provide employment. The midnight sun has attracted tourism, and arts and crafts provide some cash income. In 2010, 4 residents held commercial fishing permits. Many residents rely upon subsistence food sources: whale, seal, polar bear, walrus, duck, caribou, grayling, and whitefish are harvested from the coast or nearby rivers and lakes.

Formation of the North Slope Borough in 1972 and the Arctic Slope Regional Corporation, as well as construction of the Prudhoe Bay oilfields and Trans-Alaska Pipeline, have each contributed to the development of Barrow. Today, tax revenues from the North Slope oil fields fund borough-wide services.

#### **Culture & Demographics:**

The majority of residents are Inupiat Eskimos (69%). Although Barrow is a modern community, subsistence hunting, fishing and whaling are still very important to the local economy. Traditional marine mammal hunts and other subsistence practices are an active part of the culture. Bowhead, gray, killer, and beluga whales migrate near Barrow each summer.

#### **History and Historic/Cultural Properties:**

Birnick archaeological site contains 16 dwelling mounds of a culture believed to have existed from 500-900 AD. The archaeological findings are considered a key link between the prehistoric cultures of Alaska and Canada.

In 1881, the U.S. Army established a meteorological and magnetic research station near Barrow. Another interesting site is the

Cape Smythe Whaling and Trading Station in nearby Browerville. Cape Smythe was built as a whaling station in 1893 and is the oldest frame building in the Arctic.

During the 1940s and 1950s, the military played an influential role in the area. Construction of the Distant Early Warning (DEW) line and exploration in the National Petroleum Reserve brought new people to the region. During the same time, the Naval Arctic Research Lab (NARL) was built near Barrow.

Visitors to Barrow will arrive at the Wiley Post-Will Rogers Memorial Airport. This airport was named to commemorate the famous pilot and the American humorist who died in an airplane crash just 15 miles south of Barrow in 1935. Across from the airport sits the Will Rogers and Wiley Post

9770.5.04 – Deadhorse & Prudhoe Bay

**DEADHORSE & PRUDHOE BAY** - Pronunciation: PROO-doh

**Population:** 2,174 (2010 U.S. Census Population)

**Incorporation Type:** Unincorporated

**Borough Located In:** North Slope Borough

**Location & Climate:**

Prudhoe Bay is adjacent to the Beaufort Sea, east of Nuiqsut, at the end of the Dalton Highway. Deadhorse serves as the gateway to the Prudhoe Bay and other North Slope oilfields.

70.255 North Latitude and 148.337 West Longitude.

Sec. 08, T010N, R015E, Umiat Meridian

The climate of the North Slope is arctic. Temperatures range from -56 to 78 °F. Precipitation is light, averaging 5 inches, with 20 inches snow per year.

**Economy:**

The Prudhoe Bay oil fields provide some 2-3% of the nation's domestic oil supply and employ over 5,000 individuals in drilling, pipeline operations, cargo transportation, and a variety of support positions. U.S. Census population and employment figures reflect only permanent residents of Deadhorse and Prudhoe Bay -- most oil field workers travel home to Anchorage or the lower 48 when off duty. Pre-arranged tours are available through various tour companies.

**Culture & Demographics:**

Prudhoe Bay is a large work camp for the oil industry. All residents are employees of oil-drilling or oil-production and support companies and work long consecutive shifts. Living quarters and food are provided to the workforce.

9770.5.05 – Kaktovik

**KAKTOVIK** - Pronunciation: (kack-TOH-vick); includes Barter Island

**Population:** 239 (2010 U.S. Census)

**Incorporation Type:** 2nd Class City

**Borough Located In:** North Slope Borough

**Location & Climate:**

Kaktovik lies on the north shore of Barter Island, between the Okpilak and Jago Rivers on the Beaufort Sea coast. Kaktovik is 90 miles west of the Canadian border and 280 miles southeast of Barrow. The ruins of old Kaktovik can be seen from the road linking the village to the airport. It lies in the 19.6-million-acre Arctic National Wildlife Refuge, an occasional calving ground for the porcupine caribou herd.

70.132 North Latitude and 143.624 West Longitude.

Sec. 13, T009N, R033E, Umiat Meridian

The climate of Kaktovik is arctic. Temperatures range from -56 to 78 °F. Precipitation is light, averaging 5 inches, with snowfall averaging 20 inches.

#### **Economy:**

Economic opportunities in Kaktovik are limited due to the community's isolation, and unemployment is high. Most employment is in education, the North Slope Borough, or city services. Part-time seasonal jobs, such as construction projects, provide income.

Like other communities in the region, subsistence hunting, fishing and whaling play a major role in the local economy. Hunting in the nearby area is for Dall sheep, moose, caribou, and fox. The community also produces arts and crafts for sale such as etched baleen, carved ivory and masks. About one in every five household heads in Kaktovik receive monies from craft income.

#### **Culture & Demographics:**

Due to Kaktovik's isolation, the village has maintained its Inupiat Eskimo traditions. In the 2010 U.S. Census, 90% of residence identified as all or part Alaska Native, mostly Inupiat Eskimo. Subsistence is highly dependent upon caribou.

9770.5.06 – Nuiqsut

**NUIQSUT** - Pronunciation: (new-WICK-sit); var. Nooiksut

**Population:** 402 (2010 U.S. Census Population)

**Incorporation Type:** 2nd Class City

**Borough Located In:** North Slope Borough

#### **Location & Climate:**

Nuiqsut is located on the west bank of the Nechelek Channel of the Colville River Delta, about 35 river miles/18 air miles from the Beaufort Sea coast. It is 135 miles southeast of Barrow. The Colville River Delta has traditionally been a gathering and trading place for the Inupiat, and a good source for hunting and fishing. The Alpine Oilfield is eight miles from the village of Nuiqsut and a portion of the oilfield is on lands owned by Kuukpik Corporation and ASRC.

70.217 North Latitude and 150.976 West Longitude.  
 Sec. 18, T010N, R005E, Umiat Meridian

The climate is arctic. Temperatures range from -56 to 78 °F. On average, the daily minimum temperature is below freezing 297 days each year. Annual precipitation is light, averaging 5 inches, with 20 inches of snowfall.

### **Economy:**

Unemployment is high in Nuiqsut. The Kuukpiik Native Corporation, school, borough services, and store provide most of the year-round employment in the village. Trapping and craft-making provide some income. Caribou, bowhead and beluga whale, seal, moose, and fish are staples of the diet. Polar bears are also hunted.

### **Culture & Demographics:**

In the 2010 U.S. Census, 90% of residence identified as all or part Alaska Native, mostly Inupiat Eskimo. Residents practice a traditional subsistence lifestyle.

During the early 20th century, Christian missionaries were introduced to the Barrow region. This movement, along with the emergence of healthcare services and schools provided by the Bureau of Indian Affairs, prompted the Inupiat from Nuiqsut to immigrate to Barrow. The old village of Nuiqsut (Itqilippaa) was abandoned in the late 1940s, because there was no school. In 1973, 27 Inupiat families moved back to Nuiqsut from Barrow, and lived in tents braving the elements for over 18 months. In 1974, the Arctic Slope Regional Corporation funded construction of the village.

9770.5.07 – Point Hope

## POINT HOPE

**Population:** 674 (2010 U.S. Census Population)

**Incorporation Type:** 2nd Class City

**Borough Located In:** North Slope Borough

### Location & Climate:

Point Hope is located near the end of a triangular spit, the Point Hope peninsula, jutting 15 miles into the Chukchi Sea, 250 miles southwest of Barrow. The peninsula is a large gravel spit that forms the western-most extension of the northwest Alaska coast. Erosion and a threat of storm flooding from the Chukchi Sea led to its relocation to higher ground in the mid-1970s

68.348 North Latitude and 166.808 West Longitude.

Sec. 16, T034N, R035W, Kateel River Meridian

The climate is arctic. Temperatures range from -49 to 78 °F. Precipitation is light, averaging only 10 inches annually, with 36 inches of snowfall. The Chukchi Sea is ice-free from late June until mid-September.

### **Economy:**

Point Hope is the second largest city on the North Slope. The local economy is largely based on subsistence hunting, fishing and whaling. The Borough employs more than 18 percent of the working population and the school district employs 26 percent. Close to forty percent of the labor force works in the private sector.

Residents produce a wide array of arts and crafts for sale including carved ivory, baleen baskets, whale bone, masks, caribou skin masks, etched baleen, Eskimo parkas, ivory-tipped harpoons and bird spears.

### **Culture & Demographics:**

In the 2010 U.S. Census, Alaska Natives, primarily Inupiat Eskimos made up 93 percent of Point Hope's population. Point Hope residents (Tikeraqmuit Inupiat Eskimos) are dependent upon marine subsistence. This highly favorable site, with its abundant resources, has enabled the Tikeraqmuit to retain strong cultural traditions after more than a century of outside influences.

This Point Hope peninsula is one of the longest continually inhabited areas in North America. Some of the earliest residents came here for bowhead whaling some 2,000 years ago after crossing the Siberian land bridge.

Visitors to the area can see the remains of Old Tigara Village, a prehistoric site with the remains of sod houses. There is an even earlier site with about 800 house pits known as Ipiutak, occupied from about 500 BC to 100 AD. Ipiutak and the surrounding archaeological district are on the National Register of Historic Places. In addition to the prehistoric village sites, there are old burial grounds in the area including a cemetery marked by large whale bones standing on end.

9770.5.08 – Point Lay

### **POINT LAY - Also Known As: Kali**

**Population:** 189 (2010 U.S. Census Population)

**Incorporation Type:** Unincorporated  
**Borough Located In:** North Slope Borough

**Location & Climate:**

Point Lay is located on the Chukchi Sea coast, protected from the ocean by the Kasugluk Lagoon. It is 150 miles southwest of Barrow. Kali, the Iñupiat name for the village, means "mound" and refers to the elevated mound on which it stands.

69.736 North Latitude and 163.012 West Longitude.  
Sec. 26, T005N, R045W, Umiat Meridian

The climate is arctic. Temperatures range from -55 to 78 °F. Precipitation is light, averaging 7 inches annually, with 21 inches of snow. The Chukchi Sea is ice-free from late June until September.

#### **Economy:**

Most year-round employment opportunities are with the borough government or the school. Subsistence activities provide food sources.

#### **Culture & Demographics:**

In the 2010 U.S. Census, Alaska Natives, primarily Inupiat Eskimos made up 93 percent of Point Lay's population. Point Lay is a traditional Inupiat Eskimo village, with a dependence upon subsistence activities. Seals, walrus, beluga, caribou, and fish are staples of the diet. The deeply indented shoreline prevented effective bowhead whaling and the village never fully participated in the whaling culture. The village's traditional hunt of the beluga whales is similar to the bowhead whaling culture in other North Slope villages.

Point Lay is probably the last remaining village of the Kuukpaagruk people.

9770.5.09 – Wainwright

**WAINWRIGHT** - Pronunciation: (WANE-rite)

**Population:** 556 (2010 U.S. Census Population)

**Incorporation Type:** 2nd Class City

**Borough Located In:** North Slope Borough

#### **Location & Climate:**

Wainwright sits on a wave-eroded coastal bluff of a narrow peninsula which separates Wainwright Inlet from the Chukchi Sea. It is 3 miles northeast of the Kuk River estuary and about 70 miles southwest of Barrow.

70.637 North Latitude and 160.038 West Longitude.

Sec. 26, T005N, R045W, Umiat Meridian

The climate is arctic. Temperatures range from -56 to 80 °F. Precipitation is light, averaging 5 inches annually, with 12 inches of snow. The Chukchi Sea is ice-free from mid-July through September.

#### **Economy:**

Economic opportunities in Wainwright are influenced by its proximity to Barrow and the fact that it is one of the older, more established villages. Most of the year-round positions are in borough services. Wainwright has a larger private sector than most villages: 38 percent of the work force is employed by private businesses, primarily the village and regional corporations. The Borough employs 30 percent of the work force and the School District provides jobs for another 25 percent.

Sale of local Eskimo arts and crafts supplement income.

#### **Culture & Demographics:**

Most Wainwright inhabitants are Inupiat Eskimos who practice a subsistence lifestyle. Their ancestors were the Utukamiut (people of the Utukok River) and Kukmiut (people of the Kuk River).

Wainwright's subsistence hunting revolves primarily around Bowhead and beluga whales and caribou. Seal, walrus, polar bear, birds, and fish are also harvested. Local arts and crafts include carved ivory figurines and jewelry, baleen boats, whale bone carvings, clocks, knitted caps and gloves.

#### 9770.6.01 – Ambler

| AMBLER                                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|---------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Location and Climate</b>                 | Ambler is located on the north bank of the Kobuk River, near the confluence of the Ambler and the Kobuk Rivers. It lies 138 air miles northeast of Kotzebue, 30 miles northwest of Kobuk and 30 miles downriver from Shungnak, at approximately 67d 05m N Latitude, 157d 52m W Longitude. Ambler is in a continental climate zone; temperatures average -10 to 15 during winter, 40 to 65 during summer. Temperature extremes have been recorded from -65 to 92. Snowfall averages 80 inches, and precipitation is 16 inches total per year. The Kobuk River is navigable from early July to mid-October. |
| <b>History, Culture, &amp; Demographics</b> | Ambler was permanently settled in 1958 when people from Shungnak and Kobuk moved down stream because of the variety of fish, wild game                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

|                                  |                                                                                                                                                                                                                                                                                                                                                                                                                          |
|----------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                  | and spruce trees in the area. The residents of Ambler are Kowagmiut Inupiat Eskimos, with a traditional subsistence lifestyle. The sale or importation of alcohol is banned in the village.                                                                                                                                                                                                                              |
| <b><i>Economy</i></b>            | Cash employment is limited to the school, city, clinic and local stores, although some mining occurs. In 2009, only two residents held commercial fishing permits. Subsistence is a major part of the Ambler economy. Birch baskets, fur pelts, and jade, quartz, bone and ivory carvings are sold in gift shops throughout the state. The community is interested in developing a lapidary facility for local artisans. |
| <b><i>Subsistence</i></b>        | Chum salmon and caribou are the most important food sources; freshwater fish, moose, bear, and berries are also harvested for subsistence.                                                                                                                                                                                                                                                                               |

| <i>Housing</i>            | Accommodations and meals available at Kobuk River Lodge & General Store, 445-2150.                                                                                                                                                                                                                                                                                                                                                                                                                                                                |                |
| <i>Water &amp; Sewage</i> | The main source of water for the community is a 167' well near the Kobuk River. Water is pumped 940 feet to the treatment facility and stored in a 210,000-gallon insulated tank, then piped to most homes. An 80 feet standby well is also located at the water treatment plant. Sewage is collected via 6- and 8-inch arctic pipes and flows to a facultative lagoon through two lift stations, where it discharges to a natural watershed, then to the Kobuk River. As last reported, 57 homes are served by the piped water and sewer system. |                |
| <i>Services</i>           | Groceries, clothing, first-aid supplies, hardware items available. No laundromat or banking facilities. Rental transportation includes autos, off-road vehicles, boats, and charter aircraft.                                                                                                                                                                                                                                                                                                                                                     |                |
| <i>Miscellaneous</i>      | The community has one school, attended by 61 students. The landfill is not permitted.                                                                                                                                                                                                                                                                                                                                                                                                                                                             |                |

| <b>Location and Climate</b>                 | Brevig Mission is located at the mouth of Shelman Creek on Port Clarence, 5 miles northwest of Teller and 65 miles northwest of Nome, at approximately 65d 20m N Latitude, 166d 29m W Longitude. Brevig Mission has a maritime climate with continental influences when the Bering Sea freezes. Summer temperatures average 44 to 57; winter temperatures average -9 to 8. Precipitation averages 11.5 inches, with 50 inches of snowfall. Port Clarence is generally ice-free between early June and mid-November.                                                                                                                                                                                                                                                                               |               |
| <b>History, Culture, &amp; Demographics</b> | The Kauwerak Eskimos in this area lived in migratory communities in pursuit of hunting and fishing grounds and traded furs with Siberia, Little Diomed and King Island. They formed alliances with Wales, Little Diomed, and others for protection. The "Teller Reindeer Station" opened near this site in 1892, and the U.S. government operated it until 1900. In 1963, the Brevig Mission post office was established. Reindeer were the economic base of this community until 1974, when the industry began to decline. Approximately 92% of the population are Alaska Natives; and a federally recognized tribe is located in the community. Brevig Mission is predominantly Eskimo with a subsistence lifestyle. The sale, importation and possession of alcohol are banned in the village. |               |
| <b>Economy</b>                              | The primary employers are the city and school district. Year-round jobs are scarce, unemployment is high, and seasonal jobs in mining and construction are limited. Arts and crafts provide some cash income.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |               |
| <b>Subsistence</b>                          | The people of Brevig Mission subsist upon fish, moose, reindeer, seal, walrus and beluga whales.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |               |

#### 9770.6.03 – Buckland

| <b>BUCKLAND</b>                             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|---------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Location and Climate</b>                 | Buckland is located on the west bank of the Buckland River, about 75 miles southeast of Kotzebue, at approximately 65d 59m N Latitude, 161d 08m W Longitude. Buckland is in a transitional arctic climate zone that is characterized by long, cold winters and cool summers. Temperatures range from -60 to the mid 80s. Snowfall averages 40 inches, with 9 inches of precipitation per year. Crosswinds can restrict flying during the winter.                                                                     |
| <b>History, Culture, &amp; Demographics</b> | The residents have moved from one site to another along the river at least five times in recent memory, to places known as Elephant Point, Old Buckland and New Site. The presence of many fossil finds at Elephant Point indicates prehistoric occupation of the area. The Inupiaq Eskimos depend on reindeer, beluga whale and seal for survival. Approximately 95% of the population are Alaska Natives; a federally recognized tribe is located in the community. Buckland is an Eskimo village, and subsistence |

|                           |                                                                                                                                                                                                                                                                                                                                                                                                                                                  |      |
|---------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|
|                           | activities are an important focus of the economy. The sale or importation of alcohol is banned in the village.                                                                                                                                                                                                                                                                                                                                   |      |
| <b>Economy</b>            | Residents depend on a subsistence lifestyle for most food sources. Employment is primarily with the school, city, health clinic, and stores. Some mining also occurs. In 2009, one resident held a commercial fishing permit. The community is interested in developing a Native food products and crafts manufacturing facility to produce reindeer sausage, berry products, Labrador tea, and ivory and wood carving. Some mining also occurs. |      |

| <i>Housing</i>            | No lodging                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |                |
| <i>Water &amp; Sewage</i> | Water is pumped from Buckland River, treated in the washeteria building, and stored in a 100,000-gallon tank. Some residents have water delivered to home tanks, but most haul their own water. The city pumps flush/haul waste tanks or hauls honeybuckets to the sewage lagoon; a flush/haul system has been problematic on the south side of town, and it sometimes freezes and fails during the winter. Only eight homes and the school have functioning plumbing; 74 homes are not served. |                |
| <i>Services</i>           | No restaurant or banking services. Groceries, clothing, first-aid supplies, and hardware available at four stores. Laundry facilities available at city washeteria, open daily. No rental transportation.                                                                                                                                                                                                                                                                                       |                |
| <i>Miscellaneous</i>      | The community has one school, attended by 164 students. The school has full plumbing. Individuals dispose of refuse in dumpsters, which are hauled to the landfill; DEC has approved the landfill for use, although it is not permitted.                                                                                                                                                                                                                                                        |                |

| SPILL RESPONSE SUPPORT                                                                   |                                                                                                    |

## 9770.6.04 – Candle

| <b>CANDLE</b>                               |                                                                                                                                                                                                                                                                        |                |
|---------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------|
| <b>Location and Climate</b>                 | Candle is located on the Kewalik River, 90 miles southeast of Kotzebue. Winters are similar to Kotzebue. June is clear and cool, July hot and dry, August expect rain, then usually 2 or 3 weeks of Indian summer in September.                                        |                |
| <b>History, Culture, &amp; Demographics</b> | Candle is a mining community started in 1904. Most of the town burned down about 30 years ago; just a few of the houses were left standing. Population increases in May with the beginning of mining season and decreases with freeze-up in late September or October. |                |
| <b>Economy</b>                              | Mining and some subsistence fishing and hunting.                                                                                                                                                                                                                       |                |
| <b>Subsistence</b>                          |                                                                                                                                                                                                                                                                        |                |
| <b>Population</b>                           | Approximately four year-round; up to 35 during summer mining season.                                                                                                                                                                                                   |                |

|---------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Location and Climate</b>                 | Council is located at the terminus of the Nome/Council road, 60 miles northeast of Nome, on the left bank of the Niukluk River at approximately 64d 54m N Latitude, 163d 40m W Longitude. Council has a continental climate with maritime influences when Norton Sound is ice-free. Its inland location gives greater daily variation in temperatures than nearby coastal communities. Seasonal temperatures range from -9 to 64.                                                                                                                                                                                                                                                                                                                                                                  |
| <b>History, Culture, &amp; Demographics</b> | Historically, this was a fish camp for the Fish River Tribe, who originally lived 12 miles downstream. Council's history is synonymous with the gold rush period; gold was first discovered in the area in 1897. By 1898, there were 50 log houses, and during the summers of 1897-99 the population of "Council City" was estimated at 15,000. The depletion of gold, the flu epidemic of 1918, the depression, and World War II all contributed to the decline of the population. By 1950, only nine people remained; the post office closed in 1953. Today, the community is not occupied year-round, but serves primarily as a summer fish camp for Nome residents. Nearly two-thirds of the seasonal population are Alaska Natives. A federally recognized tribe is located in the community. |

|---------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Location and Climate</b>                 | Deering is located on Kotzebue Sound at the mouth of the Inmachuk River, 57 miles southwest of Kotzebue. It is built on a flat sand and gravel spit, 300 feet wide and a half-mile long, at approximately 66d 04m N Latitude, 162d 42m W Longitude (Sec. 20, T008N, R019W, Kateel River Meridian). Deering is located in the transitional climate zone, which is characterized by long, cold winters and cool summers. The average low temperature during January is -18; the average high during July is 63. Temperature extremes have been measured from -60 to 85. Snowfall averages 36 inches, with a total precipitation of 9 inches per year. Kotzebue Sound is ice-free from early July until mid-October. |
| <b>History, Culture, &amp; Demographics</b> | The village was established in 1901 as a supply station for Interior gold mining near the historic Malemiut Eskimo village of Inmachukmiut. The name Deering was probably taken from the 90-ton schooner "Abbey Deering," which was in nearby waters around 1900. Nearly 95% of the population are Alaska Natives, primarily Inupiat Eskimo; a federally recognized tribe is located in the community. The people are active in subsistence. The sale or importation of alcohol is banned in the village.                                                                                                                                                                                                         |

|                                  |                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|----------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b><i>Economy</i></b>            | Deering's economy is a mix of cash and subsistence activities. Three residents hold commercial fishing permits. Management of the Karmun-Moto reindeer herd of 1,400 animals provides some local employment. A number of residents earn income from handicrafts and trapping. The school, the city, Maniilaq Association, several stores, and an airline provide the only year-round jobs. Some mining occurs in the Seward Peninsula's interior. |
| <b><i>Subsistence</i></b>        | Moose, seal and beluga whale provide most meat sources; pink salmon, tom cod, herring, ptarmigan, rabbit and waterfowl are also harvested for subsistence.                                                                                                                                                                                                                                                                                        |

| <b><i>Location and Climate</i></b>                 | Diomede is located on the west coast of Little Diomede Island in the Bering Strait, 135 miles northwest of Nome, at approximately 65d 47m N Latitude, 169d 00m W Longitude (Sec. 08, T004N, R049W, Kateel River Meridian). It is only 2.5 miles to Big Diomede Island, Russia, and the International Boundary lies between the two islands. Summer temperatures average 40 to 50; winter temperatures average from -10 to 6. Annual precipitation is 10 inches, with 30 inches of snowfall. During summer months, cloudy skies and fog prevail. Winds blow consistently from the north, averaging 15 knots, with gusts to 60 and above. The Bering Strait is generally frozen between mid-December and mid-June.                                                                                                                                                                                                                                                                                                                                                                    |               |
| <b><i>History, Culture, &amp; Demographics</i></b> | Early Eskimos on the islands were fearless men of the ice and sea, with an advanced culture practicing elaborate whale hunting ceremonies. They traded with both continents. The 1880 Census counted 40 people, all Ingalikmiut Eskimos, in the village of "Inalet." When the Iron Curtain was formed, Big Diomede became a Soviet military base, and all Native residents were moved to mainland Russia. During World War II, Little Diomede residents who strayed into Soviet waters were taken captive. The city was incorporated in 1970. Some residents are interested in relocating the village, due to the rocky slopes, harsh storms, lack of useable land for housing construction, and inability to construct a water/sewer system, landfill, or airport. Nearly 94% of the population are Alaska Natives; a federally recognized tribe is located in the community. Diomede is a traditional Ingalikmiut Eskimo village with a subsistence lifestyle; mainland Natives come to Diomede to hunt polar bears. The sale or importation of alcohol is banned in the village. |               |
| <b><i>Economy</i></b>                              | The Diomede villagers depend almost entirely upon a subsistence economy for their livelihood. Regular employment is limited to the City of Diomede, the tribal office, Inalik Corporation and the school. Seasonal mining, construction and commercial fishing positions have been on the decline. The Diomede people are excellent ivory carvers; the city serves as a wholesale agent for the ivory.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |               |
| <b><i>Subsistence</i></b>                          | Fish, crab, walrus, seal, beluga whales and polar bear are harvested for subsistence.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |               |
| <b><i>Population</i></b>                           | 117 (2009 DCCED Certified)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |               |

| TRANSPORTATION            |                                                                                                                                                                                                                                                                                                                                                                                        |
|---------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Accessibility</b>      | Due to weather/sea conditions, access is often limited. Mail delivery is once per week via Helicopter. Villagers travel the 27 miles to Wales by boat for supplies; aluminum skiffs are the main method of sea travel. The popular method was by walrus skin boat until 2011, impacted by climate change.                                                                              |
| <b>Airport Facilities</b> | A State-owned heliport allows for weekly mail delivery. There is no airstrip due to the steep slopes and rocky terrain. In the past ski planes would land on an ice strip in winter but more recently the ice does not freeze thick enough to scrape a landing strip for fixed-wing landing. Few float plane pilots attempt to land on the rough, often foggy, open sea during summer. |
| <b>Airline Services</b>   | Regular flights are scheduled from Nome, weather permitting: Erickson Helicopters. Last airplane: Bering Air landing was in May of 2013.                                                                                                                                                                                                                                               |
| <b>Freight</b>            | Cargo barge stops are irregular due to sea or ice conditions, but deliver at least annually.                                                                                                                                                                                                                                                                                           |
| <b>Vessel Support:</b>    | There is a breakwater and small boat harbor.                                                                                                                                                                                                                                                                                                                                           |

| <b>Electricity</b>        | Provided by Diomed Joint Utilities.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |  |
| <b>Fuel</b>               | Gasoline, diesel, and propane. Provided by Little Store to the community residents.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |  |
| <b>Fuel Storage</b>       | <b>Tank Owners</b> (number of tanks @ total capacity): Bering Strait Schools (2 @ 42,200 gals.); City of Diomed (34,500); Diomed Joint Utility (34,500); Native Store (34,500).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |  |
| <b>Housing</b>            | A room with efficiency kitchen is available through Inalik Native Corporation (686-3221). Diomed School rents space for \$70/night. Clinic houses itinerants in the Clinic building.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |  |
| <b>Water &amp; Sewage</b> | Water drawn from a mountain spring is treated and stored in a 426,000 steel tank; households haul water from this source. The tank is filled for winter use, but the water supply typically runs out around June; the washeteria is then closed for laundry and shower services and residents are required to melt snow and ice for drinking water until the tank is refilled. The city and the school requested funding for new water storage tanks to alleviate demands on the city water supply, to improve the water catchment system, and be a community back-up. All households use privies and honeybuckets; the washeteria/clinic is served by a septic system and seepage pit. Diomed School also serves a septic system.                                                                                                                |  |
| <b>Services</b>           | No restaurant or banking services. Laundromat with showers available. Limited groceries and supplies available at Diomed Native Store (686-3611). Little Store (Private owned) sales heating fuel and limited groceries. Inalik Native Corporation sales groceries, tobacco, and supplies and housing equipment. Arrangements can be made to rent private-owned boats for summer transportation.                                                                                                                                                                                                                                                                                                                                                                                                                                                  |  |
| <b>Miscellaneous</b>      | The community has one school, attended by 35 students, Kindergarten to Grade 12, with 4 certified Teachers, 6 classified staff, and 3 temporary laborers. Due to the soil condition, lack of ground cover and steep terrain, there are limited waste disposal methods. Refuse disposal to community bins is an individual responsibility: combustibles are burned at the burn box incinerator; the remaining is disposed on the pack ice in winter. City of Diomed owns the Burn Box incinerator. There is no hired City Solid Waste Technician; Native Village of Diomed has been in charge of solid waste disposal from community bins. Native Village of Diomed-IGAP Program collects and ships out recyclables of Universal Waste to Kawerak in Nome. DIO IGAP also partners with other organizations to conduct Community & Beach Clean-Ups. |  |

| <b>SPILL RESPONSE SUPPORT</b><br>(Contact local officials to determine possibility of using community facilities.) |                                                                          |

9770.6.08 – Elim

| <b>ELIM</b>                                 |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|---------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Location and Climate</b>                 | Elim is located on the northwest shore of Norton Bay on the Seward Peninsula, 96 miles east of Nome, 460 miles northwest of Anchorage. It lies at approximately 64d 37m N Latitude, 162d 15m W Longitude (Sec. 15, T010S, R018W, Kateel River Meridian). Elim has a subarctic climate with maritime influences. Norton Sound is ice-free generally between mid-June and mid-November. Summers are cool and moist; winters are cold and dry. Summer temperatures average between 46 to 62; winter temperatures average -8 to 8. Annual precipitation is 19 inches, including approximately 80 inches of snow.                                                                                                                                                                                                                                                                       |
| <b>History, Culture, &amp; Demographics</b> | This settlement was formerly the Malemiut Inupiat Eskimo village of Nuviakchak, with a Native culture well-developed and well-adapted to the environment. Each tribe possessed a defined subsistence harvest territory. The area became a federal reindeer reserve in 1911, and in 1914 a Covenant mission and school, called Elim Mission Roadhouse, was founded. When Congress passed the Alaska Native Claims Settlement Act (ANCSA) in 1971, Elim decided not to participate and instead opted for title to the 298,000 acres of land in the former Elim Reindeer Reserve. The Iditarod Sled Dog Race passes through Elim each year. Over 90% of the population are Alaska Natives; a federally recognized tribe is located in the community, an Inupiat Eskimo village with a fishing and subsistence lifestyle. The sale or importation of alcohol is banned in the village. |
| <b>Economy</b>                              | The Elim economy is based on subsistence harvests; cash employment is limited to fishing, the city, and the school. Unemployment is high, and seasonal part-time employment in nearby Nome has declined recently. In 2009, 26 residents held commercial fishing permits; the village wants to develop a fish processing plant.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| <b>Subsistence</b>                          | Residents rely on fish, seal, walrus, beluga whale, reindeer, moose, and garden harvests.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

| <b>Fuel Storage</b>       | <b>Tank Owners</b> (number of tanks @ total capacity): Bering Strait Schools (3 @ 45,000 gals.); City (12 @ 142,430); Army Nat'l Guard (3 @ 4,500); AK DOT (3,000); Elim Native Store (68,130); AVEC (6 @ 155,154)                                                                                                                                                                                                |  |
| <b>Housing</b>            | Accommodations may be secured through the City of Elim (890-3441), which has 2 rooms with 2 beds each.                                                                                                                                                                                                                                                                                                            |  |
| <b>Water &amp; Sewage</b> | Water is derived from a well and is treated. BIA and HUD housing, and water and sewer systems built by PHS in 1974, have provided residents with piped water and sewer, indoor water heaters and plumbing, and in-home washers and dryers. Wastes flow to a sewage treatment plant with ocean outfall. The city needs to replace cracked PVC pipes and to locate a new water source, since water shortages occur. |  |
| <b>Services</b>           | Groceries, clothing, and sundry items available at Elim Native Store and Eagle Cache Store. Laundry facilities available but no restaurant nor banking services. Rental transportation includes autos, off-road vehicles, and boats. Boat, auto and aircraft repairs may be available.                                                                                                                            |  |
| <b>Miscellaneous</b>      | The community has one school, attended by 80 students. The landfill is not permitted.                                                                                                                                                                                                                                                                                                                             |  |

Extremes from -30 to 65 have been recorded.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |                |
| <b><i>History, Culture, &amp; Demographics</i></b> | St. Lawrence Island has been inhabited intermittently for the past 2,000 years by both Alaskan and Siberian Yup'ik Eskimos. In the 18th and 19th centuries, over 4,000 people inhabited the island in 35 villages. A tragic famine between 1878 and 1880 decimated the population. In 1900, reindeer were introduced to the island for local use, and in 1903, President Roosevelt established a reindeer reservation. When ANCSA was passed in 1971, Gambell and Savoonga decided not to participate and instead opted for title to the 1.136 million acres of land in the former St. Lawrence Island Reserve; the island is jointly owned by Savoonga and Gambell. Numerous species of birds, some of them rare Asiatic species, populate the island during the summer. Approximately 96% of the population are Alaska Natives; a federally recognized tribe is located in the community. The isolation of Gambell has helped to maintain the traditional Siberian-Yup'ik Eskimo culture, their language, and a subsistence lifestyle based upon marine mammals. Walrus-hide boats are still used to hunt. The sale, importation or possession of alcohol is banned in the village. |                |
| <b><i>Economy</i></b>                              | The economy in Gambell is largely based upon subsistence harvests from the sea. Fox are trapped as a secondary source of cash income. Some reindeer roam free on the island, but most harvesting occurs out of Savoonga. Ivory carving provides a popular source of income. The community benefits from a small tourism industry built around bird-watchers coming to see the abundant number of seabird colonies. One resident holds a commercial fishing permit.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |                |
| <b><i>Subsistence</i></b>                          | Seal, walrus, fish, and bowhead and gray whales are harvested for subsistence.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                |

| TRANSPORTATION            |                                                                                                                |
|---------------------------|----------------------------------------------------------------------------------------------------------------|
| <b>Accessibility</b>      | Gambell's isolated location on an island with no seaport results in heavy dependence upon air transport.       |
| <b>Airport Facilities</b> | The State-owned airport provides a 4,500' by 96' asphalt runway. Elevation 27'.                                |
| <b>Airline Services</b>   | Regular flights from Nome and charters from Unalakleet are available: Bering Air; Ravn Air; Ryan Air (freight) |
| <b>Freight</b>            | Lighterage services bring freight from Kotzebue and Shishmaref.                                                |

| <b>Location and Climate</b>                    | Golovin is located on a point of land between Golovnin Bay and Golovnin Lagoon on the Seward Peninsula, 70 miles east of Nome, at approximately 64d 33m N Latitude, 163d 02m W Longitude (Sec. 11, T011S, R022W, Kateel River Meridian). Marine climatic influences prevail during the summer when the sea is ice-free. Summer temperatures average 40 to 60; winter temperatures average -2 to 19. Extremes from -40 to 80 have been recorded. Average annual precipitation is 19 inches, with 40 inches of snowfall. Golovnin Bay is frozen from early November to mid-May.                                                                                                                                                                                  |
| <b>History, Culture, &amp; Demographics</b>    | The Eskimo village of "Chinik," located at the present site of Golovin, was originally settled by the Kauweramiut Eskimos, who later mixed with the Unaligmiut Eskimos. When gold was discovered in 1898 at Council, Golovin became a supply point for the gold fields; Supplies were shipped from Golovin across Golovnin Lagoon and up the Fish and Niukluk Rivers to Council. A post office opened in 1899. Reindeer herding was an integral part of the church missions in the area in the 1900s. Nearly 93% of the population are Alaska Natives; a federally recognized tribe is located in the community. Golovin is an Eskimo village with a fishing, herding, and subsistence lifestyle. The sale or importation of alcohol is banned in the village. |

|                                  |                                                                                                                                                                                                                                                                                                  |               |
|----------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------|
| <b><i>Economy</i></b>            | The Golovin economy is based on subsistence activities, reindeer herding, fish processing and commercial fishing. In 2009, fifteen residents held commercial fishing permits. The salmon fishery and reindeer herding offer some potential for cash income to augment subsistence food harvests. |               |
| <b><i>Subsistence</i></b>        | Fish, beluga whale, seal, moose, and reindeer are the main sources of meat; bird eggs and berries are gathered from the tundra.                                                                                                                                                                  |               |

|                                             | 15 during winter; 40 to 60 during summer. Temperature extremes have been recorded from -54 to 87. Snowfall averages 60 inches, with 16 inches of total precipitation per year. The Kobuk River is navigable from the end of May to early October.                                                                                                                                                                                                                                                                  |
| <b>History, Culture, &amp; Demographics</b> | Kowagmiut Inupiat Eskimos established Kiana, which means "a place where three rivers meet," long ago as the central village of the Kobuk River. Approximately 93% of the population are Alaska Natives; a federally recognized tribe is located in the community. Kiana is a traditional Eskimo village practicing a subsistence lifestyle. The sale or importation of alcohol is banned in the village.                                                                                                           |
| <b>Economy</b>                              | The economy depends on traditional subsistence activities, but is increasingly augmented by a cash economy. The school, the city, and Maniilaq Association provide the majority of year-round jobs in town; the Red Dog Mine also offers area employment. In 2009, two residents held commercial fishing permits; seasonal employment also includes work on river barges, BLM fire-fighting, and jade and copper ore mining. Kiana is one of the more modern villages in the borough and has three general stores. |
| <b>Subsistence</b>                          | Residents harvest chum salmon, freshwater fish, moose, caribou, waterfowl, and berries.                                                                                                                                                                                                                                                                                                                                                                                                                            |
| <b>Population</b>                           | 374 (2009 DCCED Certified)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

| <b>Location and Climate</b>                 | Kivalina is at the tip of an 8-mile barrier reef located between the Chukchi Sea and Wulik River, approximately 80 air miles northwest of Kotzebue. It lies at approximately 67d 43m N Latitude, 164d 32m W Longitude (Sec. 21, T027N, R026W, Kateel River Meridian). Kivalina is in the transitional climate zone, characterized by long, cold winters and cool summers. The average low temperature during January is -15; the average high during July is 57. Temperature extremes have been measured from -54 to 85. Snowfall averages 57 inches, with 8.6 inches of precipitation per year. The Chukchi Sea is ice-free and open to boat traffic from mid-June to early November.                                                          |
| <b>History, Culture, &amp; Demographics</b> | Kivalina has long been a stopping-off place for seasonal travelers between arctic coastal areas and Kotzebue Sound communities. It is the only village in the region where people hunt the bowhead whale. During the 1970s, new houses, a new school and an electric system were constructed in the village. Due to severe erosion, the city intends to relocate - a site has yet to be determined by discussion and vote of the public. Approximately 97% of the population are Alaska Natives, a federally recognized tribe is located in the community. Kivalina is a traditional Inupiat Eskimo village; subsistence activities, including whaling, provide most food sources. The sale or importation of alcohol is banned in the village. |
| <b>Economy</b>                              | Kivalina's economy depends on subsistence practices, where 79% of the food consumed is harvested from sea and land. The school, the city,                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

| <b>Accessibility</b>      | By barge, plane, small boat and snowmachine. There are no roads linking the community to other parts of the state. Boats are used for inter-village travel and subsistence activities. ATVs and snowmachines are commonly used in winter. The community needs a road to the proposed new school site, 7.5 miles away. Two main hunting trails follow the Kivalina and Wulik Rivers. |
| <b>Airport Facilities</b> | A State-owned 3,000' gravel airstrip serves daily flights from Kotzebue. | <i>Housing</i>            | Accommodations sometimes available in private homes, visitors may be lodged at the school.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |                |
| <i>Water &amp; Sewage</i> | Wells have proven unsuccessful in Kivalina. Water is drawn from the Wulik River via a 3-mile surface transmission line to a 670,000-gallon raw water tank and then to a 500,000-gallon tank, where it is treated when it is pumped. The water generally lasts the community only for a six-month period, and the washeteria is closed to the public when the last tank is down to 12 feet, and water use is limited to 30 gallons a day for the public during this period so it can last through May. Water is hauled by residents from this tank, which can be difficult during winter since snow can create hills 20 to 30 feet high that must be negotiated. One-seventh of residents have tanks that provide running water for the kitchen, but homes are not fully plumbed. There is a public washeteria which offers up to four (4) washers when they are working and no showers available. The school and clinic have individual water and sewer systems. Residents haul their own honeybuckets to the landfill disposal site, which has no barrier around it and is subject to visits from wild animals, such as bears and foxes. |                |
| <i>Services</i>           | No restaurant, laundromat or banking facilities. Groceries, clothing, first-aid supplies, and hardware can be purchased in the community store owned by ANICA, Inc. Boats can sometimes be rented.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                |
| <i>Miscellaneous</i>      | The community has one school, attended by 122 students. Seagulls and crows forage for food at the landfill creating a threat to airplane traffic at the landing strip.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |                |

|---------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|
| <b>Location and Climate</b>                 | Kobuk is located on the right bank of the Kobuk River, about 7 miles northeast of Shungnak and 128 air miles northeast of Kotzebue. It is the smallest village in the Northwest Arctic Borough and lies at approximately 66d 55m N Latitude, 156d 52m W Longitude (Sec. 03, T017N, R009E, Kateel River Meridian). Kobuk is located in the transitional climate zone. Temperatures average -10 to 15 during winter; 40 to 65 during summer. Temperature extremes have been recorded from -68 to 90. Snowfall averages 56 inches, with 17 inches of total precipitation per year. The Kobuk River is navigable from the end of May through October. |      |
| <b>History, Culture, &amp; Demographics</b> | Kobuk was founded in 1899 as a supply point for mining activities in the Cosmos Hills to the north. High School students attend school in Shungnak. Ice jams on the river cause high water each year, and in May 1973, a flood covered the entire village. Nearly 90% of the population are Alaska Natives. A federally recognized tribe is located in the community. It is an Inupiat Eskimo village practicing a traditional subsistence lifestyle. The sale or importation of alcohol is banned in the village.                                                                                                                                |      |
| <b>Economy</b>                              | The economy of Kobuk is based on subsistence. Cash employment is limited to the school, city government and Manillaq clinic. Seasonal construction and BLM fire fighting provide some income.                                                                                                                                                                                                                                                                                                                                                                                                                                                     |      |
| <b>Subsistence</b>                          | Whitefish, caribou and moose provide the majority of meat sources for subsistence.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |      |

|----------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b><i>Housing</i></b>            | Some accommodations can be arranged within the community.                                                                                                                                                                                                                                                                                               |
| <b><i>Water &amp; Sewage</i></b> | A 30-foot well provides water, which is treated and currently hauled by residents from the washeteria. Honeybuckets and privies are currently used by most residences. Major construction underway to provide a piped water and sewer system, including household plumbing. The washeteria has its own septic tank. Waste is disposed of at Dall Creek. |
| <b><i>Services</i></b>           | Groceries, clothing, first-aid supplies, and hardware available. Laundromat with showers. No restaurant or banking services. Rental transportation includes boats and charter aircraft. No public transportation.                                                                                                                                       |
| <b><i>Miscellaneous</i></b>      | There is one school located in the community, attended by 35 students. A new landfill was recently completed.                                                                                                                                                                                                                                           |

