

-Attention Kaktovik Residents-

The Alaska Department of Environmental Conservation (ADEC), North Slope Borough (NSB), and the U.S. Coast Guard (USCG) are currently responding to a diesel spill on 4th Street (see map.)

During the storm, snow removal efforts transported diesel-contaminated snow outside of the original spill footprint. Responders are assessing snow piles and working to reduce the potential impacts to the community by completing timely identification, marking and eventual removal of the contaminated snow.

If you are concerned that diesel-contaminated snow may be present in a snow piles near your residence or place of business, please contact ADEC via text or call 1-907-460-4602.

The snow piles shown in red on the map above are suspected to be contaminated. Residents, particularly children, should not climb, dig or play in these areas until the contaminated snow has been removed.
