The comparison of a modeled impact to the SIL shall be conducted as follows:

(1) for the PM-2.5 SIL or the 1-hour sulfur dioxide SIL.

   (A) compare the highest modeled concentration when using either 1-year of meteorological data or screening meteorological data; or

18 AAC 50.225 is amended by adding a new section to read:

(i) If an owner or operator requests a limit under this section for a stationary source
which already has one or more limits approved under this section, the owner or operator shall
provide a copy of the existing limits with the information provided under (b) of this section.

This copy is required regardless of whether the new limit will apply to emission units regulated
under the existing limits. If the department makes a preliminary decision to approve the new
limit, the department will combine the new limit and the existing limits into a single limit and
process this single limit in accordance with (d) – (g) of this section. The existing limits remain