9770.6.14 – Kotzebue

| <b>KOTZEBUE</b>                                    |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|----------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b><i>Location and Climate</i></b>                 | Kotzebue lies on the Baldwin Peninsula in Kotzebue Sound, on a 3-mile-long spit, which ranges in width from 1,100 to 3,600 feet. It is located near the discharges of the Kobuk and Noatak Rivers, 549 air miles northwest of Anchorage and 26 miles above the Arctic Circle, at approximately 66d 54m N Latitude, 162d 35m W Longitude (Sec. 03, T017N, R018W, Kateel River Meridian). Kotzebue is located in the transitional climate zone, which is characterized by long, cold winters and cool summers. The average low temperature during January is -12; the average high during July is 58. Temperature extremes have been measured from -52 to 85. Snowfall averages 40 inches, with total precipitation of 9 inches per year. Kotzebue Sound is ice-free from early July until early October.                                                                                                                                                                                                             |
| <b><i>History, Culture, &amp; Demographics</i></b> | This site has been occupied by Inupiat Eskimos for at least 600 years. "Kikiktagruk" was the hub of ancient arctic trading routes long before European contact due to its coastal location near a number of rivers. Since the turn of the century, expansion of economic activities and services in the area has enabled Kotzebue to develop relatively rapidly. An Air Force Base and White Alice Communications System were later constructed. Approximately three-quarters of the population are Alaska Natives. A federally recognized tribe is located in the community. The residents of Kotzebue are primarily Inupiat Eskimos, and subsistence activities are an integral part of the lifestyle. Each summer, the North Tent City fish camp is set up to dry and smoke the season's catch. As a regional economic center, it offers a mixture of government, transportation, and other private sector businesses. The sale is banned in the City, although importation or possession of alcohol is allowed. |
| <b><i>Economy</i></b>                              | Kotzebue is the service and transportation center for all villages in the northwest region. It has a healthy cash economy, a growing private sector, and a stable public sector. Due to its location at the confluence of three river drainages, Kotzebue is the transfer point between ocean and inland shipping. It is also the air transport center for the region. The majority of income is directly or indirectly related to government employment, such as the School District, Maniilaq Association, and the City and Borough. The Cominco Alaska Red Dog Mine is a significant regional employer. Commercial fishing for chum salmon and processing at Kotzebue Sound Area Fisheries provide some seasonal employment. Over 131 residents hold commercial fishing permits. Most residents rely on subsistence to supplement income.                                                                                                                                                                        |
| <b><i>Subsistence</i></b>                          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

| TRANSPORTATION            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|---------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Accessibility</b>      | By barge, plane, boat and snowmachine, though air is the primary means of transportation year-round. The shipping season lasts 100 days, from early July to early October, when the Sound is ice-free. Due to river sediments deposited by the Noatak River 4 miles above Kotzebue, the harbor is shallow. There are 26 miles of local gravel roads, used by cars, trucks and motorcycles during the summer. Snowmachines are preferred in winter for local transportation. |
| <b>Airport Facilities</b> | The State-owned Ralph Wien Memorial Airport supports daily jet service to Anchorage and several air taxis to the region's villages. It has a 5,900' main paved runway and 3,900' crosswind gravel runway. Elevation 11'. A seaplane base is also operated by the State.                                                                                                                                                                                                     |
| <b>Airline Services</b>   | Alaska Airlines; Bering Air; Ravn Air; Ryan Air (freight).                                                                                                                                                                                                                                                                                                                                                                                                                  |
| <b>Freight</b>            | Crowley Marine Services operates shallow draft barges to deliver cargo to area communities. The City of Kotzebue is the transfer point between ocean and inland shipping for northwest Alaska. It does not have a natural harbor, and is ice-free for only 3 months each year. Deep draft vessels must anchor 15 miles out, and cargo is lightered to the docking facility.                                                                                                 |
| <b>Vessel Support:</b>    | Docking facility but no harbor.                                                                                                                                                                                                                                                                                                                                                                                                                                             |

|                      | mains. Piped sewage is treated in a 32-acre zero discharge facultative lagoon west of the airport. Significant improvements are needed to this 30-year-old facility. Around 80% of homes are fully plumbed, and 521 homes are served by the city system. The 30-year-old PVC water and sewer mains are currently undergoing replacement. |
| <b>Services</b>      | There are several restaurants, including at the Nullagvik and the Bayside, banking services, and several stores at which to get most any kind of supplies. The town also boasts a library, a National Park Service office, and the NANA Museum of the Arctic.                                                                            |
| <b>Miscellaneous</b> | There are three schools located in the community, attended by 928 students. A new transfer station and landfill with baler has recently been completed. Recycling and hazardous waste disposal have been improved. A wind energy demonstration project is underway.                                                                      |

| <b>KOYUK</b>                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|---------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Location and Climate</b>                 | Koyuk is located at the mouth of the Koyuk River, at the northeastern end of Norton Bay on the Seward Peninsula, 90 air miles northeast of Nome, at approximately 64d 56m N Latitude, 161d 09m W Longitude (Sec. 32, T006S, R012W, Kateel River Meridian). Koyuk has a subarctic climate with a maritime influence. Average summer temperatures range from 46 to 62; winter temperatures average -8 to 8. Annual precipitation is 19 inches, including 40 inches of snowfall. Extremes from -49 to 87 have been recorded. Norton Bay is usually ice-free from May to October. |
| <b>History, Culture, &amp; Demographics</b> | The site of "Iyatayet" on Cape Denbigh to the south has traces of early man that are 6,000 to 8,000 years old. The villagers were historically nomadic. Lt. Zagoskin of the Russian Navy noted the village of "Kuyukhak-miut" here in 1842-44, and a Western Union Telegraph expedition in 1865 found the village of "Konyukmute." Around 1900, the present townsite began to be populated where supplies could easily be lightered to shore. In addition to gold, coal was mined a mile upriver to supply steam ships and for export to Nome. The first school               |

|                                  |                                                                                                                                                                                                                                                                                                                                                                                                     |
|----------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                  | began in the church in 1915; the U.S. government built a school in Koyuk in 1928. Nearly 95% of the population are Alaska Natives. A federally recognized tribe is located in the community. Koyuk is a traditional Unalit and Malemiut Eskimo village that speaks a dialect of Inupiat Eskimo. They maintain a subsistence lifestyle. The sale or importation of alcohol is banned in the village. |
| <b><i>Economy</i></b>            | The Koyuk economy is based on subsistence, supplemented by limited part-time jobs. Unemployment is high. There is a small amount of commercial fishing, and some income is derived from reindeer herding. Fourteen residents hold commercial fishing permits.                                                                                                                                       |
| <b><i>Subsistence</i></b>        | The main sources of meat are fish, reindeer, seal, beluga whale and moose.                                                                                                                                                                                                                                                                                                                          |

| TRANSPORTATION |
|----------------|
|----------------|

|                           |                                                                                                                                                                                           |
|---------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Accessibility</b>      | By plane, small boat and snowmachine. No roads connect Koyuk with other villages, although an 18-mile road to Six Mile Point is under construction, and access is limited to air and sea. |
| <b>Airport Facilities</b> | A State-owned 3,000' gravel airstrip was recently improved. Elevation 130'.                                                                                                               |
| <b>Airline Services</b>   | Regular flight service from Nome and Unalakleet is available. Bering Air; Ravn Air; Ryan Air (freight).                                                                                   |
| <b>Freight</b>            | Supplies barged to Nome, delivered in smaller vessel, and lightered to shore.                                                                                                             |
| <b>Vessel Support:</b>    | No dock in the village. (City is seeking a small boat harbor feasibility study.)                                                                                                          |

| <b>Location and Climate</b>                 | Mary's Igloo is located on the northwest bank of the Kuzitrin River, on the Seward Peninsula, northeast of Nome. It lies 40 miles southeast of Teller. Average summer temperatures range from 44 to 57, winter average -9 to 8, with extremes measured from -45 to 82.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| <b>History, Culture, &amp; Demographics</b> | Natives of "Kauwerak," as the village was originally called, were Inupiaq Eskimos known as Kauweramiuts. This village was originally located about 15 miles downriver, but by 1900, Kauwerak was abandoned, and most Natives moved to Teller or Nome because of the schools and employment opportunities. Some settled at the present site, which they called "Aukvaunlook," meaning "black whale." During the gold prospecting boom, non-Natives renamed the village "Mary's Igloo," after an Eskimo woman named Mary, who welcomed miners, trappers and other newcomers into her home for coffee. Supplies for the gold fields upriver were transferred onto river boats here. A post office and store were opened in 1901. By 1910, Mary's Igloo became a large mixed community of Eskimos, white traders, miners, innkeepers, missionaries and support crews for barges. The flu epidemic of 1918-19, and a tuberculosis epidemic two years later, devastated the community. A Catholic orphanage, "Our Lady of Lourdes Mission," was opened at nearby Pilgrim Springs, and a Lutheran orphanage was built at nearby New Igloo. The BIA school closed in 1948 and the Alaska Native School was closed in 1952 for lack of students. The post office and store also closed in 1952. Mary's Igloo is a summer fish camp; many traditional villagers live in Teller. Villagers are interested in rebuilding the community, near the old site of Kauwerak. |
| <b>Economy</b>                              | Mary's Igloo is a summer fish camp. There is no employment or commercial activity in Mary's Igloo.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| <b>Subsistence Population</b>               | None permanent - small summer population                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

| <b>NOATAK</b>                                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |      |
|----------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|
| <b><i>Location and Climate</i></b>                 | Noatak is located on the west bank of the Noatak River, 55 miles north of Kotzebue and 70 miles north of the Arctic Circle. This is the only settlement on the 396 mile-long Noatak River, just west of the 66-million acre Noatak National Preserve, at approximately 67d 34m N Latitude, 162d 58m W Longitude (Sec. 16, T025N, R019W, Kateel River Meridian). Noatak is located in the transitional climate zone. Temperatures average -21 to 15 during winter; 40 to 60 during summer. Temperature extremes have been recorded from -59 to 75. Snowfall averages 48 inches, with 10 to 13 inches of total precipitation per year. The Noatak River is navigable by shallow-draft boats from early June to early October. |      |
| <b><i>History, Culture, &amp; Demographics</i></b> | Established as a fishing and hunting camp in the 19th century, the rich resources of this region enabled the camp to develop into a permanent settlement. The 1880 census listed the site as Noatagamut, which means "inland river people." Over 95% of the population are Alaska Natives. A federally recognized tribe is located in the community. The village is Inupiat Eskimo. Subsistence activities are the central focus of the culture, and families travel to fish camps during the summer. The sale or importation of alcohol is banned in the village.                                                                                                                                                          |      |
| <b><i>Economy</i></b>                              | Noatak's economy is principally based on subsistence, although the available employment is diverse. The school district, the city, Maniilaq Association, and four stores are the primary employers. Eight residents hold commercial fishing permits. During the summer, many families travel to seasonal fish camps at Sheshalik, and others find seasonal work in Kotzebue or fire-fighting.                                                                                                                                                                                                                                                                                                                               |      |
| <b><i>Subsistence</i></b>                          | Chum salmon, whitefish, caribou, moose and waterfowl are harvested for subsistence.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |      |

Possible B&B at 485-2116.                                                                                                                                                                                                                                                                                                                                                                                                              |                |
| <b>Water &amp; Sewage</b> | Water is derived from the Noatak River and is treated. The primary well occasionally runs dry; groundwater wells have been unsuccessful in the area. A piped, recirculating water and sewer distribution system serves 77 homes, the school and businesses in Noatak. However, over half of the homes cannot use the service due to lack of plumbing. These residents haul water and honeybuckets. The village has requested funding to upgrade and add plumbing facilities where necessary and to construct a washeteria. |                |

|                      |                                                                                                                                                                       |
|----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Services</b>      | No restaurant, laundromat or banking facilities. Groceries, some clothing, hardware, and first-aid supplies available. No moorage facilities. Rental boats available. |
| <b>Miscellaneous</b> | There is one school located in the community, attended by 135 students. The landfill has recently been relocated west of the airport.                                 |

| <b>Location and Climate</b>                 | Nome sits along the Bering Sea, on the south coast of the Seward Peninsula, facing Norton Sound, at approximately 64d 30m N Latitude, 165d 25m W Longitude (Sec. 26, T011S, R034W, Kateel River Meridian). It lies 102 miles south of the Arctic Circle, 161 miles east of Russia, and 539 air miles northwest of Anchorage, a 75-minute flight. January temperatures range from -3 to 11; July temperatures are typically 44 to 65. Average annual precipitation is 18 inches, including 56 inches of snowfall.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| <b>History, Culture, &amp; Demographics</b> | Malemiut, Kauweramiut and Unalikmiut Eskimos, with a well-developed culture adapted to the environment, have occupied the Seward Peninsula historically. Gold discoveries in the Nome area had been reported as far back as 1865 by Western Union surveyors seeking a route across Alaska and the Bering Sea. But it was a \$1500-to-the-pan gold strike on tiny Anvil Creek in 1898, and two years later the discovery of gold on the beaches, that brought thousands of miners. Almost overnight an isolated stretch of tundra fronting the beach was transformed into a tent-and-log cabin city of 20,000 prospectors, gamblers, claim jumpers, saloon keepers, and prostitutes. The gradual depletion of gold, a major influenza epidemic in 1918, the depression, and finally World War II, each influenced Nome's population. A disastrous fire in 1934 destroyed most of the city. . A federally-recognized tribe is located in the community -- the Nome Eskimo Community. The population of Nome is a mixture of Inupiat Eskimos and non-Natives. Although some employment opportunities are available, subsistence activities are prevalent in the community. Although many employment opportunities are available, subsistence |

|                                  | activities are prevalent in the community. Contact Alaska Department of Fish and Game at (907) 443-5167 for current subsistence activities.                                                                                                                                                                                                                                                                           |                           |
| <b><i>Economy</i></b>            | Nome is the center of the Bering Strait/Seward Peninsula region. Government services provide the majority of employment. Less than 50 residents hold commercial fishing permits. Retail services, transportation, mining, medical and other businesses provide year-round income. Alaska Gold Company operates a placer gold mine that provides some employment. Subsistence activities contribute to the local diet. |                           |
| <b><i>Subsistence</i></b>        | Moose, caribou, salmon, bear, ptarmigan, reindeer, musk ox, seal and walrus are harvested for subsistence. Alaska Department of Fish and Game regional supervisor has most up to date information regarding fishing and subsistence activities 907-443-5167.                                                                                                                                                          |                           |

|---------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Accessibility</b>      | By barge, plane, boat and snow machine, and by vehicle from several nearby towns. Nome is a regional center of transportation for surrounding villages. Local roads lead to Teller, Council, Taylor and the Kougarok River. The entire seaward side of the city is protected by a 3,350-foot-long sea wall of granite boulders. |
| <b>Airport Facilities</b> | The Nome Airport has two paved runways, one 6,000' in length, the other 5,500'. Elevation 36'. An \$8.5 million airport improvement project is nearing completion. The City Field offers a 1,950' gravel airstrip. Elevation 59'.                                                                                               |
| <b>Airline Services</b>   | Alaska Airlines; Bering Air; Ravn Air; Erickson Helicopters; Ryan Air (freight); Northern Air Cargo.                                                                                                                                                                                                                            |
| <b>Freight</b>            | A port and berthing facilities accommodate vessels up to 18 feet of draft with an outer basin depth of 22 feet. Lighterage services distribute cargo to area communities.                                                                                                                                                       |

|                               |                                                                                                                                                                                                                                                     |
|-------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b><i>Vessel Support:</i></b> | A port and berthing facilities can accommodate vessels up to 18 feet of draft, and a new harbor channel entrance and breakwater. Local development groups and the city are funding harbor dredging, two seasonal floating docks, and a boat launch. |

| <i>Water &amp; Sewage</i> | A well at Moonlight Springs supplies water, which is treated at the Snake River Power Plant and stored in a 50,000-gallon tank. A million-gallon back-up tank is also available. Water is heated and pumped to residences via a wooden utilidor; trucks also deliver water. Sewage is piped from most homes. Over 95% of residences currently have complete plumbing. Construction has begun on a six-phase upgrade -- to drill additional wells at Moonlight Springs, to replace the water storage tank and pumping station, and to replace the 1960's-era wooden utilidor distribution system with buried Arctic piping. The city wants to develop a water source closer to New Town. Some homes still haul their own honeybuckets (service is not provided) and have water delivered to home tanks. Funds have been requested to expand water and sewer to these areas. |                |
| <i>Services</i>           | Groceries, clothing, first-aid supplies, and hardware available at several local stores. There are a number of restaurants, a bank, laundry and shower facilities. Rental transportation includes autos, off-road vehicles, boats, and charter aircraft. Credit Union Buses. Car rental                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |                |

|                      |                                                                                                                                                                                                                                                                    |

|---------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Location and Climate</b>                 | Noorvik is located on the right bank of the Nazuruk Channel of the Kobuk River, 33 miles northwest of Selawik and 45 miles east of Kotzebue. The village is downriver from the 1.7-million acre Kobuk Valley National Park, and lies at approximately 66d 50m N Latitude, 161d 03m W Longitude (Sec. 27, T017N, R011W, Kateel River Meridian). Located in the transitional climate zone, temperatures average -10 to 15 during winter; 40 to 65 during summer. Temperature extremes have been recorded from -54 to 87. Snowfall averages 60 inches, with 16 inches of total precipitation per year. The Kobuk River is navigable from early June to mid-October. |
| <b>History, Culture, &amp; Demographics</b> | Noorvik means "a place that is moved to." The village was established in the early 1900s by Kowagmuit Inupiat Eskimo fishermen, hunters from Deering, and transplants from the village of Oksik, a few miles upriver. Nearly 94% of the population are Alaska Natives. A federally recognized tribe is located in the community. Noorvik is primarily an Inupiat Eskimo community with a subsistence lifestyle. The sale or importation of alcohol is banned in the village.                                                                                                                                                                                     |
| <b>Economy</b>                              | Subsistence is the major focus of the Noorvik economy. The primary local employers are the school district, the city, Maniilaq Association, the health clinic, and two stores. Seasonal employment at the Red Dog Mine, BLM fire fighting, or work in Kotzebue supplement income. Seven residents hold commercial fishing permits.                                                                                                                                                                                                                                                                                                                               |

| <b>Water &amp; Sewage</b> | Water is pumped from the Kobuk River to the water treatment/utility building and stored in a tank. From there, a pressurized circulating system distributes water in utilidors. Groundwater wells have proven unsuccessful. Noorvik has a vacuum sewer system in which waste is carried by air instead of water. Vacuum pressure pumps the sewage to the 60,000-gal. collection and treatment plant. The system requires special toilets and water valves that collect wastewater from the sinks, toilets and showers. Over 100 homes, the school and businesses are served. Funds have been requested to connect and plumb the remaining 16 unserved homes on the south side of town and along River Road. |  |
| <b>Services</b>           | Groceries, clothing, first-aid supplies, and hardware available (Noorvik Native Store, 636-2212; Morris Trading Post, 636-2161). One restaurant but no banking facilities. Rental transportation includes autos, off-road vehicles, and boats.                                                                                                                                                                                                                                                                                                                                                                                                                                                              |  |
| <b>Miscellaneous</b>      | There is one school located in the community, attended by 243 students. A new landfill and access road are under development.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |  |

| <b><i>Location and Climate</i></b>                 | St. Michael is located on the east coast of St. Michael Island in Norton Sound, approximately 125 miles southeast of Nome and 48 miles southwest of Unalakleet. It lies at approximately 63d 29m N Latitude, 162d 02m W Longitude (Sec. 24, T023S, R018W, Kateel River Meridian). St. Michael has a subarctic climate with maritime influences during the summer when rain and fog are common. Summer temps average 40 to 60; winters average -4 to 16. Extremes recorded from -55 to 70°. Annual precipitation is 12 inches, with snowfall of 38 inches. Norton Sound is ice free from early June to mid-November.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |               |
| <b><i>History, Culture, &amp; Demographics</i></b> | The Russian-American Company built a fortified trading post called "Redoubt St. Michael" at this location in 1833; it was the northernmost Russian settlement in Alaska. The Native village of "Tachik" stood to the northeast. When the Russians left Alaska in 1867, several of the post's traders remained. "Fort St. Michael," a U.S. military post, was established in 1897, and during that year's gold rush, it was a major gateway to the interior via the Yukon River. As many as 10,000 persons were said to live in St. Michael during the gold rush. The town was also a popular trading post for Eskimos to trade their goods for Western supplies. The village remained an important trans-shipment point until the Alaska Railroad was built. There are many historic remnants about the area, and the old U.S. fort and the Russian redoubt are on the National Register of Historic Places. Over 90% of the population are Alaska Natives. A federally recognized tribe is located in the community. Saint Michael's population is largely Yup'ik Eskimo today, and many residents are descendants of Russian traders. The sale or importation of alcohol is banned in the village. |               |
| <b><i>Economy</i></b>                              | The Saint Michael economy is based on subsistence food harvests supplemented by part-time wage earning. Most cash positions are found in city government, the IRA council and village corporation, schools, and local stores. Eight residents hold commercial fishing permits, primarily for the herring fishery. Stebbins and St. Michael jointly manage a herd of reindeer.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |               |
| <b><i>Subsistence</i></b>                          | Seal, beluga whale, moose, caribou, fish and berries are harvested for subsistence.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |               |

|---------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------|
| <b>Accessibility</b>      | By plane, boat and snowmachine. A 10.5-mile road exists to Stebbins. There are no roads linking the town to other parts of the state. It is near the Yukon River delta and has a good natural harbor, but no dock. ATVs and snowmachines are commonly used in winter. |                |
| <b>Airport Facilities</b> | A State-owned 4,000' gravel airstrip (elevation 30'), complemented by seaplane base.                                                                                                                                                                                  |                |
| <b>Airline Services</b>   | Flights available from Nome and Unalakleet: Bering Air; Ravn Air; Ryan Air (freight).                                                                                                                                                                                 |                |
| <b>Freight</b>            | Saint Michael receives at least one annual shipment of bulk cargo. Lighterage service is provided on a frequent basis from Nome.                                                                                                                                      |                |
| <b>Vessel Support</b>     | No dock, but does offer a good natural harbor.                                                                                                                                                                                                                        |                |

|----------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b><i>Fuel Storage</i></b>       | <b>Tank Owners</b> (number of tanks @ total capacity): Bering Strait Schools (2 @ 60,000 gals.); City (5 @ 90,000); St. Michael Fuel (15 @ 125,000).                                                                                                                                                                                                                                                                                                                                                                                                              |
| <b><i>Housing</i></b>            | Arrangements can sometimes be made for sleeping at the school or private homes (school principal, 923-3041).                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| <b><i>Water &amp; Sewage</i></b> | Water is derived from Clear Lake, treated and stored in a 1.2 million-gallon tank. A new sanitation system is under construction to provide water delivery/holding tanks for homes, a piped gravity sewer system with septic treatment, and household plumbing. Presently, 44 homes are served by the new system, and another 37 houses are being connected. These unserved residents currently haul treated water and use honeybuckets. Funds have been requested to expand the washeteria. DEC has approved the landfill for use, although it is not permitted. |
| <b><i>Services</i></b>           | There is a washeteria, but no hotel, restaurant or banking facilities. Some supplies available.                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| <b><i>Miscellaneous</i></b>      | There is one school located in the community, attended by 125 students                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

|----------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b><i>Location and Climate</i></b>                 | Savoonga is located on the northern coast of St. Lawrence Island in the Bering Sea, 164 miles west of Nome and 39 miles southeast of Gambell. It lies at approximately 63d 42m N Latitude, 170d 29m W Longitude (Sec. 08, T021S, R061W, Kateel River Meridian). Savoonga has a subarctic maritime climate with some continental influences during the winter. Summer temperatures average 40 to 51; winters average -7 to 11. Temperature extremes from -34 to 67 have been recorded. Average precipitation is 10 inches annually, with 58 inches of snowfall. The island is subject to prevailing winds, averaging 18 MPH. Freeze-up on the Bering Sea occurs in mid-November, with break-up in late May. |
| <b><i>History, Culture, &amp; Demographics</i></b> | St. Lawrence Island has been inhabited intermittently for the past 2,000 years by both Alaskan and Siberian Yup'ik Eskimos. The island had numerous villages with a total population of around 4,000 by the 19th century, though the population was severely reduced by a tragic famine in 1878-80. In 1900 a herd of reindeer was moved to the island,                                                                                                                                                                                                                                                                                                                                                    |

|                           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

|                           | and by 1917 this herd had grown to over 10,000 animals. When the Alaska Native Claims Settlement Act (ANCSA) was passed in 1971, Gambell and Savoonga decided not to participate, and instead opted for title to the 1.136 million acres of land in the former St. Lawrence Island Reserve. The island is jointly owned by Savoonga and Gambell. Over 95% of the population are Alaska Natives. A federally recognized tribe is located in the community. It is a traditional Eskimo village with a subsistence lifestyle surrounding walrus and whale hunting. Savoonga is hailed as the "Walrus Capitol of the World." Due to the island's isolation, most residents are bilingual. Islanders today have successfully mixed the past with the present. The sale, importation and possession of alcohol are banned in the village. |
| <b>Economy</b>            | The economy of Savoonga is largely based upon subsistence hunting with some cash income. Ten residents hold commercial fishing permits, and a fish processing facility was recently completed. Reindeer harvests occur, but the herd is not managed. Fox are trapped as a secondary source of income. Islanders are known for their quality ivory carvings. Some tourism occurs by bird-watchers.                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| <b>Subsistence</b>        | Walrus, seal, fish and bowhead and gray whale are harvested for subsistence.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

|---------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Location and Climate</b>                 | Selawik is located at the mouth of the Selawik River where it empties into Selawik Lake, about 70 miles southeast of Kotzebue, some 670 miles northwest of Anchorage. The city lies at approximately 66d 36m N Latitude, 160d 00m W Longitude (Sec. 20, T014N, R006W, Kateel River Meridian), which is near the Selawik National Wildlife Refuge, a key breeding and resting spot for migratory waterfowl. The area is a transitional climate zone and temperatures average -10 to 15 during winter, 40 to 65 during summer. Temperature extremes have been recorded from -50 to 83. Snowfall averages 35 to 40 inches, with 10 inches of total precipitation per year. The Selawik River is navigable from early June to mid-October. |
| <b>History, Culture, &amp; Demographics</b> | The Imperial Russian Navy first reported the village in the 1840s as "Chilivik;" Selawik is an Eskimo name for a species of fish. Around 1908, the site had a small wooden schoolhouse and church. The village has continued to grow and has expanded across the Selawik River onto three banks, linked by bridges. Approximately 95% of the population are Alaska Natives. A federally recognized tribe is located in the community. Selawik is an Inupiat Eskimo community active in traditional subsistence fishing and hunting. The sale or importation of alcohol is banned in the village.                                                                                                                                       |
| <b>Economy</b>                              | The primary employers in the community include the school, the city, the IRA council, Maniilaq Association, and three grocery stores. Seasonal work is also found outside of Selawik at the Red Dog Mine, BLM fire fighting, and in lighterage operations. Four residents hold commercial fishing permits. Inhabitants of Selawik rely largely on                                                                                                                                                                                                                                                                                                                                                                                      |

|                           |                                                                                                  |      |

| <b>Housing</b>            | McCoy's (484-2125) has some lodging available. Contact the city office to arrange for accommodations in private homes or at the school.                                                                                                                                                                                                                                                                                                                                                                    |                       |
| <b>Water &amp; Sewage</b> | A new water and sewer system is under construction. A central treatment and washeteria facility pumps water from the Selawik River, providing up to 8,000 gallons a day. Groundwater wells have been unsuccessful. A 3-mile distribution line is available during the summer. A circulating water and vacuum sewer system was recently completed; fifty-three homes in the western area of town and new HUD housing have been plumbed and connected. About thirty homes yet to be served use honeybuckets. |                       |
| <b>Services</b>           | Groceries, clothing, first-aid supplies, and hardware available. No restaurant or banking facilities.                                                                                                                                                                                                                                                                                                                                                                                                      |                       |
| <b>Miscellaneous</b>      | There is one school located in the community, attended by 253 students. The landfill is not permitted and needs to be relocated.                                                                                                                                                                                                                                                                                                                                                                           |                       |

| <b>Location and Climate</b> | Shaktoolik is located on the east shore of Norton Sound, 125 miles east of Nome and 33 miles north of Unalakleet. It lies at approximately 64d |

|                                             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|---------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                             | 20m N Latitude, 161d 09m W Longitude (Sec. 23, T013S, R013W, Kateel River Meridian). Shaktoolik has a Subarctic climate with maritime influences when Norton Sound is ice-free, usually from May to October. Summer temperatures average 47 to 62; winter temperatures average -4 to 11. Extremes from -50 to 87 have been recorded. Average annual precipitation is 14 inches, including 43 inches of snowfall.                                                                                                                      |
| <b>History, Culture, &amp; Demographics</b> | Shaktoolik was the first and southernmost Malemiut settlement on Norton Sound, occupied as early as 1839. Twelve miles northeast, on Cape Denbigh, is "Iyatayet," a site that is 6,000 to 8,000 years old. Nearly 95% of the population are Alaska Natives. A federally recognized tribe is located in the community. It is a Malemiut Eskimo village with a fishing and subsistence lifestyle. Resources include seal, beluga whale, caribou, reindeer, moose and fish. The sale or importation of alcohol is banned in the village. |
| <b>Economy</b>                              | The Shaktoolik economy is based on subsistence, supplemented by part-time wage earnings. Commercial fishing is on the increase and provides a major source of income. Development of a new fish processing facility is a village priority; 32 residents hold commercial fishing permits. Reindeer herding also provides income and meat.                                                                                                                                                                                              |
| <b>Subsistence</b>                          | Reindeer, salmon, moose, whale, seal and rabbit are harvested for subsistence.                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

|---------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>Accessibility</i>      | By plane, boat and snowmachine. There are no roads linking the community to other parts of the state. Boats are used for inter-village travel and subsistence activities. Snowmachines and ATVs are commonly used in winter; motorbike, truck and boat in the summer. |
| <i>Airport Facilities</i> | A State-owned 2,220' gravel airstrip (elevation 15') allows for regular air service from Nome. Plans are underway to relocate the airstrip, which is 3 miles northwest of town.                                                                                       |
| <i>Airline Services</i>   | Bering Air; Ravn Air; Ryan Air (freight).                                                                                                                                                                                                                             |
| <i>Freight</i>            | Cargo is barged into Nome, then lightered to local shore from there.                                                                                                                                                                                                  |
| <i>Vessel Support:</i>    | No docking facilities                                                                                                                                                                                                                                                 |

| <b>Fuel Storage</b>       | Tank Owners (number of tanks @ total capacity): AVEC (11 @ 97,809 gals.); Bering Strait Schools (8 @ 69,300); Village Corp. (10 @ 110,000); City (3 @ 18,000); Anika Store (6,400).                                                                                                                                                                          |                |
| <b>Housing</b>            | Sunny Polar Bear B&B, private homes, or the school. Corporation has apartment to rent.                                                                                                                                                                                                                                                                       |                |
| <b>Water &amp; Sewage</b> | Water is pumped three miles from the Togoomenik River to the pumphouse, where it is treated and stored in a 848,000-gallon insulated tank. A piped water and sewage collection system serves most homes. Most households have complete plumbing and kitchen facilities. The school has received funding to develop a community-wide sewage treatment system. |                |
| <b>Services</b>           | No restaurant or banking facilities. A laundromat with shower available. Two stores in the village. Groceries, clothing, first-aid supplies, and hardware generally available.                                                                                                                                                                               |                |
| <b>Miscellaneous</b>      | There is one school located in the community, attended by 71 students. The city burns refuse in an incinerator. The landfill needs to be relocated; the current site is not permitted.                                                                                                                                                                       |                |

|                                                    | Kotzebue. Shishmaref is surrounded by the 2.6 million acre Bering Land Bridge National Reserve and has been proposed to become part of the Beringian National Heritage Park, endorsed by Presidents Bush and Gorbachev in 1990. It lies at approximately 66d 15m N Latitude, 166d 04m W Longitude (Sec. 23, T010N, R035W, Kateel River Meridian). The area experiences a transitional climate between the frozen arctic and the continental Interior. Summers can be foggy, with average temperatures ranging from 47 to 54; winter temperatures average -12 to 2. Average annual precipitation is about 8 inches, including 33 inches of snow. The Chukchi Sea is frozen from mid-November through mid-June. |               |
| <b><i>History, Culture, &amp; Demographics</i></b> | Excavations at "Keekiktuk" by archaeologists around 1821 provided evidence of Eskimo habitation from several centuries ago. After 1900, when a supply center was established to serve gold mining activities on the Seward Peninsula, the village was renamed for Shishmaref Inlet. During October 1997, a severe storm eroded over 30 feet of the north shore, threatening the loss of 14 homes and destroying many winter food caches. Nearly 95% of the population are Alaska Natives. A federally recognized tribe is located in the community. It is a traditional Eskimo village with a fishing and subsistence lifestyle. The sale or importation of alcohol is banned in the village.                 |               |
| <b><i>Economy</i></b>                              | The Shishmaref economy is based on subsistence supplemented by part-time wage earnings. One resident holds a commercial fishing permit. Year-round jobs are limited, and villagers rely on subsistence foods. Two reindeer herds are managed from here; the reindeer skins are tanned locally, and meat is available at the village store. The Friendship Center, a cultural center and carving facility, was recently completed for local artisans.                                                                                                                                                                                                                                                          |               |
| <b><i>Subsistence</i></b>                          | Fish, walrus, seal, polar bear, and rabbit are harvested for subsistence.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |               |
| <b><i>Population</i></b>                           | 547                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |               |

|---------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Water &amp; Sewage</b> | Water is derived from a surface source, treated and stored in a new tank. Shishmaref is undergoing major improvements, including the construction of a flush/haul system and household plumbing; nineteen HUD homes have been completed, and 71 homes remain. This new system provides water delivery, but the unserved homes continue to haul water. Honeybuckets and the new flush tanks are hauled by the city. The school, clinic, Friendship Center, city hall and fire hall are connected to a sewage lagoon. |
| <b>Services</b>           | Groceries, clothing, first-aid supplies, and hardware generally available at Shishmaref Native (Anika) Store and Nayokpuk General Store. Food is available at a snack bar. Washeteria available, but no banking services or rental transportation.                                                                                                                                                                                                                                                                  |
| <b>Miscellaneous</b>      | There is one school located in the community, attended by 179 students. An access road is under construction for a planned new landfill.                                                                                                                                                                                                                                                                                                                                                                            |

|---------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Location and Climate</b>                 | Shungnak is located on the right bank of the Kobuk River about 150 miles east of Kotzebue, at approximately 66d 52m N Latitude, 157d 09m W Longitude (Sec. 09, T017N, R008E, Kateel River Meridian). Temperatures average -10 to 15 during winter; 40 to 65 during summer. Temperature extremes have been recorded from -60 to 90. Snowfall averages 80 inches, with 16 inches of total precipitation per year. The Kobuk River is navigable from the end of May to mid-October.                                                                                                                                                    |
| <b>History, Culture, &amp; Demographics</b> | Founded in 1899 as a supply point for mining activities in the Cosmos Hills, this Inupiat Eskimo village was forced to move in the 1920s because of river erosion and flooding. The old site, 10 miles upstream, was renamed Kobuk by those who remained there. The new village was named "Kochuk," but later reverted to Shungnak, a name derived from the Eskimo word "Issingnak," which means jade, a stone found extensively throughout the surrounding hills. Nearly 95% of the population are Alaska Natives. A federally recognized tribe is located in the community. It is a traditional Eskimo village with a subsistence |

|                           |                                                                                                                                                                                                                                                                                                                       |
|---------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                           | lifestyle. The sale or importation of alcohol is banned in the village. High School students from Kobuk attend school in Shungnak.                                                                                                                                                                                    |
| <b>Economy</b>            | Most full-time employment is with the school district, the city, Maniilaq Association, two stores and a lodge. BLM provides seasonal employment in fire fighting, hiring over 30 residents each year. Shungnak subsists mainly on fishing, hunting and trapping. Shungnak also has a strong arts and crafts industry. |
| <b>Subsistence</b>        | Sheefish, whitefish, caribou, moose, ducks and berries are harvested for subsistence.                                                                                                                                                                                                                                 |

| <i>Housing</i>            | Accommodations may be coordinated with the school and the health clinic.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                |
| <i>Water &amp; Sewage</i> | The water infiltration gallery was destroyed by ice several years ago and needs replacement. A reservoir is intermittently filled from the Kobuk River – a portable pump fills a 200,000-gallon steel storage tank through 1,110' of buried arctic pipe. Groundwater wells have proven unsuccessful. Piped water and sewer are provided to 53 homes (those at the top of the bluff), the clinic, school and community building. Shungnak has a 6-inch buried gravity sewage main, which drains into a small, diked lake one-half mile northwest of the city. The effluent is chlorinated before discharge. |                |
| <i>Services</i>           | Groceries and supplies available at Shungnak Native Store (437-2148). No laundromat available and no banking facilities.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                |
| <i>Miscellaneous</i>      | There is one school located in the community, attended by 95 students. A new city-operated landfill has recently been completed, but it is not permitted by ADEC.                                                                                                                                                                                                                                                                                                                                                                                                                                          |                |

| <b>Location and Climate</b>                 | Solomon is located on the west bank of the Solomon River, one mile north of Norton Sound, 34 miles east of Nome, at approximately 64d 34m N Latitude, 164d 26m W Longitude (Sec. 03, T011S, R029W, Kateel River Meridian). The climate is both continental and maritime. Summers are short, wet and mild; winters are cold and windy. Temperatures range between -30 and 56. Annual precipitation is 16 inches, with 54 inches of snowfall.                                                                                                                                                                                                                                                                                                                   |
| <b>History, Culture, &amp; Demographics</b> | The village was originally settled by Eskimos of the Fish River tribe. The gold rush during the summers of 1899 and 1900 brought thousands of people to the Solomon area, and by 1904 Solomon had seven saloons, a post office, a ferry dock, and was the southern terminus of a narrow gauge railroad that ran to the Kuzitrin River. In 1913, the railroad was washed out by storms, and in 1918, the flu epidemic struck. The BIA constructed a large school in 1940, but during World War II, a number of families moved away from Solomon. The post office and BIA school were closed in 1956. The Solomon Roadhouse operated until the 1970s. A federally recognized tribe has an office in Nome. Solomon is a subsistence-use area for Nome residents. |
| <b>Economy</b>                              | Some gold mining still occurs. Many Nome residents have seasonal homes or camps in Solomon.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

