

Alaska Department of Environmental Conservation

State Revolving Fund Program

Project #125111-SE, Sherwood Estates Manganese Removal Study BIL EC

Fully subsidized loan used to identify manganese treatment method for Sherwood Estates drinking water

The Alaska Department of Environmental Conservation (ADEC) awarded a fully subsidized \$75,000 loan to Unified Alaskan Utilities who will conduct an engineering study to evaluate alternatives for manganese removal in the Sherwood Estates water system. Due to high manganese levels in source water, this project will produce a preliminary engineering report (PER) including an engineering alternatives analysis proposing recommended upgrades to the treatment system to more effectively remove manganese from the water.

ADEC is authorized by state law to issue loans to borrowers for eligible water system infrastructure projects. The administration of the loan is through the ADEC State Revolving Fund Program under the authority of the Alaska Drinking Water Fund.

The Alaska Drinking Fund is capitalized annually by a grant from the Environmental Protection Agency. This loan is offered through Emerging Contaminants funding made available through the Infrastructure Investment and Jobs Act. The Drinking Water State Revolving Fund programs operate around the country to provide states and communities with the resources necessary to maintain and improve the infrastructure that provides clean and safe drinking water resources nationwide.
