

Herb Pearce

For the truly effective removal of oils from water ADSorb-it Fabric Products have been proven time and again to work where other products fail. Many miles of the ADSorb-it Fabric were deployed by BP as an oil fence for shoreline protection during their major oil release to the Gulf of Mexico in 2010. ADSorb-it does not noticeably degrade in sunlight so it can remain deployed indefinitely adsorbing oils from water. There are photos of this deployment and more information on the unique ADSorb-it Technology and end products available at www.eco-tec-inc.com.