|---------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Location and Climate</b>                 | Stebbins is located on the northwest coast of St. Michael Island on Norton Sound, 8 miles north of St. Michael and 120 miles southeast of Nome. It lies at approximately 63d 31m N Latitude, 162d 17m W Longitude (Sec. 02, T023S, R019W, Kateel River Meridian). Stebbins has a subarctic climate with a maritime influence during the summer. Average summer temperatures are 40 to 60; winter temps range from -4 to 16. Extremes have been measured from -55 to 77. Annual precipitation is 12 inches, including 38" of snowfall. Norton Sound is ice-free from June to November, but clouds and fog are common. |
| <b>History, Culture, &amp; Demographics</b> | Redoubt St. Michael was built at nearby St. Michael by the Russian-American Company in 1833. The Yup'ik name for the village is Tapraq, the Inupiaq name is Atriviq, and the name Stebbins was first recorded in 1900. The first U.S. Census occurred in 1950, indicating 80 Yup'ik Eskimos. Nearly 95% of the population are Alaska Natives. A federally recognized tribe is located in the community. It is a majority Yup'ik Eskimo village with a commercial fishing and subsistence lifestyle. The sale or importation of alcohol is banned in the village.                                                     |
| <b>Economy</b>                              | The Stebbins economy is based on subsistence harvests supplemented by part-time wage earnings. The city government and school provide the only full-time positions. The Stebbins Native Corporation has established a mining company, selling raw gravel to rip raft materials, and armored rock. The commercial herring fishery has become increasingly important, including fishing on the lower Yukon. Twenty-one residents hold commercial fishing permits. Reindeer herding has occurred in conjunction with Saint Michael; there is an unmanaged herd on Stuart Island.                                        |
| <b>Subsistence</b>                          | Residents subsist upon fish, seal, walrus, reindeer and beluga whale, with gardens providing vegetables during the summer months.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

|----------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b><i>Housing</i></b>            | No hotel, but arrangements can sometimes be made for sleeping at the school or private homes.                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| <b><i>Water &amp; Sewage</i></b> | Major improvements are under way to enable a piped water system with household plumbing and vacuum-powered sewer. Residents currently haul water and deposit honeybuckets in bunkers. Water is derived during the summer from Big Clear Creek, treated and stored in a 1,000,000-gallon steel water tank. In the summer there are several watering points in the village, distributed from the tank via plastic pipelines. A reservoir at Clear Lake and a new water storage tank are under construction to alleviate winter water shortages. |
| <b><i>Services</i></b>           | No restaurant or banking services. Groceries, clothing, first-aid supplies, and hardware available at Stebbins Native Store (934-3241). Laundry and shower facilities available. No repair services. Arrangements can be made to rent off-road vehicles and boats.                                                                                                                                                                                                                                                                            |
| <b><i>Miscellaneous</i></b>      | There is one school located in the community, attended by 197 students. ADEC has approved the landfill for use, although it is not permitted. Refuse is collected by the city from central bins.                                                                                                                                                                                                                                                                                                                                              |

| <b><i>Location and Climate</i></b>                 | Teller is located on a spit between Port Clarence and Grantley Harbor on the Seward Peninsula, 72 miles northwest of Nome, at approximately 65d 16m N Latitude, 166d 22m W Longitude (Sec. 01, T003S, R038W, Kateel River Meridian). The climate is maritime when ice-free, then changes to a continental climate after freezing. Grantley Harbor is generally ice-free from early June to mid-October. Average summer temperatures range from 44 to 57, winter average -9 to 8, with extremes measured from -45 to 82. Annual precipitation is 11.5 inches, with 50 inches of snowfall. |
| <b><i>History, Culture, &amp; Demographics</i></b> | The Eskimo fishing camp called "Nook" was reported 20 miles south of Teller in 1827. Present-day Teller was also established in 1900 after the Bluestone Placer Mine discovery 15 miles to the south. During these boom years, Teller had a population of about 5,000 and was a major                                                                                                                                                                                                                                                                                                    |

|                                  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

|                                  | regional trading center, attracting Natives from Diomedes, Wales, Mary's Igloo and King Island. In May 1926, bad weather caused the dirigible "Norge" to detour to Teller on its first flight over the North Pole from Norway to Nome. Approximately 87% of the population are Alaska Natives. A federally recognized tribe is located in the community. Teller is a traditional Kawerak Eskimo village with a subsistence lifestyle. Many residents today were originally from Mary's Igloo. Sale of alcohol is banned in the village. |
| <b><i>Economy</i></b>            | The Teller economy is based on subsistence activities supplemented by part-time wage earnings. One resident holds a commercial fishing permit. There are mineral deposits in the area. A herd of over 1,000 reindeer wander the area, and the annual round-up provides meat and a cash product, which is sold mainly on the Seward Peninsula. Over one-third of households produce crafts or artwork for sale, and some residents trap fox.                                                                                             |
| <b><i>Subsistence</i></b>        | Fish, seal, moose, beluga whale and reindeer are harvested for subsistence.                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

| <i>Housing</i>            | Accommodations possible at the school (642-3041).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |                |
| <i>Water &amp; Sewage</i> | During summer, water is hauled from the Gold Run River (20 miles away) by the city water truck and delivered to home storage tanks. A few residents use their own ATVs or snowmachines to haul water. During winter, treated water is delivered from a large storage tank at the washeteria, or melt ice is used from area creeks. Preliminary work has begun on a piped water and sewer system, but a new water source must first be developed. Wells have proven unsuccessful. The school operates its own sewer system. A few homes and facilities have septic tanks, but 42 residents use honeybuckets, which are hauled by the city. |                |

| <b>Location and Climate</b>                 | Unalakleet is located on Norton Sound at the mouth of the Unalakleet River, 148 miles southeast of Nome and 395 miles northwest of Anchorage. It lies at approximately 63d 52m N Latitude, 160d 47m W Longitude (Sec. 03, T019S, R011W, Kateel River Meridian). Unalakleet has a subarctic climate with considerable maritime influences when Norton Sound is ice-free, usually from May to October. Winters are cold and dry, temperatures average -4 to 11, and average summer temps range 47 to 62°. Extremes have been measured from -50 to 87. Precipitation averages 14 inches annually, with 41 inches of snow.                                                                                                                                                                                                                                                                                                                                                                               |
| <b>History, Culture, &amp; Demographics</b> | Archaeologists have dated house remnants along the beach ridge from 200 B.C. to 300 A.D. The name Unalakleet means "place where the east wind blows." Unalakleet has long been a major trade center as the terminus for the Kaltag Portage, an important winter travel route connecting to the Yukon River. Indians on the upper river were considered "professional" traders who had a monopoly on the Indian-Eskimo trade across the Kaltag Portage. The Russian-American Company built a post here in the 1830s. In 1898, reindeer herders from Lapland were brought to Unalakleet to establish sound herding practices. In 1901, the Army Signal Corps built over 605 miles of telegraph line from St. Michael to Unalakleet, over the Portage to Kaltag and Fort Gibbon. Approximately 82% of the population are Alaska Natives. A federally recognized tribe is located in the community. The sale of alcohol is prohibited in the community, although importation and possession are allowed. |
| <b>Economy</b>                              | Unalakleet has a history of diverse cultures and trade activity. The local economy is the most active in Norton Sound and includes a traditional Unaligmiut Eskimo subsistence lifestyle. Both commercial herring                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

|                                  |                                                                                                                                                                                                                                                                                                                                                                                                                               |               |
|----------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------|
|                                  | fishing and subsistence activities are major components of Unalakleet's economy. A fish processing plant that employs over 50 seasonal workers was recently completed, and 113 residents hold commercial fishing permits. Government and school positions are relatively numerous, along with many retail and service positions. Tourism is becoming increasingly important; there is world-class silver fishing in the area. |               |
| <b><i>Subsistence</i></b>        | Fish, waterfowl, seal, caribou, moose and bear are harvested for subsistence.                                                                                                                                                                                                                                                                                                                                                 |               |

| <b>Location and Climate</b>                 | Wales is located on Cape Prince of Wales at the western tip of the Seward Peninsula, 111 miles northwest of Nome, at approximately 65d 37m N Latitude, 168d 05m W Longitude (Sec. 05, T002N, R045W, Kateel River Meridian). It has a maritime climate when the Bering Strait is ice-free, usually June to November. After the freeze, there is an abrupt change to a cold continental climate. Average summer temperatures range from 40 to 50; winter temperatures range from -10 to 6. Annual precipitation is 10 inches, including 35 inches of snow. Frequent fog, wind and blizzards limit access to Wales.                                                                                                                                                                                                      |
| <b>History, Culture, &amp; Demographics</b> | In 1827 the Russian Navy reported the Eskimo villages of "Eidamoo" near the coast and "King-a-ghe" further inland. In 1890, the American Missionary Association established a mission here, and in 1894 a reindeer station was organized. Wales became a major Kinugmiut Eskimo whaling center due to its location along migratory routes, and it became the region's largest and most prosperous village, with more than 500 residents. The influenza epidemic in 1918-19 claimed the lives of many of Wales' finest whalers. A burial mound of the "Birnik" culture (500 A.D. to 900 A.D.) was discovered near Wales and is now a national landmark. Ancient songs, dances, and customs are still practiced. In the summer Little Diomed residents travel between the two villages in large traditional skin boats. |
| <b>Economy</b>                              | The economy of Wales is based on subsistence hunting and fishing, trapping, Native arts and crafts, and some mining. A private reindeer herd is managed out of Wales, and local residents are employed to assist in the harvest.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| <b>Subsistence</b>                          | Whales, walrus, polar bear, moose, reindeer, salmon, and other fish are harvested for subsistence.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

|----------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b><i>Accessibility</i></b>      | By plane, small boat and snowmachine. An unimproved road covers the 6.5 miles to Tin City, but there are no roads linking the city to other parts of the state. Aluminum skiffs have replaced skin boats as the primary method of sea travel, and snowmachines are used in winter. |
| <b><i>Airport Facilities</i></b> | A State-owned 4,800' gravel airstrip. Elevation 25'. Easterly winds may cause turbulence. Frequent fog, wind and occasional blizzards limit access to Wales. In the winter, planes frequently use the ice on the Strait for landings.                                              |
| <b><i>Airline Services</i></b>   | Ravn Air Service.                                                                                                                                                                                                                                                                  |
| <b><i>Freight</i></b>            | A cargo ship delivers goods to Nome; the goods are transferred to Wales and lightered a half mile to shore.                                                                                                                                                                        |
| <b><i>Vessel Support</i></b>     |                                                                                                                                                                                                                                                                                    |

| <b>Fuel Storage</b>       | Tank Owners (number of tanks @ total capacity): AVEC (7 @ 64,749 gals.); Native Corp. (97,500); Bering Strait Schools (3 @ 39,500).                                                                                                                                                                                                                                                                                                                                                                           |                |
| <b>Housing</b>            | Accommodations (trailer) may be arranged with the Wales Native Corp. (664-3641); also check with the City of Wales (664-3501) for possible room.                                                                                                                                                                                                                                                                                                                                                              |                |
| <b>Water &amp; Sewage</b> | Water is obtained from Gilbert Creek during the summer, and residents haul treated water from a 500,000-gal. storage tank at the washeteria. Some use untreated water from Village Creek. The community needs a second water source, and has experienced water shortages; Cape Mountain is being investigated as a possible source. Almost all residents use honeybuckets, and very few homes currently have plumbing. The school, clinic and city building are connected to a piped water and septic system. |                |
| <b>Services</b>           | Groceries, clothing, first-aid supplies, and hardware available at Wales Native Store (664-3351). Laundromat and showers available. No restaurant or banking facilities. Arrangements may be made to rent private vehicles or boats.                                                                                                                                                                                                                                                                          |                |
| <b>Miscellaneous</b>      | There is one school located in the community, attended by 53 students. The landfill is not permitted.                                                                                                                                                                                                                                                                                                                                                                                                         |                |

|---------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Location and Climate</b>                 | White Mountain is located on the west bank of the Fish River, near the head of Golovin Lagoon, on the Seward Peninsula, 63 miles east of Nome. It lies at approximately 64d 41m N Latitude, 163d 24m W Longitude (Sec. 26, T009S, R024W, Kateel River Meridian). White Mountain has a transitional climate with less extreme seasonal and daily temperatures than Interior Alaska. Continental influences prevail in the ice-bound winter. Winter temperatures average -7 to 15, summer temperatures range from 43 to 80. Annual precipitation is 15 inches, with 60 inches of snow. The Fish River freezes up in November; break-up occurs in late May. |
| <b>History, Culture, &amp; Demographics</b> | White Mountain is a Kawerak Eskimo village, with historical influences from the gold rush. Nearly 90% of the population are Alaska Natives. A federally recognized tribe is located in the community. Subsistence activities are prevalent.                                                                                                                                                                                                                                                                                                                                                                                                              |
| <b>Economy</b>                              | The entire population depends on subsistence hunting and fishing, and most residents spend the entire summer at fish camps. The school, Native store and White Mountain Lodge provide the only local employment. Construction outside of town and fire fighting provide seasonal employment. Four residents hold commercial fishing permits. Ivory and bone carvings contribute some cash. A reindeer farm is run by a local resident.                                                                                                                                                                                                                   |
| <b>Subsistence</b>                          | Ducks, geese, salmon, other fish, beluga whale, seal, moose, caribou, reindeer, and brown bear are harvested for subsistence.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

|---------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Accessibility</b>      | By plane, small boat and snowmachine. There are no roads linking the village to other parts of the state. Boats are used for inter-village travel and subsistence activities. ATVs and snowmachines are commonly used in winter. Locals are interested in a road to Golovin to permit fuel deliveries, or the construction of a docking facility for barges. |
| <b>Airport Facilities</b> | A State-owned 3,000' gravel airstrip. Elevation 262'.                                                                                                                                                                                                                                                                                                        |
| <b>Airline Services</b>   | Scheduled flights are available regularly from Nome: Bering Air; Ravn Air; Ryan Air (freight).                                                                                                                                                                                                                                                               |
| <b>Freight</b>            | Cargo barges cannot currently land at White Mountain, and supplies are lightered from Nome and offloaded on the beach.                                                                                                                                                                                                                                       |
| <b>Vessel Support:</b>    | There is no dock at the village.                                                                                                                                                                                                                                                                                                                             |

**School District** - Yupiit School District

P.O. Box 51190, Akiachak, AK 99551-0190

Phone 825-3600

Fax 825-3655

Web: <http://www.yupiit.org>

**Village Corporation** - Akiachak, Limited

P.O. Box 51010, Akiachak, AK 99551-0010

Phone 825-4328

Fax 825-4115

Email: [AkiachakLtd@hotmail.com](mailto:AkiachakLtd@hotmail.com)

**Location & Climate:**

Akiachak is located on the west bank of the Kuskokwim River, on the Yukon-Kuskokwim Delta. It lies 18 miles northeast of Bethel. It lies at approximately 60d 54m N Latitude, 161d 25m W

Longitude (Sec. 36, T010N, R069W, Seward Meridian). Akiachak is located in the Bethel Recording District. The area encompasses 10 sq. miles of land and 2 sq. miles of water. The area averages 16 inches of precipitation, with snowfall of 50 inches. Summer temperatures range from 62 to 42; winter temperatures 19 to -2.

**Transportation:**

**Accessibility:** Scheduled air service from Bethel. Boats, snow machines and ATVs are used extensively by local residents on the Kuskokwim River. No connecting roads to other communities.

**Airport Facilities:** A State-owned 1,649' X 40' gravel airstrip and seaplane facilities provide scheduled and chartered services year-round to Akiachak. Relocation of the airport is planned for the future. *See the current U.S. Government Flight Information Publication (FLIP) for additional details regarding the runway and support services.*

**Scheduled and Unscheduled Air Carriers:** Scheduled air service from Bethel. Ryan Air Service, Yute Air, ERA Alaska

**Freight:** Barge and mail plane. Barges deliver bulk fuel and supplies during the summer.

**Vessel Support:** No information.

**Facilities & Utilities:**

**Communications:**

*In-State Phone:* United Utilities Inc.

*Long-Distance Phone:* United Utilities Inc.

*TV Stations:* ARCS Programming (from Akiak); KYUK

*Radio Stations:* KYUK-AM; KYKD-FM

*Cable Provider:* Village Council

*Teleconferencing:* Alaska Teleconferencing Network

**Electricity:** Electricity is provided by the Akiachak Native Community Electric Co. The power source is diesel.

**Fuel:** No information.

**Fuel Storage – Tank Owners (number of tanks, total capacity):**

- Akiachak Enterprises - 69,000 gals
- School -169,000 gals
- Electric Co. - 76,500 gals
- Village Council - 26,750 gals
- Army National Guard - 10,000 gals
- Police Station - 1,050 gals.

**Housing:** Lodging available at the Yupiit School District or the IRA Council Offices.

**Services:** Groceries/supplies available at several local stores.

**Water & Sewage:** Construction of a piped water and gravity sewer system is underway. A new well, water tank, water treatment plant and a road to the new lagoon have been completed. Construction will continue to plumb and connect 62 homes on the west side. Currently 12 facilities and the school are served by a piped water and sewer system; the remaining residents

haul water from the washeteria. 25 households have honeybuckets hauled by the City; the others haul their own honeybuckets or use septic tanks.

**Miscellaneous:** The village would like to purchase an incinerator and use the waste heat for public buildings. There is one school located in the community, attended by 155 students.

#### **Spill Response Support**

*Contact local officials to determine possibility of using community facilities.*

**Potential Command Posts:** School

**Potential Staging Areas:** Airport (obtain permission for use from Bethel Airport Station Manager and local airport manager)

**Local Spill Response Equipment:** Nearest DEC Spill Response Conex located in Bethel. Contact person is George Young, 543-2047/2087.

#### **Economy:**

The majority of year-round employment in Akiachak is in education and other public services. The Yupiit School District headquarters are located in the community. Residents rely on seasonal employment, such as commercial fishing, construction, and BLM fire-fighting. In 2010, 75 residents held commercial fishing permits, and some worked at canneries in Bristol Bay. Subsistence activities provide most food sources. Poor fish returns since 1997 have significantly affected the community.

#### **Culture & Demographic**

Akiachak is a Yup'ik Eskimo village with a fishing and subsistence lifestyle. It has a strong traditional community and was the first city in Alaska to dissolve its city government in favor of the Native village government. The sale, importation, and possession of alcohol is banned in the village.

The area was used by the Yup'ik Eskimos as a seasonal subsistence site. Called "Akiakchagamiut" in the 1890 census, the village had a population of 43 at that time. A post office was established in 1934. It incorporated as a second-class city on February 7, 1974. The city government was dissolved on January 31, 1990, in favor of traditional village council governance.

9770.7.2 – Akiak

### **Location & Climate:**

Akiak is located on the west bank of the Kuskokwim River, 42 air miles northeast of Bethel, on the Yukon-Kuskokwim Delta. It lies at approximately 60d 55m N Latitude, 161d 13m W Longitude (Sec. 32, T010N, R067W, Seward Meridian). Akiak is located in the Bethel Recording District. The area encompasses 2 sq. miles of land and 1 sq. miles of water. Precipitation averages 16 inches in this area, with snowfall of 50 inches. Summer temperatures range from 62 to 42; winter temperatures 19 to -2.

### **Transportation:**

**Accessibility:** Scheduled air service from Bethel. Snow machines, ATVs and skiffs are used extensively for local transportation to nearby villages.

**Airport Facilities:** A State-owned 1,900' gravel airstrip provides chartered or private air access year-round. The airport runway is being lengthened to 3,000' in 1998. *See the current U.S. Government Flight Information Publication (FLIP) for additional details regarding the runway and support services.*

**Airline Service:** ERA Alaska, Ryan Air, Yute Air

**Freight:** Freight arrives by barge or mail plane.

**Vessel Support:** There are no docking facilities.

### **Facilities & Utilities:**

#### **Communications:**

*In-State Phone:* United Utilities Inc.

*Long-Distance Phone:* AT&T Alascom, United Utilities Inc.  
*TV Stations:* ARCS Programming; KYUK  
*Radio Stations:* KYUK-AM; KYKD-FM  
*Cable Provider:* None - Alaska Rural Communication Service (ARCS)  
*Teleconferencing:* Alaska Teleconferencing Network

**Electricity:** City of Akiak  
**Fuel:** No information.

**Fuel Storage - Tank Owners (total capacity):**

- Kokarmiut Corp. 316,000 gals)
- Yupiit Schools (70,250 gals)
- City Electric (26,000 gals)
- Army National Guard (5,500 gals)

**Housing:**

- Yupiit School District
- Akiak Native Community Building
- City Hall
- Kamp Kiseralik
- (Accommodations can be arranged through the village office or through the school.)

**Services:** No restaurant or banking services. Supplies available through local store.

**Water & Sewage:** The school and clinic are connected directly to the water plant. Individual wells, septic systems, and plumbing were installed in 14 HUD homes in 1997. A piped water and gravity sewer system that will provide household plumbing is under construction. 67 homes need water and sewer service. Most residents are dependent upon the washeteria for laundry and bathing. Sewage disposal is by septic tanks, honeybuckets, or privies. The city provides septic pumping services.

**Miscellaneous:** There is one school located in the community, attended by 110 students.

**Spill Response Support:**

*Contact local officials to determine possibility of using community facilities.*

**Potential Command Posts:** School

**Potential Staging Areas:** Airport (obtain permission for use from Bethel Airport Station Manager and local airport manager)

**Local Spill Response Equipment:** Nearest DEC Spill Response Conex located in Bethel. Contact person is Bob Herran or George Young, 543-2047/2087.

**Economy:**

The majority of the year-round employment in Akiak is with the city, school, or other public services. Commercial fishing and BLM firefighting also provide seasonal income. In 2010, 21 residents held commercial fishing permits. The community is interested in developing a fish processing plant and tourism. Subsistence activities are important to residents.

### **Culture & Demographic**

Akiak is a Yup'ik Eskimo village with a reliance on subsistence and fishing activities. The sale and importation of alcohol is banned in the village.

In 1880, the village of "Ackiagmute" had a population of 175. The name Akiak means "the other side," since this place was a crossing to the Yukon River basin during the winter for area Eskimos. The Akiak Post Office was established in 1916. A U.S. Public Health Service hospital was built in the 1920s. The city was incorporated in 1970.

9770.7.3 – Alakanuk

**ALAKANUK - Pronunciation/Other Names:** (ah-LUCK-uh-nuck)

**Population:** 683 (2011 DCCED certified estimate)

**Incorporation Type:** 2<sup>nd</sup> Class City

**Borough Located In:** Unorganized

**Regional Native Corporation:** Calista Corp.

### **Emergency Services:**

**Police:** 238-3421

**State Troopers:** 543-3494 (Bethel)

**Fire:** Volunteer Fire Dept, 238-3313

**Medical:** Local hospitals or health clinics include Alakanuk Health Clinic (238-3212) . Auxiliary health care is provided by flight to Bethel or Anchorage (Bethel Hospital 543-3711).

### **Organizations with Local Offices:**

**City - City of Alakanuk**

P.O. Box 167, Alakanuk, AK 99554

Phone 907-238-3313

Phone 907-238-3419

Fax 907-238-3429

E-mail: [Alakanuk@aitc.org](mailto:Alakanuk@aitc.org)

### **Location & Climate:**

Alakanuk is located at the east entrance of Alakanuk Pass, the major southern channel of the Yukon River, 15 miles from the Bering Sea. It is part of the Yukon Delta National Wildlife Refuge. It lies 8 miles southwest of Emmonak, approximately 162 air miles northwest of Bethel. It is the longest village on the lower Yukon - the development stretches over a 3 mile area along the Pass. Approximately 25 homes along the bank are being threatened by erosion. It lies at

approximately 62d 41m N Latitude, 164d 37m W Longitude (Sec. 14, T030N, R082W, Seward Meridian). Alakanuk is located in the Bethel Recording District. The area encompasses 35 sq. miles of land and 6 sq. miles of water. The climate of Alakanuk is subarctic, averaging 60 inches of snowfall and 19 inches of total precipitation per year. Temperatures range from between -25 to 79. Heavy winds are frequent during the fall and winter. The River is used as an ice road during freeze-up, from November through May.

**Transportation:**

**Accessibility:** Jet service from Bethel or Nome. Alakanuk is easily accessible from the Yukon River and Bering Sea by barge and riverboat. Most passengers and mail arrive by air. There are no roads connecting Alakanuk with other population centers in the region, but ice roads are used in winter. Snowmachines and boats are used for local travel.

**Airport Facilities:** A State-owned 2,200' gravel airstrip is available.

**Airline Service:** Grant Aviation

**Freight:** Freight arrives by cargo plane and barge.

**Vessel Support:** Moorage facilities available at city dock with depth of seven feet.

**Facilities & Utilities:**

**Communications:**

*In-State Phone:* United Utilities Inc.

*Long-Distance Phone:* United Utilities

*Internet Service Provider:* Unicom/United Utilities, Inc. ([www.unicom-alaska.net](http://www.unicom-alaska.net))

*TV Stations:* ARCS Radio Stations: KICY-AM; KNOM-AM

*Cable Provider:* City of Alakanuk

*Teleconferencing:* Alaska Teleconferencing Network

**Electricity:** Electricity is provided by AVEC.

**Fuel:** Diesel fuel available at the Native Store.

**Fuel Storage – Tank Owners (number of tanks, total capacity):**

- AVEC (15 @ 117,029 gals.)
- Native Corp. (9 @ 124,000)
- State Village Safe Water (40,000)
- School (3 @ 132,000)
- City (4,000)

**Housing:** Accommodations available through city office.

**Services:** Groceries and supplies available through local stores. No banking or major repair services.

**Water & Sewage:** Water is derived from the Alakanuk Slough, is treated, stored in a tank, and piped to most of the community. By 1998, 83 homes, the school and teachers' housing, were

connected to a new piped system with household plumbing. Facilities now include a new water intake, new water treatment plant, heated 300,000-gal. water storage tank, vacuum sewage plant, sewage lagoon, arctic piping, and household plumbing. A new subdivision is currently underway, and nine homes will be connected to the piped utilities. There are 25 unserved homes that are threatened by riverbank erosion; they use rain catchment or haul from the water storage tank, honeybuckets and pit privies.

**Miscellaneous:** The landfill uses an incinerator to reduce the volume of refuse. There is one school located in the community, attended by 197 students

### **Spill Response Support**

*Contact local officials to determine possibility of using community facilities.*

#### **Potential Command Posts:**

- City Public Safety Bldg.
- Community Hall
- School

#### **Potential Staging Areas:**

- Airport –
- National Guard Armory –
- Other government facilities –

#### **Local Spill Response Equipment:**

### **Economy:**

Alakanuk experiences a seasonal economy with most activity occurring during summer. 78 residents hold commercial fishing permits. Many have gill net permits, and set net fishermen sell their salmon to Seattle fish buyers. Government employment and retail businesses provide year-round employment. Salmon, beluga whale, seal, moose and rabbit provide food sources. Some residents trap. Many residents travel to Emmonak to shop and attend social events and basketball tournaments.

### **Culture & Demographic**

95.8% of the population are Alaska Natives. A federally recognized tribe is located in the community. Alakanuk is a Yup'ik Eskimo village active in commercial fishing and subsistence. The sale, importation and possession of alcohol are banned in the village.

9770.7.4 – Aniak

**ANIAK - Pronunciation/Other Names:** (ANN-ee-ack)

Fax 675-4513  
E-mail: [Aniaktc@yahoo.com](mailto:Aniaktc@yahoo.com)

**Location & Climate:**

Aniak is located on the south bank of the Kuskokwim River at the head of Aniak Slough, 59 miles southwest of Russian Mission in the Yukon-Kuskokwim Delta. It lies 92 air miles northeast of Bethel and 317 miles west of Anchorage. It lies at approximately 61° 34' N Latitude, 159° 31' W Longitude (Sec. 12, T017N, R057W, Seward Meridian). Aniak is located in the Kuskokwim

Recording District. The area encompasses 5 sq. miles of land and 1 sq. miles of water. Climate is maritime in the summer and continental in winter. Temperatures range between -55 and 87. Average yearly precipitation is 19 inches, with snowfall of 60 inches. The Kuskokwim is ice-free from mid-June through October.

**Transportation:**

**Accessibility:** Scheduled or chartered air service from Bethel. Access to Aniak is limited to air and water. There is no road connection to other villages, although the frozen river is used as a road by snowmachines during winter. The community has requested construction of a road to Chuathbaluk.

**Airport Facilities:** The State-owned airport is 6,000' of asphalt and is lighted, with a 3,000' crosswind runway, and is equipped for instrument approaches. Several carriers, including charter operators provide regular flights. Major airport improvements were recently completed. Floatplanes can also land on Aniak Slough.

**Airline Service:** ERA Alaska, Peninsula Airways, Ryan Air Service

**Freight:** Fuel and supplies are brought in by barge during the summer; other goods are delivered by air year-round.

**Vessel Support:** No moorage facilities.

**Facilities & Utilities:**

**Communications:**

*In-State Phone:* Bush-Tell Inc.

*Long-Distance Phone:* AT&T Alascom; GCI

*Internet Service Provider:* Bush-Tell, Inc. ([www.arctic.net](http://www.arctic.net)); School Only - GCI ([www.gci.net](http://www.gci.net))

*TV Stations:* ARCS

*Radio Stations:* KYUK-AM

*Cable Provider:* The Cable Company, Inc.

*Teleconferencing:* Alaska Teleconferencing Network

**Electricity:** Electricity is provided by Aniak Light & Power Company.

**Fuel:** Marine gas, diesel, propane, and regular gasoline.

**Fuel Storage – Tank Owners (number of tanks, total capacity):**

- Moffit Contracting (682,000 gals.)
- Kuspuk Schools (142,100); City (1,500)
- Aniak Power & Light (195,000)
- Alaska Commercial Co (15,200)
- Arctic Transportation (4,000)
- Steve Hill (21,000)
- Ryan Air (72,230)
- Dept. of Transportation (3,800)
- Bush-Tell (6,000)
- Hageland Aviation (1,900)

**Housing:** Aniak Hotel LOJ's, 675-4421.

**Services:** Laundry facilities available. Groceries and supplies available at local stores. Repair services available for marine engines, boats, and airplanes.

**Water & Sewage:** The majority of homes are plumbed and have individual wells. The village corporation completed a central well in 1988; there are also wells at Auntie Marie Nicoli School and the Joe Parent Voc Ed Center. Only 21 households haul water. A central piped sewage system serves most residents, with the exception of the schools, the clinic and the Napat subdivision across Aniak Slough. The system has four lift stations, and wastewater is treated in a lagoon. Some homes use individual septic tanks, but permafrost has caused drainfield problems, so most of the unserved homes use pit privies. The City provides septic pumping services. The Village Council operates a washeteria. Refuse is collected by a private firm, Aniak Disposal Service, or by individuals.

**Miscellaneous:** The landfill is operated by the City. Aniak Power & Light is a privately owned company. There are two schools located in the community, attended by 179 students.

#### **Spill Response Support**

*Contact local officials to determine possibility of using community facilities.*

**Potential Command Posts:** Schools

**Potential Staging Areas:**

- Airport –
- National Guard Armory –
- Other government facilities –

**Local Spill Response Equipment:** A DEC spill response container is located at Aniak. For access, call the City Manager at 675-4481 or 4446.

#### **Economy:**

The economy of Aniak is based on government, transportation, and retail services. As the largest city in the area, Aniak is a service hub for surrounding villages. Subsistence activities supplement part-time wage earnings, and some commercial fishing occurs. In 2010, 9 residents held commercial fishing permits. The school district, Kuskokwim Native Association, Bush-Tell Inc., and the Aniak Subregional Clinic provide most year-round employment. Salmon, moose, bear, birds, berries, and home gardening provide food sources.

#### **Culture & Demographic**

Aniak's population is primarily Yup'ik Eskimos and Tanaina Athabascans. Subsistence foods contribute largely to villagers' diets. Many families travel to fish camps each summer. Aniak is a Yup'ik word meaning "the place where it comes out," which refers to the mouth of the Aniak River. This river played a key role in the placer gold rush of 1900-01. In 1914, Tom L. Johnson homesteaded the site and opened a store and post office. The Yup'ik village of Aniak had been abandoned long before this time. Eskimos Willie Pete and Sam Simeon brought their families from Ohagamuit to Aniak, which reestablished the Native community. A Russian-era trader named Semyeon Lukin is credited with the discovery of gold near Aniak in 1832. Construction of an airfield began in 1939, followed by the erection of the White Alice radar-relay station in 1956, which closed in 1978. The city was incorporated in 1972.

9770.7.5 – Anvik

Environmental Staff (IGAP): 663-6323

**Location & Climate:**

Anvik is located in Interior Alaska on the Anvik River, west of the Yukon River, 34 miles north of Holy Cross. It lies at approximately 62d 39m N Latitude, 160d 12m W Longitude (Sec. 29, T030N, R058W, Seward Meridian). Anvik is located in the Kuskokwim Recording District. The area encompasses 11 sq. miles of land and 3 sq. miles of water. The climate of Anvik is continental. Temperatures range from -60 to 87. Snowfall averages 110 inches, for 21 inches total precipitation per year. The Yukon River is ice-free from June through October.

**Transportation:**

**Accessibility:** The Anvik River, west of the Yukon, allows access during the summer by barge and floatplane. The City would like to develop additional dock and harbor facilities. Three miles of local roads are used by 3-wheelers, snowmachines and dog teams.

**Airport Facilities:** The State-owned 4,000' X 75' gravel airstrip provides year-round access.

**Airline Service:** Ryan Air Service, ERA Alaska

**Freight:** Air transport and barge.

- National Guard Armory
- Other government facilities

**Local Spill Response Equipment:** Nearest DEC Spill Response Conex located in Aniak at ADOTPF, 675-4345.

**Economy:**

Anvik is characterized by a seasonal economy. Very few year-round wage-earning positions are available. Residents rely heavily on subsistence activities. In 2010, 11 residents held commercial fishing permits. The city provides services, such as fresh water, to fish processors. Subsistence

foods include salmon, moose, black bear, and small game. Several residents trap or make handicrafts, and many families engage in home gardening.

### **Culture & Demographic**

Subsistence and home gardening are actively pursued by the local Ingalik Athabascan Indians. Many families travel to fish camps during the summer. The sale of alcohol is banned in the community.

Anvik has historically been an Ingalik Indian village. It has been known as American Station, Anvic, Anvick, Anvig, Anvig Station, and Anwig. The Russian Glazanov reported it as having 100 people in 1834. Originally, it was on other side of the river to the northeast, at a place called "The Point." Residents gradually moved across the river with the establishment of an Episcopal mission and school in 1887. A post office opened in 1897. After the flu epidemic of 1918-19 and another in 1927, many orphans became wards of the mission. Some children came from as far away as Fort Yukon. Sternwheelers carried supplies to the village in the early 1920s. Some residents had contracts to cut wood for the sternwheeler's fuel, and fish and furs were sold to traders. The early 1930s brought the first arrival of a plane on skis. The city was incorporated in 1969.

9770.7.6 – Atmautluak

**ATMAUTLUAK - Pronunciation/Other Names:** (aht-MOUTH-luck)

**Location & Climate:**

Atmautluak lies on the west bank of the Pitmiktakik River in the Yukon-Kuskokwim delta, 20 miles northwest of Bethel. It lies at approximately 60d 51m N Latitude, 162d 16m W Longitude (Sec. 19, T009N, R074W, Seward Meridian). Atmautluak is located in the Bethel Recording District. The area encompasses 2 sq. miles of land and 0 sq. miles of water. The area averages 16 inches of precipitation, with snowfall of 50 inches. Summer temperatures range from 62 to 42; winter temperatures 19 to -2.

**Transportation:**

**Accessibility:** Boat, snow machine; scheduled and chartered air service from Bethel. Locals use skiffs in the summer to travel to Bethel and other area villages, and snowmachines, ATVs and dog sleds are used in the winter.

**Airport Facilities:** A State-owned 2,000' gravel airstrip is available for chartered or private planes year-round. Major improvements to the runway, taxiway and apron are currently underway.

**Airline Service:** ERA Alaska, Ryan Air, Yute Air.

**Freight:** Cargo plane and barge.

**Vessel Support:** Moorage available. Arrangements can be made to rent boats.

**Facilities & Utilities:**

**Communications:**

*In-State Phone:* United Utilities Inc.

*Long-Distance Phone:* AT&T Alascom; United Utilities

*Internet Service Provider:* Unicom/United Utilities, Inc. ([www.unicom-alaska.net](http://www.unicom-alaska.net));

*TV Stations:* ARCS; KYUK

*Radio Stations:* KYUK-AM; KYKD-FM

*Cable Provider:* Village of Atmautluak

*Teleconferencing:* Alaska Teleconferencing Network

**Electricity:** Electricity is provided by Atmautluak Tribal Utilities.

**Fuel:** Marine gas, diesel, and regular gasoline available

**Fuel Storage – Tank Owners** (total capacity):

- School (4,000 gals.)
- Village Corp./LKSD (179,250)

**Housing:** Sleeping accommodations available through school; Atmautluak Community Center.

**Services:** No restaurant, laundromat, or banking services. No major repair services.

**Water & Sewage:** Treated well water is hauled by residents, and the Pitmiktakik River is also used. Honeybuckets are hauled by residents to sewage bunkers. Homes have no plumbing. A new washeteria is nearing completion. The school is connected to the City water plant. The school sewage lagoon will soon be closed (situated in the center of town), and it will be connected to the City washeteria's septic system. Two lift stations will need to be added. Funds have been requested to develop a Master Plan for future infrastructure development to eliminate water and honeybucket hauling.

**Miscellaneous:** There is one school located in the community, attended by 90 students.

**Spill Response Support**

*Contact local officials to determine possibility of using community facilities.*

**Potential Command Posts:** School

**Potential Staging Areas:**

- Airport
- National Guard Armory
- Other government facilities

**Local Spill Response Equipment:** Nearest DEC Spill Response Conex located in Bethel. 543-2047/2087

**Economy:**

The school, retail businesses, and the village government provide cash income to supplement the subsistence lifestyle. In 2010, 20 residents held commercial fishing permits.

**Culture & Demographic**

Atmautluak is a traditional Yup'ik Eskimo village with a subsistence and fishing lifestyle. The sale or importation of alcohol is banned in the village.

Yup'ik Eskimos have inhabited this region for thousands of years due to the area's rich resources; however, Atmautluak itself was not settled until the 1960s. People moved to this site on higher ground to avoid flooding and for the rich resources of the area. A city was incorporated in 1976, but it was dissolved on Feb. 7, 1996, in favor of the traditional village council government.

#### **Location & Climate:**

Bethel is located at the mouth of the Kuskokwim River, 40 miles inland from the Bering Sea. It lies in the Yukon Delta National Wildlife Refuge, 400 air miles west of Anchorage. It lies at approximately 60d 47m N Latitude, 161d 45m W Longitude (Sec. 09, T008N, R071W, Seward Meridian). Bethel is located in the Bethel Recording District. The area encompasses 44 sq. miles of land and 6 sq. miles of water. Precipitation averages 16 inches a year in this area, with snowfall of 50 inches. Summer temperatures range from 62 to 42; winter temperatures average 19 to -2.

#### **Transportation:**

**Accessibility:** The State-owned Bethel Airport is the regional transportation center, and is served by two major passenger airlines, two cargo carriers, and numerous air taxi services. The airport ranks third in the state for total number of flights. River travel is the primary means of local transportation in the summer, and it becomes a 150-mile ice road to surrounding villages in the winter. There are 16 miles of local roads.

**Airport Facilities:** The airport offers a 6,398' asphalt runway and 1,850' gravel crosswind runway, and is currently undergoing a \$7 million renovation and expansion. Two floatplane bases are nearby, Hangar Lake and H Marker

**Airline Service:** Alaska Airlines; Reeve Aleutian Airlines; Camai Air; PenAir; Yute Air; Hageland Air; Craig Air; Northern Air Cargo

**Freight:** Cargo plane, barge, and ship. A barge service based in Bethel provides goods to the Kuskokwim villages.

**Vessel Support:** The Port of Bethel is the northern-most medium-draft port in the U.S. Arrangements can be made to rent boats.

**Facilities & Utilities:**

**Communications:**

*In-State Phone:* United KUC, Inc.

*Long-Distance Phone:* GCI; United Utilities

*TV Stations:* ARCS; KYUK

*Radio Stations:* KYUK-AM; KYKD-FM

*Cable Provider:* GCI Cable, Inc.

*Teleconferencing:* Alaska Teleconferencing Network; Legislative Information Office

**Electricity:** Electricity is provided by Bethel Utilities Corporation.

**Fuel:** All types of fuel available.

**Fuel Storage – Tank Owners** (number of tanks, total capacity):

- Yukon Fuel Co. (9.4 million gals.)
- Crowley Marine (5.6 million gals.)
- Airport (120,500 gals.)
- Bethel Utilities Corp. (51 000)
- U.S. Federal Aviation Admin (44 000)

**Housing:** Many lodging facilities and restaurants:

- Pacifica Guest House
- Bentley's Porterhouse B&B
- Village Motel
- Delta Cottages
- Bethel Inn
- 6th Avenue B&B
- Hammer Manor
- Brown Slough B&B

**Services:** Public laundry facilities and banking services available. Several grocery stores available. Repair services for marine, engines, boats, autos and airplanes. Rental transportation includes autos and charter aircraft.

**Water & Sewage:** Some residents are connected to the central piped water and sewer system. Approximately 75% of households have water delivered and sewage hauled by truck. Several facilities in Bethel have individual wells and septic tanks. For health reasons the City ruled that residents can no longer use honeybuckets. Extensions of the piped systems to the City Subdivision and Old Town are under construction. Water Treatment Plant improvements have been completed in Bethel Heights. Additional funding has been requested to connect 105 homes to the piped system. The landfill and sewage lagoon, located north of the City, are nearing capacity.

**Miscellaneous:** There are 6 schools located in the community, attended by 1,345 students.

**Spill Response Support**

*Contact local officials to determine possibility of using community facilities.*

**Potential Command Posts:**

- Schools
- VFW hall

**Potential Staging Areas:**

- Airport
- National Guard Armory
- Other government facilities

**Local Spill Response Equipment:** DEC maintains a spill response container at Bethel. Point of contact is the City Manager at 543-2047, ext. 223.

**Economy:**

Bethel serves as the regional center for 56 villages in the Yukon-Kuskokwim Delta. Food, fuel, transportation, medical care and other services for these villages are provided by businesses in Bethel. 50% of the jobs in Bethel are in government positions. Commercial fishing is an important source of income; 216 residents hold commercial fishing permits, primarily for salmon and herring roe net fisheries. Subsistence activities contribute substantially to villager's diets, particularly salmon, freshwater fish, game birds and berries.

**Culture & Demographic**

63.9% of the population are Alaska Natives. A federally recognized tribe is located in the community. The region is fortunate in that rapid development did not occur before the importance of protecting the Native culture was realized. The traditional Yup'ik Eskimo practices and language remain predominant in the area. Subsistence activities and commercial fishing are major contributors to residents' livelihoods. The sale of alcohol is banned in the community, although importation or possession is allowed.

9770.7.8 – Bill Moore's Slough

**BILL MOORE'S SLOUGH**

Bill Moore's Slough is currently an **unpopulated** community, and/or no U.S. Census data is available for the community.

The information below provides a brief overview of the community.

**Location & Climate:**

The site is located on the left bank of Apoon Pass, southwest of Kotlik, in the Yukon Delta. This was a landing and riverboat woodyard, first reported in 1899 by R.L. Faris of the U.S. Coast & Geodetic Survey as "Konogkelyokamiut." The name "Bill Moore's Slough" was first noted in the 1961 Census. At that time, there were 32 persons living in the community. Bill Moore's is a summer subsistence-use camp; traditional villagers live permanently in Kotlik. There are no year-round residents. Transportation is provided by boat or floatplane from Kotlik.

**Location & Climate:**

Chefornak is located on the south bank of the Kinia River, at its junction with the Keguk River, in the Yukon-Kuskokwim Delta. The village lies within the Clarence Rhode National Wildlife Refuge, established for migratory waterfowl protection. Chefornak is 98 air miles southwest of Bethel and 490 miles southwest of Anchorage. It lies at approximately 60d 13m N Latitude, 164d 12m W Longitude (Sec. 19, T001N, R086W, Seward Meridian). Chefornak is located in the Bethel Recording District. The area encompasses 32 sq. miles of land and 4 sq. miles of water.

Chefornak is located in a marine climate. Precipitation averages 22 inches, with 43 inches of snowfall annually. Summer temperatures range from 41 to 57, winter temperatures range 6 to 24.

#### **Transportation:**

**Accessibility:** Scheduled air service from Bethel. Snowmachines are relied upon during the winter.

**Airport Facilities:** A State-owned 2,500' gravel airstrip provides chartered and private air access year-round, and a seaplane base is available. A new airport is currently under development.

**Airline Service:** ERA Alaska, Grant Aviation, Ryan Air, Yute Air.

**Freight:** Plane and barge service.

**Vessel Support:** Although there are no docking facilities at this time, a number of fishing boats and skiffs are used for local travel. Rental boats and off-road vehicles available. Marine engine and boat repairs available.

#### **Facilities & Utilities:**

#### **Economy:**

Other than government positions, most employment in Chefnak is seasonal, supplemented by subsistence activities. In 2010, 32 residents held commercial fishing permits. Coastal Villages Seafood, Inc., processes halibut and salmon in Chefnak. Trapping is also a source of income.

#### **Culture & Demographic**

A traditional Yup'ik Eskimo community, Chefnak residents practice a subsistence lifestyle with some commercial fishing. The sale and importation of alcohol is banned in the village.

The area has historically been occupied by Yup'ik Eskimos. In the early 1950s, Alexie Amagiqchik founded a small general store at the site. He had moved from a village on the Bering Sea to the new location one mile inland to escape potential floodwaters. Others from the original village followed and settled in Chefnak. The city was incorporated in 1974.

**Location & Climate:**

Chevak is located on the north bank of the Niglikfak River, 17 miles east of Hooper Bay in the Yukon-Kuskokwim Delta. It lies at approximately 61° 31' N Latitude, 165° 35' W Longitude (Sec. 34, T017N, R090W, Seward Meridian). Chevak is located in the Bethel Recording District. The area encompasses 2 sq. miles of land and 0 sq. miles of water. Chevak has a maritime climate. Its location near the Bering Sea renders the area subject to heavy winds and rain. Temperatures range from -25 to 79. Snowfall averages 60 inches per year. Freeze-up occurs at the end of October; break-up occurs in June.

**Transportation:**

**Accessibility:** Scheduled or charter air service from Bethel. Skiffs are used for local travel on the river in the summer, and snowmachines are used in the winter.

**Airport Facilities:** A State-owned 3,200' X 75' gravel airstrip is available, although heavy winds and rain can preclude air access. A relocation of the airport is currently underway. Floatplanes can land on Chevak Lake/Niglikfak River.

**Airline Service:** ERA Aviation; Grant Aviation; Ryan Air Service

**Freight:** Barge or mail plane.

**Vessel Support:** There are no docking facilities, however, a barge landing is available for cargo off-loading. No moorage facilities. Marine engine repair available.

**Facilities & Utilities:**

**Communications:**

*In-State Phone:* United Utilities Inc.

*Long-Distance Phone:* AT&T Alascom; United Utilities

*Internet Service Provider:* Unicom/United Utilities, Inc.

*TV Stations:* ARCS

**Housing:**

- Chevak Bird and Culture Camp
- Lodging sometimes available at the school (858-7713)

**Services:** No restaurant or banking services. Groceries and supplies available at local store.

**Water & Sewage:** A piped water and sewer provides service to 193 homes and the school.

**Miscellaneous:** There is one school located in the community, attended by 300 students.

**Spill Response Support:**

*Contact local officials to determine possibility of using community facilities.*

**Potential Command Posts:**

- City community center
- School

**Potential Staging Areas:**

- Airport
- National Guard Armory
- Other government facilities

**Local Spill Response Equipment:** Nearest DEC Spill Response Conex located in Bethel. 543-2047/2087

**Economy:**

Employment in Chevak is at its peak in the summer months and declines to a few full-time positions during winter. Construction projects and BLM firefighting provide summer employment. In 2010, 16 residents held commercial fishing permits. Incomes are supplemented by subsistence activities and handicrafts. Salmon, seal, walrus, clams, and waterfowl are harvested.

**Culture & Demographic**

Chevak is a Cup'ik Eskimo village. Commercial fishing and subsistence activities are an important part of the local culture. The sale and importation of alcohol is banned in the village.

Eskimos have inhabited the region for thousands of years. The current location is also known as New Chevak, because residents inhabited another village called Chevak before 1950. "Old" Chevak, on the north bank of the Keoklevik River, 9 miles east of Hooper Bay, was abandoned because of flooding from high storm tides. The name Chevak refers to "a connecting slough," on which "Old" Chevak was situated. The new site was first reported by the U.S. Coast and Geodetic Survey in 1948. A post office was established in 1951. The city government was incorporated in 1967.

9770.7.11 – Chuathbaluk

**CHUATHBALUK - Pronunciation/Other Names:** (CHUATH-bah-luck; formerly Russian Mission)

**Population:** 135 (2011 DCCED certified estimate)

**Incorporation Type:** 2<sup>nd</sup> Class City

**Borough Located In:** Unorganized

**Regional Native Corporation:** Calista Corp.

**Emergency Services:**

**Police:** None.

**Environmental Staff (IGAP)** - Phone: 467-4313

**Location & Climate:**

Chuathbaluk is located on the north bank of the Kuskokwim River, 11 miles upriver from Aniak in the Kilbuk-Kuskokwim mountains. It is 87 air miles northeast of Bethel and 310 miles west of Anchorage. It lies at approximately 61° 34' N Latitude, 159° 13' W Longitude (Sec. 10, T017N, R055W, Seward Meridian). Chuathbaluk is located in the Kuskokwim Recording District. The area encompasses 4 sq. miles of land and 2 sq. miles of water. A continental climate prevails in Chuathbaluk. Snowfall averages 85 inches per year, with a total precipitation of 17 inches per year. Temperatures range from -55 to 87. Heavy winds can cause flight delays in the fall. The Kuskokwim River is ice-free from mid-June through October.

**Transportation:**

**Accessibility:** The Kuskokwim River serves as the major carrier for supply barges from Aniak and Bethel, skiffs and floatplanes. In the winter, ski planes land on the frozen river and vehicles are sometimes driven on the ice road to neighboring communities.

**Airport Facilities:** A 3,401' X 60' State-owned gravel airstrip is located one mile north of the village, with scheduled air service.

**Airline Service:** ERA Alaska, Ryan Air Service

**Freight:** Air cargo and barge.

**Vessel Support:** Moorage facilities available.

**Facilities & Utilities:**

**Communications:**

*In-State Phone:* United Utilities Inc.

*Long-Distance Phone:* AT&T Alascom; United Utilities

*Internet Service Provider:* School Only - GCI ([www.gci.net](http://www.gci.net))

*TV Stations:* ARCS

*Radio Stations:* KYUK-AM

*Cable Provider:* None

*Teleconferencing:* None listed.

**Electricity:** Electricity is provided by Middle Kuskokwim Electric Cooperative. The Middle Kuskokwim Electric Co-op provides power from Chuathbaluk to Stony River.

**Fuel:** Gas, diesel, propane.

**Fuel Storage – Tank Owners** (total capacity):

- Kuspuk Schools (36,400 gals.)
- City (17,100 gals)
- Middle Kuskokwim Electric (26,400 gals)

**Housing:**

- Lodging at the school gym (467-4229)
- City community center (capacity 100) (467-4115)

**Services:** Laundromat available, no banking services. No major repair service or rental transportation.

**Water & Sewage:** Water is pumped from a 105-foot well into a storage tank, then hauled from this point by residents. The school has its own watering point, and some homes have individual wells. 80% of homes do not have complete plumbing. Honeybuckets and privies are used by most residents for waste disposal; a few homes have septic tanks. The school and clinic have a septic tank/leachfield system, as do several homes. A water and sewer Master Plan has been funded to examine needed repairs to the pump house, water treatment, washeteria, school sewage lagoon and other components. Refuse is collected weekly.

**Miscellaneous:** There is one school located in the community, attended by 39 students.

**Spill Response Support:**

*Contact local officials to determine possibility of using community facilities.*

**Potential Command Posts:**

- City Facility (467-4115), capacity 100, Internet access.
- Chuathbaluk Traditional Council (467-4313) capacity 100, Internet access.

**Potential Staging Areas:**

- Gravel Pit B (467-4115)
- Airport
- National Guard Armory
- Other government facilities

**Local Spill Response Equipment:**

- Containment Boom (400 feet) - Middle Kuskokwim Electric Cooperative/City of Chuathbaluk
- Sorbent/pom-pom boom (200 feet) - Middle Kuskokwim Electric Cooperative/City of Chuathbaluk
- Anchors for securing boom (2) - Middle Kuskokwim Electric Cooperative/City of Chuathbaluk
- Sorbent pads (15 bags) - Middle Kuskokwim Electric Cooperative/City of Chuathbaluk
- Backhoe (2) - City (467-4115)

**Limiting factors in the community for supporting a large spill response effort:** Restricted Food Supply

Top two sensitive areas (environmental or cultural) to be protected in case of an oil spill.

| LOCATION         | REASON FOR PROTECTION            |
|------------------|----------------------------------|
| City/CTC/ School | Gathering Areas; Public Entities |

**Economy:**

Chuathbaluk's economy is heavily dependent on subsistence activities. Employment is primarily through the school, tribal government, city, clinic, or seasonal firefighting for the BLM. Local artisans produce fur garments, beadwork, mukluks, kuspiks, and ulus. Salmon, moose, black bear, porcupine, and waterfowl are harvested.

**Culture & Demographic**

Chuathbaluk residents are Yup'ik Eskimos and Tanaina Athabascans. Subsistence is a crucial source of food.

Chuathbaluk was the site of an Ingalik Indian summer fish camp in the mid-1800s. The village has been known as Chukbak, St. Sergius Mission, Kuskokwim Russian Mission, and Little Russian Mission. The village was often confused with Russian Mission on the Yukon, so, in the 1960s, the name was changed to Chuathbaluk, which is derived from the Yup'ik word "Curapalek," meaning "the hills where the big blueberries grow." The Russian Orthodox Church finished the St. Sergius Mission in 1894, and residents of Kukuktuk from 20 miles downriver moved to the mission. Tragically, much of the village was lost in an influenza epidemic in 1900. By 1929, the site was deserted, although Russian Orthodox members continued to hold services at the mission. In 1954, the Sam Phillips family from Crow Village resettled the mission and were joined later by individuals from Aniak and Crooked Creek. The church was rebuilt in the late 1950s, and a state school opened in the 1960s. The city was incorporated in 1975.

9770.7.12 – Chuloonawick

**CHULOONAWICK**

Chuloonawick is currently an **unpopulated** community, and/or no U.S. Census data is available for the community.

A "complete" Community Information Summary has not been developed for this community. The information below provides a brief overview of the community.

**Organizations:**

**Village Corporation** - Chuloonawick Corporation  
2635 Draper Drive, Anchorage, AK 99517  
Phone 907-562-7008

**Village Council** - Native Village of Chuloonawick  
P.O. Box 126, Chuloonawick, AK 99581  
Phone 907-949-1720  
Fax 907-949-1384

**Location:**

The site is located on the North bank of Kwikpak pass in the Yukon-Kuskokwim Delta. It has also been reported as "Kwipakamiut" in 1899 by the U.S. Coast & Geodetic Survey.

This is an historical Eskimo village, now abandoned, and was first reported in 1879 by the U.S. Coast & Geodetic Survey as "Kwipakamiut." Chuloonawick is a summer fish camp for Emmonak residents. There are no year-round residents at this site. Transportation is provided by boat or float plane.

9770.7.13 – Crooked Creek

**CROOKED CREEK**

**Population:** 103 (2011 AK Dept of Labor estimate)

**Incorporation Type:** Unincorporated

**Borough Located In:** Unorganized

**Regional Native Corporation:** Calista Corp.

**Emergency Services:**

**Police:** None

**State Troopers (Aniak):** 675-4398

**Fire:** Volunteer Fire Department 432-2200

**Medical:** Crooked Creek Health Clinic (432-2222). Auxiliary health care is provided by flight to Bethel or Anchorage.

**Location & Climate:**

Crooked Creek is located on the north bank of the Kuskokwim River at its junction with Crooked Creek. It lies in the Kilbuk-Kuskokwim Mountains 50 miles northeast of Aniak, 141 miles northeast of Bethel, and 275 miles west of Anchorage. It lies at approximately 61d 52m N Latitude, 158d 06m W Longitude (Sec. 32, T021N, R048W, Seward Meridian). Crooked Creek is located in the Fairbanks Recording District. The area encompasses 40 sq. miles of land and 3 sq. miles of water. A continental climate prevails in the area. Snowfall measures 85 inches per year, with total precipitation averaging 17 inches per year. Temperatures range from -59 to 94. High winds often cause flight delays in the fall and winter. The Kuskokwim is ice-free from mid-June through October.

**Transportation:**

**Accessibility:** Scheduled air service from Bethel. The Kuskokwim River is the local highway in both summer and winter. ATVs and snow machines are used by residents. The frozen river becomes an ice road in winter. Skiffs and barges provide cargo in summer. A suspension bridge over Crooked Creek connects the upper and lower villages with the airport.

**Airport Facilities:** A State-owned and operated 1,997' gravel airstrip is southwest of the village, with scheduled weekday air services.

**Airline Service:** ERA Alaska, Ryan Air Service

**Freight:** Mail plane or barge.

**Vessel Support:** Information not available.

#### **Facilities & Utilities:**

##### **Communications:**

*In-State Phone:* Bush-Tell Inc.

*Long-Distance Phone:* AT&T Alascom

*Internet Service Provider:* School Only - GCI ([www.gci.net](http://www.gci.net))

*TV Stations:* ARCS

*Radio Stations:* None

*Cable Provider:* None

*Teleconferencing:* Not listed.

**Electricity:** Electricity is provided by Middle Kuskokwim Electric Cooperative.

**Fuel:** Information not available.

##### **Fuel Storage – Tank Owners (total capacity):**

- Kuspuk Schools (24,800 gals.)
- Village Council Washeteria (9,500)
- Electric Co-op (17,800)
- Thomas Fuel Sales (47,100)
- Village Council (7,600)

**Housing:** Accommodations available at local roadhouse (Thomas Fishing Lodge); community center.

**Services:** No banking services. Information on repair services, transportation, and moorage unavailable.

**Water & Sewage:** All homes lack plumbing; residents haul water and honeybuckets. A well provides treated water, and a washeteria is also available. The school, store, and three homes have individual wells, septic tanks, and plumbing. The school, store, and three homes have individual wells, septic tanks and plumbing.

**Miscellaneous:** There is one school located in the community, attended by 43 students.

#### **Spill Response Support:**

*Contact local officials to determine possibility of using community facilities.*

##### **Potential Command Posts:**

- Community center
- School

##### **Potential Staging Areas:**

- Airport
- National Guard Armory
- Other government facilities

**Local Spill Response Equipment:** Nearest DEC Spill Response Conex located in Bethel. 543-2047/2087

**Economy:**

The economy is focused on subsistence activities. Salmon, moose, caribou, and waterfowl are staples of the diet. Some residents trap and sell pelts. The Calista Corporation, Kuskokwim Corporation, and NovaGold Resources are exploring a significant gold deposit at Donlin Creek, north of Crooked Creek.

**Culture & Demographic**

Crooked Creek is a mixed Yup'ik Eskimo and Ingalik Athabascan village with a lifestyle reliant on subsistence activities.

It was first reported in 1844 by the Russian explorer Zagoskin, who recorded the name of the creek as "Kvikchagpak" ("great bend" in Yup'ik) and as "Khottylno" ("sharp turn" in Ingalik). He noted that the site was used as a summer fish camp for the nearby villagers of Kwigiapainukamuit. In 1909, a permanent settlement was established as a way station for the Flat and Iditarod gold mining camps. The USGS reported it in 1910 as "Portage Village," because it was at the south end of a portage route up Crooked Creek to the placer mines. In 1914, Denis Parent founded a trading post upriver from the creek mouth, in what would become the "upper village" of Crooked Creek. A post office was opened in 1927, and a school was built in 1928. The "lower village" was settled by Eskimos and Ingalik Indians. By the early 1940s, there was a Russian Orthodox Church, St. Nicholas Chapel, and several homes. The upper and lower portions of the village remain today. Gold production continued through the late 1980s, when Western Gold Mining and Exploration went out of business.

9770.7.14 – Eek

**EEK - Pronunciation/Other Names:** (EEK)

**Population:** 318 (2011 DCCED certified estimate)

**Incorporation Type:** 2<sup>nd</sup> Class City

**Borough Located In:** Unorganized

**Regional Native Corporation:** Calista Corp.

**Emergency Services:**

**VPSO:** 536-5328

**State Troopers (Bethel):** 543-2294

**Fire:** Volunteer Fire Department: 536-5129

**Medical:** Eek Health Clinic (536-5314). Auxiliary health care is provided by flight to PHS Regional Hospital in Bethel.

E-mail: [etcgov@yahoo.com](mailto:etcgov@yahoo.com)

**Location & Climate:**

Eek lies on the south bank of the Eek River, 12 miles east of the mouth of the Kuskokwim River. It is 35 air miles south of Bethel in the Yukon-Kuskokwim Delta, and 420 miles west of Anchorage. It lies at approximately 60d 13m N Latitude, 162d 01m W Longitude (Sec. 31, T002N, R073W, Seward Meridian). Eek is located in the Bethel Recording District. The area encompasses 1 sq. miles of land and 0 sq. miles of water. Eek is located in a marine climate. Precipitation averages 22 inches, with 43 inches of snowfall annually. Summer temperatures average 41 to 57; winter temperatures average 6 to 24.

**Transportation:**

**Accessibility:** Scheduled and chartered air service from Bethel. Fishing boats, skiffs and snowmachines are used for local transportation to Bethel and other villages. There is a one-mile gravel road in the City.

**Airport Facilities:** A State-owned 3,243' gravel airstrip provides chartered and private air access. A seaplane base is also available on the Eek River.

**Airline Service:** ERA Alaska, Grant Aviation, Ryan Air, Yute Air

**Freight:** Plane and barge. Barges deliver fuel and supplies during the summer months.

**Vessel Support:** A dock is available.

**Facilities & Utilities:**

**Communications:**

*In-State Phone:* United Utilities Inc.

*Long-Distance Phone:* AT&T Alascom; United Utilities

*Internet Service Provider:* United Utilities Inc.

*TV Stations:* ARCS; KYUK

*Radio Stations:* KYUK-AM; KYKD-FM

*Cable Provider:* Iqfijouaq Corp.

*Teleconferencing:* Alaska Teleconferencing Network

**Electricity:** Electricity is provided by AVEC.

**Fuel:** Marine gas, diesel, propane, and regular gasoline available.

**Fuel Storage – Tank Owners** (total capacity):

- Iqfijouaq Co. Store (79,400 gals.)
- AVEC (67,300)
- LK Schools (45,500)
- Army National Guard (4,300)

**Housing:** Lodging arrangements may be made at the school (536-5229).

**Services:** No restaurant or banking services. Groceries and supplies available through local stores. No major repair service or rental transportation.

**Water & Sewage:** Water is derived from Eek River, is treated and stored in a tank at the washeteria. A few homes have tanks, which provide running water to the kitchen; but the large majority have no additional plumbing. Rain catchment systems and ice melt are also used for drinking water. Honeybuckets are disposed of in a sewage lagoon.

**Miscellaneous:** There is one school located in the community, attended by 86 students.

**Spill Response Support:**

*Contact local officials to determine possibility of using community facilities.*

**Potential Command Posts:**

- City community hall
- School

**Potential Staging Areas:**

- Airport –
- National Guard Armory –
- Other government facilities –

**Local Spill Response Equipment:** Nearest DEC Spill Response Conex located in Bethel. 543-2047/2087

**Economy:**

Eek's economy is primarily subsistence and commercial fishing-based. A few full-time positions are available at the school, city, and village office. All families participate in subsistence fishing. In 2010, 41 residents held commercial fishing permits.

**Culture & Demographic**

Eek is a traditional Yup'ik Eskimo village with a subsistence lifestyle and salmon is a dominant food source. All five Pacific salmon species spawn in the Eek River. The sale and importation of alcohol is banned in the village.

The village was originally located on the Apokok River. It moved to its present location in the 1930s when constant flooding and erosion forced a relocation. A BIA school and a Moravian church were constructed at the new site. A post office was established in 1949. The city was incorporated in 1970.

9770.7.15 – Emmonak

**EMMONAK - Pronunciation/Other Names:** (ee-MAHN-nuck)

**Population:** 796 (2011 DCCED certified estimate)

E-mail: [Emmonak@smtp.ak.bia.gov](mailto:Emmonak@smtp.ak.bia.gov)

**Location & Climate:**

Emmonak is located at the mouth of the Yukon River, 10 miles from the Bering Sea, on the north bank of Kwiguk Pass. It lies 120 air miles northwest of Bethel and 490 air miles from Anchorage, in the Yukon Delta National Wildlife Refuge. It lies at approximately 62° 47' N Latitude, 164° 32' W Longitude (Sec. 17, T031N, R081W, Seward Meridian). Emmonak is located in the Bethel Recording District. The area encompasses 6 sq. miles of land and 1 sq. miles of water. A maritime climate predominates in Emmonak. Temperatures range from -25 to 79. Precipitation is 19 inches per year, while snowfall is 50 to 60 inches per year. Freeze-up occurs during October; break-up occurs in June.

**Transportation:**

**Accessibility:** Scheduled and chartered air service from Bethel or Nome. Emmonak relies on air and water transportation. There are no connecting roads, but winter trails to Kotlik, Alakanuk and Sheldon Point are used by snow machines. Skiffs and ATVs are used during the summer for local transportation.

**Airport Facilities:** A State-owned 4,400' gravel airstrip is available.

**Airline Service:** Grant Aviation; Hageland; Larry's; Camai Air; Arctic Transportation Services; Warbelow's; Northern Air Cargo

**Freight:** Cargo plane and barge.

**Vessel Support:** Marine engine repair service available. No moorage facilities.

**Facilities & Utilities:**

**Communications:**

*Radio Stations:* KICY-AM; KNOM-AM

*Cable Provider:* City of Emmonak

*Teleconferencing:* Alaska Teleconferencing Network

**Electricity:** Electricity is provided by AVEC.

**Fuel:** Fuel available includes marine gas, diesel, propane, unleaded and regular gasoline.

**Fuel Storage – Tank Owners** (number of tanks, total capacity):

AVEC (21 @ 172,247 gals.)

City (10 @ 131,500)

LY Schools (168,000)

Grant Air Services (6 @ 133,000)

Village Corp. (421,148)

Alaska Commercial Co. Store (20,000)

**Housing:** Accommodations and meals available.

**Services:** No banking facilities. Groceries and supplies available at local store. Charter aircraft available.

**Water & Sewage:** Water is derived from the Yukon River and is treated. Piped water and sewer services have recently been expanded to the west side -- 161 homes, businesses and the school are now served. Water storage capacity has been doubled to serve the system expansion. The landfill must be relocated.

**Miscellaneous:** There is one school located in the community, attended by 251 students.

**Spill Response Support:**

*Contact local officials to determine possibility of using community facilities.*

**Potential Command Posts:**

- City teen center
- City fire house
- School

**Potential Staging Areas:**

- Airport –
- National Guard Armory –
- Other government facilities –

**Local Spill Response Equipment:**

**Economy:**

The city experiences a seasonal economy, with most activity occurring during the summer. It is becoming a center for commercial fishing, purchasing and processing on the lower Yukon River. Yukon Delta Fish Marketing Co-op and Bering Sea Fisheries process and export salmon from Emmonak. Two fish processing plants now operate in Emmonak. 102 residents hold commercial fishing permits. Subsistence activities, trapping and public assistance support income. The majority of the community travels to fish camps during the summer months to dry salmon for winter use. Moose, beluga whale, seal and waterfowl are also utilized.

**Culture & Demographic**

92.1% of the population are Alaska Natives. A federally recognized tribe is located in the community. Emmonak is a Yup'ik Eskimo village involved in commercial fishing, processing and subsistence activities. Residents of Chuloonawick, a nearby fish camp, also live in Emmonak. The sale, importation and possession of alcohol are banned in the village.

9770.7.16 – Flat

## **FLAT**

**Population:** 0 (2011 AK Dept of Labor estimate)

**Located In:** Unorganized

**Incorporation Type:** Unincorporated

There are no public facilities or permanent residents.

### **Location and Climate:**

Flat is located on Otter Creek, 7 miles east of its junction with the Iditarod River. It lies 59 miles northeast of Holy Cross and 8 miles east of Iditarod, in the Kilbuck-Kuskokwim Mountains. It lies at approximately 62.453610 North Latitude and -158.007500 West Longitude. (Sec. 4, T027N, R047W, Seward Meridian.) Flat is located in the Kuskokwim Recording District.

The area has a cold, continental climate. Summer temperatures average 42 to 80 °F, and winters can range from -62 to 0 °F. Annual precipitation averages 67 inches, with average annual snowfall of 110 inches.

**Spill Response Support:** Nearest DEC Spill Response Conex located in Bethel. 543-2047/2087

### **Economy:**

The Iditarod Mining District still produces gold today. The 2006-2010 American Community Survey (ACS) estimated zero residents as employed.

### **Culture and Demographics:**

Gold was discovered in Flat on Christmas Day in 1908 by John Beaton and his associate. It became the widest pay streak ever found in Alaska. Peter Miscovich (Croatia), Lars Ostnes (Norway), and David Strandberg (Sweden) were also founding fathers and have been inducted into the Alaska Mining Hall of Fame. Flat became a mining and supply camp, first reported in 1910 by A.G. Maddren of the USGS. A tramway was built between Iditarod and Flat. A post office opened around 1912. Between 1910 and 1914, about 6,000 people moved to the community. Flat had an elementary school, a telephone system, two stores, a hotel, restaurant, pool hall, laundry, and jail. By World War I, the population had dramatically declined. The population was 158 in 1920 and 124 in 1930. By the end of World War II, only about 15 people lived there year-round. In 1937, Peter Miscovich purchased a large excavator, increasing production.

9770.7.17 – Georgetown

## **GEORGETOWN**

**Population:** Three year-round residents

**Located In:** Unorganized

**Incorporation Type:** Unincorporated

**Location and Climate:**

Georgetown is located on the north bank of the upper Kuskokwim River in the Kilbuck-Kuskokwim mountains. It is east of the mouth of the George River, 16 miles northwest of Red Devil. It lies at approximately 61.923381 North Latitude and -157.619840 West Longitude. (Sec. 18, T021N, R046W, Seward Meridian.) Georgetown is located in the Kuskokwim Recording District.

Georgetown has a continental climate with temperatures ranging between -59 to 94 °F. Precipitation averages 17 inches annually, with snowfall of 80 inches. The Kuskokwim is ice-free from mid-June through October.

**Spill Response Support:** Nearest DEC Spill Response Conex located in Aniak. 675-4481/4446

**Transportation:**

The Kuskokwim River serves as the major transportation link to other villages. Barges which serve villages upriver may also serve Georgetown. In the winter transportation is primarily by snowmachine and aircraft.

**General:**

The middle Kuskokwim area first experienced contact with Europeans when the Russian explorer Zagoskin sailed upriver to McGrath in 1844. At that time, Georgetown was known as Keledzhichagat, a summer fish camp for residents of Kwigumpainukamiut. Gold was found along the George River in 1909. This mining settlement and the river were named for three traders: George Hoffman, George Fredericks and George Morgan. By 1910, about 300 prospectors were living on the west side of the George River. About 200 cabins had been built, when a fire swept through the settlement in 1911, destroying all but 25 cabins. Also saved were the two general stores in town -- the Kuskokwim Commercial Company and the Northern Commercial Company. By 1953, the only large structure that remained at the site was the two-story log house belonging to George Fredericks. In the 1950s, the present settlement, on the east side of the George River, began to develop. A State school was established in 1965, and remained until 1970. Georgetown is presently used as a seasonal fish campsite. There are no year-round residents.

**Economy:**

There are three year-round residents. The 2006-2010 American Community Survey (ACS) estimated zero residents as employed.

**Culture and Demographics:**

Georgetown residents are Yup'ik Eskimos and Tanaina Athabascans and depend upon a subsistence lifestyle.

The middle Kuskokwim area first experienced contact with Europeans when the Russian explorer Zagoskin sailed upriver to McGrath in 1844. At that time, Georgetown was known as Keledzhichagat, a summer fish camp for residents of Kwigumpainukamiut. Gold was found along the George River in 1909. prospectors were living on the west side of the George River. About 200 cabins had been built, when a fire swept through the settlement in 1911, destroying all but 25 cabins. Also saved were the two general stores in town -- the Kuskokwim Commercial Company and the Northern Commercial Company. By 1953, the only large structure that remained at the site was the two-story log house belonging to George Fredericks. In the 1950s, the present settlement, on the east side of the George River, began to develop. A state school was established in 1965 and remained until 1970.

9770.7.18 – Goodnews Bay

## GOODNEWS BAY

**Population:** 246 (DCCED certified estimate)

**Incorporation Type:** 2<sup>nd</sup> Class City

**Borough Located In:** Unorganized

**Regional Native Corporation:** Calista Corp.

### Emergency Services:

**VPSO:** 967-8113

**State Troopers:** Troopers in Bethel

**Fire:** Volunteer Fire Dept 967-8614

**Medical:** Local hospitals or health clinics include Goodnews Bay Health Clinic (967-8128).

Auxiliary care is provided by Goodnews Bay First Responder Group (CHP 967-8128).

### Organizations with Local Offices:

**City** - City of Goodnews Bay

P.O. Box 70, Goodnews Bay, AK 99589

Phone 907-967-8614

Fax 907-967-8124

**Village Corporation** - Kuitsarak, Incorporated

P.O. Box 10, Goodnews Bay, AK 99589

Phone 907-967-8428

Fax 907-967-8226

**Village Council** - Native Village of Goodnews Bay

P.O. Box 50, Goodnews Bay, AK 99589

Phone 907-967-8929

Fax 907-967-8330

E-mail: [GoodnewsBay@smtp.ak.bia.gov](mailto:GoodnewsBay@smtp.ak.bia.gov)

### Location & Climate:

The community is located on the north shore of Goodnews Bay at the mouth of Goodnews River. It is 116 air miles south of Bethel, 110 miles northwest of Dillingham and 400 miles west of Anchorage. It lies at approximately 59d 07m N Latitude, 161d 35m W Longitude (Sec. 21, T012S, R073W, Seward Meridian). Goodnews Bay is located in the Bethel Recording District. The area encompasses 3 sq. miles of land and 2 sq. miles of water. Goodnews Bay is located in a

transitional climatic zone, exhibiting characteristics of both a marine and continental climate. Average precipitation is 22 inches, with 43 inches of snowfall. Summer temperatures range from 41 to 57; winter temperatures are 6 to 24.

**Transportation:**

**Accessibility:** Scheduled and chartered air service from Bethel or Dillingham. Snowmachines are the primary means of travel during the winter.

**Airport Facilities:** A State-owned 2,850' gravel airstrip is available for chartered or private planes year-round.

**Airline Service:** ERA Aviation

**Freight:** Cargo plane, barge, and ship. Barges deliver fuel and other supplies during the summer months.

**Vessel Support:** There are no docking facilities, although locals use boats and skiffs extensively during the summer months.

**Facilities & Utilities:**

**Communications:**

*In-State Phone:* United Utilities Inc.

*Long-Distance Phone:* AT&T Alascom; United Utilities

*Internet Service Provider:* School Only - GCI ([www.gci.net](http://www.gci.net))

*TV Stations:* ARCS

*Radio Stations:* KYUK-AM

*Cable Provider:* City of Goodnews Bay

*Teleconferencing:* No information

**Electricity:** Electricity is provided by AVEC.

**Fuel:** Marine gas, diesel, and propane available.

**Fuel Storage – Tank Owners** (number of tanks, total capacity):

- AVEC (8 @ 67,300 gals.)
- Mumtram Pikkai Inc. (6 @ 113,400)
- Lower Kuskokwim School District (2 @ 43,200)
- City (2 @ 16,600)
- Army Nat'l Guard (2,200)
- Goodnews River Fishing Lodge (10,000)

**Housing:** Accommodations available through the village or the school (967-8213).

**Services:** No restaurant, laundromat, or banking services. Supplies available through local store. No major repair service or rental transportation.

**Water & Sewage:** Currently, treated well water is hauled from the new watering point. Honeybuckets are hauled by the City. Most homes are currently not plumbed. A piped water and sewer system, with plumbing for 72 homes, is under construction. The school has requested funds for new water treatment, and to be connected to the City sewage lagoon.

**Miscellaneous:** There is one school located in the community, attended by 71 students.

**Spill Response Support:**

*Contact local officials to determine possibility of using community facilities.*

**Potential Command Posts:**

- City community building
- School

**Potential Staging Areas:**

- Airport
- National Guard Armory
- Other government facilities

**Local Spill Response Equipment:****Economy:**

The city, school, local businesses and commercial fishing provide the majority of the income, supplemented by subsistence activities. 43 residents hold commercial fishing permits, for salmon and herring roe fisheries. The 1992 Community Development Quota (CDQ) program has increased the pollock groundfish quota for small communities like Goodnews. From 40 to 50% of residents engage in trapping. Subsistence upon salmon, seal, walrus, birds, berries, moose and bear is an integral part of the lifestyle.

**Culture & Demographic**

95.9% of the population are Alaska Natives. A federally recognized tribe is located in the community. Goodnews is a traditional Eskimo village practicing a subsistence, trapping and fishing lifestyle. The sale, importation or possession of alcohol are banned in the village.

9770.7.19 – Grayling

**GRAYLING - Pronunciation/Other Names:** (GRAY-leeng)

**Population:** 189 (2011 DCCED certified estimate)

**Incorporation Type:** 2<sup>nd</sup> Class City

**Borough Located In:** Unorganized

**Regional Native Corporation:** Doyon, Limited

**Emergency Services:**

**Police:** None

**State Troopers:** 675-4398/4629 (Aniak)

**Fire:** Volunteer Fire Department, 453-5148

**Medical:** Grayling Clinic, 453-5120.

**Organizations with Local Offices:**

Box 9, Grayling, AK 99590

Phone 453-5133  
Fax 453-5151

**Village Council** - Organized Village of Grayling  
P.O. Box 49, Grayling, AK 99590  
Phone 453-5116  
Fax 453-5146

**Location & Climate:**

Grayling is located in Interior Alaska on the west bank of the Yukon River east of the Nulato Hills. It is 18 air miles north of Anvik. It lies at approximately 62d 57m N Latitude, 160d 03m W Longitude (Sec. 34, T033N, R057W, Seward Meridian). Grayling is located in the Kuskokwim Recording District. The area encompasses 11 sq. miles of land and 0 sq. miles of water. The climate of Grayling is continental, with long, cold winters and relatively warm summers. Temperature extremes range between -60 to 87. Snowfall averages 110 inches, with 21 inches of total precipitation per year. The Yukon River is ice-free from June through October.

**Transportation:**

**Accessibility:** Scheduled and chartered air service from McGrath or Bethel. In summer, access to Grayling is by air, riverboat or barge. No roads connect Grayling with other communities. Skiffs are used for transportation up and down the river during summer. Every other year Grayling is a checkpoint on the annual 1,049-mile Iditarod sled dog race.

**Airport Facilities:** The State owns and operates a 2,315' gravel runway.

**Airline Service:** ERA Alaska, Ryan Air Service

**Freight:** Barge or mail plane.

**Vessel Support:** Moorage facilities available.

**Facilities & Utilities:**

**Communications:**

*In-State Phone:* Bush-Tell Inc.

*Long-Distance Phone:* AT&T Alascom

*Internet Service Provider:* School Only - GCI ([www.gci.net](http://www.gci.net))

*TV Stations:* ARCS

*Radio Stations:* KICY-AM; KNOM-AM

*Cable Provider:* None

*Teleconferencing:* Alaska Teleconferencing Network

**Electricity:** Electricity is provided by AVEC.

**Fuel:** Diesel, propane, and regular gasoline available.

**Fuel Storage – Tank Owners** (total capacity):

- AVEC (75,300 gals.)
- Native Store (24,489)
- School (2,000)
- Village Corp. (20,572)

**Housing:** Lodging available through

- Shirley Clarks B&B
- School
- Through the city (453-5148)

**Services:** No restaurants or banking services. Groceries and supplies available through local stores.

Aircraft mechanic and charter aircraft available.

**Water & Sewage:** Water is derived from an infiltration gallery at Grayling Creek, is treated, stored and piped throughout the community. Over 90% of homes are plumbed for water and sewer.

**Miscellaneous:** There is one school located in the community, attended by 69 students.

**Spill Response Support:**

*Contact local officials to determine possibility of using community facilities.*

**Potential Command Posts:**

- Teen center
- School

**Potential Staging Areas:**

- Airport
- National Guard Armory
- Other government facilities

**Local Spill Response Equipment:**

Nearest DEC Spill Response Conex located in Mountain Village. 591-2929

Email: [cityofmou@yahoo.com](mailto:cityofmou@yahoo.com)

**Economy:**

Grayling's economy is heavily dependent on subsistence activities, and employment is found primarily in seasonal work. In 2010, 31 residents held commercial fishing permits. Subsistence activities include fishing, hunting, trapping, and berry gathering. Salmon, moose, black bear, small game, and waterfowl are harvested.

**Culture & Demographic**

The population of Grayling is comprised of Holikachuk and Ingalik Indians. Subsistence activities are important to villagers' livelihoods. The sale of alcohol is banned in the village.

In 1900, the U.S. Revenue steamer Nunivak reported 75 inhabitants, a store, and a large woodyard to supply steamers. Between 1962 and 1966, 25 families moved from Holikachuk on the Innoko River to Grayling. Holikachuk was prone to annual spring flooding, and low water levels made the return trip from Yukon fish camps each year difficult. The city government was incorporated in 1969.

9770.7.20 – Hamilton

**HAMILTON**

Hamilton is currently an **unpopulated** community, and/or no U.S. Census data is available for the community. A "complete" Community Profile has not been developed for this community. The information below provides a brief overview of the community.

**Organizations:**

**Village Council** - Native Village of Hamilton

P.O. Box 20248, Kotlik, AK 99620

Phone 907-899-4252

Fax 907-899-4202

**Village Corporation** - Nunapiglluraq Corporation

P.O. Box 20187, Kotlik, AK 99620

Phone 907-899-4226

Fax 907-899-4528

**General:**

The village was first reported in 1844 by Lt. L.A. Zagoskin of the Russian Navy as the Eskimo village or camp "Aunguamut." In 1897, the North American Transportation & Trading Company established a supply post and riverboat landing here. The village was named for Charles H. Hamilton, assistant manager of the company. It has also been known as Fort Hamilton and Old Hamilton. Hamilton is a traditional summer subsistence-use camp; villagers live permanently in Kotlik. There are no year-round residents at this site. Transportation is provided by boat or float plane.

9770.7.21 – Holy Cross

**HOLY CROSS**

**Population:** 176 (2011 DCCED certified estimate)

**Incorporation Type:** 2<sup>nd</sup> Class City

**Borough Located In:** Unorganized

**Village Council** - Holy Cross Village

P.O. Box 89, Holy Cross, AK 99602

Phone 476-7124

Fax 476-7132

### **Location & Climate:**

Holy Cross is located in Interior Alaska on the west bank of Ghost Creek Slough off the Yukon River. It is 40 miles northwest of Aniak and 420 miles southwest of Fairbanks. It lies at approximately 62d 12m N Latitude, 159d 46m W Longitude (Sec. 05, T024N, R057W, Seward Meridian). Holy Cross is located in the Kuskokwim Recording District. The area encompasses 31 sq. miles of land and 6 sq. miles of water. The climate of Holy Cross is continental. Temperature extremes range from -62 and 93. Snowfall averages 79.4 inches, with 19 inches of total precipitation per year. The Yukon river is ice-free from June through October.

### **Transportation:**

**Accessibility:** The community is dependent upon air and boat transportation. Residents use boats for fishing, subsistence and recreation. 7.5 miles of local roads are used by 3-wheelers, motor bikes, snowmachines and dog teams.

**Airport Facilities:** The State owns and operates a 4,000-foot gravel airstrip.

**Airline Service:** ERA Alaska, Ryan Air Service

**Freight:** Air transport and barge (in the summer).

**Vessel Support:** No moorage facilities.

### **Facilities & Utilities:**

#### **Communications:**

*In-State Phone:* Bush-Tell Inc.

*Long-Distance Phone:* AT&T Alascom

*Internet Service Provider:* School Only - GCI ([www.gci.net](http://www.gci.net)), AT&T

*Radio Stations:* KICY-AM; KYUK-AM; KNOM-AM

*Cable Provider:* None

*Teleconferencing:* Alaska Teleconferencing Network

**Electricity:** Electricity is provided by AVEC.

**Fuel:** Propane and regular gasoline available.

**Fuel Storage – Tank Owners** (total capacity):

- AVEC (77,600 gals.)
- Iditarod Schools (29,314)
- City (14,084)
- Deloycheet, Inc. (163,547)
- Holy Cross Church (6,200)

**Housing:** Accommodations and meals available at Holy Cross Lodge.

**Services:** Groceries and supplies available local stores. No banking services or rental transportation.

**Water & Sewage:** Water is derived from a deep well and is treated. A new backup well, new pump house and water treatment facility have been completed. 71 households and the school are connected to the piped water and sewer system, with a plumbed kitchen. The remainder haul water from the washeteria and use honeybuckets.

**Miscellaneous:** There is one school located in the community, attended by 54 students. Landfill improvements are needed.

**Spill Response Support:**

*Contact local officials to determine possibility of using community facilities.*

**Potential Command Posts:**

- City community hall
- Village council teen center
- School

**Potential Staging Areas:**

- Other government facilities –

**Local Spill Response Equipment:**

Nearest DEC Spill Response Conex located in Mountain Village. 591-2929

Email: [cityofmou@yahoo.com](mailto:cityofmou@yahoo.com)

**Economy:**

Holy Cross is characterized by a seasonal economy. In 2010, nine residents held commercial fishing permits. Subsistence hunting, fishing, trapping, and gardening supplement income.

**Culture & Demographic**

Holy Cross is an Ingalik village. Subsistence and fishing-related activities are important to residents. The sale of alcohol is banned in the village.

Holy Cross first had contact with Europeans in the early 1840s, when Russian explorers led by Lt. Zagoskin traveled the Yukon River. They reported on "Anilukhtapak," which had 170 people. In 1880, the village was reported as "Askhomute" with 30 residents. A Catholic mission and school were established in the 1880s by Father Aloysius Robaut, who came to Alaska across the Chilkoot Trail. Ingaliks migrated to Holy Cross to be near the mission and school. A post office was opened in 1899 under the name "Koserefsky." In 1912, the name of the town was changed to "Holy Cross" after the mission. In the 1930s and 40s, sternwheelers brought the mail and supplies two or three times a year. The course of the river changed during the 1930s, and, by the mid-40s, the slough on which the village is now located was formed. The mission church and many additional buildings were torn down after the boarding school ceased operations in 1956. The city government was incorporated in 1968.

9770.7.22 – Hooper Bay

**HOOPER BAY**

**Population:** 1,137 (2011 DCCED certified estimate)

**Incorporation Type:** 2<sup>nd</sup> Class City

**Borough Located In:** Unorganized

**Regional Native Corporation:** Calista Corp.

**Emergency Services:**

**Police:** 758-4615/4617

**VPSO:** 758-4615

**State Troopers:** Bethel - 543-2294

**Fire:** Volunteer Fire Dept 329-8001

**Medical:** Local hospitals or health clinics include Hooper Bay Health Clinic (758-4711). Auxiliary health care is provided by flight to Bethel or Anchorage.

**Organizations with Local Offices:**

**City** - City of Hooper Bay

P.O. Box 41, Hooper Bay, AK 99604

Phone 907-758-4915

Fax 907-758-4066

**Location & Climate:**

Hooper Bay is located 20 miles south of Cape Romanzof, 25 miles south of Scammon Bay in the Yukon-Kuskokwim Delta. The city is separated into two sections: a heavily built-up townsite located on gently rolling hills, and a newer section in the lowlands. It lies at approximately 61° 31' N Latitude, 166° 05' W Longitude (Sec. 26, T017N, R093W, Seward Meridian). Hooper Bay is located in the Bethel Recording District. The area encompasses 9 sq. miles of land and 0 sq. miles of water. The climate in Hooper Bay is maritime. The mean annual snowfall is 75 inches, with a total precipitation of 16 inches. Temperatures range between -25 and 79. Winter ice pack and winds often promote severe conditions. The Bering Sea is ice-free from late June through October.

**Transportation:**

**Accessibility:** Residents of Hooper Bay rely on air and water transportation.

**Airport Facilities:** The 3,300' paved runway is State owned and operated.

**Airline Service:** No information.

**Freight:** Air and barge. Barge lines deliver shipments of fuel and other bulk supplies throughout the summer.

**Vessel Support:** A commercial fishing dock is under construction. Skiffs are used during summer for local transportation. Limited motor repair services available.

**Facilities & Utilities:**

**Communications:**

In-State Phone: United Utilities Inc.  
Long-Distance Phone: AT&T Alascom; United Utilities  
Internet Service Provider:  
TV Stations: ARCS  
Radio Stations: KICY-AM; KCUK-FM; KNOM-AM  
Cable Provider: Frontier Cable, Inc.  
Teleconferencing: Alaska Teleconferencing Network

**Electricity:** Electricity is provided by AVEC.

**Fuel:** Gasoline and diesel fuel available.

**Fuel Storage – Tank Owners** (number of tanks, total capacity):

- High School (145,400 gals.)
- City (20,000)
- AVEC (160,900)
- Army Nat'l Guard (8,200)
- Yukon Fuel Co. (225,203)
- Little Flower of Jesus Parish (2,519)

**Housing:** Accommodations available at Qavartarvik (Sea Lion Hotel, 758-4015).

**Services:** Groceries and supplies available at local stores. Laundromat with showers available.

**Water & Sewage:** Residents currently haul treated water from the washeteria or other watering points. Three new wells were drilled in 1997, 3 miles northeast of town. The school uses its own water system. Honeybuckets are hauled by residents. The large majority of homes are not plumbed, with the exception of the new HUD housing subdivision, which uses a flush/haul system. The City is beginning infrastructure improvements in preparation for a piped water and sewer system. A new water treatment/washeteria facility is under construction.

**Miscellaneous:** There is one school located in the community, attended by 390 students. The landfill was expanded in 1997, and includes a new sewage lagoon; the combined site is nearly 20 acres in size.

**Spill Response Support:**

*Contact local officials to determine possibility of using community facilities.*

**Potential Command Posts:**

- School

**Potential Staging Areas:**

- Airport –
- National Guard Armory –
- Other government facilities –

**Local Spill Response Equipment:**

**Economy:**

Most employment in Hooper Bay is seasonal with peak economic activity in the summer and little income-producing activity during the winter. 44 residents hold commercial fishing permits. The 1992 Community Development Quota (CDQ) program has increased the pollock groundfish quota for small communities like Hooper Bay. BLM fire fighting offers some employment, and grass baskets and ivory handicrafts are sold. The community is interested in developing the Naparyarmiut Arts & Crafts Cooperative. Income is supplemented by subsistence activities. Salmon, walrus, beluga whale and waterfowl are harvested.

### **Culture & Demographic**

96% of the population are Alaska Natives. A federally recognized tribe is located in the community. Hooper Bay is a traditional Cup'ik Eskimo community. Commercial fishing and subsistence activities are the primary means of support. Members of the Village of Paimiut also live in Hooper Bay. The sale or importation of alcohol is banned in the village.

9770.7.23 – Kasigluk

**KASIGLUK - Pronunciation/Other Names:** (ka-SEE-ga-luck); aka Kaseglok)

**Population:** 576 (2011 AK Dept of Labor estimate)

**Incorporation Type:** Unincorporated

**Borough Located In:** Unorganized

**Regional Native Corporation:** Calista Corp.

### **Emergency Services:**

**Police:** 477-6128

**State Troopers:** Troopers in Bethel 543-2294

**Fire:** Volunteer Fire Dept 477-6247

**Medical:** Local hospitals or health clinics include Kasiguk Health Clinic (477-6120).

### **Organizations with Local Offices:**

**Village Corporation** - Kasigluk Incorporated

P.O. Box 39, Kasigluk, AK 99609

Phone 907-447-6113

Fax 907-447-6026

**Village Council** - Kasigluk Traditional Council

Fax 907-477-6212

E-mail: [Kasigluk@smtp.ak.bia.gov](mailto:Kasigluk@smtp.ak.bia.gov)

### **Location & Climate:**

Kasigluk is on the Johnson River in the Kuskokwim River Delta, 26 miles northwest of Bethel. The community is comprised of Old and New Kasigluk, surrounded by the Johnson River and a network of lakes. It lies at approximately 60d 52m N Latitude, 162d 32m W Longitude (Sec. 02, T009N, R075W, Seward Meridian). Kasigluk is located in the Bethel Recording District. The area encompasses 19 sq. miles of land and 0 sq. miles of water. The area's precipitation averages 16 inches annually, with snowfall of 50 inches. Summer temperatures range from 62 to 42; winter temperatures are 19 to -2.

### **Transportation:**

**Accessibility:** Scheduled and chartered air service from Bethel. Locals use skiffs to travel to Bethel and other area villages during the summer, and snowmachines in the winter.

**Airport Facilities:** A State-owned 1,950' lighted gravel airstrip provides chartered or private air transportation year-round. The airport is undergoing major improvements, including an extension of the runway to 3,000'.

**Airline Service:** No information.

**Freight:** Cargo plane and barge.

**Vessel Support:** Although there are no docking facilities, barges from Bethel deliver fuel and supplies during summer months.

**Facilities & Utilities:**

**Communications:**

In-State Phone: United Utilities Inc.

Long-Distance Phone: AT&T Alascom; United Utilities

Internet Service Provider: Unicom/United Utilities, Inc. ([www.unicom-alaska.net](http://www.unicom-alaska.net)); School Only - GCI ([www.gci.net](http://www.gci.net))

TV Stations: ARCS; KYUK

Radio Stations: KYUK-AM; KYKD-FM

Cable Provider: Village of Kasigluk

Teleconferencing: Alaska Teleconferencing Network

**Electricity:** Electricity is provided by AVEC (from Nunapitchuk). Electricity is provided by Nunapitchuk, although the village would like a local electric system.

**Fuel:** Marine gas and propane available.

**Fuel Storage – Tank Owners** (number of tanks, total capacity):

- School (95,250 gals.)
- Village Council (15,000)
- Village Corp. (116,500)

**Housing:** Accommodations can be arranged at

- the school (477-6615)
- the clinic (477-6120)
- private homes

**Services:** No restaurant or banking services. Laundry facilities available. Groceries and supplies available through local stores. No major repair services, rental transportation.

**Water & Sewage:** Treated well water is hauled from the washeteria, and individual wells are also available. The new Kasigluk area known as Akula Heights uses the school well.

Honeybuckets are hauled to sewage bunkers. Homes are not plumbed, and residents are reliant on the washeteria for bathing and laundry. A Master Plan is being completed for water and sewer system improvements.

**Miscellaneous:** The landfill does not meet DEC standards, and is located on a flood plain. There are 2 schools located in the community, attended by 168 students.

**Spill Response Support:**

*Contact local officials to determine possibility of using community facilities.*

**Potential Command Posts:**

- Community building
- Schools
- Police station

**Potential Staging Areas:**

- Airport –

- National Guard Armory –
- Other government facilities –

**Local Spill Response Equipment:**

**Economy:**

The school, commercial fishing, retail businesses and village government provide the majority of employment in Kasigluk. Subsistence activities contribute significantly to household diets. 46 residents hold commercial fishing permits, mainly for salmon set net and herring roe fisheries.

**Culture & Demographic**

95.3% of the population are Alaska Natives. A federally recognized tribe is located in the community. Kasigluk is an Eskimo community practicing a fishing and subsistence lifestyle. The sale or importation of alcohol is banned in the village.

9770.7.24 – Kipnuk

**KIPNUK - Pronunciation/Other Names:** (KIP-nuck, aka Kanganak)

**Environmental Staff (IGAP):** 896-5515

### **Location & Climate:**

Kipnuk is located on the west bank of the Kugkaktlik River in the Yukon-Kuskokwim Delta, 85 air miles southwest of Bethel. It lies four miles inland from the Bering Sea coast. It lies at approximately 59° 56' N Latitude, 164° 03' W Longitude (Sec. 10, T003S, R086W, Seward Meridian). Kipnuk is located in the Bethel Recording District. The area encompasses 30 sq. miles of land and 1 sq. miles of water. The community is located in a marine climate. Precipitation averages 22 inches, with 43 inches of snowfall annually. Summer temperatures range from 41 to 57, winter temperatures are 6 to 24.

### **Transportation:**

**Accessibility:** Scheduled air service from Bethel. Boats and skiffs are used by residents for local travel during the summer, with snowmachines in the winter.

**Airport Facilities:** Kipnuk offers a State-owned 2,120' gravel airstrip, with scheduled air taxi service five times each day. Charter services are also available. A seaplane base is also available.

**Airline Service:** ERA Alaska, Grant Aviation, Ryan Air Service, Yute Air

**Freight:** Mail plane and barge. Although there is no dock, barges from Bethel deliver cargo each summer. It is a local priority to construct docking facilities.

**Vessel Support:** No information available.

### **Facilities & Utilities:**

#### **Communications:**

In-State Phone: United Utilities Inc.; GCI (cell phone service, 5-10 mile range)

Long-Distance Phone: AT&T Alascom; United Utilities

Internet Service Provider: GCI; United Utilities Inc.

TV Stations: ARCS

Radio Stations: KYUK-AM

Cable Provider: Frontier Cable, Inc.

Teleconferencing: Alaska Teleconferencing Network

**Electricity:** Kipnuk Light Plant provides Electricity.

**Fuel:** Gas, Diesel.

**Fuel Storage – Tank Owners** (total capacity):

- School (70,200 gals.)
- Village Power Plant (151,300)
- Kugkaktlik Ltd (324,500)
- Kashatok Bros. Store (13,800)

**Housing:** Lodging can be arranged with

- Marshall School
- Hunter Sales Rooming (679-6111)
- Kipnuk Traditional Council 896-5515.

**Services:** Limited supplies available at local store.

**Water & Sewage:** A new 210,000 gal. water storage tank is filled from a reservoir on a nearby lake; residents haul treated water from several watering points. Honey buckets are hauled by the village to a sewage lagoon. Homes are not plumbed.

**Miscellaneous:** There is one school located in the community, attended by 201 students. The Village Council collects refuse and maintains the Class III permitted landfill. The Kipnuk school needs additional funds to complete its bio-pure sewage treatment plant and increase water storage capacity.

**Spill Response Support:**

*Contact local officials to determine possibility of using community facilities.*

**Housing Facilities:**

- Tribal Office Building, 896-5515, (All season; Capacity: 30-50)
- Kipnuk Tribal Council Bunkhouse, 896-5515 (All season; Capacity: 17)
- CVRF, 896-5080 (All season; Capacity: 2)

**Potential Command Posts:**

- Kipnuk Tribal council Office Bldg, 896-5515 (Capacity: 30-50; Internet access)
- CVRF Office/Shop, 896-5080 (Capacity: 10; Internet access)

**Potential Staging Areas:**

- CVRF Office/Shop, 896-5080 (Capacity: 10; Internet access)
- Airport
- National Guard Armory

**Local Spill Response Equipment:** Nearest DEC Spill Response Conex located in Toksook Bay, 427-7511

- Containment Boom (100 feet) - Kugkaktlik Ltd (896-5414)
- Sorbent Pads (8 bags) - Kipnuk Light Plant (896-5427)
- Backhoe (2) - 896-5015
- Bulldozer (2) - 896-5515
- Skiff with outboard - numerous in community
- Hazwoper Trained Spill Responders: 5-6

**Limiting factors in the community for supporting a large spill response effort.** Examples are restricted food supply, seasonal water rationing, lack of lodging, waste-water restrictions, etc. Yes. Ground is very absorbent and soft for heavy equipment operation, and all of the above are also limiting factors.

**Top two sensitive areas (environmental or cultural) to be protected in case of an oil spill.**

| Location                   | Reason for Protection |
|----------------------------|-----------------------|
| Chief Paul Memorial School | Children/students     |
| Kugkaktlik River           | Seafood               |

**Economy:**

Most employment in Kipnuk is in seasonal activities such as commercial fishing and construction. Subsistence activities are a major component of the Kipnuk lifestyle. In 2010, 42 residents held commercial fishing permits. Coastal Villages Seafood, Inc., processes halibut and salmon in Kipnuk. Income is also obtained by trapping.

**Culture & Demographic**

Kipnuk is a traditional Yup'ik Eskimo community, maintaining a subsistence lifestyle. Commercial fishing is an important income source. The sale and importation of alcohol is banned in the village. Yup'ik Eskimos have inhabited the region for thousands of years. According to early BIA records, the village was established around 1922.

9770.7.25 – Kongiganak

## **KONGIGANAK**

**Pronunciation/Other Names:** (kahn-GIG-uh-nuk; abbr. Kong)

**Population:** 462 (2011 AK Dept of Labor Estimate)      **Incorporation Type:** Unincorporated  
**Borough Located In:** Unorganized      **Regional Native Corporation:** Calista Corp.

### **Emergency Services:**

**VPSO:** 557-5607

**State Troopers:** Bethel - 543-2294

**Fire:** Volunteer Fire Dept

**Medical:** Local hospitals or health clinics include Kongiganak Health Clinic (557-5127).

### **Organizations with Local Offices:**

Phone 907-557-5614, Fax 907-557-5614

**Village Corporation** - Qemirtalek Coast Corporation, P.O. Box 5070, Kongiganak, AK 99559

Phone 907-557-5429, Fax 907-557-5517

**Village Council** - Kongiganak Native Village, P.O. Box 5069, Kongiganak, AK 99559

Phone 907-557-5226, Fax 907-557-5224, e-mail: [Kongiganak@smtp.ak.bia.gov](mailto:Kongiganak@smtp.ak.bia.gov)

### **Location & Climate:**

Kongiganak is located on the west shore of Kuskokwim Bay, west of the mouth of the Kuskokwim River. It lies 70 miles southwest of Bethel and 451 miles west of Anchorage. It lies at approximately 59d 52m N Latitude, 163d 02m W Longitude (Sec. 33, T002S, R079W, Seward Meridian). Kongiganak is located in the Bethel Recording District. The area encompasses 11 sq. miles of land and 1 sq. miles of water. Kong is located in a marine climate. Precipitation averages 22 inches, with 43 inches of snowfall annually. Summer temperatures range from 41 to 57, winter temperatures are 6 to 24.

### **Transportation:**

**Accessibility:** Scheduled air service from Bethel. Snowmobiles, boats and skiffs provide local transportation to Bethel and other area villages

**Airport Facilities:** Kongiganak and Kwigillingok share use of the State-owned 2,500' gravel airstrip; major improvements are nearing completion. A seaplane base is also nearby.

**Airline Service:** No information.

**Freight:** Plane and barge service. Barges deliver cargo once or twice each summer.

**Vessel Support:** There are no docking facilities.

### **Facilities & Utilities:**

**Communications:** **In-State Phone:** United Utilities Inc. **Long-Distance Phone:** AT&T Alascom; United Utilities **Internet Service Provider:** School Only - GCI ([www.gci.net](http://www.gci.net)) **TV Stations:** ARCS

**Radio Stations:** KYUK-AM **Cable Provider:** Qemirtalek Coast Corp. (Village Corp.)

**Teleconferencing:** Alaska Teleconferencing Network

**Electricity:** Electricity is provided by Puvurnaq Power Company.

**Fuel:** No information available.

**Fuel Storage – Tank Owners** (number of tanks, total capacity): LK Schools (74,100 gals.); Village Safewater Corp. (25,734); Puvurnaq Power (53,470); Village Corp. (51,900); Moravian Church (4,170); Army Nat'l Guard (3,700); Kongiganak Trading Co. (8,500)

**Housing:** Lodging available at the school (557-5126).

**Services:** No information.

**Water & Sewage:** Treated surface water is hauled from the washeteria. Some residents use rain catchments during the summer and ice melt in the winter. Honeybuckets are hauled by the village from disposal bunkers to a pre-treatment plant at the sewage lagoon. Homes are not plumbed. Funds have been requested to construct a circulating water and vacuum sewer utilidor system, and plumbing for 45 homes. Phase I infrastructure improvements are under development, such as a new water source and water treatment improvements. The school wants an additional water storage tank. A new washeteria is needed.

**Miscellaneous:** There is one school located in the community, attended by 121 students.

**Spill Response Support:**

*Contact local officials to determine possibility of using community facilities.*

**Potential Command Posts:**

Community hall

School

**Potential Staging Areas:**

Airport –

National Guard Armory –

Other government facilities –

**Local Spill Response Equipment:**

**Economy:**

Approximately half of the employment in Kongiganak is at the school. The remaining employment is with village services, stores, and commercial fishing. 27 residents hold commercial fishing permits. Subsistence activities are important supplements to income. Some trapping occurs. The 1992 Community Development Quota (CDQ) program has increased the pollock groundfish quota for small communities like Kongiganak.

**Culture & Demographic**

97.3% of the population are Alaska Natives. A federally recognized tribe is located in the community. Kongiganak is a traditional Eskimo village with a fishing and subsistence lifestyle and culture. The sale, importation or possession of alcohol is banned in the village.

9770.7.26 – Kotlik

**KOTLIK**

**Pronunciation/Other Names:** (KAWT-lick)

**Incorporation Type:** 2<sup>nd</sup> Class City

**Borough Located In:** Unorganized

**Regional Native Corporation:** Calista Corp.

**Emergency Services:**

**City VPO:** 899-4626

**State Troopers:** St Mary's - (800) 240-2019

**Fire:** Volunteer Fire Dept

**Medical:** Local hospitals or health clinics include Kotlik Health Clinic (899-4511). Auxiliary health care is provided by flight to Bethel or Anchorage.

**Organizations with Local Offices:**

**City** - City of Kotlik, P.O. Box 20268, Kotlik, AK 99620-0268

Phone 907-899-4313, Fax 907-899-4826

**Village Corporation** - Kotlik Yupik Corporation, P.O. Box 20007, Kotlik, AK 99620

Phone 907-899-4019, Fax 907-899-4528

**Village Council** - Village of Kotlik, P.O. Box 20210, Kotlik, AK 99620

Phone 907-899-4326, Fax 907-899-4790, e-mail: [Kotlik@smtp.ak.bia.gov](mailto:Kotlik@smtp.ak.bia.gov)

**Location & Climate:**

Kotlik is located on the east bank of the Kotlik Slough, 35 miles northeast of Emmonak in the Yukon-Kuskokwim Delta. It lies 165 air miles northwest of Bethel, and 460 miles from Anchorage. It lies at approximately 63d 02m N Latitude, 163d 33m W Longitude (Sec. 25, T028S, R026W, Kateel River Meridian). Kotlik is located in the Bethel Recording District. The area encompasses 4 sq. miles of land and 1 sq. miles of water. The climate of Kotlik is subarctic. Temperatures range between -50 and 87. There is an average of 60 inches of snowfall, with a total of 16 inches of precipitation annually. High winds and poor visibility are common during fall and winter. Norton Sound and the Yukon are ice-free from mid-June through October.

**Transportation:**

**Accessibility:** Scheduled and chartered plane service from Nome or Bethel. There is no road access, although Kotlik is easily accessible by barge. The river is used by the 50 or so commercial and private boats owned by residents.

**Airport Facilities:** Air transportation of passengers, cargo and mail is provided via the State-owned 2,145' gravel airstrip.

**Airline Service:** No information.

**Freight:** Air and barge service.

**Vessel Support:** No information available on moorage facilities.

**Facilities & Utilities:**

**Communications:** **In-State Phone:** United Utilities Inc. **Long-Distance Phone:** AT&T Alascom; United Utilities **Internet Service Provider:** **TV Stations:** ARCS **Radio Stations:** KICY-AM; KNOM-AM **Cable Provider:** Kotlik Joint Utility (City) **Teleconferencing:** Alaska Teleconferencing Network

**Electricity:** Electricity is provided by Kotlik Joint Utility.

**Fuel:** No information available.

**Fuel Storage – Tank Owners** (number of tanks, total capacity): Electric Utility (20 @ 50,000 gals.); Kotlik Yupik Corp. (5 @ 220,000); School (6 @ 48,955); City (18,100); Alaska Commercial Store (15,000)

**Housing:** Lodging arrangements may be made with the Kotlik Lodge (899-4313) or the local school (899-4415).

**Services:** Groceries and supplies available at local stores. No information available on repair services, rental transportation.

**Water & Sewage:** A piped vacuum sewer and circulating water utilidor is being constructed in Kotlik, including plumbing for 51 homes. 19 households and facilities are not yet served, and

these residents haul treated water from the washeteria or the Kotlik Slough and haul honeybuckets to containers.

**Miscellaneous:** Since trenching and burying is difficult in the area, the City is considering an incinerator and recycling to reduce the quantity of solid waste. The existing landfill is being closed. There is one school located in the community, attended by 198 students.

**Spill Response Support:**

*Contact local officials to determine possibility of using community facilities.*

**Potential Command Posts:**

City community hall  
City teen center  
School

**Potential Staging Areas:**

Airport –  
National Guard Armory –  
Other government facilities –

**Local Spill Response Equipment:**

**Economy:**

Kotlik has a seasonal economy with most activity during the summer. Fishing and fish processing are the primary income generators. 82 residents hold commercial fishing permits. The community is interested in developing a local seafood processing facility, and an arts and crafts project. Kotlik's residents rely heavily on subsistence foods, and many families have fish camps on the Yukon River. Salmon, moose, beluga whale and seal are harvested. Income is also derived from trapping.

**Culture & Demographic**

97% of the population are Alaska Natives. A federally recognized tribe is located in the community. It is a Yup'ik Eskimo village practicing a fishing, trapping and subsistence lifestyle. Residents of Hamilton, a nearby summer fish camp, also live in Kotlik. The sale, importation or possession of alcohol is banned in the village.

9770.7.27 – Kwethluk

**KWETHLUK**

**Pronunciation/Other Names:** (KWEETH-luk)

**Population:** 741 (2011 DCCED certified estimate)

**Incorporation Type:** 2<sup>nd</sup> Class City

**Borough Located In:** Unorganized

**Regional Native Corporation:** Calista Corp.

**Emergency Services:**

**VPSO:** 757-6629

**State Troopers:** 543-2294 (Bethel Post)

**Fire:** 757-6629

**Medical:** Betty Guy Memorial Clinic, 757-6627, 757-6670

**Organizations with Local Offices:**

**City -** City of Kwethluk

Phone 757-6022, Fax 757-6497

**Village Council** - Organized Village of Kwethluk

Phone 757-6714/6715, Fax 757-6328

**Electric Utility** - Kwethluk Incorporated

Phone 757-6613, Fax 757-6212

**Village Corporation** - Kwethluk Incorporated

Phone 757-6613, Fax 757-6212

**Location & Climate:**

This is a Yup'ik community located 12 air miles east of Bethel on the Kwethluk River at its junction with the Kuskokwim. The village is the second largest along the Lower Kuskokwim River, following Bethel. It lies at approximately 60° 49' North Latitude, 161° 26' West Longitude (Sec. 05, T008N, R069W, Seward Meridian).

Kwethluk's precipitation averages 16 inches, with snowfall of 50 inches. Summer temperatures average from 62 to 42; winter averages are 19 to -2. Extremes have been recorded from 86 to -46. The Kuskokwim is typically ice-free from June through October.

**Transportation:**

**Accessibility:** Scheduled and chartered air service from Bethel. Kwethluk is dependent on air transportation for year-round movement of freight and passengers. Snowmachines, ATVs, and skiffs are used for local travel, and the River becomes an ice road during winter. Winter trails are marked to Eek (45 mi), Three Step Mountain (55 mi), and Columbia Creek (49 mi).

**Airport Facilities:** A State-owned 3,199' long by 75' wide gravel airstrip and seaplane base are available.

**Airline Service:** ERA Alaska, Ryan Air Service, Yute Air

**Freight:** Cargo plane and barge. Barge services deliver cargo during the summer.

**Vessel Support:** There are no docking facilities.

**Facilities & Utilities:**

**Communications:** Cellular Phone: GCI

**In-State Phone:** United Utilities Inc.

**Long-Distance Phone:** GCI; United Utilities

**Internet Service Provider:** GCI; United Utilities

**TV Stations:** ARCS; KYUK

**Radio Stations:** KYUK-AM; KYKD-FM

**Cable Provider:** None

**Teleconferencing:** AK Teleconferencing Network

**Electricity:** Kwethluk Incorporated

**Fuel:** Gasoline, diesel and propane

**Fuel Storage – Tank Owners** (capacity in gallons): Kwethluk Inc (93,750 Diesel and 116,750 Unleaded) City (17,000) Lower Kuskokwim Schools (23,500) Army National Guard (5,250) Kwethluk Electric (138,000 Diesel)

**Housing & Accommodations:** Lodging accommodations can be arranged through the school or city.

School: Contact Site Administrator, 757-6015 (Capacity 25)

City: Contact City Manager, 757-6022 (Capacity 12)

**Services:** No restaurant or banking services. Groceries and supplies available through local stores. No rental transportation or repairs.

Kwethluk Native Store, 757-6220

Kwethluk Sports Store (hardware), 757-64112

**Water & Sewage:** The City of Kwethluk provides water treatment, honeybucket, washeteria, and refuse services. The school and teachers' housing have individual systems. Residents haul water for household use. There are sewage container disposal bins; these are hauled to the sewage lagoon. None of the 147 homes have complete plumbing, but many residents have steam baths.

Kwethluk Washeteria, 757-6821

**Miscellaneous:**

**Spill Response Support:**

*Contact local officials to determine possibility of using community facilities.*

**Potential Command Posts:**

Kwethluk City Office (757-6022). Capacity for 30, internet is available

**Potential Staging Areas:**

Old Airport Apron (757-6022). Approximately 2,900 feet.

**Economy:**

The largest employer is the school district. Subsistence activities play a central role in the lifestyle; salmon, moose, and caribou are staples of the diet. Seal meat and seal oil are obtained in trade with coastal relatives and neighbors. Most families travel to fish camps each summer.

**Culture & Demographic**

Archaeological finds indicate that the area has been inhabited since prehistoric times. The name Kwethluk is derived from the Yup'ik word Kuiggluk," meaning "dangerous river." In the late 1860s and early 1870s Russian Orthodox missionaries from Russian Mission founded a small congregation. The Moravian Church built a chapel in 1896 and a Russian Orthodox church was built in 1912. Discovery of gold in nearby creeks in 1909 attracted prospectors until 1911. Only one placer deposit, discovered on the upper Kwethluk River, delivered a small yield and was mined until World War II. A Moravian orphanage, located three miles upriver, provided children

services between 1930 and the early 1970s. In 1939, the villagers owned 31,000 reindeers and harvested the herd for food and skins. The tuberculosis epidemic of the late 1930s impacted the local population. The community has a post office since 1947, and a store since 1948. The city was incorporated in 1975.

A federally-recognized tribe is located in the community -- the Organized Village of Kwethluk. Kwethluk is predominantly a Yup'ik Eskimo village that practices a subsistence lifestyle. The sale and importation of alcohol is banned in the village.

9770.7.28 – Kwigillingok

**KWIGILLINGOK**

**Pronunciation/Other Names:** (kwih-GILL-in-gawk; abbr. Kwig)

**Organizations with Local Offices:**

**Village Corporation** - Kwik Incorporated, P.O. Box 50, Kwigillingok, AK 99622  
Phone 907-588-8112, Fax 907-588-8313

**Village Council** - Native Village of Kwigillingok, P.O. Box 49, Kwigillingok, AK 99622-0049  
Phone 907-588-8114, Fax 907-588-8429, e-mail: [Kwigillingok@smtp.ak.bia.gov](mailto:Kwigillingok@smtp.ak.bia.gov)

**Location & Climate:**

Kwigillingok is on the western shore of Kuskokwim Bay near the mouth of the Kuskokwim River. It lies 77 miles southwest of Bethel and 388 miles west of Anchorage. The village of Kongiganak is nearby. It lies at approximately 59d 51m N Latitude, 163d 08m W Longitude (Sec. 01, T004S, R081W, Seward Meridian). Kwigillingok is located in the Bethel Recording District. The area encompasses 16 sq. miles of land and 5 sq. miles of water. Kwig is located in a marine climate. Precipitation averages 22 inches, with 43 inches of snowfall annually. Summer temperatures range from 41 to 57, winter temperatures are 6 to 24.

**Transportation:**

**Accessibility:** Scheduled air service from Bethel. Snowmachines and ATVs are used during winter, and boardwalks are used for local walkways in the village.

**Airport Facilities:** A State-owned 3,000' gravel airstrip is shared with Kongiganak, which provides year-round transportation. Major improvements to the airport are nearing completion. A seaplane base is also available.

**Airline Service:** No information.

**Freight:** Airplane and barge.

**Vessel Support:** There are no docking facilities, although a number of residents have fishing boats or skiffs for travel to Bethel and area villages.

**Facilities & Utilities:**

**Communications:** In-State Phone: United Utilities Inc. Long-Distance Phone: AT&T Alascom; United Utilities Internet Service Provider: School Only - GCI (www.gci.net) TV Stations: ARCS Radio Stations: KYUK-AM Cable Provider: Kwik Inc. (Village Corp.) Teleconferencing: Alaska Teleconferencing Network

**Electricity:** Electricity is provided by Kwig Power Company.

**Fuel:** Marine gas, regular gasoline, diesel, and kerosene available.

**Fuel Storage – Tank Owners** (number of tanks, total capacity): School (113,250 gals.); Village Council (3,000); Kwik Inc. (8 @ 109,000 gals.); Kwig Power (30,000); Village Safe Water Plant (10,000)

**Housing:** Accommodations can be made through the IRA Council (588-8114) to stay at private homes.

**Services:** Limited groceries and supplies available at local stores.

**Water & Sewage:** Water is currently derived from a nearby lake, is treated, and hauled from the washeteria. The school operates its own surface water treatment facility. Honeybuckets are disposed of by residents. Homes are not plumbed. Infrastructure improvements are planned to develop a flush/haul system to serve the 74 homes in the village.

**Miscellaneous:** There is one school located in the community, attended by 106 students.

**Spill Response Support:**

*Contact local officials to determine possibility of using community facilities.*

**Potential Command Posts:**

School

**Potential Staging Areas:**

Airport –

National Guard Armory –

Other government facilities –

**Local Spill Response Equipment:****Economy:**

Most employment in Kwigillingok is with the school, village government, stores or commercial fishing. Income is supplemented by subsistence activities. 39 residents hold commercial fishing permits. The 1992 Community Development Quota (CDQ) program has increased the pollock groundfish quota for small communities like Kwigillingok. A local arts and crafts cooperative markets local handicrafts; the village would like to expand the cooperative.

**Culture & Demographic**

95% of the population are Alaska Natives. A federally recognized tribe is located in the community. Kwigillingok is a traditional Eskimo village, practicing a commercial fishing and subsistence lifestyle. The sale or importation of alcohol is banned in the village.

9770.7.29 – Lake Minchumina

**LAKE MINCHUMINA**

**Pronunciation/Other Names:** (min-SHOO-mih-nuh; a.k.a. Minchumina)

**Population:** 12 (2011 AK Dept of Labor estimate)

**Incorporation Type:** Unincorporated

**Borough Located In:** Unorganized

**Regional Native Corporation:** Not applicable

**Emergency Services:**

**Police:**

**State Troopers:** Troopers in Fairbanks, 451-5100

**Fire:** Lake Minchumina Rescue Squad, 674-3215

**Medical:** No clinic is available. Auxiliary health care is provided by Lake Minchumina Rescue Squad (674-3215); air transport to Fairbanks Hospitals.

**Organizations with Local Offices:**

**Community Non-Profit** - Lake Minchumina Homeowners Assoc., Gen. Delivery, Lake Minchumina, AK 99757

**Electric Utility** - Lake Minchumina Power Company, General Delivery, Lake Minchumina, AK 99757

Phone 907-674-3320, Fax 907-674-3211

**Village Council** - Lake Minchumina Trad. Council, General Delivery, Lake Minchumina, AK 99623

**Location & Climate:**

Lake Minchumina is located north of Mount McKinley in Interior Alaska. It lies at approximately 63d 53m N Latitude, 152d 19m W Longitude (Sec. 08, T012S, R024W, Fairbanks Meridian). Lake Minchumina is located in the Fairbanks Recording District. The area encompasses 73 sq. miles of land and 22 sq. miles of water. Interior Alaska experiences seasonal temperature extremes. January temperatures range from -22 to -2; July temperatures range from 50 to 72. Average annual precipitation is 11.3 inches. Ice fog is common during the winter.

**Transportation:**

**Accessibility:** Scheduled air service from Fairbanks. The Lake may be accessed by boat in the summer. There is no road connection.

**Airport Facilities:** A State-owned 4,200' gravel airstrip is available.

**Airline Service:** No information.

**Freight:** Delivered by small plane.

**Vessel Support:** No information available.

**Facilities & Utilities:**

**Communications:** **In-State Phone:** United Utilities Inc. **Long-Distance Phone:** United Utilities

**Internet Service Provider:** School Only - GCI ([www.gci.net](http://www.gci.net)) **TV Stations:** ARCS **Radio Stations:**

None listed **Cable Provider:** None **Teleconferencing:** None listed

**Electricity:** Electricity is provided by Semloh Power Company.

**Fuel:** No information available.

**Fuel Storage – Tank Owners** (number of tanks, total capacity): No information available.

**Housing:** Accommodations at Denali West Lodge (733-2630).

**Services:** Groceries and supplies available at local store.

**Water & Sewage:** Half of all households have individual wells; the remainder haul water from untreated surface sources. Septic tanks are used by 25% of homes; the majority use outhouses or honeybuckets. A private company, Lake Minchumina Power, provides electrical services.

**Miscellaneous:** The landfill was closed by the FAA several years ago, and a private dumpsite is currently being used for non-burnable refuse. Funds have been provided to develop a new site. There are no state-operated schools located in the community.

**Spill Response Support:**

*Contact local officials to determine possibility of using community facilities.*

**Potential Command Posts:**

None identified

**Potential Staging Areas:**

Airport –

National Guard Armory –

Other government facilities –

**Local Spill Response Equipment:****Economy:**

The Denali National Park and Preserve, lodge and school provide the majority of employment in this small community. A general store is located in the community. Due to its isolation, subsistence activities, trapping and dog mushing are also pursued.

**Culture & Demographic**

18.8% of the population are Alaska Natives. Many residents run dog sled teams. Few Natives live at Lake Minchumina year-round. A subsistence lifestyle is practiced.

9770.7.30 – Lime Village

**LIME VILLAGE**

**Population:** 29 (2011 DCCED certified estimate)**Incorporation Type:** Unincorporated  
**Borough Located In:** Unorganized **Regional Native Corporation:** Calista Corp.

**Emergency Services:****Police:**

**State Troopers:** Troopers in McGrath, 542-3052

**Fire:** Volunteer Fire Dept

**Medical:** Local hospitals or health clinics include Lime Village Health Clinic (562-5113). Auxiliary health care is provided by flight to Anchorage.

**Organizations with Local Offices:**

**Village Corporation** - Lime Village Company, P.O. Box 92005, Anchorage, AK 99509

**Village Council** - Lime Village Traditional Council, P.O. Box LVD, Lime Village, McGrath, AK 99627  
Phone 907-526-5236, Fax 907-526-5235, e-mail: [Lime@aitc.org](mailto:Lime@aitc.org)

**Location & Climate:**

Lime Village is located on the south bank of the Stony River, 50 miles southeast of its junction with the Kuskokwim River. The village is 111 air miles south of McGrath, 137 miles east of Aniak, and 185 miles west of Anchorage. It lies at approximately 61° 21' N Latitude, 155° 28' W Longitude (Sec. 30, T015N, R034W, Seward Meridian). Lime Village is located in the Kuskokwim Recording District. The area encompasses 53 sq. miles of land and 0 sq. miles of water. The climate in Lime Village is continental. Temperatures range between -47 and 82. Precipitation averages 22 inches, with snowfall of 85 inches per year. The Kuskokwim and Stony Rivers are ice-free from mid-June through October.

**Transportation:**

**Accessibility:** Scheduled or chartered air service from McGrath or Aniak. Located on the Stony River, Lime Village is dependent on small riverboats and airplanes for transportation. When the river freezes, residents use dog teams and snowmachines for ground travel.

**Airport Facilities:** There is a 1,475' gravel runway just north of the village that is owned and maintained by the State.

**Airline Service:** No information.

**Freight:** Freight arrives by mail plane once a week.

**Vessel Support:** No information available.

**Facilities & Utilities:**

**Communications:** **In-State Phone:** United Utilities Inc. **Long-Distance Phone:** AT&T Alascom; United Utilities **Internet Service Provider:** School Only - GCI ([www.gci.net](http://www.gci.net)) **TV Stations:** ARCS **Radio Stations:** KSKO-AM **Cable Provider:** None **Teleconferencing:** Alaska Teleconferencing Network

**Electricity:** Electricity is provided by Lime Village Electric Utility. Fuel oil is brought in for the school and clinic, although most residents use wood for heating. A central electrical system was completed in March 1998, with the cooperation of the village, the University, the Department of Community and Regional Affairs' Division of Energy, and the Alaska Science and Technology Foundation.

**Fuel:** No information available.

**Fuel Storage – Tank Owners** (number of tanks, total capacity): School (9,800); Village Council (5,000)

**Housing:** No visitor facilities available.

**Services:** No visitor facilities available.

**Water & Sewage:** Water is drawn from Stony River and is treated. Residents haul water from the pump house. Sewage is disposed of in pit privies. The school and teacher's housing are connected to individual wells and septic systems, and are fully plumbed. The school septic tank needs replacement. A small washeteria is scheduled to begin construction during the summer of 1999.

**Miscellaneous:** There is one school located in the community, attended by 14 students.

**Spill Response Support:**

*Contact local officials to determine possibility of using community facilities.*

**Potential Command Posts:**

School

**Potential Staging Areas:**

Airport –

National Guard Armory –

Other government facilities –

**Local Spill Response Equipment:**

**Economy:**

Subsistence activities are essential. There is no store in Lime Village. Salmon, moose, bear, caribou, waterfowl and berries are utilized. Some seasonal work is found through BLM fire fighting or trapping. Income is primarily derived from public assistance programs.

### **Culture & Demographic**

95.2% of the population are Alaska Natives. A federally recognized tribe is located in the community. Lime Village is an Denaina Athabascan Indian settlement practicing a subsistence lifestyle.

9770.7.31 – Lower Kalskag

### **LOWER KALSKAG**

**Pronunciation/Other Names:** (KAL-skag)

**Population:** 287 (2011 DCCED certified estimate)      **Incorporation Type:** 2<sup>nd</sup> Class City  
**Borough Located In:** Unorganized      **Regional Native Corporation:** Calista Corp.

### **Emergency Services:**

**Police:**

**State Troopers:** Troopers in Aniak, 675-4398

**Fire:** Volunteer Fire Dept

**Medical:** Local hospitals or health clinics include Lower Kalskag Health Clinic (471-2294).

### **Organizations with Local Offices:**

**City** - City of Lower Kalskag, P.O. Box 81, Lower Kalskag, AK 99626

Phone 907-471-2228, Fax 907-471-2363

**Village Council** - Village of Lower Kalskag, P.O. Box 27, Lower Kalskag, AK 99626

Phone 907-471-2379, Fax 907-471-2379, e-mail: [LowerKalskag@aitc.org](mailto:LowerKalskag@aitc.org)

### **Location & Climate:**

Lower Kalskag is located on the north bank of the Kuskokwim River, 2 miles downriver from Upper Kalskag. It lies 26 miles west of Aniak, 64 miles northeast of Bethel, and 350 miles west of Anchorage. It lies at approximately 61d 30m N Latitude, 160d 21m W Longitude (Sec. 02, T016N, R062W, Seward Meridian). Lower Kalskag is located in the Kuskokwim Recording District. The area encompasses 1 sq. miles of land and 0 sq. miles of water. The climate is semi-arctic with maritime influences from the Bering Sea. Precipitation averages 19 inches, with 60 inches of snowfall. Temperatures range between -55 and 87. The Kuskokwim River is ice-free from mid-June through October.

### **Transportation:**

**Accessibility:** Scheduled air service from Bethel. The village is accessible by boat in summer and snowmachine in winter. Passengers and other freight arrive by air year-round, through scheduled daily air services

**Airport Facilities:** . The State-owned 2,200' gravel airstrip is shared by Lower and Upper Kalskag, and there is a road connecting the two cities.

**Airline Service:** Yute Air; Camai Air; Arctic Air; Larry's Air; Hageland's

**Freight:** Plane and barge service. Commercial barge lines deliver fuel and other bulk supplies in the summer.

**Vessel Support:** No moorage facilities.

### **Facilities & Utilities:**

**Communications:** **In-State Phone:** Bush-Tell Inc. **Long-Distance Phone:** AT&T Alascom **Internet Service Provider:** School Only - GCI (www.gci.net) **TV Stations:** ARCS; KYUK **Radio Stations:** KICY-AM; KYUK-AM **Cable Provider:** None **Teleconferencing:** No information  
**Electricity:** Electricity is provided by AVEC.  
**Fuel:** Marine gas and diesel available.  
**Fuel Storage – Tank Owners** (number of tanks, total capacity): City/AVEC (10 @ 103,500 gals.); School (16,000); City (74,770)  
**Housing:** Arrangements may be made to stay at the school (471-2318).  
**Services:** Restaurant located in the community. No laundromat or banking services. Groceries and supplies available at local store. No repair services. No rental transportation.  
**Water & Sewage:** An 85-foot well provides water, which is treated and piped to most homes and the school. The school, clinic and over 40% of homes use individual septic tanks and have complete plumbing. A 10,000-gallon community septic tank allows for piped sewage collection to part of the village. Funds have been requested to connect the 20 remaining homes using septic tanks to the piped sewer system, due to effluent ponding. The community also needs a washeteria.  
**Miscellaneous:** Refuse is burned or buried at a new landfill located between Lower and Upper Kalskag. There are 2 schools located in the community, attended by 144 students.

**Spill Response Support:**

*Contact local officials to determine possibility of using community facilities.*

**Potential Command Posts:**

- City community hall.
- Schools

**Potential Staging Areas:**

- Airport –
- National Guard Armory –
- Other government facilities –

**Local Spill Response Equipment:**

**Economy:**

Lower Kalskag's economy is predominantly based on subsistence activities. Salmon, moose, black bear, porcupine and waterfowl are utilized. Year-round employment is limited to the school, City and clinic. Eight residents hold commercial fishing permits. BLM fire fighting can provide seasonal income.

**Culture & Demographic**

98.3% of the population are Alaska Natives. A federally recognized tribe is located in the community. Lower Kalskag is an Eskimo village of Russian Orthodox practitioners who relocated from Upper Kalskag in 1940. Subsistence activities provide food sources. The sale or importation of alcohol is banned in the village.

9770.7.32 – McGrath  
McGRATH

**Population:** 341 (2011 DCCED certified estimate)      **Incorporation Type:** 2<sup>nd</sup> Class City

**Village Council** - Medfra Traditional Council, P.O. Box 92, McGrath, AK 99627

**Location & Climate:**

McGrath is located 221 miles northwest of Anchorage and 269 miles southwest of Fairbanks in Interior Alaska. It is adjacent to the Kuskokwim River directly south of its confluence with the Takotna River. It lies at approximately 62d 57m N Latitude, 155d 35m W Longitude (Sec. 18, T033N, R033W, Seward Meridian). McGrath is located in the Mt. McKinley Recording District. The area encompasses 38 sq. miles of land and 5 sq. miles of water. The McGrath area has a cold, continental climate. Average summer temperatures range from 62 to 80, winters temperatures can range from -64 to 0. Precipitation is light, averaging 10 inches per year, including an average snowfall of 86 inches. The Kuskokwim River is generally ice-free from June through October.

**Transportation:**

**Accessibility:** Scheduled air service from Anchorage and Yukon River communities. On-demand air charter service to outlying communities. River travel May to October. There are no road connections to McGrath, but local roads are used by ATVs and trucks. Residents rely on air service, and barges deliver heavy cargo during the summer.

**Airport Facilities:** Air facilities include a State-owned 5,435' paved runway with a 1,700' crosswind landing strip, and a seaplane base on the Kuskokwim River. The airport is currently undergoing major improvements.

**Airline Service:** PenAir; Tanana Air; Hageland

**Freight:** Barge service from Bethel delivers fuel products, heavy equipment, and building materials. Air cargo service also available.

**Vessel Support:** There is no dock, however, a boat launch ramp is available. Boats and off-road vehicles may be rented locally.

**Facilities & Utilities:**

**Communications:** **In-State Phone:** United KUC, Inc. **Long-Distance Phone:** AT&T Alascom  
**Internet Service Provider:** McGrath Light and Power ([www.mcgrathalaska.net](http://www.mcgrathalaska.net)); School Only - GCI ([www.gci.net](http://www.gci.net)) **TV Stations:** ARCS **Radio Stations:** KSKO-AM **Cable Provider:** McGrath Broadcasting Co. **Teleconferencing:** Alaska Teleconferencing Network  
**Electricity:** Electricity is provided by McGrath Light & Power.  
**Fuel:** All types of fuel (marine gas, aircraft, diesel, propane, etc.)  
**Fuel Storage – Tank Owners** (number of tanks, total capacity): B.J. Magnuson Fuel (12 @ 176,000 gals.); Don Harris (4 @ 80,000); US DOT/FAA (2 @ 42,000); McGrath Church (2,000); City (36,000); Alaska Commercial Co. (40,000); KSKO Radio; Electric Utility; Native Corp.; Alaska Fish & Wildlife (3,000); Alaska State Troopers (3,000)  
**Housing:** Accommodations and meals available at Rosa’s Riverside Café and Rooms (524-3666); Takusko House (524-3198); Caroline’s Kitchen and Rooms (524-3466); and Fly On In Bed and Breakfast (524-3947).  
**Services:** Groceries and supplies available through local stores. No banking services. Laundromat available with shower facilities. Major repair services for vehicles and heavy equipment available. Charter aircraft service available.  
**Water & Sewage:** McGrath operates a piped water system that serves nearly all 178 households; a few homes have individual wells or haul water. The FAA operates its own water system. Individual septic tanks are used by the majority of residents; a limited City sewage system serves approximately 34 homes. Funds have been requested to expand the piped sewer system to the 144 houses and businesses currently using septic tanks.  
**Miscellaneous:** A private firm, McGrath Trash & Refuse, collects refuse for disposal at the City landfill. There is one school located in the community, attended by 109 students.

**Spill Response Support:**

*Contact local officials to determine possibility of using community facilities.*

**Potential Command Posts:**

Teen center.  
School

**Potential Staging Areas:**

Airport –  
National Guard Armory –  
Other government facilities –

**Local Spill Response Equipment:**

**Economy:**

McGrath functions as a transportation, communications, and supply center in Interior Alaska. It has a diverse cash economy, and many families rely upon subsistence. Salmon, moose, caribou, bear, and rabbits are utilized. Some residents trap and tend vegetable gardens. The Nixon Fork gold mine located 30 miles northeast of McGrath ceased operations in May 1999 due to low gold prices. 45 year-round employees were laid off, and 5 caretakers remain on the property.

**Culture & Demographic**

47% of the population are Alaska Natives. A federally recognized tribe is located in the community. A little less than half of the population are Athabascans, Eskimos or Aleuts. As a regional center, McGrath offers a variety of employment opportunities, but subsistence remains

an important part of the local culture. About 10 families in town have dog teams which they enter into the Iditarod, Kuskokwim 300, and Mail Trail 200 sled dog races.

9770.7.33 – Marshall

**MARSHALL**

**Pronunciation/Other Names:** (formerly Fortuna Ledge)

**Environmental Staff (IGAP):** 679-2116

**Location & Climate:**

Marshall is located on the north bank of Polte Slough, north of Arbor Island, on the east bank of the Yukon River in the Yukon-Kuskokwim Delta. It lies on the northeastern boundary of the Yukon Delta National Wildlife Refuge. It lies at approximately 61d 53m N Latitude, 162d 05m W Longitude (Sec. 27, T021N, R070W, Seward Meridian). Marshall is located in the Bethel Recording District. The area encompasses 5 sq. miles of land and 0 sq. miles of water. The climate of Marshall is maritime with temperatures ranging between -54 and 86. Average annual rainfall measures 16 inches. Heavy winds in the fall and winter often limit air accessibility. The Lower Yukon is ice-free from mid-June through October.

**Transportation:**

**Accessibility:** Boat; scheduled or chartered air service from Bethel. There are no roads connecting to Marshall, so access is primarily by air or water. Many residents have boats, and in winter they rely on snow machines and dog teams.

**Airport Facilities:** A State-owned 3,201' gravel airstrip is available. Funds have been provided to relocate the airport.

**Airline Service:** ERA Alaska, Grant Aviation, Ryan Air Services

**Freight:** The community is serviced by barge and cargo plane.

**Vessel Support:** No moorage facilities. Marine engine repair available. Boats available for rent.

### **Facilities & Utilities:**

**Communications:** In-State Phone: United Utilities Inc. Long-Distance Phone: AT&T Alascom; United Utilities Internet Service Provider: None. TV Stations: ARCS Radio Stations: KYUK-AM; KICY-AM; KNOM-AM Cable Provider: None Teleconferencing: Alaska Teleconferencing Network

**Electricity:** Electricity is provided by AVEC.

**Fuel:** Marine gas, diesel, propane, and regular gasoline available.

**Fuel Storage – Tank Owners** (total capacity): AVEC (76,560 gals.); Maserculiq/City (110,000); LY Schools (46,000); City (14,200); Hunter Store (17,000); Maserculiq Processing Plant (10,000)

**Housing:** Accommodations available at Hunter's Sales Room and Board (679-6111).

**Services:** No restaurant, laundromat, or banking services. Groceries and supplies available at local store. Arrangements can be made to rent boats and off-road vehicles.

**Water & Sewage:** Water is derived from five wells. Approximately 70% of the City (60 homes) are served by a piped circulating water and sewer system and have full plumbing. The remainder haul water and use honeybuckets. **Miscellaneous:** A new landfill and access road were completed in 1997, and the City has begun a refuse collection service. There is one school located in the community, attended by 96 students.

### **Spill Response Support:**

*Contact local officials to determine possibility of using community facilities.*

#### **Potential Command Posts:**

- Community center
- City public safety building
- School

#### **Potential Staging Areas:**

- Airport –
- National Guard Armory –
- Other government facilities –

**Local Spill Response Equipment:** Nearest DEC Spill Response Conex located in Mountain Village. 591-2929 Email: [cityofmou@yahoo.com](mailto:cityofmou@yahoo.com)

- Bulldozer, City of Marshall, 679-6215
- Dump Truck or similar, City of Marshall, 679-6215
- Skiff w/ outboard

### **Economy:**

Marshall has a seasonal economy with most activity during the summer. Fishing, fish processing, and BLM firefighting positions are available seasonally. In 2010, 39 residents held commercial fishing permits. Subsistence activities supplement income. Salmon, moose, bear, and waterfowl are harvested. Trapping provides some income.

### **Culture & Demographic**

Marshall is a traditional Yup'ik Eskimo village. Subsistence and fishing-related activities support most residents. Members of the Village of Ohogamiut also live in Marshall. The sale, importation, and possession of alcohol is banned in the village.

An expedition came upon an Eskimo village called "Uglovaia" at this site in 1880. Gold was discovered on nearby Wilson Creek in 1913. "Fortuna Ledge" became a placer mining camp, named after the first child born at the camp, Fortuna Hunter. Its location on a channel of the Yukon River was convenient for riverboat landings. A post office was established in 1915, and the population grew to over 1,000. Later, the village was named for Thomas Riley Marshall, Vice President of the United States under Woodrow Wilson from 1913-21. The community became known as "Marshall's Landing." When the village incorporated as a second-class city in 1970, it was named Fortuna Ledge but was commonly referred to as Marshall. The name was officially changed to Marshall in 1984.

**Location & Climate:**

Mekoryuk is at the mouth of Shoal Bay on the north shore of Nunivak Island in the Bering Sea. The Island lies 30 miles off the coast. It is 149 air miles west of Bethel and 553 miles west of Anchorage. Mekoryuk is part of the Yukon Delta National Wildlife Refuge. It lies at approximately 60° 23' N Latitude, 166° 11' W Longitude (Sec. 31, T004N, R097W, Seward Meridian). Mekoryuk is located in the Cape Nome Recording District. The area encompasses 7 sq. miles of land and 0 sq. miles of water. The Bering Sea which surrounds Nunivak Island strongly influences the climate of the island. Foggy and stormy weather are frequent. Average precipitation is 15 inches; annual snowfall is 57 inches. Summer highs average 48 to 54; winter highs run 37 to 44. Extremes have been recorded from 76 to -48.

**Transportation:**

**Accessibility:** Scheduled and chartered air service from Bethel. Scheduled and chartered air service from Bethel. Mekoryuk relies heavily on air transportation for passenger, mail and cargo service. A breakwater protects the shoreline from Bering Sea waves. Boats, snowmachines and ATVs are used for travel within the community.

**Airport Facilities:** A State-owned 3,070' gravel runway allows year-round access.

**Airline Service:** ERA Aviation; Arctic Circle Air

**Freight:** Cargo plane and barge. Barges deliver goods from Bethel once or twice each summer.

**Vessel Support:** Private boats available for charter. No moorage facilities.

**Facilities & Utilities:**

**Communications:** **In-State Phone:** United Utilities Inc. **Long-Distance Phone:** AT&T Alascom;

United Utilities **Internet Service Provider:** School Only - GCI (www.gci.net) **TV Stations:** ARCS

**Radio Stations:** KYUK-AM; KICY-AM; KNOM-AM **Cable Provider:** City of Mekoryuk

**Teleconferencing:** Alaska Teleconferencing Network

**Electricity:** Electricity is provided by AVEC.

**Fuel:** Marine gas, propane, unleaded and regular gasoline.

**Fuel Storage – Tank Owners** (number of tanks, total capacity): Bering Sea Reindeer Products (3 @ 15,900 gals.); NIMA Corp. (15 @ 95,130); Army Nat'l Guard (3,000); Lower Kuskokwim Schools (8 @ 90,400); City (7 @ 34,700); AVEC (10 @ 84,900)

**Housing:** Lodging available at Bering Sea Reindeer Products (827-8940) and several bed and breakfast establishments.

**Services:** Groceries and supplies available at local stores. Laundromat available.

**Water & Sewage:** Water is derived from a well, is treated and stored in a tank. A new flush/haul system currently serves about 90% of homes. Funds have been provided to complete the remaining homes which use honeybuckets. The school has its own well, and needs a new water treatment system. The washeteria has piped graywater disposal to the lagoon.

**Miscellaneous:** There is one school located in the community, attended by 57 students.

**Spill Response Support:**

*Contact local officials to determine possibility of using community facilities.*

National Guard Armory –

Other government facilities –

**Local Spill Response Equipment:**

**Economy:**

Employment by the school, city, village corporation, commercial fishing, construction projects, and services prevails. The Bering Sea Reindeer Products Co. is a major employer. Trapping and crafts, such as knitting qiviut (musk ox underwool), provide income to many families. 54 residents hold commercial fishing permits, most for halibut and herring roe. The village operates a freezer for commercial and subsistence catches. Almost all families engage in subsistence activities and most have fish camps. Salmon, reindeer, seal meat and oil are important staples. The 1992 Community Development Quota (CDQ) program has increased the pollock groundfish quota for small communities like Mekoryuk.

**Culture & Demographic**

99.4% of the population are Alaska Natives. A federally recognized tribe is located in the community. This Cup'ik Eskimo village maintains reindeer and musk ox herds, and practices a subsistence lifestyle. The sale, importation or possession of alcohol is banned in the village.

9770.7.35 – Mountain Village

### **MOUNTAIN VILLAGE**

**Population:** 835 (2011 DCCED certified estimate)      **Incorporation Type:** 2<sup>nd</sup> Class City  
**Borough Located In:** Unorganized      **Regional Native Corporation:** Calista Corp.

#### **Location & Climate:**

Mountain Village is on the north bank of the Yukon River, approximately 20 miles west of St. Mary's and 470 miles northwest of Anchorage. It is at the foot of the 500' Azachorok Mountain, the first mountain encountered by those traveling up the Yukon. It lies at approximately 62° 05m N Latitude, 163° 43m W Longitude (Sec. 14, T023N, R079W, Seward Meridian). Mountain Village is located in the Bethel Recording District. The area encompasses 4 sq. miles of land and 1 sq. miles of water. The climate is continental with maritime influences. Temperatures range from -44 to 80. Precipitation averages 16 inches, with snowfall of 44 inches per year. High winds and low visibility are common during winter. The Lower Yukon is ice-free from mid-June to October.

#### **Transportation:**

**Accessibility:** Scheduled or chartered air service from Nome or Bethel, and direct air service from Anchorage. A summer road links Mountain Village to Pitka's Point, Andreafsky and St. Mary's. The community is accessible by riverboat or barge. In the winter, passengers, cargo and mail are flown in by plane. Snowmachines and skiffs are used for local transportation.

**Airport Facilities:** A State-owned 2,520' gravel airstrip is available, and floatplanes land on the Yukon River.

**Airline Service:** Hageland Aviation; Yute Air; Grant Air

**Freight:** Cargo plane and barge.

**Vessel Support:** There is a village marina. Marine engine repair available.

**Facilities & Utilities:**

**Communications:** **In-State Phone:** United Utilities Inc. **Long-Distance Phone:** AT&T Alascom; United Utilities **Internet Service Provider:** **TV Stations:** ARCS **Radio Stations:** KICY-AM; KYUK-AM; KNOM-AM; KSBZ-FM **Cable Provider:** None **Teleconferencing:** Alaska Teleconferencing Network

**Electricity:** Electricity is provided by AVEC.

**Fuel:** Marine gas, propane, and regular gasoline.

**Fuel Storage – Tank Owners** (number of tanks, total capacity): AVEC (23 @ 194,700 gals.); Schools (16 @ 206,045); City (2 @ 33,550); Azachorok Inc. (193,550); Hageland (1,495)

**Housing:** City Nightly Rental Unit; Azachorak Corp.; School

**Services:** Food, groceries and supplies available in the community. No laundromat or banking services. Autos and charter aircraft can be rented.

**Water & Sewage:** Water is derived from a well and is treated. Mountain Village operates a piped water and sewer system that serves 200 households and facilities. A system expansion for the east side, including household plumbing for 18 units, was recently completed. The wastewater treatment plant needs major repairs or replacement.

**Miscellaneous:** A new landfill is now available. There is one school located in the community, attended by 239 students.

**Spill Response Support:**

*Contact local officials to determine possibility of using community facilities.*

**Potential Command Posts:**

City community hall  
City teen center  
School

**Potential Staging Areas:**

Airport –  
National Guard Armory –  
Other government facilities –

**Local Spill Response Equipment:**

**Economy:**

Mountain Village has a seasonal economy. Fishing, fish processing and canning provide income in the summer. 93 residents hold commercial fishing permits. There are a few full-time positions with the city, school district, federal government and native corporation. Subsistence foods are relied upon, including salmon, moose and waterfowl. Some residents trap for additional income.

**Culture & Demographic**

91.1% of the population are Alaska Natives. A federally recognized tribe is located in the community. It is a Yup'ik Eskimo community with traditional subsistence practices. Commercial

fishing and fish processing provide income. The sale or importation of alcohol is banned in the village.

9770.7.36 – Napaimute

**NAPAIMUTE**

**Pronunciation/Other Names:** (nuh-PIE-mute)

Napaimute is currently an **unpopulated** community, and/or no U.S. Census data is available for the community. Consequently, a complete Community Information Summary has not been developed for this community. The information below provides a brief overview of the community.

**Location:**

Napaimute is located on the north bank of the Kuskokwim River, 28 miles east of Aniak in the Kilbuck-Kuskokwim Mountains.

**Transportation:**

Napaimute is easily accessible by riverboat. In the summer months all passengers, cargo and mail arrive in the village by boat. A cargo barge stops several times during the summer. Air charters by float planes or ski planes are available. The River is used as a ice road by snowmachines during winter.

**General:**

Napaimute means "forest people," and was once called "Hoffman's." In 1906, George W. Hoffman, an Englishman, established a trading post at the site. A community of non-Native trappers and miners, with a significant number of Eskimos, developed around the trading post. Hoffman built a territorial school in 1920. A second school was established in 1926. By the early 1950s, most residents had moved to nearby villages, many to Aniak. Today, it is used as a summer fish camp. The 1990 Census counted only three permanent non-Native residents in Napaimute. As a river site, it is used seasonally by area Natives as a subsistence camp. No sustained income-producing activity exists within the village. Residents must depend on subsistence harvests for their livelihood. Salmon, moose, bear, rabbit and berries provide food sources.

9770.7.37 – Napakiak

**NAPAKIAK**

**Pronunciation/Other Names:** (nuh-PAH-key-ack)

**Population:** 359 (2011 DCCED certified estimate)      **Incorporation Type:** 2<sup>nd</sup> Class City  
**Borough Located In:** Unorganized      **Regional Native Corporation:** Calista Corp.

**Emergency Services:**

**VPSO:** 589-2920

**State Troopers:** Bethel, 543-2294

**Fire:** Volunteer Fire Dept

**Medical:** Napakiak Health Clinic (589-2711)

#### **Organizations with Local Offices:**

**City** - City of Napakiak, General Delivery, Napakiak, AK 99634

Phone 907-589-2611, Fax 907-589-2611

**Village Council** - Native Village of Napakiak, P.O. Box 2, Napakiak, AK 99634

Phone 907-589-2135, Fax 907-589-2136, e-mail: [Napakiak@aitc.org](mailto:Napakiak@aitc.org)

#### **Location & Climate:**

Napakiak is on the north bank of the Kuskokwim River, 15 miles southwest of Bethel. It is located on a sandbar between the Kuskokwim River and Johnson's Slough. It lies 407 miles west of Anchorage. It lies at approximately 60d 41m N Latitude, 162d 07m W Longitude (Sec. 17, T007N, R072W, Seward Meridian). Napakiak is located in the Bethel Recording District. The area encompasses 7 sq. miles of land and 0 sq. miles of water. Napakiak is influenced by storms in the Bering Sea and also by inland continental weather. Average annual precipitation is 16 inches, with 50 inches of snowfall. Summer high temperatures average 59 to 62, winter highs average 11 to 19. Extremes from 86 to -46 have been recorded. The Kuskokwim River is typically ice-free from June through October.

#### **Transportation:**

**Accessibility:** Scheduled air service from Bethel. The river is an important means of transportation in summer; the Kuskokwim is a major thoroughfare. In winter the river becomes an ice road to surrounding villages. The community is interested in construction of a 9-mile road to Bethel.

**Airport Facilities:** A State-owned 2,150' gravel runway and seaplane landing area provide air transportation for passengers, mail and cargo. The runway is currently undergoing major improvements.

**Airline Service:** Yute Air; Camai Air; Hageland; Ryan Air

**Freight:** Airplane and barge. Barges from Bethel deliver goods during the summer.

**Vessel Support:** There are no docking facilities. Boats may be rented. Contact Mott's Marina (589-2811).

#### **Facilities & Utilities:**

**Communications:** **In-State Phone:** United Utilities Inc. **Long-Distance Phone:** AT&T Alascom

**Internet Service Provider:** Unicom/United Utilities, Inc. ([www.unicom-alaska.net](http://www.unicom-alaska.net)); School Only - GCI ([www.gci.net](http://www.gci.net)) **TV Stations:** ARCS; KYUK **Radio Stations:** KYUK-AM; KYKD-FM **Cable**

**Provider:** Napakiak Corporation **Teleconferencing:** Alaska Teleconferencing Network

**Electricity:** Electricity is transmitted by overhead lines from Bethel Utilities and purchased and distributed locally by Incinraq Power Company.

**Fuel:** Information on repair service and fuel at Mott's Marina (589-2811).

**Fuel Storage – Tank Owners** (number of tanks, total capacity): Lower Kuskokwim Schools (8 @ 73,000 gals.); Napakiak Corp. (2 @ 61,500); Marina (2,500); Nat'l Guard/Native Corp. Diesel Dispensary (2,800)

**Housing:** Accommodation may be arranged at the school (589-2420) or the washeteria (589-2611).

**Services:** Groceries and supplies available at local store. Boats may be rented.

**Water & Sewage:** 56 residents are using a new flush/haul system, including plumbing for sinks and low-flush toilets. Water is derived from a well and is treated. The school has its own well, and needs a new water treatment system. The flush haul system is being expanded, and the washeteria is being remodeled.

**Miscellaneous:** There is one school located in the community, attended by 104 students.

**Spill Response Support:**

*Contact local officials to determine possibility of using community facilities.*

**Potential Command Posts:**

- Community hall (under construction)
- City public safety building
- School

**Potential Staging Areas:**

- Airport –
- National Guard Armory –
- Other government facilities –

**Local Spill Response Equipment:**

**Economy:**

Napaskiak's primary employers include the school and local, state, and federal governments. Seasonal commercial fishing, construction projects, trapping and crafts also provide income. 43 residents hold commercial fishing permits, primarily for herring roe and salmon net fisheries. Subsistence activities provide an estimated 50% of the local diet. Most families have fish camps. Salmon, waterfowl, moose, bear and seals provide meat.

**Culture & Demographic**

94.3% of the population are Alaska Natives. A federally recognized tribe is located in the community. This city is predominantly Yup'ik Eskimos who maintain a fishing and subsistence lifestyle. The sale, importation or possession of alcohol is banned in the village.

9770.7.38 – Napaskiak

**NAPASKIAK**

**Pronunciation/Other Names:** (nuh-PASS-key-ack)

**Population:** 428 (2011 DCCED certified estimate)      **Incorporation Type:** 2<sup>nd</sup> Class City

**Borough Located In:** Unorganized      **Regional Native Corporation:** Calista Corp.

**Emergency Services:**

**VPSO:** 737-7639

**State Troopers:** Bethel, 543-2294

**Fire:** Volunteer Fire Dept

**Medical:** Elena Alexie Memorial Clinic (737-7329).

**Organizations with Local Offices:**

**City** - City of Napaskiak, P.O. Box 6109, Napaskiak, AK 99559

Phone 907-737-7626, Fax 907-737-7412

**Village Corporation** - Napaskiak Corporation, P.O. Box 6069, Napaskiak, AK 99559

Phone 907-737-7433, Fax 907-737-2919

**Village Council** - Native Village of Napaskiak, P.O. Box 6009, Napaskiak, AK 99559  
Phone 907-737-7364, Fax 907-737-7039, e-mail: [Napaskiak@smtp.ak.bia.gov](mailto:Napaskiak@smtp.ak.bia.gov) or:  
[Napaskiak@aitc.org](mailto:Napaskiak@aitc.org)

**Location & Climate:**

Napaskiak is located on the east bank of the Kuskokwim River, along the Napaskiak Slough, 7 miles southeast of Bethel. It lies at approximately 60d 42m N Latitude, 161d 54m W Longitude (Sec. 08, T007N, R071W, Seward Meridian). Napaskiak is located in the Bethel Recording District. The area encompasses 4 sq. miles of land and 0 sq. miles of water. Napaskiak is strongly influenced by storms and patterns in the Bering Sea and also by inland continental weather. Average annual precipitation is 16 inches, with 50 inches of snowfall. Summer temperatures range from 42 to 62, winter temperatures are -2 to 19.

**Transportation:**

**Accessibility:** Scheduled air service from Bethel. Winter air and river taxi service. Snow machines and ATVs are used in winter

**Airport Facilities:** A State-owned 3,000' gravel airstrip and seaplane landing area west of the village provides charter and general aviation access year-round.

**Airline Service:** No information.

**Freight:** Freight arrives by plane and barge. Barges deliver goods during the summer months.

**Vessel Support:** Although there are no docking facilities, many residents have fishing boats, and skiffs are used in the summer for subsistence fishing and travel to Bethel or nearby villages.

**Facilities & Utilities:**

**Communications:** **In-State Phone:** United Utilities Inc. **Long-Distance Phone:** AT&T Alascom;

United Utilities **Internet Service Provider:** Unicom/United Utilities, Inc. ([www.unicom-](http://www.unicom-alaska.net)

[alaska.net](http://alaska.net)); School Only - GCI ([www.gci.net](http://www.gci.net)) **TV Stations:** ARCS; KYUK **Radio Stations:** KYUK-

AM; KYKD-FM **Cable Provider:** None **Teleconferencing:** Alaska Teleconferencing Network

**Electricity:** Electricity is provided by Napaskiak Electric Utility.

**Fuel:** Fuel available for snow machines, boat motors, and 3- and 4-wheelers.

**Fuel Storage – Tank Owners** (number of tanks, total capacity): No information

**Housing:** Information on visitor services not available.

**Services:** Supplies available at local store.

**Water & Sewage:** Residents haul treated water from one of two watering points. Some homes have tanks with running water for the kitchen, but very few have complete plumbing.

Honeybuckets are disposed of by residents in bunkers at various locations. Sewage is then pumped from the bunkers and transported to the sewage lagoon. The school has its own well, but needs a new water treatment system. The community has requested funds to develop a flush/haul demonstration project for 5 to 10 homes. They occasionally experience water shortages.

**Miscellaneous:** There is one school located in the community, attended by 121 students.

**Spill Response Support:**

*Contact local officials to determine possibility of using community facilities.*

**Potential Command Posts:**

Community building

School

**Potential Staging Areas:**

Airport –  
National Guard Armory –  
Other government facilities –  
**Local Spill Response Equipment:**

**Economy:**

The school, local businesses and some commercial fishing provide employment. 42 residents hold commercial fishing permits for salmon drift netting. Subsistence activities are a part of the culture and supplement cash earnings.

**Culture & Demographic**

94.8% of the population are Alaska Natives. A federally recognized tribe is located in the community. Napaskiak is a traditional Eskimo village dependent upon fishing and subsistence activities. The sale or importation of alcohol is banned in the village.

9770.7.39 – Newtok

**NEWTOK**

**Pronunciation/Other Names:** (NOO-tock)

**Population:** 370 (2011 AK Dept of Labor estimate)      **Incorporation Type:** Unincorporated  
**Borough Located In:** Unorganized      **Regional Native Corporation:** Calista Corp.

**Emergency Services:**

**Police:**

**Location & Climate:**

Newtok is on the Kealavik River north of Nelson Island in the Yukon-Kuskokwim Delta Region. It is 94 miles northwest of Bethel. Due to severe beach erosion, the village wants to relocate homes and facilities to a new site approximately 5 miles away. It lies at approximately 60d 56m N Latitude, 164d 38m W Longitude (Sec. 24, T010N, R087W, Seward Meridian). Newtok is located in the Bethel Recording District. The area encompasses 7 sq. miles of land and 1 sq. miles of water. Newtok is located in a marine climate. Average precipitation is 17 inches, with annual snowfall of 22 inches. Summer temperatures range from 42 to 59, winter temperatures are 2 to 19.

**Transportation:**

**Accessibility:** Scheduled air service from Bethel. Boats, skiffs and snowmachines are used for local transportation and subsistence activities.

**Airport Facilities:** A State-owned 2,202' gravel airstrip provides chartered or private air access year-round; major improvements are under construction. A seaplane base is also available.

**Airline Service:** ERA Alaska, Grant Aviation, Ryan Air Service, Yute Air

**Freight:** Freight arrives by mail plane and barge. Barges deliver cargo during the summer months.

**Vessel Support:** No information available.

#### **Facilities & Utilities:**

**Communications:** **In-State Phone:** United Utilities Inc. **Long-Distance Phone:** AT&T Alascom; United Utilities **Internet Service Provider:** United Utilities Inc. **TV Stations:** ARCS **Radio**

**Stations:** KYUK-AM **Cable Provider:** None **Teleconferencing:** Alaska Teleconferencing Network

**Electricity:** Electricity is provided by Ungusraq Power Company.

**Fuel:** No information available.

**Fuel Storage – Tank Owners** (total capacity): Newtok Corp. Store (52,200 gals.); LK Schools (121,070); Electric Utility (55,955); Tom's Store (4,125); Agayuvik Holy Family Church (3,000); Army Nat'l Guard (2,500)

**Housing:** Quyurruvik Community Hall

**Services:** No information.

**Water & Sewage:** Water is pumped from a lake into a water treatment plant, then hauled from a storage tank. In winter, melted ice is used when water in the storage tank runs dry or freezes. Households are not plumbed, and honeybuckets are used. A washeteria is available. A feasibility study for a flush/haul system was recently completed. The health clinic now uses flush/haul tanks. The schools have individual wells; a new well and water treatment system are needed.

**Miscellaneous:** A new landfill and refuse collection are provided. The community wants to relocate.

There is one school located in the community, attended by 101 students.

#### **Spill Response Support:**

*Contact local officials to determine possibility of using community facilities.*

**Potential Command Posts:**

School

**Potential Staging Areas:**

Airport –

National Guard Armory –

Other government facilities –

**Local Spill Response Equipment:** Nearest DEC Spill Response Conex located in Toksook Bay, 427-7511

#### **Economy:**

The school, clinic, village services, and commercial fishing provide employment. Subsistence activities and trapping supplement income. In 2010, 17 residents held commercial fishing permits.

#### **Culture & Demographic**

Newtok is a traditional Yup'ik Eskimo village, with an active subsistence lifestyle. Relative isolation from outside influences has enabled the area to retain its traditions and customs, more so than other parts of Alaska. The sale and importation of alcohol is banned in the village.

The people of Newtok share a heritage with Nelson Island communities; their ancestors have lived on the Bering Sea coast for at least 2,000 years. The people from the five villages are known as Qaluyaarmiut or "dip net people." Only intermittent outside contact occurred until the 1920s. In the 1950s, the Territorial Guard found volunteers from Newtok while they were traveling to Bethel. Tuberculosis was a major health problem during this period. In the late 1950s, the village was relocated from Old Kealavik ten miles away to its present location to escape flooding. A school was built in 1958, although high school students were required to travel to Bethel, St. Mary's, Sitka, or Anchorage for their education. This was often their first exposure to the outside, and students returned with a good knowledge of the English language and culture. A high school was constructed in Newtok in the 1980s. The city was incorporated in 1976, but it was dissolved on January 28, 1997. Due to severe erosion, the village wants to relocate to a new site called Taqikcaq, approximately 5 miles away on Nelson Island. In November 2003, the 108th Congress passed S. 924, allowing the village to relocate to Nelson Island. The legislation authorizes an exchange of lands between the U.S. Fish and Wildlife Service and the Newtok Native Corporation to allow villagers to relocate.

9770.7.40 – Nightmute

#### **NIGHTMUTE**

**Pronunciation/Other Names:** (formerly Fortuna Lodge)

**Population:** 407 (2011 DCCED certified estimate)      **Incorporation Type:** 2<sup>nd</sup> Class City

Phone 647-6215, Fax 647-6112, E-Mail: [negtemiut\\_tribe@live.com](mailto:negtemiut_tribe@live.com)

#### **Location & Climate:**

Nightmute is located on Nelson Island, in western Alaska. It is 18 miles upriver from Toksook Bay and 100 miles west of Bethel. It lies at approximately 60° 28' N Latitude, 164° 44' W Longitude (Sec. 33, T005N, R088W, Seward Meridian). Nightmute is located in the Bethel Recording District. The area encompasses 97 sq. miles of land and 5 sq. miles of water.

Nightmute is influenced by a marine climate. Precipitation averages 22 inches, with 43 inches of snowfall annually. Summer temperatures range from 41 to 57; winter temperatures are 6 to 24.

### **Transportation:**

**Accessibility:** Scheduled and charter air service from Bethel. Snow machines and ATVs are used during winter months.

**Airport Facilities:** A State-owned 1,600' gravel airstrip is used by chartered and private aircraft. A seaplane landing area is also available.

**Airline Service:** ERA Alaska, Grant Aviation, Ryan Air Service, Yute Air

**Freight:** Freight arrives by cargo plane and barge.

**Vessel Support:** There are no docking facilities, although many residents use fishing boats or skiffs for local travel.

### **Facilities & Utilities:**

**Communications:** **In-State Phone:** United Utilities Inc. **Long-Distance Phone:** AT&T Alascom; United Utilities **Internet Service Provider:** School Only - GCI ([www.gci.net](http://www.gci.net)) **TV Stations:** ARCS **Radio Stations:** KYUK-AM; KNOM-AM **Cable Provider:** None **Teleconferencing:** Alaska

Teleconferencing Network

**Electricity:** Electricity is provided by AVEC.

**Fuel:** Marine gas, diesel, and regular gasoline available.

**Fuel Storage – Tank Owners** (total capacity): Chinurak Inc. (40,400 gals.); Nightmute Power Co. (89,900); Army Nat'l Guard (3,000); Lower Kuskokwim Schools (27,500); Our Lady of Perpetual Help Catholic Church (1,650)

**Housing:** Lodging can be arranged with local homes. Contact city (647-6426). Lodging can also be arranged through the school (647-6313).

**Services:** No banking service or laundromat. Groceries and supplies available through local store. No repair service or rental transportation.

**Water & Sewage:** The City of Nightmute provides a small water facility, which is the central watering point from which residents haul their own water. A washeteria is not available. The city also provides water and sewer haul service. The school has its own sewage lagoon.

**Miscellaneous:** There is one school located in the community, attended by 63 students.

### **Spill Response Support:**

*Contact local officials to determine possibility of using community facilities.*

#### **Potential Command Posts:**

City community hall.

School

#### **Potential Staging Areas:**

Airport –

National Guard Armory –

Other government facilities –

**Local Spill Response Equipment:** Nearest DEC Spill Response Conex located in Toksook Bay, 427-7511

### **Economy:**

The economy is a mixture of both subsistence and cash-generating activities. Employment is primarily with the city, school, services, commercial fishing, and construction. Trapping and crafts also provide income. Almost all families engage in either commercial or subsistence fishing, and most have fish camps. In 2010, 19 residents held commercial fishing permits for herring roe, salmon drift, and net fisheries.

### **Culture & Demographic**

Nightmute is a traditional Yup'ik Eskimo village, active in subsistence. The sale, importation, and possession of alcohol is banned in the village.

Nelson Island has been inhabited by the Qaluyaarmiut ("dip net people") for 2,000 years. The area was relatively isolated from outside contact and has kept its traditions and culture. Umkumiut is the traditional fish camp. In 1964, several residents moved to Toksook Bay to obtain more cost-effective goods. The city was incorporated in 1974.

9770.7.41 – Nikolai

### **NIKOLAI**

**Pronunciation/Other Names:** (NICK-oh-lie; a.k.a. Edzeno Nikolai)

**Population:** 101 (2011 DCCED certified estimate)      **Incorporation Type:** 2<sup>nd</sup> Class City  
**Borough Located In:** Unorganized      **Regional Native Corporation:** Doyon, Limited

### **Emergency Services:**

**Police:**

**State Troopers:** McGrath, 542-3052

**Fire:** Volunteer Fire Dept

**Medical:** Nikolai Clinic (293-2328).

### **Organizations with Local Offices:**

**City** - City of Nikolai, P.O. Box 9145, Nikolai, AK 99691

Phone 907-293-2113, Fax 907-293-2115

**Village Council** - Nikolai Village, P.O. Box 9105, Nikolai, AK 99691

Phone 907-293-2311, Fax 907-293-2115, e-mail: [Nikolai@aitc.org](mailto:Nikolai@aitc.org)

### **Location & Climate:**

Nikolai is located in Interior Alaska on the South Fork of the Kuskokwim River, 46 air miles east of McGrath. It lies at approximately 62d 58m N Latitude, 154d 09m W Longitude (Sec. 36, T028S, R023E, Kateel River Meridian). Nikolai is located in the Mt. McKinley Recording District. The area encompasses 5 sq. miles of land and 0 sq. miles of water. Nikolai has a cold, continental climate with relatively warm summers. Average summer temperature range from 42 to 80, winter temperatures range from -62 to 0. Precipitation is light, averaging 16 inches per year, including an average snowfall of 56 inches. The River is ice-free generally from June through October.

### **Transportation:**

**Accessibility:** Scheduled air service from McGrath and Anchorage. Accessible by river (May to October). Boats, ATVs and snowmachines are used for recreation and subsistence activities. It is a check point for the Iditarod sled dog race held in March.

**Airport Facilities:** A State-owned 2,350' gravel airstrip is available.

**Airline Service:** From McGrath - Tanana Air; Red Line Air; Woods Air

**Freight:** Barges supply fuel and heavy equipment. Other freight delivered by cargo plane.

**Vessel Support:** No information provided.

### **Facilities & Utilities:**

**Communications:** In-State Phone: United Utilities Inc. Long-Distance Phone: United Utilities

**Internet Service Provider:** School Only - GCI (www.gci.net) **TV Stations:** ARCS **Radio Stations:**

KDKO-AM **Cable Provider:** City of Nikolai **Teleconferencing:** Alaska Teleconferencing Network

**Electricity:** Electricity is provided by Nikolai Light & Power Utility.

**Fuel:** Gasoline available.

**Fuel Storage – Tank Owners** (number of tanks, total capacity): Iditarod Schools (1 @ 8,500 and 1 @ 6,500)

**Housing:** City-owned hotel/apartment building provides limited accommodations.

**Services:** Supplies available at local store. Laundromat and coffee shop available. No banking services. No major repair service.

**Water & Sewage:** All 47 households and facilities use individual wells; of these, only 2 units lack plumbing. 33 homes, including 10 new HUD housing units north of the airport, are connected to the piped sewage system. The remaining 15 homes use septic tanks. Funds have been requested to rehabilitate the washeteria, develop two new wells, upgrade the landfill and expand the piped sewer system.

**Miscellaneous:** There is one school located in the community, attended by 13 students.

### **Spill Response Support:**

*Contact local officials to determine possibility of using community facilities.*

#### **Potential Command Posts:**

City recreation center

School

#### **Potential Staging Areas:**

Airport –

National Guard Armory –

Other government facilities –

#### **Local Spill Response Equipment:**

### **Economy:**

Village employment peaks during the summer when construction gets under way. City, state and federal governments provide the primary year-round employment. Residents rely heavily on subsistence activities for food, and wood for heat. Some residents tend gardens. Salmon, moose, caribou, rabbits, and the occasional bear are utilized. Trapping and handicrafts also provide income.

### **Culture & Demographic**

89% of the population are Alaska Natives. A federally recognized tribe is located in the community. Nikolai is an Athabascan community. Residents are active in subsistence food-gathering. The sale or importation of alcohol are prohibited in the City.

9770.7.42 – Nunapitchuk

Phone 907-527-5705, Fax 907-527-5705, e-mail: [Nunapitchuk@aitc.org](mailto:Nunapitchuk@aitc.org)

**Location & Climate:**

Nunapitchuk is located on the both banks of the Johnson River, 22 miles northwest of Bethel in the Yukon-Kuskokwim Delta. It lies at approximately 60d 53m N Latitude, 162d 29m W Longitude (Sec. 05, T009N, R074W, Seward Meridian). Nunapitchuk is located in the Bethel Recording District. The area encompasses 8 sq. miles of land and 0 sq. miles of water. The area averages 16 inches of precipitation, with snowfall of 50 inches. Summer temperatures range from 62 to 42; winter temperatures run from 19 to -2.

**Transportation:**

**Accessibility:** Scheduled air service from Bethel. Snowmachines, ATVs and dog sleds are used on the frozen river in winter months.

**Airport Facilities:** A State-owned airstrip provides chartered or private air access year-round.

**Airline Service:** No information.

**Freight:** Freight arrives by air transport and barge.

**Vessel Support:** A new dock, small boat harbor, and seaplane landing area are available on the Johnson River. Marine engine repair services available.

**Facilities & Utilities:**

**Communications:** **In-State Phone:** United Utilities Inc. **Long-Distance Phone:** AT&T Alascom;

**Housing:** Limited accommodations available through IRA Council (contact city at 527-5327).

**Services:** No restaurant or banking services. Groceries and supplies available through local stores.

**Water & Sewage:** Well water is treated and supplied from a central tap year round. A flush/haul system was recently installed in 33 homes in Nunapitchuk, with water delivery and

tank hauling services. Construction continues on the remaining 73 homes. Unserved households haul their own water and honeybuckets. Sewage containers are located throughout the City, and are emptied into one of two new sewage lagoons (one on each side of the River). Teacher's housing, located in the old school, has an independent water and sewer system that needs improvements.

**Miscellaneous:** There is one school located in the community, attended by 139 students.

**Spill Response Support:**

*Contact local officials to determine possibility of using community facilities.*

**Potential Command Posts:**

City recreation center

School

**Potential Staging Areas:**

Airport –

National Guard Armory –

Other government facilities –

**Local Spill Response Equipment:**

**Economy:**

The school, local businesses and the city government provide most employment in Nunapitchuk. Commercial fishing and subsistence activities are a focal point of the culture. 52 residents hold commercial fishing permits for salmon and herring roe net fisheries and roe on kelp.

**Culture & Demographic**

97.1% of the population are Alaska Natives. A federally recognized tribe is located in the community. Nunapitchuk is an Eskimo village, and residents are involved in commercial fishing and subsistence activities. The sale, importation or possession of alcohol is banned in the village.

9770.7.43 – Ohogamiute

**OHOGAMIUTE**

**Pronunciation/Other Names:** (oh-HOE-ga-myoot)

Ohogamiut is currently an **unpopulated** community, and/or no U.S. Census data is available for the community. A detailed Community Information Summary has not been developed for this community.

The information below provides a brief overview of the community.

**Location:**

Ohogamiut is located on the right bank of the Yukon River, 22 miles southeast of Marshall, in the Yukon-Kuskokwim Delta.

**General:**

The Eskimo name "Okhnagamiut" means "village (people) on the other side (of the river)." The name was also shown as "Ohogamut" on a 1916 USGS field sheet. The village is now a summer fish camp. The site is accessible by boat or float plane.

**Organizations:**

**Village Corporation** - Ohog Incorporated, General Delivery, Marshall, AK 99585

**Village Council** - Village of Ohogamiut, P.O. Box 26, Marshall, AK 99585

Phone 679-6112, Fax 679-6637

9770.7.44 – Oscarville

**OSCARVILLE**

**Population:** 71 (2011 AK Dept of Labor estimate)      **Incorporation Type:** Unincorporated  
**Borough Located In:** Unorganized      **Regional Native Corporation:** Calista Corp.

**Emergency Services:**

**Police:** None

**State Troopers:**

**Fire:** None

**Medical:** Oscarville Health Clinic (737-7231).

**Organizations with Local Offices:**

**Village Corporation** - Oscarville Native Corporation, General Delivery, Oscarville, AK 99559

Phone 907-543-2066

**Village Council** - Oscarville Traditional Council, P.O. Box 6129, Napaskiak, AK 99559

Phone 907-737-7099, Fax 907-737-7428, e-mail: [Oscarville@smtp.ak.bia.gov](mailto:Oscarville@smtp.ak.bia.gov) or:

[Oscarville@aitc.org](mailto:Oscarville@aitc.org)

**Location & Climate:**

Oscarville is located on the north bank of the Kuskokwim River opposite Napaskiak, 6 miles southwest of Bethel. It lies 401 miles west of Anchorage. It lies at approximately 60d 43m N Latitude, 161d 46m W Longitude (Sec. 05, T007N, R071W, Seward Meridian). Oscarville is located in the Bethel Recording District. The area encompasses 2 sq. miles of land and 1 sq. miles of water. The weather is influenced by storms in the Bering Sea and also by the inland continent. Average precipitation is 16 inches and snowfall is 50 inches. Summer temperatures average 42 to 62, winter temperatures average -2 to 19. The Kuskokwim River is typically ice-free from June through October.

**Transportation:**

**Accessibility:** Boat, snow machine, and float plane service from Bethel. Oscarville relies heavily on Napaskiak for passenger, mail and cargo services. Residents use skiffs to pick up mail in Napaskiak or shop in Bethel. The river is an important means of transportation in summer and in the winter as an ice road, however, during breakup and freezeup, the community can be periodically isolated.

**Airport Facilities:** The village is interested in construction of an airport.

**Airline Service:** No information.

**Freight:** Airplane or barge. Barge services deliver goods once a year.

**Vessel Support:** No information available.

### Facilities & Utilities:

**Communications:** **In-State Phone:** United Utilities Inc. **Long-Distance Phone:** AT&T Alascom  
**Internet Service Provider:** No information **TV Stations:** ARCS **Radio Stations:** KYUK-AM; KYKD-FM  
**Cable Provider:** None **Teleconferencing:** Alaska Teleconferencing Network

**Electricity:** Electricity is provided by Bethel Utilities Corporation. An electrical transmission line from Bethel supplies power.

**Fuel:** No information available.

**Fuel Storage – Tank Owners** (number of tanks, total capacity): No information

**Housing:** No information available on visitor facilities.

**Services:** No information available

**Water & Sewage:** Treated well water is hauled from the washeteria. However, the washeteria itself is not functioning. A few homes have individual systems that collect and use rainwater. About one-fourth of homes have running water to the kitchen. The school has its own well and sewage lagoon, but it needs a new water treatment system. Honeybuckets are disposed of by residents in the sewage lagoon. Funds have been requested to increase water storage capacity, to upgrade the washeteria, and to upgrade the water and sewer services to a flush/haul system.

**Miscellaneous:** There is one school located in the community, attended by 19 students.

### Spill Response Support:

*Contact local officials to determine possibility of using community facilities.*

### **Potential Command Posts:**

School

### **Potential Staging Areas:**

Airport –

National Guard Armory –

Other government facilities –

### **Local Spill Response Equipment:**

### Economy:

The school and health clinic are the only permanent sources of employment. Residents use the post office and airstrip at Napaskiak. One resident holds a commercial fishing permit for the salmon net fishery. Trapping and handicrafts provide some income. Subsistence activities provide most food sources. Salmon, waterfowl, moose, bear, and seals are utilized.

### Culture & Demographic

91.2% of the population are Alaska Natives. A federally recognized tribe is located in the community. The year-round population of Oscarville is primarily Yup'ik Eskimos. Subsistence is an integral part of the lifestyle, and some commercial fishing occurs.

9770.7.45 – Paimuit

### PAIMUIT

**Pronunciation/Other Names:** (PIE-myoot)

Paimuit is currently an **unpopulated** community, and/or no U.S. Census data is available for the community. A detailed Community Information Summary has not been developed for this community.

The information below provides a brief overview of the community.

Paimiut is located on Kokechik Bay, on the east bank of the Lithkealik River. It lies on the Bering Sea, south of Scammon Bay.

Paimiut is an Eskimo name meaning "people of the stream's mouth." It was first reported in 1951 as having two groups of two or three frame houses, about a quarter of a mile apart. The village is now a summer fish camp. Villagers live in Hooper Bay during the winter months. The village is accessible by boat or float plane.

[PilotStation@aitc.org](mailto:PilotStation@aitc.org)

**Location & Climate:**

Pilot Station is located on the northwest bank of the Yukon River, 11 miles east of St. Mary's and 26 miles west of Marshall on the Yukon-Kuskokwim Delta. It lies at approximately 61d 56m N Latitude, 162d 52m W Longitude (Sec. 05, T021N, R074W, Seward Meridian). Pilot Station is located in the Bethel Recording District. The area encompasses 2 sq. miles of land and 1 sq. miles of water. The climate is maritime, averaging 60 inches of snowfall with 16 inches of total precipitation per year. Temperatures can range from -44 to 83. The Lower Yukon is ice-free from mid-June through October.

**Transportation:**

**Accessibility:** Scheduled and charter air service from Bethel. Cargo, passengers and mail arrive by air. Heavy winds of up to 50 MPH are common during fall and winter. Pilot Station is easily accessible by river-going vessels. Skiffs and snowmobiles provide inter-village transportation. There are no roads to surrounding communities.

**Airport Facilities:** A State-owned 2,520' gravel airstrip is available.

**Airline Service:** No information.

**Freight:** Cargo plane or barge. Barges deliver fuel and other bulk supplies during the summer.

**Vessel Support:** No moorage facilities.

#### **Facilities & Utilities:**

**Communications:** **In-State Phone:** United Utilities Inc. **Long-Distance Phone:** AT&T Alascom; United Utilities **Internet Service Provider:** **TV Stations:** ARCS **Radio Stations:** KICY-AM; KYUK-AM; KNOM-AM **Cable Provider:** City of Pilot Station **Teleconferencing:** Alaska Teleconferencing Network

**Electricity:** Electricity is provided by AVEC.

**Fuel:** Propane, kerosene, marine gas, and regular gasoline.

**Fuel Storage – Tank Owners** (number of tanks, total capacity): AVEC (11 @ 96,340 gals.); Native Corp. Store (14 @ 101,840); School District (47,725); City (16,850)

**Housing:** Accommodations available.

**Services:** No restaurant, banking services or laundromat. Groceries and supplies available at local store. Rental transportation includes boats, off-road vehicles, and charter aircraft.

**Water & Sewage:** More than half of the community is served by a piped water and sewer system, completed in 1973 by PHS, and are fully plumbed. 32 homes continue to haul treated well water and honeybuckets. The school operates its own water treatment system. Major infrastructure improvements are underway, in preparation for an expansion of the piped system to the remaining unserved 32 homes. A new water source, water treatment plant. and 200,000-gal. water storage tank have been funded.

**Miscellaneous:** The City also needs a new landfill. There is one school located in the community, attended by 205 students.

#### **Spill Response Support:**

*Contact local officials to determine possibility of using community facilities.*

#### **Potential Command Posts:**

City public safety building

School

#### **Potential Staging Areas:**

#### **Local Spill Response Equipment:**

#### **Economy:**

Almost 85% of the year-round employment is with the school, city and state government. Pilot Station's private sector employment is related to the summer fishing season. 55 residents hold commercial fishing permits. Incomes are supplemented by subsistence activities. Salmon,

moose, bear, porcupine and waterfowl are harvested. Trapping and BLM fire fighting also provide income.

### **Culture & Demographic**

95% of the population are Alaska Natives. A federally recognized tribe is located in the community. Pilot Station is a Yup'ik Eskimo village dependent upon a fishing and subsistence lifestyle. The sale or importation of alcohol is banned in the village.

9770.7.47 – Pitka's Point

### **PITKA'S POINT**

**Pronunciation/Other Names:** (PIT-kus)

**Population:** 93 (2011 AK Dept of Labor estimate)      **Incorporation Type:** Unincorporated  
**Borough Located In:** Unorganized      **Regional Native Corporation:** Calista Corp.

### **Emergency Services:**

**Police:**

**State Troopers:** St Mary's 438-2019

**Fire:** Volunteer Fire Dept

**Medical:** Pitka's Point Clinic (438-2546).

### **Organizations with Local Offices:**

**Village Corporation** - Pitka's Point Native Corporation, P.O. Box 184, Pitka's Point, AK 99658  
Phone 907-438-2232

**Village Council** - Native Village of Pitka's Point, P.O. Box 127, Saint Mary's, AK 99658  
Phone 907-438-2833, Fax 907-438-2569, e-mail: [PitkasPoint@aitc.org](mailto:PitkasPoint@aitc.org)

### **Location & Climate:**

Pitka's Point is located near the junction of the Yukon and Andreafsky Rivers, 5 miles northwest of St. Mary's on the Yukon-Kuskokwim Delta. It lies 3 miles by road from the St. Mary's airport. It lies at approximately 62d 02m N Latitude, 163d 17m W Longitude (Sec. 06, T022N, R076W, Seward Meridian). Pitka's Point is located in the Bethel Recording District. The area encompasses 1 sq. miles of land and 2 sq. miles of water. The climate is both maritime and continental. Temperatures range from -44 to 83. Precipitation measures 16 inches, with 60 inches of snowfall per year.

### **Transportation:**

**Accessibility:** Scheduled air service from Bethel to St Mary's. The Yukon River allows easy access by water, and most families own a skiff. There is a 17.7 mile road connecting Mountain Village with the St. Mary's airport and Andreafsky, so residents have access to the transportation facilities at St. Mary's. Snowmachines provide local winter transportation.

**Airport Facilities:** None available. See St Mary's airport information.

**Airline Service:** No information.

**Vessel Support:** No moorage facilities.

**Freight:** Cargo plane and barge.

### **Facilities & Utilities:**

**Communications:** **In-State Phone:** United Utilities Inc. **Long-Distance Phone:** AT&T Alascom

**Location & Climate:**

Platinum is located on the Bering Sea coast, below Red Mountain on the south spit of Goodnews Bay. It lies 11 miles from Goodnews Bay and 123 miles southwest of Bethel. It is 440 miles west of Anchorage. It lies at approximately 59d 00m N Latitude, 161d 49m W Longitude (Sec. 32, T013S, R075W, Seward Meridian). Platinum is located in the Bethel Recording District. The area encompasses 45 sq. miles of land and 0 sq. miles of water. Platinum has a marine climate. Average annual precipitation is 22 inches, with 43 inches of snowfall. Summer highs range from 53 to 57, winter highs average 6 to 9. Extremes have been measured from 82 to -34.

**Transportation:**

**Accessibility:** Scheduled air service from Bethel. The community relies heavily on air transportation for passengers, mail and cargo service. Boats, snow machines and ATVs are used for local travel and subsistence activities.

**Airport Facilities:** There are two gravel airstrips. One is State-owned, at 3,640' in length with a 2,000' crosswind runway. The second is a 2,000' gravel airstrip owned by the Platinum Mine. A seaplane landing site is also available.

**Airline Service:** No information.

**Freight:** Freight arrives by barge or mail plane. Barge services deliver goods twice a year.

**Vessel Support:** No moorage facilities.

**Facilities & Utilities:**

**Communications:** **In-State Phone:** United Utilities Inc. **Long-Distance Phone:** AT&T Alascom;

United Utilities **Internet Service Provider:** School Only - GCI ([www.gci.net](http://www.gci.net)) **TV Stations:** ARCS

**Radio Stations:** KYUK-AM **Cable Provider:** Platinum Trad. Village Council **Teleconferencing:**

Alaska Teleconferencing Network

**Electricity:** Electricity is provided by City of Platinum. The City operates the electric service once provided by the mining company.

**Fuel:** Diesel, propane, and regular gasoline.

**Fuel Storage – Tank Owners** (number of tanks, total capacity): Arviq Inc. (5 @ 67,100 gals.); City Power Plant (5,600); Lower Kuskokwim School District (7,000)

**Housing:** Accommodations possible at school (979-9111).

**Services:** No restaurant, banking services, or laundromat. Supplies available in the community.

**Water & Sewage:** Almost half of the homes have individual water wells and septic systems.

During the summer, untreated water is hauled from approximately fifteen watering points.

During winter, residents dig holes in the ice to draw water. Honeybuckets are disposed of in seepage pits. A washeteria is under construction. Funds have been requested to construct a 20,000-gallon water storage tank, water treatment plant, water connections, plumbing and septic tanks for 16 homes, a sludge disposal site and new landfill. The school has asked for funds

to drill its own well, and construct a treatment plant that would also serve as the community's back-up water system.

**Miscellaneous:** There is one school located in the community, attended by 13 students.

**Spill Response Support:**

*Contact local officials to determine possibility of using community facilities.* Facility available with phone, fax, and modem that can serve as central organizational meeting point for spill responders.

**Potential Command Posts:**

School

**Potential Staging Areas:**

**Local Spill Response Equipment:**

(as of September 2000 survey)

Boom: None available

Sorbent Pads None available

Hazwoper Trained Staff: 1

Boats: 1

Backhoes: 1

Logistical Support: Capable of providing support (food, lodging) for 10 cleanup crewmembers for up to 2 weeks.

Internet Access: Yes

**Local Protection Priorities for Spill Incidents:** (as of September 2000 survey)

**Location**      **Specific Resource to Protect/Reason**

Small's Creek      Fish entering to spawn in creek

Beach Banks      Wild greens and subsistence nets, birds feeding on banks

Main Well (water)      Main source of water for community

School      Children

Airport      Connection to outside world, mail, groceries arrival point

**Economy:**

Commercial fishing now contributes to the largely cash-based economy. The mine, school, stores and City provide employment. Platinum is a major supplier of gravel to area villages. Seven residents hold commercial fishing permits. The 1992 Community Development Quota (CDQ) program has increased the pollock groundfish quota for small communities like Platinum. Subsistence activities are also an important part of the lifestyle. Salmon and seal are the staples of the diet. The community is interested in developing a marine repair facility and dry dock, a seafood processing plant, specialty seafoods venture, or herring roe aquaculture project.

**Culture & Demographic**

92.2% of the population are Alaska Natives. A federally recognized tribe is located in the community. Because the community was founded as a commercial center, and has always seen an influx of outsiders, local traditions have not been retained as much as in other villages. Platinum is one of the few Eskimo villages in the region in which the first language of the

children is English. The economy is primarily cash-based. The sale or importation of alcohol is banned in the village.

9770.7.49 – Quinhagak

**QUINHAGAK**

**Pronunciation/Other Names:** (QUINN-uh-hawk; var. Kwinhagak)

**Population:** 675 (2011 DCCED certified estimate)      **Incorporation Type:** 2<sup>nd</sup> Class City  
**Borough Located In:** Unorganized      **Regional Native Corporation:** Calista Corp.

**Emergency Services:**

**VPO:** 556-8314      **Tribal Police VPSO:** 556-8314

**State Troopers:** Bethel, 543-2294

**Fire:** Quinhagak EMS Quick Response Team, 556-8448

**Medical:** Quinhagak (Kwinhagak) Clinic (556-8320).

**Organizations with Local Offices:**

**City** - City of Quinhagak, P.O. Box 90, Quinhagak, AK 99655

Phone 907-556-8202, Fax 907-556-8166, e-mail: [nvkkwn@aol.com](mailto:nvkkwn@aol.com)

**Village Corporation** - Qanirtuuq, Incorporated, P.O. Box 69, Quinhagak, AK 99655

Phone 907-556-8712, Fax 907-556-8814

**Village Council** - Native Village of Kwinhagak, P.O. Box 149, Quinhagak, AK 99655

Phone 907-556-8165, Fax 907-556-8166, e-mail: [nvkkwn@aol.com](mailto:nvkkwn@aol.com) or: [Kwinhagak@aitc.org](mailto:Kwinhagak@aitc.org)

**Location & Climate:**

Quinhagak is on the Kanektok River on the east shore of Kuskokwim Bay, less than a mile from the Bering Sea coast. It lies 71 miles southwest of Bethel. It lies at approximately 59° 45' N Latitude, 161° 54' W Longitude (Sec. 17, T005S, R074W, Seward Meridian). Quinhagak is located in the Bethel Recording District. The area encompasses 5 sq. miles of land and 0 sq. miles of water. Quinhagak is located in a marine climate. Precipitation averages 22 inches, with 43 inches of snowfall annually. Summer temperatures average 41 to 57, winter temperatures average 6 to 24. Extremes have been measured from 82 to -34.

**Transportation:**

**Accessibility:** Boat, scheduled and charter air service from Bethel. Quinhagak relies heavily on air transportation for passenger mail and cargo service. Boats, ATVs, snow machines, and some vehicles are used for local transportation.

**Airport Facilities:** A State-owned 2,600' gravel airstrip is available. Plans are underway to relocate the airport. Float planes land on the Kenektok River.

**Airline Service:** No information.

**Freight:** Barges delivery heavy cargo at least twice a year.

**Vessel Support:** A harbor and dock were recently completed. Marine engine repair available.

**Facilities & Utilities:**

**Communications:** **In-State Phone:** United Utilities Inc. **Long-Distance Phone:** AT&T Alascom; United Utilities **Internet Service Provider:** School Only - GCI ([www.gci.net](http://www.gci.net)) **TV Stations:** ARCS

**Radio Stations:** KYUK-AM **Cable Provider:** Frontier Cable, Inc. **Teleconferencing:** Alaska Teleconferencing Network

**Electricity:** Electricity is provided by AVEC.

**Fuel:** Marine gas, diesel, propane, and regular gasoline.

**Fuel Storage – Tank Owners** (number of tanks, total capacity): School (2 @ 100,500 gals.); City (3 @ 28,600); Village Council (2,600); AVEC (99,400); Qanirtuuq Store (1,030); Qanirtuuq (79,900); Moravian Church (2,700); Kusko Aviation (10,300); A&C Market (9,600); Army Nat'l Guard (8,020)

**Housing:** Lodging available on occasion at the high school and washeteria.

**Services:** Laundry and shower facilities available. Groceries and supplies available through local store. Air charter service available. No rental transportation.

**Water & Sewage:** All services are provided by the Native Village of Kwinhagak, under agreement with the City. Water is derived from a well near the Kenektok River. The water treatment plant, storage tank, and waterline were relocated in 1997, as part of a new flush/haul system for the community. 30 homes are now served by the new system, with water delivery and tank haul. An old BIA building has been renovated as a new washeteria and health clinic. The school and washeteria are connected directly to the water plant. 107 households still haul water and use honeybuckets, and funds are being sought to expand the flush/haul system.

**Miscellaneous:** There is one school located in the community, attended by 148 students.

**Spill Response Support:**

*Contact local officials to determine possibility of using community facilities.*

**Potential Command Posts:**

City fire hall

School

**Potential Staging Areas:**

Airport –

National Guard Armory –

Other government facilities –

**Local Spill Response Equipment:**

**Economy:**

Most of the employment is with the school, government services or commercial fishing. Trapping, basket weaving, skin sewing and ivory carving also provide income. Subsistence remains an important part of the livelihood; seal and salmon are staples of the diet. 90 residents hold commercial fishing permits for herring roe and salmon net fisheries. The Incorporated Fishermen of Quinhagak has been organized to improve market conditions and stabilize prices. A fish processing facility was recently completed, owned by the village IRA council. The 1992 Community Development Quota (CDQ) program has increased the pollock groundfish quota for small communities like Quinhagak.

**Culture & Demographic**

93.8% of the population are Alaska Natives. A federally recognized tribe is located in the community. The community is primarily Yup'ik Eskimos who fish commercially and are active in subsistence food gathering. The sale, importation or possession of alcohol is banned in the village.

9770.7.50 – Red Devil

**RED DEVIL**

**Population:** 19 (2011 AK Dept of Labor estimate)      **Incorporation Type:** Unincorporated  
**Borough Located In:** Unorganized      **Regional Native Corporation:** Calista Corp.

**Emergency Services:**

**Police:**

**State Troopers:** Aniak, 675-4398

**Fire:** Volunteer Fire Dept

**Medical:** Red Devil Clinic Clara Morgan Sub-Regional Clinic in Aniak

**Organizations with Local Offices:**

**Community Non-Profit** - Red Devil People & Community, Inc., Gen. Delivery, Red Devil, AK 99656

Phone 907-447-3213, Fax 907-447-3214

**Electric Utility** - Middle Kuskokwim Electric Cooperative, P.O. Box 40, Red Devil, AK 99656

Phone 907-447-3230, Fax 907-447-3231

**Village Council** - Red Devil Traditional Council, General Delivery, Red Devil, AK 99656

Phone 907-447-3236, Fax 907-447-3231, e-mail: [RedDevil@aitc.org](mailto:RedDevil@aitc.org)

**Location & Climate:**

Red Devil is located on both banks of the Kuskokwim River, at the mouth of Red Devil Creek. It lies 75 air miles northeast of Aniak, 161 miles northeast of Bethel, and 250 miles west of Anchorage. It lies at approximately 61° 45' N Latitude, 157° 18' W Longitude (Sec. 06, T019N, R044W, Seward Meridian). Red Devil is located in the Kuskokwim Recording District. The area encompasses 24 sq. miles of land and 2 sq. miles of water. The climate in Red Devil is continental with temperatures ranging between -58 and 90. Annual snowfall averages 85 inches, with total precipitation of 20 inches. High winds often cause flight delays in fall and winter. The Kuskokwim River is ice-free from mid-June through October.

**Transportation:**

**Accessibility:** Boat; scheduled and air charter service from Bethel. The Kuskokwim River serves as a major transportation link and supply route for bulk supplies and fuel oil during the summer. In the winter the frozen river is used by snowmachines for travel to neighboring villages. Local interests want a 9-mile road from Red Devil to Sleetmute constructed.

**Airport Facilities:** A 4,750' gravel airstrip provides year-round access. It is owned and operated by the State. Scheduled weekday service is available.

**Airline Service:** No information.

**Freight:** Cargo plane and barge.

**Vessel Support:** Boats available for rent. No moorage facilities.

**Facilities & Utilities:**

**Communications:** **In-State Phone:** Bush-Tell Inc. **Long-Distance Phone:** AT&T Alascom

**Internet Service Provider:** School Only - GCI ([www.gci.net](http://www.gci.net)) **TV Stations:** ARCS **Radio Stations:**

No information **Cable Provider:** None **Teleconferencing:** No information

**Electricity:** Electricity is provided by Middle Kuskokwim Electric Cooperative.

**Fuel:** Marine gas, diesel, and regular gasoline.

**Fuel Storage – Tank Owners** (number of tanks, total capacity): School (18,100 gals.); Village Corp. (42,500); Red Devil Hardware (3,000); G&L Riverside Inn (12,000)

**Housing:** Accommodations and meals available.

**Services:** No banking services or laundromat. Groceries and supplies available at local store. Rental transportation includes boats, and charter aircraft through local air service.

**Water & Sewage:** Water is derived from individual wells or hauled from the school well. Some wells have a high iron content. Almost 40% of households are fully plumbed. Sewage is disposed of on an individual basis. The school and teacher's housing uses individual septic tanks and drain fields; others use pit privies. A new landfill site is needed. A feasibility study of alternative water, sewer and waste operations has been funded. The community needs a small watering point and washeteria.

**Miscellaneous:** There is one school located in the community, attended by 16 students.

**Spill Response Support:**

*Contact local officials to determine possibility of using community facilities.*

**Potential Command Posts:**

School

**Potential Staging Areas:**

Airport –

National Guard Armory –

Other government facilities –

**Local Spill Response Equipment:**

**Economy:**

Since the closure of the mercury mine in 1971, employment opportunities have been limited. Income is supplemented by subsistence activities, BLM fire fighting, or work in the commercial fishing industry. Salmon, bear, moose, caribou, rabbit, waterfowl and berries are harvested in season.

**Culture & Demographic**

50.9% of the population are Alaska Natives. A federally recognized tribe is located in the community. Unlike other villages in the area, Red Devil is a mixed population of Eskimos, Athabascans and non-Natives. Subsistence activities are prevalent. The sale of alcohol is prohibited, although importation or possession is allowed.

9770.7.51 – Russian Mission

**RUSSIAN MISSION**

**Population:** 303 (2011 DCCED certified estimate)      **Incorporation Type:** 2<sup>nd</sup> Class City  
**Borough Located In:** Unorganized      **Regional Native Corporation:** Calista Corp.

**Emergency Services:**

**Police:** 584-5111

**VPSO:** 584-5626

**State Troopers:** St Mary's, (800) 240-2019

**Fire:** Volunteer Fire Dept

**Medical:** Russian Mission Clinic (584-5611). Auxiliary health care is provided by flight to Bethel or Anchorage.

**Organizations with Local Offices:**

**City** - City of Russian Mission, P.O. Box 49, Russian Mission, AK 99657

Phone 907-584-5111, Fax 907-584-5476

**Village Corporation** - Russian Mission Native Corp., P.O. Box 48, Russian Mission, AK 99657  
Phone 907-584-5885, Fax 907-584-5311

**Village Council** - Iqurmiut Tribe, P.O. Box 09, Russian Mission, AK 99657  
Phone 907-584-5511, Fax 907-584-5593, e-mail: [RussianMission@aitc.org](mailto:RussianMission@aitc.org)

**Location & Climate:**

Russian Mission is located on the west bank of the Yukon River in the Yukon-Kuskokwim Delta, 25 miles southeast of Marshall. It lies 70 air miles northeast of Bethel and 376 miles west of Anchorage. It lies at approximately 61d 47m N Latitude, 161d 19m W Longitude (Sec. 31, T020N, R066W, Seward Meridian). Russian Mission is located in the Bethel Recording District. The area encompasses 5 sq. miles of land and 1 sq. miles of water. The climate exhibits a significant maritime influence. Temperatures range from -54 to 86. Annual precipitation is 16 inches, with snowfall of 60 inches. Heavy northern winds often limit air access in the fall and winter. The Lower Yukon is ice-free from mid-June through October.

**Transportation:**

**Accessibility:** Scheduled and charter air service from Bethel. Russian Mission's location on the Yukon River allows barge and small boat travel during the summer. Passengers, mail and light goods arrive primarily by air. Snow machines enable inter-village transportation in the winter on the frozen riverbed.

**Airport Facilities:** A 2,700' gravel airstrip and seaplane landing area are owned and operated by the State. Scheduled daily flights are available.

**Airline Service:** No information.

**Freight:** Cargo plane and barge.

**Vessel Support:** Marine engine and boat repair service available. Moorage facilities available.

**Facilities & Utilities:**

**Communications:** **In-State Phone:** United Utilities Inc. **Long-Distance Phone:** AT&T Alascom; United Utilities **Internet Service Provider:** No information **TV Stations:** ARCS **Radio Stations:** KICY-AM; KYUK-AM; KNOM-AM **Cable Provider:** None **Teleconferencing:** Alaska Teleconferencing Network

**Electricity:** Electricity is provided by AVEC.

**Fuel:** Diesel, propane, and regular gasoline.

**Fuel Storage – Tank Owners** (number of tanks, total capacity): AVEC (4 @ 58,830 gals.); LY Schools (5 @ 29,830); Native Corp. Store (4 @ 34,785); U.S. PHS (11,530); Alaska Native Industrial Coop Assoc. (9,775)

**Housing:** Accommodations possible at private homes, school (584-5615), and clinic (584-5529).

**Services:** No banking services. Laundromat available. Groceries and limited supplies available at local store.

**Water & Sewage:** Water is derived from a deep well, is treated and distributed via buried pipes throughout the community. Most homes are also connected to the piped sewage system, including 25 new HUD homes. The City has requested funds to replace the plumbing and fixtures in 15 homes.

**Miscellaneous:** There is one school located in the community, attended by 106 students. Refuse is disposed of by individuals at the landfill; a new site is needed.

**Spill Response Support:**

*Contact local officials to determine possibility of using community facilities.*

**Potential Command Posts:**

Recreation center  
City public safety building  
School

**Potential Staging Areas:**

Airport –  
National Guard Armory –  
Other government facilities –

**Local Spill Response Equipment:****Economy:**

Employment opportunities in Russian Mission are limited to the school, local businesses and fishing. Ten residents hold commercial fishing permits. Seasonal employment includes BLM fire fighting and construction. Some income is earned from trapping, and subsistence activities are prevalent. Salmon, moose, black bear, porcupine, rabbit and waterfowl are utilized.

**Culture & Demographic**

94.7% of the population are Alaska Natives. A federally recognized tribe is located in the community. Russian Mission is an Eskimo village. Subsistence is the focus of the culture. The sale or importation of alcohol is banned in the village.

9770.7.52 – Saint Mary's

**SAINT MARY'S**

Phone 907-438-2932, Fax 907-438-2932, e-mail: [algaaciq@aol.com](mailto:algaaciq@aol.com)

**Location & Climate:**

St. Mary's is located on the north bank of the Andreafsky River, 5 miles from its confluence with the Yukon River. It lies 450 air miles west-northwest of Anchorage. The City of St. Mary's encompasses the Yup'ik villages of St. Mary's and Andreafsky. It lies at approximately 62° 03' N Latitude, 163° 10' W Longitude (Sec. 26, T023N, R076W, Seward Meridian). Saint Mary's is located in the Bethel Recording District. The area encompasses 42 sq. miles of land and 6 sq. miles of water. The climate is continental with a significant maritime influence. Temperatures range between -44 and 83. Annual precipitation measures 16 inches, with 60 inches of snowfall. The Yukon is ice-free from June through October.

#### **Transportation:**

**Accessibility:** Boat service up and down Yukon; scheduled and charter air service from Anchorage and Bethel. St. Mary's is served by barge, large commercial vessels and aircraft. Local roads link St. Mary's to Andreafsky, Pitka's Point, and Mountain Village.

**Airport Facilities:** The State-owned 6,000' gravel runway and 1,900' crosswind strip provide year-round access.

**Airline Service:** Hagland Air Service; PenAir

**Freight:** Cargo plane and barge.

**Vessel Support:** . An expansion of the deep water dock is under construction.

#### **Facilities & Utilities:**

**Communications:** **In-State Phone:** United Utilities Inc. **Long-Distance Phone:** AT&T Alascom; United Utilities **Internet Service Provider:** School Only - GCI ([www.gci.net](http://www.gci.net)) **TV Stations:** ARCS

**Radio Stations:** KICY-AM; KYUK-AM; KNOM-AM **Cable Provider:** Frontier Cable, Inc.

**Teleconferencing:** Alaska Teleconferencing Network

**Electricity:** Electricity is provided by AVEC.

**Fuel:** Marine gas, propane, regular gasoline.

**Fuel Storage – Tank Owners** (number of tanks, total capacity): City (11 @ 275,050 gals.); Boreal Fisheries Inc. (3 @ 24,500); Hageland Aviation (3 @ 23,000); City School District (4 @ 46,500); Mark Air (4 @ 56,000 - out of business); ADOT (3 @ 60,430); Ryan Air (9,300); Omni Corp. (2,000); St. Mary's Fuel Co. (300,000); Native Corp. (2 @ 41,200); Army Nat'l Guard (10,000); Herman's Air (5,000); St. Mary's Mission (4 @ 173,500); AVEC (215,751); Delta Dev. Corp. (100,000)

**Housing:** Food and lodging available at Bays Bed and Breakfast (438-2048) and the Road House.

**Services:** Meals available at several restaurants. Laundry facilities available. No banking services. Groceries and supplies available at local stores. Marine engine, boat, and aircraft repair available. Charter aircraft available.

**Water & Sewage:** Water is derived from Alstrom Creek reservoir and is treated. The majority of the City (120 homes and facilities) have complete plumbing and are connected to the piped water and sewer system. Approximately 15 residences haul water and use honeybuckets; the City provides hauling services. 20 new HUD houses were recently connected to the system. A new honeybucket disposal site is under construction. Funds have been requested to repair plumbing in 40 older homes, and to study replacement of the failing 30-year-old water and sewer mains. A washeteria is available nearby at Pitka's Point.

**Miscellaneous:** The landfill must be relocated. There is one school located in the community, attended by 129 students.

#### **Spill Response Support:**

*Contact local officials to determine possibility of using community facilities.*

**Potential Command Posts:**

School

**Potential Staging Areas:**

Airport –

National Guard Armory –

Other government facilities –

**Local Spill Response Equipment:****Economy:**

The economy in St. Mary's is subject to seasonal fluctuations. Employment peaks during the summer fishing season. 68 residents hold commercial fishing permits. Cold storage is available. Cash income is supplemented by subsistence activities and trapping. Salmon, moose, bear, and waterfowl are harvested.

**Culture & Demographic**

83% of the population are Alaska Natives. A federally recognized tribe is located in the community. St. Mary's is a Yup'ik Eskimo community that maintains a fishing and subsistence lifestyle. The sale of alcohol is prohibited in the City, although importation and possession are allowed.

9770.7.53 – Scammon Bay

**SCAMMON BAY**

**Population:** 498 (2011 DCCED certified estimate)      **Incorporation Type:** 2<sup>nd</sup> Class City  
**Borough Located In:** Unorganized      **Regional Native Corporation:** Calista Corp.

**Emergency Services:**

**Police:** 558-5529

**VPSO:** 558-5529

**Fire:** Volunteer Fire Dept

**Medical:** Scammon Bay Clinic (558-5511). Auxiliary health care is provided by flight to Bethel or Anchorage.

**Organizations with Local Offices:**

**City** - City of Scammon Bay, P.O. Box 90, Scammon Bay, AK 99662

Phone 907-558-5529, Fax 907-558-5626, e-mail: [aulak@aol.com](mailto:aulak@aol.com)

**Village Corporation** - Askinuk Corporation, P.O. Box 89, Scammon Bay, AK 99662

Phone 907-558-5628, Fax 907-558-5963

**Village Council** - Scammon Bay Traditional Council, P.O. Box 126, Scammon Bay, AK 99662

Phone 907-558-5425, Fax 907-558-5134, e-mail: [ScammonBay@smtp.ak.bia.gov](mailto:ScammonBay@smtp.ak.bia.gov)

**Location & Climate:**

Scammon Bay is on the south bank of the Kun River, one mile from the Bering Sea. It lies to the north of the 2,300-foot Askinuk Mountains on the Yukon-Kuskokwim Delta. It lies at approximately 61d 50m N Latitude, 165d 35m W Longitude (Sec. 10, T020N, R090W, Seward Meridian). Scammon Bay is located in the Bethel Recording District. The area encompasses 1 sq. miles of land and 0 sq. miles of water. The area's climate is maritime. Temperatures range between -25 and 79. Annual precipitation is 14 inches, with 65 inches of snowfall. Severe

easterly winds during the fall and winter limit accessibility. The Bering Sea is ice-free from mid-June through October.

**Transportation:**

**Accessibility:** Scammon Bay is accessible by air and water. Scheduled and charter air service from Bethel. Winter trails connect Scammon Bay with Hooper Bay. Snowmachines and skiffs are the primary means of local transportation.

**Airport Facilities:** A State-owned 3,000' gravel airstrip and City-owned seaplane base on the Kun River serve air traffic.

**Airline Service:** ERA; Yute Air; Hageland Aviation; Grant Air

**Freight:** Cargo plane and barge. Barges bring in bulk supplies each summer.

**Vessel Support:** Marine engine repair available. No moorage facilities.

**Facilities & Utilities:**

**Communications:** **In-State Phone:** United Utilities Inc. **Long-Distance Phone:** AT&T Alascom; United Utilities **Internet Service Provider:** No information **TV Stations:** ARCS **Radio Stations:** KICY-AM; KCUK-FM **Cable Provider:** City of Scammon Bay **Teleconferencing:** Alaska Teleconferencing Network

**Electricity:** Electricity is provided by AVEC. AVEC and the City are interested in developing a small hydroelectric plant.

**Fuel:** Marine gas, diesel, propane, and regular gasoline.

**Fuel Storage – Tank Owners** (number of tanks, total capacity): School (60,100 gals.); City (10,800); Army Nat'l Guard (3,000); AVEC (81,200); Village Corp. (132,800); Catholic Church (1,000)

**Housing:** Accommodations possible through local school (558-5312).

**Services:** No restaurant, laundromat, or banking services. Groceries and supplies available at local store. Arrangements may be made to rent autos.

**Water & Sewage:** Water is derived from an infiltration gallery located on a small stream south of the City, is treated and stored in a 100,000-gal. tank. Nearly all homes and the school are connected to the piped water and sewer system and are plumbed. Only a few residents use honeybuckets, typically due to frozen pipe damage. There is no washeteria.

**Miscellaneous:** A new landfill and access road were recently completed, but funds are needed for equipment. There is one school located in the community, attended by 164 students.

**Spill Response Support:**

*Contact local officials to determine possibility of using community facilities.*

**Potential Command Posts:**

School

**Potential Staging Areas:**

**Local Spill Response Equipment:**

**Economy:**

Employment is focused on commercial fishing. Fire fighting for BLM, construction projects and handicrafts also provide seasonal income. 49 residents hold commercial fishing permits. The

1992 Community Development Quota (CDQ) program has increased the pollock groundfish quota for small communities like Scammon Bay. Subsistence activities provide fish, beluga whale, walrus, seal, birds and berries.

### **Culture & Demographic**

96.5% of the population are Alaska Natives. A federally recognized tribe is located in the community. Scammon Bay is a Yup'ik Eskimo community that relies on fishing and subsistence activities. Most residents travel to the Black River each summer for fish camp, 50 miles to the north. The sale, importation or possession of alcohol is banned in the village.

9770.7.54 – Shageluk

### **SHAGELUK**

**Pronunciation/Other Names:** (SHAG-uh-look)

**Population:** 83 (2011 DCCED certified estimate) **Incorporation Type:** 2<sup>nd</sup> Class City  
**Borough Located In:** Unorganized **Regional Native Corporation:** Doyon, Limited

### **Emergency Services:**

**Police:**

**State Troopers:** Aniak, 675-4398

**Fire:** Volunteer Fire Dept

**Medical:** Shageluk Clinic (473-8231).

Phone 907-498-4184, Fax 907-498-4185, e-mail: [SheldonPoint@aitc.org](mailto:SheldonPoint@aitc.org)

**Location & Climate:**

Nunam Iqua is on a south fork of the Yukon River, about 9 miles south of Alakanuk and 18 miles southwest of Emmonak on the Yukon-Kuskokwim Delta. It lies 500 miles northwest of Anchorage. It lies at approximately 62d 32m N Latitude, 164d 52m W Longitude (Sec. 10, T028N, R084W, Seward Meridian). Nunam Iqua is located in the Bethel Recording District. The area encompasses 13 sq. miles of land and 5 sq. miles of water. The climate is maritime, averaging 60 inches of snowfall with a total of 18 inches of precipitation per year. Temperatures range from - 25 to 78. Heavy winds in the fall and winter often limit accessibility. The Bering Sea is ice-free from mid-June through October.

**Transportation:**

**Accessibility:** Boat; scheduled or charter service from Emmonak. Nunam Iqua has easy access by boat and barge. In the winter snowmachines serve as the primary mode of inter-village transportation.

**Airport Facilities:** It has a State-owned, City-operated 2,060' gravel airstrip. Float plane landing sites are available at Kwemeluk Pass and Swan Lake.

**Airline Service:** Grant Aviation; Hageland

**Freight:** Cargo plane, barge, small boat, and snow machine.

**Vessel Support:** No moorage facilities.

**Facilities & Utilities:**

**Communications:** **In-State Phone:** United Utilities Inc. **Long-Distance Phone:** United Utilities

**Internet Service Provider:** Unicom/United Utilities, Inc. ([www.unicom-alaska.net](http://www.unicom-alaska.net)) **TV Stations:**

No information **Radio Stations:** KICY-AM; KNOM-AM **Cable Provider:** Swan Lake Corp.

**Teleconferencing:** Alaska Teleconferencing Network

**Electricity:** Electricity is provided by Sheldon Point Electric Co..

**Fuel:** Regular gasoline and fuel oil.

**Fuel Storage – Tank Owners** (number of tanks, total capacity): LY Schools (67,240 gals.); Swan Lake Corp. (95,423); ADOT (3,000)

**Housing:** Accommodations possible at private homes or school (498-4112).

**Services:** No banking services. Groceries and supplies available at local store. No repair services.

**Water & Sewage:** Residents haul treated well water from a new storage tank. Honeybucket hauling services are provided by the City. The washeteria was destroyed by fire in August 1997, and funds have been provided to rebuild the water supply and treatment. A few homes are connected to a community septic tank and have plumbing. A comprehensive Master Plan for a piped system has been completed. Funds have been requested to complete phase 1, a new water treatment plant, vacuum sewer plant and a new washeteria.

**Miscellaneous:** The existing refuse site is temporary; a new landfill is needed. There is one school located in the community, attended by 61 students.

**Spill Response Support:**

*Contact local officials to determine possibility of using community facilities.*

**Potential Command Posts:**

- Community hall (under construction)
- City public safety building
- School

**Potential Staging Areas:**

- Airport –
- National Guard Armory –
- Other government facilities –

**Local Spill Response Equipment:**

**Economy:**

Commercial fishing is the economic foundation of the community. 27 residents hold commercial fishing permits. There are a few year-round positions with government organizations and the private sector. Subsistence activities and trapping supplement income. Salmon, beluga whale, seal, moose, and waterfowl are harvested.

**Culture & Demographic**

92.7% of the population are Alaska Natives. A federally recognized tribe is located in the community. Commercial fishing and subsistence activities are the means of support in this Yup'ik Eskimo village. The sale or importation of alcohol is banned in the village.

9770.7.56 – Sleetmute

**SLEETMUTE - Pronunciation/Other Names:** (SLEET-myoot)

**Population:** 93 (2011 AK Dept of Labor estimate)

**Incorporation Type:** Unincorporated

**Borough Located In:** Unorganized

**Regional Native Corporation:** Calista Corp.

**Emergency Services:**

**VPSO:** 449-4205

**State Troopers:** Aniak, 675-4398

**Fire:** Volunteer Fire Dept

**Medical:** Sleetmute Clinic (449-9901).

**Organizations with Local Offices:**

**Village Council** - Sleetmute Traditional Council, P.O. Box 34, Sleetmute, AK 99668  
Phone 907-449-4205, Fax 907-449-4203, e-mail: [Sleetmute@aitc.org](mailto:Sleetmute@aitc.org)

**Location & Climate:**

Sleetmute is located on the east bank of the Kuskokwim River, 1.5 miles north of its junction with the Holitna River. It lies 79 miles east of Aniak, 166 miles northeast of Bethel, and 243 miles west of Anchorage. It lies at approximately 61d 42m N Latitude, 157d 10m W Longitude (Sec. 25, T019N, R044W, Seward Meridian). Sleetmute is located in the Kuskokwim Recording District. The area encompasses 28 sq. miles of land and 2 sq. miles of water. The climate in Sleetmute is continental with temperatures ranging from -58 to 90. Snowfall averages 85 inches, with total precipitation of 22 inches per year. High winds often cause flight delays in the fall and winter. The Kuskokwim is ice-free from mid-June through October.

**Transportation:**

**Accessibility:** Boat; scheduled or charter air service from Bethel or Aniak. The Kuskokwim River provides barges and boats transportation in the summer, and snowmachines are used on the frozen river in the winter.

**Airport Facilities:** The 3,100' gravel airstrip is owned and maintained by the State. Scheduled weekday service is provided.

**Airline Service:** No information.

**Freight:** Cargo plane and barge.

**Vessel Support:** No moorage facilities.

**Facilities & Utilities:**

**Communications:** **In-State Phone:** Bush-Tell Inc. **Long-Distance Phone:** AT&T Alascom

**Internet Service Provider:** School Only - GCI ([www.gci.net](http://www.gci.net)) **TV Stations:** ARCS **Radio Stations:**

No information **Cable Provider:** None **Teleconferencing:** No information

**Electricity:** Electricity is provided by Middle Kuskokwim Electric Cooperative.

**Fuel:** Marine gas, diesel, and propane.

**Fuel Storage – Tank Owners** (number of tanks, total capacity): School (30,000 gals.); Middle Kuskokwim Electric Co-op (17,000); Village Council (25,500)

**Housing:** Accommodations possible at city offices (449-9901).

**Services:** Groceries and supplies available at local store. Laundry facilities and public showers available. No repair services, rental transportation, or moorage facilities. No banking services.

**Water & Sewage:** A central well with treated water and several individual wells are used in the community. Water is pumped by hand to fill gravity storage tanks at each house. The washeteria has its own untreated water source. Privies, honeybuckets and seepage pits are used. Nine homes and the school use individual systems and are completely plumbed. A Master Plan has been completed to design alternative water, sewer and refuse systems.

**Miscellaneous:** There is a landfill site southeast of the airstrip. There is one school located in the community, attended by 24 students.

**Spill Response Support:**

*Contact local officials to determine possibility of using community facilities.*

**Potential Command Posts:**

School

**Potential Staging Areas:**

Airport –

National Guard Armory –

Other government facilities –

**Local Spill Response Equipment:**

**Economy:**

Most cash income in Sleetmute is derived seasonally from BLM fire fighting, trapping, or from cannery work in other communities. The school is the primary employer. One resident holds a commercial fishing permit. 60% of the village's food is derived from subsistence fishing, hunting and gathering. Many residents travel to fish camps during the summer. Salmon, moose, bear, porcupine, rabbit, waterfowl and berries are harvested in season.

**Culture & Demographic**

86.8% of the population are Alaska Natives. A federally recognized tribe is located in the community. Sleetmute is an Ingalik Indian village, and subsistence activities contribute substantially to local diets.

9770.7.57 – Stony River

**STONY RIVER**

**Population:** 46 (2011 AK Dept of Labor estimate)      **Incorporation Type:** Unincorporated  
**Borough Located In:** Unorganized      **Regional Native Corporation:** Calista Corp.

**Emergency Services:**

**Police:**

**State Troopers:** Aniak, 675-4398

**Fire:** 745-2738 (Volunteer Fire Dept)

**Medical:** Stony River Clinic (537-3228).

**Organizations with Local Offices:**

**Village Council** - Village of Stony River, P.O. Box SRV, Stony River, AK 99557

Phone 907-537-3209, Fax 907-537-3210 , e-mail: [StonyRiver@aitc.org](mailto:StonyRiver@aitc.org)

**Location & Climate:**

Stony River is located on the north bank of the Kuskokwim River, 2 miles north of its junction with the Stony River. The village is 100 miles east of Aniak, 185 miles northeast of Bethel, and 225 miles west of Anchorage. It lies at approximately 61d 47m N Latitude, 156d 35m W Longitude (Sec. 31, T020N, R040W, Seward Meridian). Stony River is located in the Kuskokwim Recording District. The area encompasses 17 sq. miles of land and 3 sq. miles of water. The climate is continental with temperatures ranging from -58 to 90. Snowfall averages 85 inches, with total precipitation of 22 inches per year. High winds often cause flight delays in the fall and winter. The Kuskokwim is ice-free from mid-June through October.

**Transportation:**

**Accessibility:** Boat; snow machine; scheduled and charter air service from Aniak. Stony River's location near the confluence of the Kuskokwim and Stony Rivers affords it easy accessibility by riverboat in summer and snowmachine in winter.

**Airport Facilities:** The 2,555' gravel airstrip is State-owned and -operated. Scheduled weekday air services deliver mail and other cargo.

**Airline Service:** No information.

**Freight:** Chartered plane or barge. Barges deliver cargo and bulk fuel.

**Vessel Support:** No moorage facilities. No marine engine repair service.

#### **Facilities & Utilities:**

**Communications:** **In-State Phone:** Bush-Tell Inc. **Long-Distance Phone:** AT&T Alascom

**Internet Service Provider:** School Only - GCI (www.gci.net) **TV Stations:** ARCS **Radio Stations:**

KSKO-AM **Cable Provider:** None **Teleconferencing:** Alaska Teleconferencing Network

**Electricity:** Electricity is provided by Middle Kuskokwim Electric Cooperative. The Middle Kuskokwim Electric Co-op provides power from Chuathbaluk to Stony River.

**Fuel:** Marine gas and regular gasoline.

**Fuel Storage – Tank Owners** (number of tanks, total capacity): Village Council (22,550 gals.); School (26,250); Middle Kusko Electric Coop (23,960)

**Housing:** Accommodations possible in private homes or in IRA Council building.

**Services:** No restaurant, banking services, or laundry facilities. Groceries and supplies available. Most supplies acquired from Sleetmute, Red Devil, Aniak, or Anchorage. No rental transportation or moorage facilities.

**Water & Sewage:** Water is derived from individual wells; the school, washeteria and clinic each have a well. Septic tanks and some outhouses are used for sewage disposal. Most residents are reliant on the washeteria for laundry and bathing. Feasibility and engineering of a piped water system has been completed; the system will also include individual septic tanks for all homes.

**Miscellaneous:** There is one school located in the community, attended by 20 students. The school uses a septic tank/drainfield system. There is a landfill a half mile from the school.

#### **Spill Response Support:**

*Contact local officials to determine possibility of using community facilities.*

#### **Potential Command Posts:**

School

#### **Potential Staging Areas:**

Airport –

National Guard Armory –

Other government facilities –

#### **Local Spill Response Equipment:**

#### **Economy:**

There are few income opportunities in Stony River; the school is the only year-round employer. BLM fire fighting can provide seasonal income. Subsistence provides 60% of the village's food sources. Salmon, moose, caribou, bear, porcupine, waterfowl and berries are harvested.

#### **Culture & Demographic**

88.2% of the population are Alaska Natives. A federally recognized tribe is located in the community. The village is a mixed population of Indians and Eskimos. Residents depend heavily on subsistence foods.

9770.7.58 – Takotna

**TAKOTNA**

**Pronunciation/Other Names:** (tuh-KOTT-nuh)

**Fuel:** No information available.

**Fuel Storage – Tank Owners** (total capacity): Lower Kuskokwim Schools (34,460 gals.); AVEC (147,475); City (26,000); Nunakuiak Yupik Corp. (120,020); Army Nat'l Guard (5,000)

**Housing:** Accommodations can be arranged at the school (427-7815), or Nunakuiak Yupik Corp. (427-7928/7929).

**Services:** No restaurant, but a snack bar is available. Groceries and supplies available at local store.

**Water & Sewage:** Water is derived from a well and infiltration gallery, is treated and stored in a 212,000-gal. tank, then piped throughout the community. A gravity piped sewer system also serves most households. Most occupied homes have complete plumbing. However, several homes have failed plumbing and haul water and honeybuckets. The City collects refuse and maintains the landfill. The traditional council operates the washeteria.

**Miscellaneous:** There is one school located in the community, attended by 172 students.

### Spill Response Support:

*Contact local officials to determine possibility of using community facilities.*

#### **Potential Command Posts:**

- Multi-purpose facility
- City public safety facility
- School

#### **Potential Staging Areas:**

- Airport –
- National Guard Armory –
- Other government facilities –

**Local Spill Response Equipment:** A DEC spill response container is located in this community.

**Contact the Mayor, 427-7511**

### **Economy:**

Commercial fishing and the school, city, and tribal council are the primary income producers. Subsistence activities supplement income and provide essential food sources. In 2010, 77 residents held commercial fishing permits for herring roe and salmon net fisheries. Coastal Villages Seafood, Inc., processes halibut and salmon in Toksook.

### **Culture & Demographic**

Toksook Bay is a traditional Yup'ik Eskimo community with a reliance on fishing and subsistence activities. The sale and importation of alcohol is banned in the village. The area has been inhabited and utilized by Yup'iks for thousands of years. Toksook Bay was established in 1964 along the Tuqsuk River by residents of Nightmute. Cyril Chanar, Tom Sunny, and Nasgauq Tangkaq were the earliest inhabitants. Toksook Bay was settled to be more accessible to the annual freighter ship, the North Star. The city was incorporated in 1972.

9770.7.61 – Tuluksak

### **TULUKSAK**

**Pronunciation/Other Names:** (too-LOOK-sack)

**Population:** 373 (2011 AK Dept of Labor estimate)      **Incorporation Type:** Unincorporated  
**Borough Located In:** Unorganized      **Regional Native Corporation:** Calista Corp.

### **Emergency Services:**

**Police:**

**State Troopers:** Bethel, 543-2294

**Fire:** Volunteers

**Medical:** Tuluksak Clinic (695-6991).

### **Organizations with Local Offices:**

**Village Corporation** - Tulkisarmute, Incorporated, General Delivery, Tuluksak, AK 99679  
Phone 907-693-6420, Fax 907-693-6932

**Village Council** - Tuluksak Native Community, P.O. Box 95, Tuluksak, AK 99679  
Phone 907-695-6420, Fax 907-695-6932, e-mail: [Tuluksak@smtp.ak.bia.gov](mailto:Tuluksak@smtp.ak.bia.gov)

### **Location & Climate:**

Tuluksak lies on the south bank of the Tuluksak River at its junction with the Kuskokwim River. The village is 35 miles northeast of Bethel. It lies at approximately 61d 06m N Latitude, 160d 58m W Longitude (Sec. 27, T012N, R066W, Seward Meridian). Tuluksak is located in the Bethel Recording District. The area encompasses 3 sq. miles of land and 1 sq. miles of water.

Precipitation averages 16 inches in this area, with snowfall of 50 inches. Summer temperatures range from 62 to 42; winter temperatures can be 19 to -2.

**Transportation:**

**Accessibility:** Scheduled and charter air service from Bethel. It can be accessed by a State-owned 2,500' gravel airstrip year-round. Residents use fishing boats, skiffs, snow machines and ATVs for local transportation.

**Airport Facilities:** State-owned 2,500' gravel airstrip open year-round.

**Airline Service:** No information.

**Freight:** Mail plane and barge.

**Vessel Support:** There are no docking facilities, although cargo barges deliver during the summer.

**Facilities & Utilities:**

**Communications:** **In-State Phone:** United Utilities Inc. **Long-Distance Phone:** AT&T Alascom; United Utilities **Internet Service Provider:** School Only - GCI (www.gci.net) **TV Stations:** ARCS; KYUK **Radio Stations:** KYUK-AM; KYKD-FM **Cable Provider:** None **Teleconferencing:** Alaska Teleconferencing Network

**Electricity:** Electricity is provided by Tuluksak Traditional Power Utility.

**Fuel:** No information available.

**Fuel Storage – Tank Owners** (number of tanks, total capacity): Village Council (2 @ 38,500 gals.); School (10 @ 80,000); Elementary School (8 @ 50,000); Village Corp. (50,000)

**Housing:** Accommodations may be arranged with the city (695-6212).

**Services:** Washeteria available. Supplies available at local stores.

**Water & Sewage:** Treated well water is hauled by residents. Only one watering point, with storage capacity of less than 7,000 gallons, serves the entire community, washeteria, clinic and school. The washeteria was rehabilitated in 1996, but water shortages are limiting its use. Residents haul honeybuckets -- Tuluksak has 75 active honeybucket disposal pits. A feasibility study has been completed to implement a piped water and sewer system. A larger water storage tank, water system improvements and a honeybucket haul system are the village's priorities.

**Miscellaneous:** There is one school located in the community, attended by 137 students.

**Spill Response Support:**

*Contact local officials to determine possibility of using community facilities.*

**Potential Command Posts:**

School

**Potential Staging Areas:**

Airport –

National Guard Armory –

Other government facilities –

**Local Spill Response Equipment:**

**Economy:**

The primary employers are the school, village government, and services. Some commercial fishing also occurs; 31 residents hold commercial fishing permits for herring roe and salmon net fisheries. Subsistence activities provide most food sources. A village store was recently completed.

### **Culture & Demographic**

95.5% of the population are Alaska Natives. A federally recognized tribe is located in the community. Tuluksak is a traditional Eskimo village with a fishing and subsistence livelihood. The community has abandoned its city government in favor of more village governmental control, and in 1994 the city was conditionally dissolved by the Local Boundary Commission. The sale, importation or possession of alcohol is banned in the village.

9770.7.62 – Tuntutuliak

### **TUNTUTULIAK**

**Pronunciation/Other Names:** (tun-too-TOO-lee-ack)

**Population:** 428 (2011 AK Dept of Labor estimate)      **Incorporation Type:** Unincorporated  
**Borough Located In:** Unorganized      **Regional Native Corporation:** Calista Corp.

### **Emergency Services:**

**Police/VPSO:** 256-2634

Phone 256-2315, Fax 256-2441

**Village Council** - Native Village of Tuntutuliak, P.O. Box 8086, Tuntutuliak, AK 99680  
Phone 256-2128, Fax 256-2080, Email: [Tuntutuliak@aitc.org](mailto:Tuntutuliak@aitc.org)

### **Location & Climate:**

Tuntutuliak is on the Qinaq River, approximately 3 miles from its confluence with the Kuskokwim River, about 40 miles from the Bering Sea coast. It lies 40 miles southwest of Bethel and 440 miles west of Anchorage. It lies at approximately 60d 22m N Latitude, 162d 38m W Longitude (Sec. 21, T003N, R077W, Seward Meridian). Tuntutuliak is located in the Bethel Recording District. The area encompasses 27 sq. miles of land and 0 sq. miles of water. Tuntutuliak's summer temperatures average from 42 to 62, winter temperatures average -2 to 19. Extremes have been recorded from 86 to -46. Annual precipitation averages 16 inches, with snowfall of 50 inches.

### **Transportation:**

**Accessibility:** Scheduled and charter air service from Bethel. Tuntutuliak relies heavily on air transportation for passengers, mail and cargo service. Boats and snow machines are used for local travel.

**Airport Facilities:** A State-owned 3,025' gravel runway, and a public seaplane base on the Qinaq River are available.

**Airline Service:** ERA Alaska, Grant Aviation, Ryan Air Service, Yute Air

**Freight:** Mail plane and barge. Barge services deliver goods approximately six times a year.

**Vessel Support:** No information available.

**Facilities & Utilities:**

**Communications:** **In-State Phone:** United Utilities Inc. **Long-Distance Phone:** AT&T Alascom; United Utilities **Internet Service Provider:** United Utilities Inc. **TV Stations:** ARCS; KYUK **Radio Stations:** KYUK-AM; KYKD-FM **Cable Provider:** Quinarmit Cablevision (Village Corp.)

**Teleconferencing:** Alaska Teleconferencing Network

**Electricity:** Electricity is provided by Tuntutuliak Community Service Assoc.

**Fuel:** No information available.

**Fuel Storage – Tank Owners** ( total capacity): School (74,400 gals.); Village Council (86,900); Village Corp. (71,700)

**Housing:** Accommodations can be arranged with the school (256-2415); Community Hall.

**Services:** Washeteria available. Supplies available in the community.

**Water & Sewage:** A flush/haul system, unpermitted landfill, sewage lagoon, and 4-mile sanitation boardwalk are available. The school has its own well and sewage lagoon.. The Tuntutuliak Community Service Association, a non-profit arm of the Village Council, operates the utilities.

**Miscellaneous:** There is one school located in the community, attended by 98 students.

**Spill Response Support:**

*Contact local officials to determine possibility of using community facilities.*

**Potential Command Posts:**

School

**Potential Staging Areas:**

Airport –

National Guard Armory –

Other government facilities –

**Local Spill Response Equipment:** Nearest DEC Spill Response Conex located in Bethel. 543-2047/2087

**Economy:**

The school, various services, commercial fishing, and fish processing provide most of the income. Trapping, basket weaving, skin-sewn products, and other Native handicrafts also provide cash. Subsistence foods comprise a majority of the diet, and about one-half of families go to fish camp each summer. In 2010, 47 residents held commercial fishing permits for salmon net and herring roe fisheries.

**Culture & Demographic**

It is a traditional Yup'ik Eskimo village with a fishing and subsistence lifestyle. Salmon and seal are important food sources. Children are taught in Yup'ik until the third grade and then classes are taught in English. The sale, importation, and possession of alcohol is banned in the village.

The village's Yup'ik name is Tuntutuliaq, meaning "place of many reindeer." It was originally located four miles to the east and called Qinaq, as noted in 1879 by Edward Nelson, who noted 175 residents at that time. In 1908, a Moravian missionary visited the village and reported 130 people living there. In 1909 a BIA school was built, and the first teacher was well-liked in the community. Due to lack of confidence in the subsequent teachers, the school was closed in 1917, and the building moved to the village of Eek. It is thought that some Qinaq villagers may have moved to Eek, so their children could attend school. In 1923 the first Moravian chapel was built with lumber and other support from Eek. In the late 1920s, a trading post and store was opened by John Johnson. The community moved to its present site on higher ground and was renamed Tuntutuliak in 1945. The BIA built a school in 1957. A post office opened in 1960.

9770.7.63 – Tununak

**TUNUNAK**

**Pronunciation/Other Names:** (too-NOO-nuck; var. Tananak)

**Population:** 342 (2011 AK Dept of Labor Estimate)      **Incorporation Type:** Unincorporated  
**Borough Located In:** Unorganized      **Regional Native Corporation:** Calista Corp.

**Emergency Services:**

**Police/VPSO:** 652-6812

**State Troopers (Bethel):** 907-543-2294

**Fire:** None

**Medical:** Tununak Health Clinic, 652-6829.

**Organizations with Local Offices:**

Phone 652-1818, Fax 652-4086, Email: [tribe2work@yahoo.com](mailto:tribe2work@yahoo.com)

**Location & Climate:**

Tununak is located in a small bay on the northeast coast of Nelson Island, 115 miles northwest of Bethel and 519 miles northwest of Anchorage. It lies at approximately 60d 35m N Latitude, 165d 15m W Longitude (Sec. 28, T006N, R091W, Seward Meridian). Tununak is located in the Bethel Recording District. The area encompasses 4 sq. miles of land and 0 sq. miles of water. The village is located in a marine climate. Average precipitation is 17 inches, with annual snowfall of 28 inches. Summer temperatures can range from 42 to 59, winter temperatures average 2 to 19. Extremes have been recorded from 80 to -35.

**Transportation:**

**Accessibility:** Scheduled and charter air service from Bethel. Tununak relies heavily on air transportation for passengers, mail and cargo service. Boats, snow machines and ATVs are used extensively for local travel.

**Airport Facilities:** A State-owned 1,778' gravel airstrip is available.

**Airline Service:** ERA Alaska, Grant Aviation, Ryan Air Service, Yute Air

**Freight:** Cargo plane and barge. Barges deliver goods two to four times each summer.

**Vessel Support:** No moorage facilities.

### **Facilities & Utilities:**

**Communications:** In-State Phone: United Utilities Inc. Long-Distance Phone: AT&T Alascom; United Utilities Internet Service Provider: United Utilities Inc. TV Stations: ARCS Radio Stations: KICY-AM; KYUK-AM; KNOM-AM Cable Provider: Frontier Cable, Inc.

**Teleconferencing:** Alaska Teleconferencing Network

**Electricity:** Electricity is provided by AVEC.

**Fuel:** Marine gas, propane, and regular gasoline.

**Fuel Storage – Tank Owners** (total capacity): Lower Kuskokwim Schools (70,300 gals.); Tununak Elders Council (15,600); AVEC (79,800); Tununrmiut Rinit Corp. Store (120,400); Army Nat'l Guard (6,300)

**Housing:** Accommodation in the school (652-6827) or the clinic can be arranged through the city office (652-6312).

**Services:** Food available at local restaurant. No banking services. Washeteria available. Groceries and supplies available at local stores. No major repair services.

**Water & Sewage:** Water is derived from Muskox Creek. A flush/haul system began construction in 1992. Only five homes are currently served, and 30 additional units are in construction. 40 additional household units will need to be installed. Most residents currently haul water and honeybuckets, and rely on the washeteria for laundry and bathing. 5% of households use individual septic systems.

**Miscellaneous:** There is one school located in the community, attended by 101 students. The landfill needs to be upgraded.

### **Spill Response Support:**

*Contact local officials to determine possibility of using community facilities.*

#### **Potential Command Posts:**

School

#### **Potential Staging Areas:**

Airport –

National Guard Armory –

Other government facilities –

**Local Spill Response Equipment:** Nearest DEC Spill Response Conex located in Toksook Bay, 427-7511

### **Economy:**

Employment is primarily with the school district, village corporation, stores, and commercial fishing. Trapping and Native crafts also generate cash for many families, and subsistence activities are an important contributor to villagers' diets. Seal meat, seal oil, and herring are the staples of the diet. Beluga whale and walrus are also hunted. Residents participate in a lottery to hunt musk-ox on Nelson or Nunivak Islands. In 2010, 46 residents held commercial fishing permits. Coastal Villages Seafood, Inc., processes halibut and salmon in Tununak.

### **Culture & Demographic**

Tununak is a traditional Yup'ik Eskimo village, with an active fishing and subsistence lifestyle. The sale and importation of alcohol is banned in the village.

In 1878 Nelson Island was named after Edward Nelson, a Smithsonian naturalist who noted 6 people, including 1 non-Native trader, living in Tununak. In 1889 the Jesuits opened a small chapel and school. They found the villagers difficult to convert due to the migratory nature of

their traditional culture and because the shamans were still quite powerful. The mission closed in 1892. In 1925 a government school was built, and a Northern Commercial Company store was opened in 1929. From 1934 to 1962, a missionary named Father Deshout lived on Nelson Island. His long-standing relationship and work with the people in the area had a great influence. The 1950s brought great changes to the islanders' lifestyle, through their involvement with the Territorial Guard and work in fish canneries, high schools, and healthcare treatment for tuberculosis. For many, this was their first exposure outside the community. By the 1970s, snowmachines were replacing dog-sled teams, and the last qasgiq (men's community houses) was abandoned. The city was incorporated in 1975, but it was dissolved on Feb. 28, 1997, in favor of traditional council governance.

9770.7.64 – Umkumiute

**UMKUMIUTE**

**Pronunciation/Other Names :** (OOM-kuh-myoot) var. Umkumiut

**Population:** Seasonal

**Located In:** Unorganized

**Incorporation Type:** Unincorporated

Umkumiute serves as a seasonal, summer fish camp for Toksook Bay residents.

The information below provides a brief overview of the community.

**Location and Climate:**

Umkumiute is located on Nelson Island in the Yukon-Kuskokwim Delta, adjacent to Toksook Bay. It lies at approximately 60.498320 North Latitude and -165.198850 West Longitude. (Sec. 26, T005N, R091W, Seward Meridian.) Umkumiute is located in the Bethel Recording District. The island experiences a marine climate. Annual precipitation averages 22 inches, with 43 inches of snow. Summer temperatures range from 41 to 57 °F, and winter temperatures are 6 to 24 °F.

**Economy:**

As a seasonal-use fish camp, Umkumiute provides subsistence food items for area residents. The 2006-2010 American Community Survey (ACS) estimated zero residents as employed.

**Culture and Demographics:**

Umkumiute is a summer fish camp for Toksook Bay residents. The resources of this area have been used by Yup'ik Eskimos for thousands of years. During 1950, approximately 100 residents were enumerated in the village.

9770.7.65 – Upper Kalskag

**UPPER KALSKAG**

**Pronunciation/Other Names:** (KAL-skag; aka Kalskag)

**Population:** 219 (2011 DCCED certified estimate)

**Incorporation Type:** 2<sup>nd</sup> Class City

**Borough Located In:** Unorganized

**Regional Native Corporation:** Calista Corp.

**Emergency Services:**

**VPSO:** 471-2442

**State Troopers:** Aniak, 675-4398

**Fire:** Volunteer Fire Dept

**Medical:** Catherine Alexie Health Clinic (471-2276).

**Organizations with Local Offices:**

**City** - City of Upper Kalskag, P.O. Box 80, Upper Kalskag, AK 99607, Phone 471-2220, Fax 471-2220

**Village Council** - Village of Kalskag, P.O. Box 50, Upper Kalskag, AK 99607, Phone 471-2207, Fax 471-2207, e-mail: [Kalskag@aitc.org](mailto:Kalskag@aitc.org)

**Location & Climate:**

Upper Kalskag is located on the north bank of the Kuskokwim River, 2 miles upriver from Lower Kalskag. It lies 28 miles west of Aniak, 68 miles northeast of Bethel and 348 miles west of Anchorage. It lies at approximately 61° 32' N Latitude, 160° 20' W Longitude (Sec. 27, T017N, R061W, Seward Meridian). Upper Kalskag is located in the Kuskokwim Recording District. The area encompasses 4 sq. miles of land and 0 sq. miles of water. The climate in Upper Kalskag is semi-arctic with influences from the Bering Sea. Snowfall averages 60 inches, with total precipitation of 19 inches per year. Temperatures range from -55 to 87. The Kuskokwim is ice-free from mid-June through October.

**Transportation:**

**Accessibility:** Scheduled and charter air service from Aniak or Bethel. The Kuskokwim River affords easy access by boat in summer and snowmachine in winter.

**Airport Facilities:** A State-owned 3,200' gravel airstrip is shared by Upper and Lower Kalskag, and a road connects the two cities. Daily scheduled air services deliver passengers, mail and other cargo year-round.

**Airline Service:** Hageland; Yute Air; Arctic Air

**Freight:** Freight arrives by plane and barge. Barges deliver cargo and bulk fuel during the summer.

**Vessel Support:** No moorage facilities.

**Facilities & Utilities:**

**Communications:** **In-State Phone:** Bush-Tell Inc. **Long-Distance Phone:** AT&T Alascom

**Internet Service Provider:** School Only - GCI ([www.gci.net](http://www.gci.net)) **TV Stations:** ARCS **Radio Stations:** KYUK-AM; KICY-AM **Cable Provider:** None **Teleconferencing:** No information

**Electricity:** Electricity is provided by AVEC (from Lower Kalskag).

**Fuel:** Marine gas, diesel, unleaded gas and propane.

**Fuel Storage – Tank Owners** (number of tanks, total capacity): School (49,200 gals.); Village Corp. Store (36,200); Ausdahl Mercantile/Danny Ausdahl (1,980); City (2,500); Ken Morgan (36,800)

**Housing:** Accommodations may be arranged with the school (471-2288) or the Kalskag Store (471-2268).

**Services:** No laundromat or banking services. Groceries and supplies available through several local stores. No repair service. No rental transportation or moorage facilities.

**Water & Sewage:** As of November 1997, nearly all homes, the school and the store have individual wells with potable water and indoor plumbing. A new piped gravity sewage system with lift stations, force main and lagoon now serves over 60 households and facilities. The school has requested funds for a new septic tank and leachfield, or connection to the community sewer system.

**Miscellaneous:** There is one school located in the community, attended by 31 students. The landfill is located between Upper and Lower Kalskag.

**Spill Response Support:**

*Contact local officials to determine possibility of using community facilities.*

**Potential Command Posts:**

City Multi-Purpose Facility (under construction).

City public safety office

School

**Potential Staging Areas:**

Airport –

National Guard Armory –

Other government facilities –

**Local Spill Response Equipment:**

**Economy:**

Most cash income in Upper Kalskag is derived from public employment at the school, City or clinic. Some trap or work as BLM firefighters. Three residents hold commercial fishing permits. 70% of the village's total livelihood is earned from subsistence activities. Salmon, moose, rabbit, and waterfowl are the primary meat sources. A few residents maintain gardens.

**Culture & Demographic**

84.9% of the population are Alaska Natives. A federally recognized tribe is located in the community. Upper Kalskag is an Eskimo village which was strongly influenced by the Roman Catholic Church. Today, subsistence activities are an important component of their lifestyle. The sale or importation of alcohol is banned in the village.
